And now with saints and angels sing.

The brightest on the list of fame,
In golden letters shines his name:
Her triumph shall sound it throughout the world,
And the striped banner ne'er be unfurled.

And every sex and every age,
From lisping boy to learned sage;
The widow and the orphan son
Will bless the name of Washington.

And has not Hope cheered genius and made many a wasting youth's face brighten when all was dark, when gloomy clouds darkened his horizon and not a gleam of light seemingly lit his cheerless pathway. How basely, Oh! genius, art thou treated, toiling onward, upward. Let the stinging retort of criticism ring a little while longer, until he seeks refuge in the grave. Oh as Fanny Fern was often heard to exclaim, if there was no bow of promise athwart those dark and lowering clouds; if there was no ray of hope in tho future, how many a weary wretch would sink into the valley of despair: how many a high and lofty forehead, stamped with genius, care and want, bends over the dingy sheet of foolscap: his fingers emaciated by want, still grasp the pen and write on; thoughts still come clustering around his pen, thinking that he may reach the topmost round on the ladder of fame and bind the laurel wreath around his burning brow. But, impetuous youth, you have quite forgotten in your hot pursuit—high gifted soul struggling for life—that genius and greatness lives in the future. It is no matter to him or her, if they take no particular fancy to your book, how much time and toil it has cost you; no matter if he has expended all his strength and half his lifetime. It is no matter to her if in forming those lines which she so remorselessly reviews, he has consumed many a precious hour by candlelight, when the busy world was reclining in down; when none but the still night and his dumb candle saw his pinched throes. None at all, but she stands ready, more likely, to pierce that interesting little volume with the red hot fangs of criticism, and, if possible, hostile its well-meaning author into oblivion. Poor poets, poor philosophers.

So runs the poet's doom—if he succeeds,
To a pure fame we marry him forever;
But if we take no unction of his reed,
We cut his head off for his vain endeavor.

The world knows nothing of the quenchless yearnings, the mighty grapplings, the hopes and despairs, the raptures and trials of an author's life. Hope exerts its influence alike in the humble peasant and the king upon his throne. It lingers with the prisoner in his gloomy cell, and cheers the wanderer on the ocean's rolling wave; it dries the tear of sorrow and sweetens the bitter cup of the drunkard in earnest solicitude to reclaim the wanderer back to the bosom of his family and be the [illegible] of industry and [illegible]

I must soon stop writing for want of room as the sun is going down behind the [illegible] It has been the [illegible] shadows the tall trees and distant [illegible] which fall upon the dry and [illegible] grass, evidence of its [illegible] departure. In a moment more it will [illegible] and [illegible] goes into the [illegible] I [illegible] parted the curtains of my [illegible] I can catch the [illegible] and while I gaze upon the [illegible] I [illegible] [illegible] [illegible]

SPECIAL NOTICES.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the Executive Committee.
v3-26 C. I. HUTCHINSON, President,

☞ **Peruvian Febrifuge.**—The formula for this preparation is the result of practical observation and experience for a number of years, in the treatment and cure of Fever and Ague, and such has been the uniform success in its use, that no case is known where this valuable remedy failed to cure when timely administered. A single trial will afford relief, and a few doses convince the patient that he has found the real "El Dorado" of a permanent cure for Fever and Ague and the various other grades of Fevers.

☞ **Ex-Alderman Perkins sends us the following,** in favor of WISTAR'S BALSAM OF WILD CHERRY:

BOSTON, Feb. 3, 1851.

Dr. S. W. Fowle: Dear Sir—For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me for business. I had taken but a small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful. I attribute this entirely to the good effects of your Wild Cherry, as I took no other medicine whatever. I cordially recommend it to all my friends. Respectfully yours,

v4-11 SAM'L. S. PERKINS.

PRINCE'S PROTEAN FOUNTAIN PEN.
[PATENTED JAN. 23, 1855.]
T. G. Stearns, General Agent, 271 Broadway,
Corner of Chambers street, N. Y.

ADVANTAGES.—An incorrodible and durable Ink reservoir, made of Proteus, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time. A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material. Its structure is simple, and not liable to get out of order.

DIRECTIONS.—To fill the reservoir with the Piston, remove the cap by turning it like a screw, insert the pen in the ink half an inch or more, draw up the piston, then with the thumb and finger on the lower part of the piston, draw it up tight into the head of the tube that it may neither move nor allow any pressure of the air. Wipe the pen with a soft cloth or paper after filling and whenever the cap is removed. The piston is not to be pushed down until the ink is entirely exhausted. To push it down place the thumb and the finger just above the tube, that the piston may not be broken. Put the cap on light ly when the pen is not in use, to preserve the ink from drying; and screw it home to its shoulder when carried in the pocket.

To fill the reservoir by suction, (the mode adapted to pocket pens,) loosen the small screw, at the upper end, but do not take it out; insert the pen in ink, as above; apply the lips to the small screw, exhaust the air by suction, and while the pen remains in the ink, turn the screw until it is tight. Or, loosen the screw, insert the tube in a bottle of ink, let it remain until the ink has found its level in the tube, then turn the screw until it is tight, and the pen is ready for use.

The suction pens should be carried in the pocket with the cap upwards, the piston pens with the cap downwards.

Use good ink, free from sediment; Headley & Field's American Fluid, also Bryan & Wilcox's, and Arnold's Fluid Ink, recommended to the public, as they will copy. v4-33m

JAS. HAWORTH, President C. S. Co.
J. P. DEIMIAN, Secretary. v3-4tf

To Farmers and all others interested in Agriculture, Horticulture &c.

WILL be published, in October, 1855,
The Year Book of Agriculture;
OR,
The Annual of Agricultural Progress and Discovery, for 1855.

Exhibiting the most important discoveries and improvements in Agricultural Mechanics, Agricultural and Horticultural Botany, Agricultural and Economic Geology, Agricultural Zoology, Matereology, etc.; together with Statistics of American Growth and Production, a List of Recent Agricultural Publications, Agricultural Patents, with notes by the Editor, on the Progress of American and Foreign Agriculture, for the year 1855. By DAVID A. WELLS, A. M., member of the Boston Society of Natural History, formerly Chemist to the Ohio State Board of Agriculture; Editor of the Annual of Scientific Discovery, Familiar Science, &c., &c.

It is evident that a publication of this character, giving a complete and condensed view of the Progress of every Department of Agricultural Science, free from technical and unnecessary scientific descriptions, and systematically arranged so as to present at one view all recent Agricultural Facts, Discoveries, Theories and Applications, must be a most acceptable volumn to every one interested in the Cultivation of the Soil, or the Diffusion of Useful Knowledge.

The "Year Book of Agriculture" will be published in a handsome octavo volume, comprising upwards of 300 pages, and will contain an elegant Steel Portrait of an agriculturist, together with fine illustrations of New Agricultural Machines, Stock, Fruit, &c., together with a series of *beautifully colored engravings.* Although the publication of this work will be attended with very heavy expenses, it will be issued at the low price of $1 50, thereby enabling every Farmer and Planter to possess a copy.

On receipt of the published price it will be sent free by mail, to any part of the United States. As the sale will be large, all orders should be sent immediately.

A liberal reduction to clubs.

Address, CHILDS & PETERSON,
124 Arch street, Philadelphia.

Subscriptions received at the CALIFORNIA FARMER Office, Fourth street, between J and K. v4-12 2iv

☞ Agents wanted to sell the above valuable work.

Ingham's Improved Smut Machines.

THESE Machines combine all the apparatus necessary to cleanse Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also remove short straws, white caps, seeds and other foul substances in the most perfect manner. All of the solid worth saving is collected in a reservoir, while the smut and light dust are passed out of the mill, allowing the machine to be put on the same floor with the flour chests or wherever most convenient, without being enclosed. It is a California improvement and designed to meet the wants of this country; Eastern Machines having been found to be inadequate to that purpose. It has received the highest recommendation from all using them, among whom are Pettit & Hodgekiss, Brighton Mills, Sacramento; Brooks & Hall, Happy Valley Mills, San Francisco; Wm. Sharp, American Mills, San Francisco; Babbit & Hale, Sierra Nevada Mill, San Francisco; H. S. Hill, Washington Mills, San Francisco.

Those building Mills can save expense and room by using this machine, as they will avoid all the machinery ordinarily used for that purpose.

Orders filled on short notice. SHOP on L street, between First and Second, Sacramento. H. B. INGHAM.

N. B.—All information given, and orders left with WARREN & SON, Sacramento, will be attended to.

The following certificate is among the number received; others can be referred to in quantities:

"This is to certify that I have one of H. B. Ingham's Improved Smut Machines, and believe it to be superior to any other. I need no other fixture for cleansing Grain, except the machine itself; it makes no dirt in the mill; occupies but little room; requires less power, and does the work more perfectly than any other I have ever seen or used before.

WM. SHARP, Agent American Mills,
v4-9 3m Pine street, San Francisco."

Cooper's Eye, Ear and Orthopedic Infirmary,
San Francisco.

No. 14 Sansome street, near the Rassette House.

PATIENTS laboring under Disease of the Eye, the Ear, and those afflicted with all varieties of deformities, resorting to this Institution, will find at once a home, where Miners as well as others can be accommodated with board and comfortable rooms, in plain or costly style, according to their taste.

Dr. Cooper has visited all the important hospitals in Europe, for the purpose of extending his knowledge of medicine and surgery, and will give the Infirmary his immediate supervision.

N. B.—All Surgical Operations free to patients who present themselves at the *clinic* on Wednesdays and Saturdays.

For particulars apply to DR. E. S. COOPER, at the Infirmary. v4-10 3m.

AGRICULTURAL, &c.

Important to Millers and Farmers.

THE undersigned having discovered a remedy for the injury to wheat arising from Smut, and a plan of renovating the same, has secured by a "Patent Right," his title to the same.

From the experiments made by experienced millers, the most satisfactory results have been achieved. From well attested trials and repeated proofs of the capabilities of its power to clean the smut from the wheat, it has been ascertained that the most perfect purification takes place in the wheat, while at the same time a large saving of time, labor and cost accrues to the miller, and the flour is as pure and white as from the finest wheat.

Farmers who have crops of wheat, now unharvested, may yet save them, for they can easily be assured that their grain can be restored and the value saved to them.

Licences, with all particulars for the use of this Patent Right, can be obtained at the warehouse of the subscriber, on Clay street, between Drum and East, San Francisco.

v4-2 CHARLES CAMPBELL.

Agricultural Warehouse,

193 *Front street, New York.*

THE subscriber offers for sale an assortment of Agricultural Implements of the latest and most approved kinds, among which are the celebrated Premium Plows, which were awarded the highest premium of the American Institute in 1846, 1848, 1849, 1850, 1851, 1852 and 1853. Also, Eagle, Centre Draught, Peoria, and all other plows in general use.

Pitt's, Hall's and Smith's Horse Powers and Threshers. Burrall's, McCormick's, Hussey's, Seymour & Morgan's, and Ketchum's Mowing and Reaping Machines. Yankee self-sharpening Straw Cutters—the best article in use: Corn Shellers, Fanning Mills, Picks and Pick Handles, &c., &c.

HOTELS.

MURRAY'S WESTERN HOUSE,

AND

General Office of the California Stage Company.

Corner of Second and D streets,.....MARYSVILLE.

☞ Open all Night. ☜

THIS superb first-class Hotel is by far the most capacious and elegant one in California, out of San Francisco, and is excelled by none in that city. It is of brick, perfectly fire-proof, four stories high, and fronts 103 feet on Second street, and 80 feet on D street. Two hundred persons can be accommodated with entire ease, and in the most comfortable style. Particular attention is paid to the wants and comforts of Families.

Its location is central, and is the General Depot of Staging and Steamboating.

Travelers can rely upon being *called in time* for any boat or stage leaving the city.

Those who desire, can entrust their TREASURE and BAGGAGE to the proprietor in person, who is the sole manager of the establishment, and who will be responsible for the same.

Rates of Charges.

Board without lodging, per week.....$12 00
do with lodging, per week.....$15 to $20 00
do without lodging, per day.....$2 50
do with lodging, per day.....$3 25 to $4 00
Lodging, 75 cts., $1 and $2 per night.

v4-6 R. J. MURRAY, Sole Proprietor.

Orleans Hotel,

Second, between J and K streets, Sacramento.

THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.

The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also leased the large brick building corner of and K and Front streets (formerly known as Suckett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.

v3-2 HARDENBURGH & CORSE, Proprietors.

Beaty's Hotel,

(Formerly the Mansion House,)

SAN JOSE.

A. S. BEATY, Proprietor of the above Hotel, begs to inform his old friends and the public, that he has removed from the "Wood Lawn Hotel," Pulgas Ranch, to the above premises, and is now prepared for their reception under more favorable circumstances than heretofore.

He begs to assure all who may favor him with a visit, that no pains will be spared to merit the patronage of the public, and make "Beaty's Hotel," San Jose, second to none in the State.

Gentlemen with their Families visiting San Jose, the Quicksilver Mines, &c., &c., will find at this House suitable accommodations. A. S. BEATY, Proprietor.

☞ HORSES KEPT AT LIVERY.—Stabling, Hay and Grain, and "Turn Outs" provided for Pleasure Parties.

Dillon, Hedge & Co.'s Line of Stages for San Jose, Santa Cruz, Monterey, and the Quicksilver Mines put up at this Establishment. v 412 tf

White Sulphur Springs, Napa Valley.

THE White Sulphur Springs are situated seventeen miles from Napa City, in one of the most beautiful and retired localities in the Valley. The proprietors have this season enlarged their premises, and are now fully prepared, with

Hotel and Bath Rooms,

To accommodate invalids and transient guests. The celebrity which these Warm Sulphur Springs have acquired in the cure of Cutaneous Diseases, and obstinate forms of Rheumatism, have rendered them a popular resort for invalids from all parts of the State, and the united testimony of the Medical Profession has been warmly expressed in their favor.

The Springs possess besides, the advantages of a "Pleasant Retreat," with ample resources for amusement and recreation, and are easily accessible from San Francisco by daily steamboat communication to Napa City.

v4-12 tf EVEY & LILLIE, Proprietors.

American Hotel, Benicia.

THIS HOUSE has been established *Five Years*, without interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.

Miscellany.

The late Hon. Abbott Lawrence.

The following paragraph from the London Post of July 19th. will show how Mr. Lawrence was esteemed in English circles:

"We understand that the Hon. Mr. Lawrence, late American Minister to this Court, had taken state rooms on board the steamer Asia, from Boston, and was expected this week. with Mrs. Lawrence, on a visit of a few months to this country. We learn with deep regret that serious and alarming illness prevented the fulfilment of his intention. At the last dates. the more dangerous symptoms had disappeared, and the gradual improvement of his condition leads us to hope that his proposed visit is not entirely abandoned, and that we shall yet have the pleasure of seeing this distinguished statesman among us once more. No Minister was ever more popular among all classes of our people than Mr. Lawrence, and no man will be more cordially welcomed back."

A Boston correspondent of the Newburyport Herald, thus alludes to Mr. Lawrence, in a recent communication:

Speaking of public benefactors, no doubt many of your readers will heartily unite with us in congratulations upon the favorable turn which now seems to be taking place in the disorder of Mr. Abbott Lawrence. The loss of this eminent person would be a very severe public calamity, and a cause of more private grief, than always accompanies the departure of a great man from the stage of action. I suppose there may be some, who would object to the allowance of such an appellation to Mr. Lawrence; and I know, that the words' *great* and *little*, as applied to men, are mere terms of comparison.

There have been periods in our history, as in that of other countries, when a whole galaxy of confessedly superior persons has shown out conspicuously eminent, amongst the common file. But looking round upon our own cotemporaries, when truly great men are certainly not common, I should be at a loss to select one, who seems better entitled to be thus characterized. For in Mr. Lawrence, besides that extraordinary success in the pursuit of fortune, which is not always the criterion of singular capacity or sterling worth. is a rare combination of excellent qualities, which at least deserves, if it does not ensure the wealth and the honors held out by the world, as the suitable rewards of uncommon merit. In his case, surely, fortune has stripped off her blind and shaken bands with truth, in the munificent judgment she has awarded in his behalf. What everybody likes in Mr. Lawrence, is his kindness of nature, his considerate and unostentatious benevolence, and a certain *bonhommie*, which would disarm the most inveterate envy; while the plain integrity of the old-school merchant, his practical sagacity, his broad and liberal views, and his unimpeachable life, challenge and command respect.

No doubt good men will live hereafter, as they have done heretofore. But when the loss of such seems really impending, and we try in vain to imagine who will be left exactly to fill their vacant places,—our sense of the averted blow is as naturally glad, as it would be ungrateful and unreasonable to refuse due praise to a truly upright and generous man.

Go to.—"Young man, do you believe in a future state?" "In course I does—and what's more I intend to enter it as soon as Betsey gets her wedding things ready." "You mistake me: do you believe in a future state of rewards and punishments?" "Most assuredly; if I should cut mugs with a red-headed woman, I should expect my hat indented by the first broomstick she could lay her hands on." "Go to, young man, you are incorrigible. Go to." "Go two. If it wasn't the law agin bigamy, darned if I wouldn't go a dozen. But who supposed, deacon, that a man of your years would give such advice to a person just starting life?" This took the deacon down.

Come here, my lad, said an attorney to a boy about nine years of age. The boy came and asked the attorney what case was to be tried next? The lawer answered, a case between the Pope and the Devil—which do you think will gain the action? The boy replied, I guess it will be a pretty tight squeeze—the Pope has the most money, but the Devil has the most lawyers.

Axle Grease! Axle Grease!!

THE attention of Farmers, Mill owners and others, is respectfully invited to the celebrated Patent Anti-Friction Grease, manufactured by Hucks & Lambert, and prepared by them expressly for the axles and bearings of agricultural machines, cogs, pinions and open bearings of mill machinery, and for the axles of all kinds of wheel carriages. This extraordinary composition is warranted to last three times as long as common tar grease, and to keep the bearings, axles, &c., in a cool, oily state to the last, *without gumming or corroding*. Samples in tins of 2 lbs., price $1, may be obtained of

HUCKS & LAMBERT, 166 Front st., San Francisco;
COMPTON, SANDERSON & CO., Stockton;
BULL, BAKER & CO., Shasta;
AYRES & CO., Sacramento;

THE CALIFORNIA FARMER,
And Journal of Useful Sciences,

Published every Friday Morning, at the Office on Fourth street, Sacramento City.

THIS Journal will contain Valuable Agricultural Statistics, from all parts of the States, together with Original Scientific and Literary articles. The aim of the proprietors will be to make it an acceptable FAMILY PAPER, containing Interesting matter relative to Household Literature, from several able lady correspondents.

To those who desire to make known the *real condition of California*, so as to induce kindred friends to come and settle in our State, the FARMER will be found to be very a valuable paper for mailing to the States.

WARREN & SON.

P. S.—Advertisers will please look to our notice in another column. v4-9

MISCELLANEOUS.

WAINWRIGHT, RANDALL & CO.,
Real Estate and Stock Auctioneers,

No. 100 Merchant street, San Francisco, California.

WE respectfully inform our friends and the public generally, that we have connected with our other business that of House Brokerage and General Directory, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.

As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.

This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.

This department will include a *registry*, (already prepared,) of all persons, (except Chinese,) within the limits of the city; by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.

To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and address of *forty-three thousand persons*, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.

v3-18 WAINWRIGHT, RANDALL & CO.

SANDS' SARSAPARILLA,
IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of *Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Biles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.*

IN this preparation all the restorative properties of the root are concentrated in their utmost strength and efficacy; but while Sarsaparille Root forms an important part of its combination, it is, at the same time, compounded with other vegetable remedies of great power, and it is in the peculiar combination and scientific manner of its preparation, that its remarkable success in the cure of disease depends. It acts simultaneously upon the *stomach*, the *circulation* and the *bowels*; and thus three processes, which are ordinarily the result of the three different kinds of medicine, are carried on at the same time, through the instrumentality of *this one* remedial agent which gently stimulates while it disinfects and expels from the stomach and bowels all that is irritating, and at the same time restores their vigor and tone. Many other preparations imitate it in bearing the name of Sarsaparilla, and in that their resemblance ends, being often prepared from worthless and inert roots, and of course possess no healing or curative properties, and patients in making choice of which they will use should take no other, but that one entitled to their confidence, from the first list of cures it has effected on living witnesses, whose testimonials and residence have been published, and who are still bearing daily testimony to its worth.

Astonishing Cure.

PATTERSON, N. Y., July 20, 1851.

Messrs. A. B. & D. Sands: Gentlemen,—Having witnessed the most beneficial effects from the use of your Sarsaparilla, it gives me pleasure to send you the following statement in regard to my son. In the spring of 1843 he took a severe cold, and after eight weeks of severe suffering, the disease settled in his leg and foot, which soon swelled to the utmost. The swelling was lanced by his physician, and discharged most profusely; after that no less than eleven ulcers formed on the leg and foot at one time. We had five different physicians, but none relieved him much; and the last winter found him so emaciated and low that he was unable to leave his bed, suffering the most excruciating pain. During this time the bone had become so much affected that piece after piece came out, of which he has now more than twenty-five preserved in a bottle, varying from one-half to one and a-half inches in length. We had given up all hopes of his recovery, but at this time we were induced to try your Sarsaparilla, and with its use his health and appetite began immediately to improve, and so rapid was the change that less than a dozen bottles effected a perfect cure.

With gratitude, I remain truly yours,
DARIUS BALLARD.

We the undersigned, neighbors of Mr. Ballard, cheerfully subscribe to the facts of the above statement.

Oil! Oil!! Camphene!!!

BRANCH of the Pacific Oil and Camphene Works in Sacramento.

The undersigned respectfully informs his friends and customers that he has established a depot at 51 K street, Sacramento for the sale of Oil, Camphene, &c., and invites the attention of dealers to his stock, which consists of Polar, Sperm, Lard, Elephant, Neat's Foot, Tanners', Black Fish, and Machinery Oil, Camphene, Turpentine and Alcohol, which he warrants pure genuine.

The facilities which his extensive works afford, will enable him to keep on hand a large stock, and supply dealers at San Francisco prices. [v4-1] WILLIAM BAILEY.

ALBANY AGRICULTURAL WORKS,
ON HAMILTON, LIBERTY AND UNION STREETS;
WAREHOUSE AND SEED STORE,
No. 52 State Street, Albany, N. Y.

The Proprietors of the above-named establishment being the sole owners and manufacturers of

EMERY'S PATENT HORSE POWER, &c.,

☞ ALL ARRANGEMENTS WITH OTHER PARTIES FOR THEIR MANUFACTURE HAVING EXPIRED ☜

have formed a new Copartnership, under the firm name of

EMERY BROTHERS,

And will continue the manufacture and sale of AGRICULTURAL IMPLEMENTS and MACHINERY, as heretofore, at the old stands of EMERY & CO. By this arrangement the united efforts, and interest of the Brothers, long known to the public, are secured, and no exertions will be spared to meet the wishes of those dealing in and using the class of implements they manufacture—their leading branch being the manufacture of the justly celebrated

Emery's Patent Changeable Geered Railroad Horse Powers,

with the machines to be propelled by it, as Threshing Machines, Saw Mills, and Machinery generally.

These Powers having been submitted repeatedly to the most severe tests and trials to determine their relative merit and utility with those of every known manufacturer, have without exception been awarded the highest prizes for superiority—among which were the following:

N. Y. STATE AGRIC'L SOCIETY, 1854, 1853, 1852, 1851, 1850	MARYLAND STATE AGRICULTURAL SOCIETY, 1853
OHIO STATE BOARD OF AGRICUL., 1854, 1853, 1852, 1851	MISSOURI STATE AGRICULTURAL SOCIETY, 1853
MICHIGAN STATE AGRICUL'L SOCIETY, 1853, 1852, 1851	AMERICAN INSTITUTE, - - - - - 1852, 1851
INDIANA STATE AGRICULTURAL SOCIETY, 1853	NEW YORK CRYSTAL PALACE, - - - - 1853
ILLINOIS STATE AGRICULTURAL SOCIETY, 1853	CANADA PROVINCIAL SOCIETY, - - - 1852, 1851
PENNSYLVANIA STATE AGRICULTURAL SOCIETY, 1853	CONNECTICUT STATE AGRICULTURAL FAIR, 1854

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 224 bushels, of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both kinds of Powers, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. If the crops be extraordinarily heavy or light, greater or less results will follow.

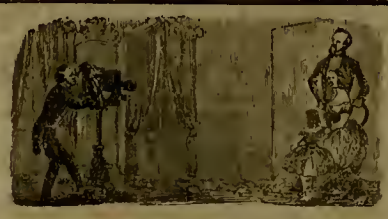
These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by this Circulars, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and full purchase money refunded if not found acceptable to purchasers.

The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, they hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.



They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery, Implements and Seeds, which are all new and of the most approved and complete kinds extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.

The attention of a discerning public is solicited to our present stock of goods, before selecting and purchasing the coming season.

PRICES FOR 1855.

ALBANY, N. Y., March 15, 1855. (v4-10 6m) EMERY BROTHERS.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to Vance's who wishe PERFECT LIKENESSES? Because he has now the most arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

COLLINS & CO.,
PRACTICAL HATTERS,
(PREMIUM HAT STORE,)
157 *Commercial street, San Francisco.*

THE undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a Hat; that no gent shall wear a finer Hat than can be found at Collins & Co.'s Warehouse.

The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.

v4-1 COLLINS & CO.

Candies.

GUM-DROPS, Jujube, Rock Candies and Lozenges—large assortment. Known to be superior in quality, and to keep, for California market, better than any other.

STEWART & BUSSING,
4v-5 3m 336 Pearl street, New York.

TREADWELL & CO.,

CORNER OF FIRST STREET AND MAIDEN LANE,
MARYSVILLE.

Corner of California and Battery streets, San Francisco. No. 56 Federal street, Boston

Importers of Hardware, Iron, Steel, Cordage, Paints, Oil Varnish and Window Glass, direct from the Atlantic States and Europe, with a complete assortment of tools and implements for *Farmers, Miners, Carpenters, Coopers, Caulkers and Gravers, Saddlers, Turners, Masons, Smiths, Painters, Glaziers, Ship Carpenters, Wheelwrights, Millwrights, Cabinet Makers, and others.* v3-5

New Patent
Force and Lifting Pump and Fire Engine Combined.

THE undersigned is now manufacturing and has for sale a NEW PATENT PUMP, which, for utility and power, surpasses anything of the kind ever offered to the public.

For Ships, Railroad Stations, Paper Mills, Factories, and all other places where a large quantity of water is required to be raised, they are peculiarly adapted.

Its construction is double acting, throwing a continuous stream of water, at the rate of from 200 to 400 gallons per minute, (according to size) and can be used as a Lifting or Force Pump, and by the application of Hose can be operated as a Fire Engine of the most efficient kind.

It is simple, not liable to get out of order, can be operated by hand, steam or water power, and need only be seen to be appreciated.

N. HUNT,
26 Devonshire street, New York.

Also for sale—Best quality of Leater Belting and superior Shuttle Sewing Machines.

☞ Orders for the above received at this office. v4-3 3m.

GOLDEN GATE CLOTHING WAREHOUSE.

SECOND ANNUAL FAIR
Of the California State Agricultural Society.
Second Day.

IN the midst of our pressing duties, we present sketches of the Fair from the Union, being very ably reported; that of the Cattle Show, Races, and equestrian exercises, particularly so, and portions of which we were not able to see. Our own special reports, with weight and measurement, will also appear:

The Capitol.

The spacious Assembly Chamber of the Capitol was visited by many strangers and citizens throughout Wednesday, and in the evening the room was thronged with ladies and gentlemen. The interest manifested in the community is not only gratifying but evidently increasing.

In addition to the extensive list of articles on exhibition during the first day, and which were minutely enumerated and described (in last week's paper), the following have been duly registered and placed in the hall:

On the west floor a beautiful and highly finished set of mechanical instruments, consisting of surveyor's compass, India rubber bound spy glasses, transit instruments and leveling instruments with independent screw. These are presented by Wm. Schaols.

A little removed to the left of these are some ornamental as well as useful specimens of native brooms, the handles of which are manufactured of California pine. In this vicinity also may be seen a large show case of seeds; also perfect imitations of wood and marble from a Sacramento manufactory.

A mammoth beet weighing nineteen pounds, from the ranch of R. Tucker, Colusi, excited expressions of wonderment.

In the northwest corner of the chamber towers a magnificent specimen of the "Tree of Heaven," from the famous garden of Crook and Jackson, Sacramento. Adjoining this is a beautiful miniature flower garden, laid out into regular beds, with parterres, fountain, &c. This is the handiwork of Thos. O'Brien, of Sacramento.

On the right of the Speaker's rostrum, is a superb vase, adorned with figures of birds, and filled with choice flowers, the gift of Mrs. T. Robinson, of this city.

A bag of flour, neatly packed and elegantly labelled, from the Horner Mills, San Francisco, ornamented a table opposite the Speaker's desk.

A handsome and truthful portrait of the Governor elect has been suspended to the wall on the west of the painting of Clay; and beyond these, two likenesses of beautiful children. These meritorious productions have been executed by Mr. Jas. Wise, an artist of this city.

On the east side of the hall, tastefully embroidered covers for the seat and back of a chair called forth general commendation, as did also a little tree, composed of ingeniously twisted and braided locks of fanny hair; also, handsome specimens of flowers, and a superbly embroidered lamp mat; all of which were wrought and presented by Mrs. B. Eisenmenger.

On the same table is a specimen of New Almaden cinnabar, weighing 14 1-2 pounds, presented by Polhemus; also an elephant's tooth, from the Island of Isornea, presented by Mr. Graves. Opposite is an elaborately executed sign from the San Francisco shop of Messrs. Kaye & Hanks.

Two enormous drumhead cabbages, weighing each thirty pounds, entirely filled a table

Above these, and suspended to the wall, is a wholly wrought in worsted picture, which probably attracted more admiration than any other article on exhibition. It represents the death of Geo. Douglass, the black horseman, and the idea is taken from this passage in the Abbot: "'Mourn not for me,' he faintly said; 'I die in my armor, as a Douglass should, and I die pitied by Mary Stuart.'" The groupings of the picture are natural, and the various figures are admirably proportioned and features expressive. The accompanying scenes and scenery which complete the picture are excellently well executed.

Attached to the centre of the last wall is a specimen of the genius, talent and skill of a California artist, which challenges the admiration of all beholders. We refer to the beautiful and artistic painting of Nahl's, entitled "The Arabian Girl." The almost faultless beauty of the face, admirable adjustment of the drapery, posture of person, soft blendings of light and shade, and astonishingly accurate delineation of every feature of the picture, constitute a *tout ensemble* which cannot but entrance the attention of the spectator. This magnificent painting was sold almost immediately after being first subjected to the inspection of the public.

The only other new articles heretofore unnoticed are a lot of tremendous pumpkins, from Smith's Garden's, one of which measures seven feet and one inch in circumference.

The Cattle Show.

The attendance at the Louisiana Race Course, the space within the track of which is set apart for the cattle exhibition, was large throughout Wednesday, and despite the blinding dust and intense heat visitors stuck to the Show with great pertinacity, and saw it all before leaving for town. The stock on exhibition is by no means great in quantity, but cannot be overrated in quality—in fact some of the specimens shown are infinitely superior to the great majority of those seen at Fairs in the Atlantic States.

HORSES.—A brood mare, with a colt four months old—the latter a remarkably precocious animal—are exhibited by W. B. Arnold, of this city.

A splendid three-year old horse from San Jose, is next seen.

Then comes a beautiful brood mare, with two sorrel colts, the one a yearling, and the other but four months old. These are elegant little beasts, and can boast of blooded ancestry; the mare being sired by Shakspeare. They are owned by Mr. Harris, of Cache Creek.

A bay stallion, of three years, cross between French and American stock, belongs to Mr. Treadway, of Sacramento. He is a fine heavy animal.

Another bay stallion, sired by Grand Turk, and dammed by Messenger, six years old, is owned in this city.

One of the most beautiful beasts on the ground is a chestnut colt, five months old. The dam is a splendid creature, sired by William Wallace, and equally good blood on the maternal side. This colt will be heard of one of these days.

A mare, with a huge colt but four months and a half old, attracted much notice; they are from San Joaquin county.

We noticed nearly all the ladies grouped about and examining critically the fine points of a white saddle steed, a native Californian, finely trained and withal just such a nag as would become an *equestrienne*. The creature is owned by Mr. Crosby, of Los Angeles.

CATTLE.—A Durham bull, two years old in May last, if on exhibition in the Eastern States, would assuredly take an A No. 1 prize. He is large, finely proportioned, and looks as if his posterity must be stout, healthy and handsome. He is the property of J. & W. Cole, of Solano county.

Another Durham bull, imported from Lexington, Ky., is one of the handsomest in the collection.

A leviathan ox named "Diablo Champion," is a remarkable curiosity, as was apparent by the number of persons who were constantly gazing on his monster proportions.

A milch cow, five years old, of Durham breed, Kentucky bred, is a beautiful animal.

The most miraculous specimen of the calf species we have ever heard of, attracted attention from everybody, particularly when it was announced that although but seven months and a half old, he weighed 500 pounds.

Seven head of splendid cattle from Davis' Ranch, Yolo county, are exhibited, viz: a cow, two bulls, a very large heifer, and two calves.

HOGS.—Two monstrous porkers, raised on Davis' Ranch and termed "Irish Grazers," called forth expressions of amazement. Their united weight amounts to nine hundred pounds.

In addition to those enumerated, there is a great variety of stock to be exhibited on Thursday.

The entertainments of the day were varied by expert exploits with the lasso, in which a number of native Californians distinguished themselves, as did, also, an American gentleman from one of the lower counties.

There were also many trials of speed of animals offered for exhibition, among which the noted stallion Gen. Taylor, shone conspicuous.

On the whole, the opening out-door festivities of the Fair gave great satisfaction, which is more than can be said of the heat and dust, which would annoy everybody that visited the show.

The Evening's Entertainment.

THE ORATION.—The big round moon showed her own face and that of her man just in time last evening to light hundreds to the rooms of the Fair, as also to the church. The former were full until a late hour, although many were attracted to the Congregational Church, in which Ex-Governor Foote had been previously and publicly announced to deliver an oration on the subject of Agriculture.

The spacious edifice was densely crowded, and a very great proportion of the audence were ladies. On the stage were seated, besides the President, Orator of the Evening, and Secretary, Gen. John A. Sutter and Gen. John E. Wool. The latter two, as also Ex-Governor Foote, were greeted with general applause by the audience as they passed down the aisle and ascended the rostrum.

The elaborate and finished address of the Orator of the evening will be found in another part of this paper.

Third Day.

THE TOURNAMENT.—Sacramento was out of town Thursday. Between the hours of 2 and 5 o'clock P. M. there were not enough people in the city to have extinguished a moderately sized bonfire. In the morning there were more souls in the three wards of the town than on any day since its settlement. There have heretofore assembled big crowds at Bolter, Bogus, Whig and Know Nothing Conventions, multitudes have been attracted hither to see men hung by Vigilance Committees, to attend public celebrations on the 4th of July, and to "see the sights," but never in the annals of this juvenile city of the plains have there been congregated here so many human beings as the place contained on Thursday.

Nearly if not every county in the State was represented. From Siskiyou they came, and from San Diego, while the adjoining towns were almost emptied of their population.

At an early hour those personally, particularly and pecuniarily interested in the exercises of the day, left for the scene of festivities. Shortly after "citizens generally" commenced departing, and by 2 P. M. every vehicle and animal was *en route* for the race course. At this hour, it is not exaggeration to say that there was an unbroken line of stages, wagons, carts, sulkies, barouches, equestrians and pedestrians extending all the way from the Orleans Hotel to the fair grounds, a distance of three miles. One stage left the aforesaid hotel with twelve inside and twenty outside passengers, and every species of "go cart" was proportionally crowded with anxious expectants for fun and frolic.

On arriving on the grounds visitors presented an appearance sorry sights, indeed. Everybody was "heated" with dust, everybody heated to excess, and everybody exposed to the rays of an intense autumnal sun, for be it known that there is neither tree nor shrub on or near the site of the State Agricultural Fair. However, the immense crowd maintained their equanimity most courageously, in hopes that the attractive programme of exercises would be carried out to the letter.

It is proper here to state that the managers had made every preparation necessary for the complete carrying out of their arrangements.

The entrance to the enclosure was carefully attended, and every proper precaution adopted to prevent unauthorized persons from intruding upon the course. Despite all care, however the immense crowd would force themselves on the track and in their eagerness to see everything prevented all about them from seeing anything. The committee, composed of the following distinguished gentlemen, ascended the stand about ten minutes soon after which the exercises of the day commenced: Chairman, Major General Wool; Ex-Gov. Foote, Judge Murray, General Runyon, Richard Chenery, Gen. Sutter and [illegible].

The Marshals of the Day, after a most superhuman exertions, finally cleared the track, when the following named gentlemen [illegible] entered the lists: W. C. Johnson, San Francisco; S. J. Crosby, Santa Clara; [illegible], Sacramento; I. C. Crocker, San Joaquin; J. W. Pugh, Sacramento; also, Mr. Foley of Yolo, and Mr. Woods. Mr Harris [illegible] the splendid sorrel colt "Napoleon" and Mr. Jesse Wilson mounted on the noble steed "Jenny Lind." [illegible] its prancing up and down the track to [illegible] judges' stand. Shortly after the above entries the attention of the crowd, who by this time were thronging the track, sheds, enclosures and every available standing place that could afford a glimpse of the performances, was fastened on two native Californians, named Jesus Vacca and Senor Crist, who entered the enclosure, reined up gracefully in front of the starting pole, and hooked their names for the tournament.

Then rushed forward the peerless equestrian, Crosby, of Santa Clara, mounted on a very gray charger, and a steed who "knew his master." In company with the Californians he dashed through the crowd, driving them beyond the ropes, and exhibiting meanwhile feats of agility unparalleled almost in the annals of horsemanship. Putting his horse to a fearful speed, he would with lightning velocity throw himself underneath the belly of his charger, and pick from the ground the smallest articles thrown on to the course by the crowd.

The native Californians also exhibited prodigies of skill, and elicited the wildest marks of approbation from the multitudes that observed their miraculous movements.

The Equestriannas.

The entertaining exhibitions of the male gentry were brought to speedy termination, owing to a collision of two native horsemen, who, although dismounted by the shock, were instantaneously on their chargers, and rollicking about as if nothing had happened.

The brief excitement over, the gallant Wool rapped upon the stand, and ordered the equestrianes of the day to be ushered before him, Whereupon appeared the following named fair competitors:

Miss Stevens, of Sacramento, mounted on a dapple gray steed, and most becomingly dressed in a green riding habit, black hat, and flowing plume; of handsome face and faultless figure; she sat on her noble animal gracefully, and her entree was the occasion of tumultuous applause from the admiring audience. Next appeared Miss Louisa Morgan, of Bolinas Bay, dressed becomingly, and mounted on a neat little bay, a perfect beauty. Then came Mrs. Fern, of this city, clad in a brown habit, with white bodice. The fourth competitress was Mrs. Kellog, who rode a gray horse, and completed the quartette.

The signal being given, away they dashed, Louise's gray taking the lead, followed, however, but by one equestrienne, Miss Morgan. To the great annoyance of the Judges, a gentleman friend attended one of the rival riders beyond the distance pole, although peremptory orders had been issued forbidding any male geatry from escorting the ladies around the track.

On the back stretch the little bay gained rapidly on the gray, although the practised eye failed not to discover that the black plume materially inclined backward, and at times almost touched the saddle bone. It was a beautiful specimen of female jockeying, as the sequal shows. The bay having come up within a length, the "Do" of the gray let loose the rein, and away the fleet courser sped, unceremoniously exhibiting his iron heel to the vision of the lady behind, and maintained the advantage to the running pole, coming in to the judge's stand in 3:03. The most uproarious cheering greeted the successful competitress, who modestly acknowledged the compliment.

The championess of the turf afterwards mounted the racer Leni Gustin, and seated herself in a masculine saddle, but the animal proved to be rather intractable and frequently bolted the track.

The riding of Miss Morgan, albeit she proved to be the successful competitress, was elegant and graceful and deserved the applause which was unanimously bestowed upon her.

The other two ladies also would have taken the first prize in any other State than California.

As another test trial was about being had, there suddenly occurred two incidents which effectually scattered the dense mass in the vicinity of the Judges' stand. The one, that the city was in flames, (which alarm arose from a brick kiln,) and the other that the native Californians had entered the enclosure are for the purpose of [illegible] the untamed cattle of the prairie.

THE LATER.—The latter proved to be correct, for having to the [illegible] and yelling throughout [illegible] of human legs and the [illegible] of the [illegible] we observed a number of [illegible] entering the [illegible], and learning the [illegible] they proved to be [illegible] a [illegible] race.

[illegible] was heard and instantly there [illegible] a perfect [illegible] [illegible] and for a few [illegible] [illegible] [illegible]

maddened beasts tore through the narrow space between the innumerable moveable and stationary vehicles with amazing velocity, and scattered in every direction men, women and children. But the fleet and skillful native Californian was speedily at their heels, and long before they had reached the outermost carriage, the leathern thongs had bound them head and foot, quelling at once all further apprehension of danger.

CASUALTIES.—And here we would sincerely wish to close our account of the tournament without being compelled to chronicle any serious accidents or rencounter, but candur compels us to the task of giving publicity to a circumstance which cast the shadow of gloom over the subsequent sports of the day. A ferocious bull, which by some means had escaped from his keepers sometime during the day, was captured after a hard chase on the prairie, and dragged to the entrance of the Course. At this time very many of the visitors were passing through the gate on their homeward way. Quite a large crowd were gathered about the animal, which, although apparently secured by the person holding the lariat, burst into the multitude and pierced with his horn a person named Abram Irving, the groom of the race horse "Joe Wilson." The wound inflicted caused immediate death, the horn entering his left side below the shoulder, and reaching to the heart. The corpse was stretched out in the upper apartment of an adjoining building, and visited by many sympathising friends and curious strangers. Deceased was a pale faced, spare man, married, and about 35 years of age.

About 5 o'clock, a native Californian, named Rodriguez Pinola, got into a difficulty with a countryman, living on the Cosumnes, which resulted in his inflicting a severe wound with a bowie knife in the kidneys of his adversary. The injured man was immediately thereafter driven home by his friends.

The Pacing Match.

Although, strictly speaking, the evening race on the Louisiana Course does not come under the head of the festivities of the State Agricultural Society, still as it was really and *bona fide* one of the series of entertainments in which the visitors of the Fair grounds participated, we deem it not inappropriate to interweave the same into our account of the amusements of the day. The competitors for the purse were Wisconsin Chief, Joe Wilson and Lady Mac, all of whom were competitors in the undecided race of Tuesday last.

FIRST HEAT.—A splendid start, Joe inside, which, however, was speedily taken by Lady, who led around the course, coming in winner in 2:36, Joe second. At the end of the heat Wisconsin Chief was withdrawn, he having lost five previous heats. This animal, one of the very fastest of the three, is evidently "unt of sorts."

SECOND HEAT.—Another excellent departure from the stand, Lady Mac inside. On the first quarter she broke badly, but speedily gathered and closed on Joe. They ran neck and neck to within 400 yards of the judges' stand, when Joe slipped, allowing the Lady to pass and come home winner of the purse, in 2:33.

This was a beautiful race and hotly contested.

Fourth Day.

The Annual Meeting of the State Agricultural Society for the election of officers for the ensuing year, was held on Friday afternoon in the Senate Chamber. The following gentlemen were elected: President, E. L. Beard, of Alameda; Vice-Presidents, Samuel J. Hensley, of Santa Clara; C. K. Garrison, of San Francisco; John Yount, of Napa; Gen. John A. Sutter, Rev. A. H. Myers, of Alameda; G. H. Beach, of Yuba; and W.W. Gift, of Contra Costa. Recording Secretary, Rev. Eli Corwin, of Santa Clara. Treasurer, Dr. L. H Bascom, of Santa Clara.

A motion to locate the "Society Rooms" permanently, was sustained by a unanimous vote.

The following resolutions were also unanimously adopted:

Resolved, In view of the mournful event which transpired on Thursday, (the goring of Abram Irvin by a steer,) by which a citizen was deprived of life, leaving a wife and child, that we extend the Fair over till Monday next, and tender the entire proceeds of the day and evening to the wife and child of the deceased.

Resolved, That the officers and members of this Society yield their privileges as members on Monday next, and pay the regular price of admission to the house of exhibition, for the benefit of the wife and child.

It was ordered, that the next Annual Fair be held at San Jose.

An adjourned meeting was held in the evening, which was occupied till a late hour, in a spicy discussion relative to the office of Corresponding Secretary of the Society, which was finally left vacant.

Upon the conclusion of the discussion, the awards of several of the Committees on Premiums were read; whereupon, an adjournment was had until 8 1-2 o'clock, next morning.

The Closing Ceremonies of the State Agricultural Fair.

A brilliant, but not crowded, assemblage of ladies and gentlemen was present in the Assembly Chamber last evening, to enjoy the closing scene of the first State Agricultural Fair ever held in the Capitol.

The exercises commenced with a beautifully executed piece of music by the distinguished artist Miss Tozer, assisted by the other members of the choir of Rev. Mr. Benton's congregation. The voice of the accomplished cantatrice is of fine compass, exquisitely sweet and melodious, and perfectly modulated. The performances of the choir greatly enchanced the pleasure of the evening's entertainments.

Final Award.

Rev. O. C. Wheeler next came forward, and acting in his capacity of Secretary, proceeded, after an appropriate preface, to pronounce the following award to the various contributors having articles on exhibition:

Fowls.—To C. W. Holt, Sacramento, for best pair of Shanghai Chickens.....$10
An honorary premium is recommended to T. W. Leggett, Sacramento, for two pairs beautiful Carrier Pigeons.....10
Grain—Oats.—1st premium to Lewis & Tufts.....50
Corn.—To Henry Wilson, Russian River, for best five acres or more.....50
Sweet Potatoes.—To John G. Almond, for best half acre or more.....50
To Hooker & Fern, for second best ditto.....25
Onions.—To Hooker & Fern, for best five acres.....30
Tobacco.—1st premium to Hooker & Fern.....20
2d premium to Dr. B. B. Brown, Sacramento.....10
Special Premiums Recommended.—To Dr. Curtis, for Millet..10
To J. L. Sandford, for Chinese Beans.....10
To Hooker & Fern, for London Beans.....10
To David Kendall, for Egyptian Corn.....10
To Thomas Edwards, for Flax Seed.....10
Dairy.—Cheese.—1st premium to Shepherd & Reeves.....25
2d premium to Saml. Lewis.....15
Butter.—Premium to Mrs. Pugh.....25
Soap.—Premium to J. P. Dyer.....15
Bread.—Special premium to Mrs. Pugh.....10
Flour.—1st premium to State Lower Mills, (Nicholson & Co., San Francisco).....30
2d premium to Phoenix Mills, Sacramento.....20
Corn Meal.—1st premium to Phoenix Mills.....15

Fruit.

Apples.—Best specimen, to Mr. Case, San Jose.....30
2d do., to Beard & Lewellyn.....15
The Committee recommends in this department, for the largest variety, a special premium to A. H. Myers, of Alameda.....25
To Mr. Kellogg, a special premium.....15
Also, to Capt. Morgan, of Bolinas Bay.....10
Strawberries.—1st premium to J. L. Sandford.....30
2d do., to A. P. Smith.....15
Special premium recommended to Messrs. Thompson....15
Pears.—1st premium to Mr. Lewellyn.....20
2d do., to A. H. Myers.....10
Special Premiums Recommended.—To Mr. Prevost, of San Jose, for two trees two years old, in full bearing.....20
To E. L. Beard.....10
To E. Wilson.....10
To G. H. Beach.....10
To Patch & Clayton.....10
To S. Smart.....10
Grapes—Foreign.—1st premium to A. Delmas.....30
2d do., to A. P. Smith.....15
Special premium to Crooks & Jackson.....10
Native.—1st premium to Mr. Gosty.....20
2d do., to Crook & Jackson.....10
Special premium to A. Delmas, for vine of two years' growth.....20
Peaches.—1st premium to Messrs. Thompson.....25
2d do., to A. P. Smith.....15
Special Premiums.—To P. L. Weimer, Coloma.....10
To Dr. Hoile.....10
To Wm. Duke.....10
To O. C. Wheeler.....10
To A. H. Myers.....10
To Mr. Pinnix.....10
Lemons.—1st premium to T. J. White.....15
Special Premiums—To Don Manuel Requena.....10
To Sansevaint Brothers.....10
Orange—(Los Angeles)—Best, Sansevaint Bros.....15
Watermelons.—Best, A. P. Smith.....10
Muskmelons.—1st premium to No. 1.....10
2d do. to No. 3, Benj. Landes, of Yuba.....5
Special premium to Mr. Frank.....5
Fern & Hooker, special premium to No. 3 (Citron,).....5
Almonds.—To Don Manuel Requena, (only contribution)...15
Figs.—To Patch, Clayton & Co.....20
Mangroves.—Special premium to Mr. Greason, of San Jose..10

Flowers.—To J. B. Saul, Sacramento, for best Floral Design..25
To A. P. Smith, of Pomological Gardens, Sacramento, for best display of Pot Plants.....25
To Mr. Sountag, Mission Dolores, for best collection of Roses.....10
To Mr. Kuhlau, of Floral Gardens, Sacramento, for best collection of Dahlias.....10
To Mr. O'Donnell, San Francisco, for best pair of Vase Bouquets.....10
To Wm. O'Brien, Sacramento, for second best do.....5
To Mr. Kuhlau, for best 6 Hand Bouquets.....10
To Wm. O'Brien, for second best do.....5
To A. P. Smith, for best Evergreen Wreath, fifty yards long.....25
To Messrs. Saul and O'Brien, gardeners to A. P. Smith, for best Floral Wreath, thirty yards long.....25
To Mr. O'Donnell, for his collection of Select Plants and Rare Exotics, the Committee also recommend a special premium of.....20
They suggest that some appropriate award be bestowed on Thos. O'Brien, of Sacramento, for his ingenious Miniature Flower Garden.
They also recommend to Mrs. J. P. Robinson, of Sacramento, for her Baccante Tazza, the award of a Cameo Port Monnaie, now on exhibition.

Vegetables.

Pumpkins and Squashes.—1st premium to Mr. B. Sands....$10
2d do., to A. P. Smith.....5
Beets.—1st premium to Dr. Morgan.....10
2d do., to J. S. Curtiss.....5
Carrots.—Best, Dr. Morgan.....10
Parsnips.—1st premium to Dr. J. S. Curtiss.....10
2d do., to J. E. Johnson.....5
Salsify.—Best, to A. P. Smith.....10
Turnips.—Best, Dr. Morgan.....10
Tomatoes.—Best, J. L. Sandford.....10
Cabbage.—1st premium to J. E. Johnson.....10
2d do., to J. S. Curtiss.....5
Cauliflower.—Best, J. E. Johnson.....10
Egg Plants.—Best, J. E. Johnson.....15
Pea Nuts.—Best, J. S. Curtiss.....10
Peppers.—Best, J. E. Johnson.....

Miscellaneous.

To Kimball & Co., San Francisco, for best exhibit of Hose Carriage.....$10
To Collins & Co., for best exhibit of Hats and Caps.....
To Mrs. Stevens, for best exhibit of Needle Work.....10
To Mrs. Sarah M. Johnson, was recommended a special premium of.....10
To Madame Taylor, of San Francisco, for best Millinary....10
To Mr. Herring, of Sacramento, for best Blacksmith Work..10
To D. Kendall, for best Cooking Stove.....15
To D. Kendall, for best Tinware.....10
To H. Lusk for best Broom.....5
To Ontman & Taylor, for best Pottery.....25
To Taylor & Chase, the Committee recommend a special premium for Brooms.....25
To Mr. Peasley, the Committee also recommend a special premium for Blacksmith Work.....5
And honorary premiums, as follow:
To Mr. Schmoltz, for Mathematical Instruments.....20
To Mr. Kendall, for Stoves and Tinware.....25
To Mr. Lusk, for Brooms and Broom corn.....15
To Mr. Downie, for Clothes Drying Machine.....10
To Lippincott & Vaughn, for Soda & Syrups.....25
To J. W. Grist, for Washing Machine.....10
To H. B. Ingham, for Smut Machine.....50
To Encinal Tanning Company, for Leather.....20
The Committee recommend the award of a diploma to the builder, also to the painter, of Manhattan Hose Carriage.
Embroidery.—1st premium to Miss Anabella Smith.....25

Daguerreotypes.—1st premium to R. H. Vance.....$10
2d do., to J. W. Johnson.....5
To J. W. Johnson, for magnificent Photographic Portrait, the Committee recommend a special premium of.....15
Also a special premium for portraits from Beals' Daguerrean Gallery
Dentistry.—Premium to Dr. Burbank.....15
Native Wine.—1st premium to Manuel Requena.....25
2d do., to A. Delmas.....15

Harness and Saddles.

Gentleman's Riding Saddle.—1st premium to C. Randolph Scheuner, of this city.....$15
2d do., to A. T. Nelson, of this city.....10
Ladies' Saddles.—1st premium to Chas. R. Scheuner, of this city.....5
2d do., to A. T. Nelson of this city.....10
Double and Bitting Harness.—To A. T. Nelson, of this city, the Committee recommend an honorary premium of.....25
Also, to J. T. Hull, for Whips, an honorary premium of..20

Stallions, Geldings, Mares, Colts and Mules.

For the best Stallion—to E. H. Parker, owner of gray stallion "General Taylor".....$150
For 2d best do.—to A. S. Beaty, of San Jose, for sorrel stallion "Napoleon".....50
For best Imported American Mare—to S. Tryan, owner of two years old filly "Surprise".....50
For 2d best do.—to H. Wallace, owner of "Black Hawk Maid".....25
For best California-bred Stallion—to L. A. Gould, owner of brown colt "Kossuth".....50
For 2d best do.—to A. B. Treadway, for 3 years old colt "St. Lawrence".....25
For best California-bred Mare—to Robt. Harris, for sorrel filly "Fashion," 18 months old.....25
For 2d best do.—to D. A. Shaw, owner of filly "May Queen," year old.....15
For best Breeding Mare and Colt—to W. M. Williamson, Colusa, owner of sorrel mare "Downing," and colt "Joe Downing".....$25
2d do., to W. B. Arnold, of this city, owner of "Puss," and colt 4 months old.....15
For best span matched Carriage Horses, to Joseph Green, for "Black Span,".....25
2d do. to Jerome C. Davis, Yolo, for span half Sanish.....15
For best Cart-horse, to S. J. Crosby, Santa Clara, for bay...20
For best Express Horse, to W. Paul, San Francisco, for grey horse "Paul,".....30
For best colt over 1 year and under 3, to W. M. Williamson, Colusa, for filly "Owen Dale," 2 year old.....20
2d do. to J. Q. Shirley, San Francisco, for "Young Major".10
For best pair Draft Mules, to J. C. Davis, Yolo.....20
A special Premium is recommended to
J. C. Davis, of Yolo, for Brown Mule Colt, 18 months old.
" " " " " 13 "
" " " " " 4 "
" " " 4 year old Jack, 14 hands high.
W. W. GIFT, Chm'n. Com.

Bulls, Oxen, Cows, Heifers, Calves.

For the best Bull, to James W. Cole, for a white Durham..100
2d do. to H. L. Lovell, Sonoma, for a California bred Durham.....50
For best Cow and Calf, Devonshire and Durham breed, to Richard Rick, Sutter; cow four years old, weighing 1,350 lbs, and calf 7½ months old, weighing 800 lbs..50
2d do. Durham stock, to Jerome C. Davis, Yolo.....25
For best yearling Heifer, California bred, to L. Stone, Colusa 15
For best Yoke of Oxen, seven years old, to Jeremiah Miller, San Jose.....40
A special premium is recommended to J. C. Davis, Yolo, for roan Milch Cow, Durham stock, 9 years old.
Also, for a Kentucky bred Cow owned by C. W. Hnit.
Also, to L. Stone, Colusa, for "Diablo Champion," six years old, eight feet 5¾ inches girth, and 5½ feet high, weighing 2,370 lbs.
Also to Jesse Schultz, for white and red Durham bull.

Bucks, Ewes, Lambs, Boars, Sows and Pigs.

For best Buck, to J. C. Davis, Yolo.....15
For best Ewes and Lambs, to J. C. Davis.....10
For best Boar, to J. C. Davis.....20
2d best do. to C. W. Holt.....10
For best sow, to J. C. Davis.....20
For best pair of Pigs, to J. C. Davis.....20
2d best sow and pigs, C.W. Holt.....10

Trotters, Pacers, Roadsters, and Saddle Horses.

For best Trotter, to G. W. Ferguson, for "New York".....50
2d best do. to W. T. Grissim, for "Rhoderick Dhu,".....30
3d best do. to Capt. David Van Pelt, for "Prairie Bird".20
For best Pacer, to Wm. Shear, for "Fred Johnson,".....50
2d best do. to G. W. Ferguson, for "Lady Mac,".....30
3d best do. to C. S. Ellis, for "Wisconsin Chief,".....20
"Ned McGowan," and "Little Pet," are recommended as Californin Pacers, for special premiums, both owned by Wm. Shear.
For best span of Roadsters in harness, to C. Coover, silver Cup, valued at.....30
2d best do. to Philip Ripley, Yuba, silver Cup or Plate....20
For best single Roadster, to C. H. Parker, for "Big Boy," silver Cup or Plate, valued at.....20
2d best do. to Orrick Johnson, for "Red Bird," silver plate 15
The "Martha Washington," entered by David and John Hoagland, of Yolo, is recommended for a special premium.
For best saddle horse, to S. J. Crosby, for "Carlos,".....15
A special premium is recommended to John Ryan, of Butte, for "Mountain Eagle;" also, to Messrs. Vacca, of Yolo, for two California saddle horses.

For Committee.
B CALHOON, Chairman.

WORKS OF ART.—The undersigned, appointed a Committee on Works of Art, beg leave to make the following report:

They have examined attentively the specimens exhibited in the various Branches of art, and in the department of "Sign and Ornamental Painting," they adjudge the premium due to T. Robinson, $20.

Among the specimens of Oil Paintings, while the works of some other artists are not wanting in merit, they find the production called the "Arabian Girl," by Chas. Nahl, well deserving the prize, $25.

In the department of Water Color Paintings, the "View on the Chagres River," by the same artist, Charles Nahl, is highly meritorious and should take the prize, $20.

In the branch of Wood Cuts, but few specimens came under the inspection of the Committee; one of which is a well executed "View of the Agricultural Fair Grounds," Sacramento, and to this the prize is awarded, $50.

For the best specimen of Drawing, they find a "Monochronatic View on the Hudson," by S. S. Henning, deserves the prize, $10.

The Committee, in conclusion, would remark, that our young State has, as yet, extended so little encouragement to the Fine Arts, it is not to be wondered at that there are comparatively so few specimens exhibited in the present Fair. A brighter promise for the future is, however, even now indicated, which, at the next anniversary of this noble institution, will, we trust, ripen into many more of those creditable and beautiful productions of the artist's genius, which go so far in the great work of refining and elevating the people of every nation.

All of which is respectfully submitted by

HORACE EDGAR PRATT,
J. W. WINANS,
T. M. LOOAN, M. D.,
Committee.

Sacramento, Oct. 1, 1855.

EXPLANATION.—Some Committees cannot report without reasons. Others have failed to do more than leave some crude pencilings. Others have mistaken their legitimate, and reported upon schedules pertaining to others. Others have not reported at all. One department yet destitute of a report, although three efforts have been made on the part of Executive Committee.

At the conclusion of the rendering of the awards, the choir again favored the audience with music, after which followed the interesting ceremony of

The Presentation.

On behalf of the donor, Col. Warren presented, in the following speech, a magnificent saddle, exclusively of home manufacture:

DEAR GENERAL: In all the associations, in all the duties, in all the pleasures of this most interesting Exhibition, there has been none that could have been assigned to me, more in accordance with my wishes—none more gratifying—none more ennobling, than that of addressing one who has ever been the friend, the true friend, the generous friend, of all who sought a home upon this golden shore.

To you, the early Pioneer,
Did gathering thousands come;
You bade them all a welcome here,
None were refused a home.

You fed the hungry, the naked clothed;
To all was freely given;
Your soul by sweet *compassion* movod—
That *attribute* of Heaven.

It is indeed a most happy duty to meet you, to address you, and to strive to show, that however dark the clouds may sometimes lower around you, there will come some ray of light—some joyous song, to cheer and make glad your heart; and in the great battle of life, if the mass forget their duty to one who has done so much for them, there will ever come the outpourings of warm and affectionate greetings from those who never can forget the NOBLE PIONEER OF CALIFORNIA.

It is more blessed to give than to receive; this you know—for your whole life has spoken it by the unbounded liberality which has ever marked your course; and be assured, that however dark may be the present hour to you, sure as there is a God above, so sure the clouds must pass and reveal a brighter day to you. In the clear distance I hear the sound of the spirit-stirring drum, and the echoing bugle's notes; already methinks I see the waving banners of advancing armies, and their song is—"Honor to the brave."

Quick through the heart the blood is rushing,
And quick from memory's fount come gushing
Those generous acts, that never part,
Or leave a manly, noble heart.

It is no idle panegyric thus to address you. Every ear that hears me knows the tribute is thine. Every generous heart must respond to it in grateful emotion, and every eye tell it by a tear. We look yonder upon the wall and we see in that beaming face the joy that rose in his heart as he labored for others, forgetful of himself or the future. What would have been the condition of this city—this State—our nation, had no "Sutter's Fort" been built, no "Sutter's race" been cut?

To you, General, to your name will ever be linked the history of the discovery of that, which moves with as much power as was sought by Archimides—it *has moved a world*. As you look around this hall and see the beautiful adornments—as you behold the rich and varied products of this bounteous soil—as the eye catches the manifestations of genius, called into existence by the circumstances which have changed, not only this place and country, but the world—I say, when you behold all this—these evidences of human progress, your noble heart does and will rejoice, although the change may bring a tear from your eyes or wring a pang from your heart—for the price of this change, this good to the many, must make you feel it, in the sacrifice of self. These mighty changes are marked by yon *crumbling Fort*, where your proudest and happiest moments have been spent. "Sutter's Fort," "Sutter's race," "Hock Farm," may crumble, fall, and pass away, but the noble deeds of the *early and brave Pioneer* shall be like the *pure gold* which springs from them—they shall grow brighter and brighter, to the perfect day.

Turning from that picture of earlier days we look upon another, in which we think we see shades bespeaking care, anxiety and sorrow; and still we see, rising superior to all, from that speaking eye, a voice saying—

Life is real—life is earnest,
And the grave is not its goal.
"Dust thou art—to dust returneth,"
Was not spoken of the soul.

Not enjoyment! and *not* sorrow,
Is our destined end and way;
But to act that *each to-morrow*
Finds us farther than to-day.

And thus have you labored. The walls built by you, to guard you from a hostile foe, have given place to cultivated fields, and blessed Homes now stand where once the "Red Man roamed"—and the broad prairie, that for centuries lay wild and uncultivated, parched by the burning sun—

That earth refreshed by what'ry showers,
Gives forth the golden grain;
This garnered, then the fragant flowers
Come springing forth again.

What a proud and glurious satisfaction is yours, dear sir, to see, to know all this, and to know, when you shall be called from this earth, that you can say with that noble Chief LOGAN, "Who ever came to Sutter's home hungry and he gave him no bread? Who ever came to Sutter's home thirsty and he gave him no drink?" Yes, dear General, yours is indeed a proud satisfaction, and one that can never pass away.

With heartfelt satisfaction I now present to you this gift. This, to which the highest award of this Society has been rendered, the generous owner, Charles Schenner, Esq., the able and skillful manufacturer of the same, bids me present to you. The donor is himself your countryman—both early pioneers—he, with a spirit of true gen-

erosity feels that no better disposition could be made of it than to present this gift to you.

This gift—how appropriate—designed to make your pathway easier through life. Accept then, General, this gift; accept it as the free will offering of a true friend; and as you stand with your foot in the stirrup, remember that your foot rests upon the native wood of California. And these figures upon this saddle-cloth (this too the product from among the "cattle of a thousand hills") —these figures—this noble Bird, the emblem of the lofty aim of America and her institutions—see in his beak the "stars and stripes"! you know that proud bird, as you vault into your saddle, will bear you upward and onward; and those roses, thornless here, and surrounded by the oak and the olive, emblems of Truth and Fidelity—these are fitting testimonials to represent the faithfulness of a friend.

Accept then, General, this gift. God grant that as you pass through life, it may aid you and give you an easier journey. If you are called upon to ascend the rugged steep, the Eagle shall aid you, and bear you up. Fear not to mount. Try the pass up, up its rugged steep; you shall win at last, and rest in a land fragrant with friendship, perennial with honor; for oh, has it not been your desire to bless and make others happy? and is not your own heart rewarding you?

How blessed to *aid others*, to make their way through life easy and happy. You, dear General, know and have felt this; and you, Mr. President—and you—and you; and the remembrance must come like sweet perfume upon the altar of the heart.

Take, then, dear General, this gift, and with it the warmest, best wishes of your friend and countryman. Take it, and know that it comes to you with the best and warmest prayers of all that hear me, and all that know you, that you may yet be spared to see and enjoy better and brighter days.

Th gift was received with evident emotion by the venerable pioneer, who remarked in the course of his speech that for twenty years he had been almost constantly in the saddle. (Loud cheering.)

The Auction.

Col. Warren next ascended the rostrum, and proceeded to bid off a quantity of fruits and shrubs, for the benefit of the widowed *beneficiare*. The first two plates of fruit brought $5, after which two handsome apples were sold for *twenty-one dollars*, to R. T. Brown, Esq. The competition for these was very spirited and exciting. The net proceeds of the sale amounted to some $75.

By 11 o'clock the audience had dispersed, the lights were turned down, and the mamoth pumpkins left *vis a vis* with the portraits of the distinguished personages which adorn the chamber. And thus endeth the California Capital Fair.

Los Angeles Vineyards.

SAN FRANCISCO, September 22.

DEAR SIR: I send you some specimens of fruits which I obtained during my late visit to Los Angeles, from the garden of Messrs. Sansevain Brothers—the truly enteprising and most excellent gentlemen who have succeeded their Uncle, Don Louis Vigues, in the management of this magnificent estate.

A brief history of this place is given in the enclosed note of the 4th Sept., by the proprietors.

It was my purpose to have presented these interesting specimens of the soil and climate of the Italy of California, in person, with the view of embodying some facts in regard to the vineyards and orchards of Los Angeles, which might not have been entirely uninteresting to the Agricultural Fair—an institution which has contributed so much to the wonderful development of our genial climate and exceedingly fertile soil—but urgent business prevents a visit at this time to your city.

This is one of many vineyards which is in a high state of cultivation in this portion of the State, but most of them are neglected and in a dilapidated condition; that attention has not been given to this portion of the State that its productive climate and soil so amply deserve.

At the next Fair I hope to have an opportunity of giving you some specimens from my own orchard and vineyard, directly opposite Don Louis' old establishment. I have 16,000 vines, in full bearing, and as fine as I ever saw, which will now yield from 20 to 40 bunches to the vine; some of which weigh upwards of 5 lbs., and each vine will make a gallon of wine. I have a great variety of fruit, peach, pear, quince, apple, fig, pomegranate, plum, &c., &c.; examples of which I shall send you on my return. Messrs. Sansevain have very fine specimens of wine, made some 18 or 20 years since. I was disappointed in sending you samples.

Don Benito Wilson, a friend of mine, now senator elect from Los Angeles, and a most hospitable and kind gentleman, showed me a specimen of champagne, manufactured at his beautiful and picturesque vineyard, near the old mission of San Gabriel, which was of an excellent quality; the taste and effervescence resembling very much a fine quality of that specimen of wine.

There is no portion of the world in all probability, that produces grapes in so great an abundance as Los Angeles, and the crops there never fail; a state of things quite different in Europe.

With great respect,

TH. J WHITE.

WHEAT! WHEAT!!—Farmers, look to your granaries! Who was right relative to the Grain crop? See the market value this week. We desire the profit and the increased value to come into your own pockets.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, OCTOBER 5, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

Redeem your Pledge.

THE following resolution was passed at the Annual Meeting of the State Agricultural Society, on Friday evening last, after the second election of the Corresponding Secretary:

On motion of Rev. Mr. Myers—

Resolved, That this Society adopt the CALIFORNIA FARMER as its organ, and recommend the same to the support of all the members, and especially the Farmers throughout the State.

Resolution sostained by Messrs. Myers, Osborn, Davis and others, and passed unanimously.

True copy of minutes.

O. C. WHEELER, Sec.

Nothing could be more gratifying to us than the above resolution, and to know it was so ably advocated by such men as those mentioned in the resolution. Now, gentlemen, *let it be done.*

As it is our wish to do these gentlemen evenhanded justice, and to give to each one his just portion of credit, we are desirous to make the result of their labors as widely known as possible. To this end we shall publish the number of subscribers received from each them. This alone can show our friends how well the resolution is carried out. We wait to record your lists, friends, and hope your endeavors will be so crowned with success, that we can make great improvements in our journal, which we shall do with all the aid you give us.

THANKS!—We are most grateful for the many remembrances of our friends during the Fair. We shall not soon forget their kindness. We return thanks as follows: To our friend Vance, for those magnificent pictores of the Great American Water Lily; to Monsieur Delmas, for his excellent collection of grapes and the bottles of wine; to Messrs. Wilson, Flint, and Beach, for those superior specimens of pears and apples; to E. L. Beard, for those splendid large pears; to Mr Case, for the specimens from lime; to C. R. Bond, Esq., for a beautiful dish of lemons from Sonor Requena, of Los Angeles; to J. Elder, Esq., for a fine cheese, manufactured by Samuel Lewis, of Sonoma county, of very superior flavor; to B. Landis, Esq., of Napa, for those high-flavored melons; to our friends Chase & Co., Marysville, for the six brooms manufactured by them and that delicious soda; to Messrs. Lusk & Co. of Sacramento, for two of their elegant brooms, and to Messrs. Hooker & Fern, for superb melons. To several other of our friends we are indebted for specimens of fruits, grains, vegetables and valuables, which we will duly credit, and for which our gratitude is tendered; they made our labors and duties lighter, and our editorial sanctum more agreeable. Friends shall not be forgotten.

VALUABLE DONATION TO STATE AGRICULTURAL SOCIETY.—We announce with much pleasure the receipt per last steamer, of the following Donations to the State Society, received through the exertions of J. Q. A. Warren, Esq., of Boston, the junior editor of the FARMER, who is now laboring to increase the Library and Museum of this Society—his labor and services being voluntary.

The large volumes, five in number, of the Records of the Michigan State Agricultural Society, from the hands of their Secretary, J. C. Holmes.

From the Hon. C. F. Hagerdon Esq., Bavarian Consul at Philadelphia, Journals of the Bavarian Agricultural Society, fourteen in number, through whom opportunities are secured to a correspondence with many important societies in Germany and the old countries, and facilities opened for an exchange of products.

From J. A Beckwith, Esq., Secretary of Vermont State Agricultural Society, has been received various valuable documents: the able Address of Hon. Wm. H. Seward, before the State Society; also the Address of C. T. Russell, Esq., upon "Labor," a most interesting paper; a package of muriate of lime, a preparation for the destruction of the grasshopper, with Pamphlets. Also, a package of new and valuable Peas of many sorts, from a distinguished grower, Mr. J—es, of which we shall speak in our next. These donations are of great value to the Society, and will be duly appreciated.

"Farm[illegible] was a good plan for [illegible] to trample them for [illegible]." Just so. Well [illegible] as a general thing the less game there is, the more hunting you have."

Grain Markets.

ENCOURAGING TO FARMERS.

THE last news from New York, show firmer prices for Bread-stuffs; so we may hope that the shipments recently gone forward will pay handsomely. We clip the following from the N. Y. Tribune, of Sept. 5:

GRAIN.—The demand for Wheat is good for export, and for milling, but with large arrivals; prices are 8 to 10c. lower; there is some inquiry for future delivery, but at lower prices; sales of 17,000 bush. White Southern at $1 70@$1 83; 15,000 bush. red do. at $1 60@$1 70; 3,200 bush. new white Ohio, the first of the season, at $1 90; 30,000 bush. Western white, to arrive in 60 days, on private terms, and 10,000 bush white Canadian, to arrive, at $1 75@$1 80. Rye is firm; sales of 6,000 bush., part to arrive, at $1 10@$1 11. Oats are dull and lower; sales of State and Western at 45@52c., and Jersey at 40@44c. Barley is scarce and in nominal. Corn is freely offered, and is 1 to 2c. lower; the demand is moderate mainly for the East and City trade, with little doing for export; the sales are 50,000 bush. at 81@85½c. for Western mixed, closing dull at 84@85c. Included in the sales are 13,000 bush. good, in store at 84c.

We clip the following from the Chronicle of Oct. 3, showing the price of Flour and Grain in San Francisco:

FLOUR.—There was a sale last evening of 2,000 bbls Gallego, taken without inspection at $14; 100 do do sold to-day from first hands, also "as is," at $14 25; 125 do do jobbed at $14 50 @$15; 300 qr sks Alviso at $9 75@$10; 250 cs Suffolk Mills at $12 50; 100 do do Golden Gate at $10; 300 do do Golden City and Magnolia at $9; 300 do do Pacific Steam Mills Napa City at $9 50; 450 do do Ashley's, and 200 do do Fairchild's sell-raising at $11.

GRAIN.—Receipts of Wheat were 4,402 sks against sales of very nearly the same quantity; 500 sacks sold on private term; 400 do at 2¾c; 120 do at 2½c; 80 do at 2¾; 140 do at $2 90; 214 do at $2 72; 621 do at 3c; 1,150 do at 3c; 415 do at $2 85; 590 do at 2¾c. The range has been from 2@3c, according to quality, with more buyers than sellers. Barley has been quiet but firm; sales of 1,450 sks in two lots at 2c; 400 do at 2 1-6c; receipts were only 1,853 sacks. Oats have been a trifle more active than yesterday; sales were 1,050 sacks at 1⅞@2c, according to quality, against receipts of 660 sacks.

SPECIAL REPORT OF THE FAIR.—As will be seen by our last week's and the present week's issue, we have been obliged to be dependant upon the reports of others, for what we have said in the main. The awards thus far are correct—the descriptions, names and characters of many articles are wanting, and we have decided that a Fair of so much moment to our State should be carefully reported. We shall therefore commence *de novo*, next week, and report every article, with weight, measure and particulars, thus giving a valuable record of the Fair to all who wish to present the same; and we must ask the kind indulgence of our subscribers—they know our duties have been arduous, and they will excuse.

TO OUR READERS.—The matters relative to the Fair occupy so much space, we crave the indulgence of our readers and patrons for much that is necessarily omitted. Premiums on Farms, particulars of Annual Meeting, &c., are deferred.

SPECIAL NOTICES.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the Executive Committee.

v3-26 C. I. HUTCHINSON, President.

☞ **Peruvian Febrifuge.**—The formula for this preparation is the result of practical observation and experience for a number of years, in the treatment and cure of Fever and Ague, and such has been the uniform success in its use, that no case is known where this valuable remedy failed to cure when timely administered. A single trial will afford relief, and a few doses convince the patient that he has found the real "El Dorado" of a permanent cure for Fever and Ague and the various other grades of Fevers.

☞ **Ex-Alderman Perkins sends us the following, in favor of WISTAR'S BALSAM OF WILD CHERRY:**

BOSTON, Feb 3, 1854.

DR. S. W. FOWLE: Dear Sir—For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me for business. I had taken but a small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful. I attribute this entirely to the good effects of your Wild Cherry, as I took no other medicine whatever. I cordially recommend it to all my friends. Respectfully yours,

Correspondence.

Letters from the Coast Range.—No. 3.

Geysers, Sept. 11, 1855.

Editors Farmer: As I stated in my last, we passed Sunday quietly, and yesterday morning we rose bright and early, to prepare for the rough and tumble of a camp and hunter's life. Mr. Godwin, in the course of our leisurely conversation on Sunday, had become excited with the idea of accompanying us, notwithstanding he thought at first he could not leave his farm and his merchandise; but the more he thought of the agreeable company of our joyous friend Parker, and gentle friend Iredale, the more irresistible became his desire to partake in the prospective delights of our journey and explorations. Accordingly he made preparations, much to our satisfaction, to make one of our party. He is an experienced hunter and good marksman, and is as familiar with the trails through this wild and unfrequented region of California, as the Indians or wild beasts themselves. To insure ample assistance for our mountain adventures, we took young Billy Ray for our hunter and general caretaker, and an Indian for our guide and an assistant to him in the care of the horses and pack animals. Billy has a benign and cheerful face, with much clear sense, and an undoubted courage in all wild sports except when face to face with a grizzly of the most formidable kind. Of this we have evidence this morning, for on hitting one of these hideous creatures in the foot, in a wild glen, and seeing the animal gnash his teeth, bite the wound, and then rush towards the spot where he stood, he took a sudden "buck-ague," dropped his powder flask, and run so hard that it took him an hour to recover firmness enough to return and find it. However, for two-and-twenty he is a second Nimrod, and all who go to the Geysers by way of Petaluma and Godwin's Ranch, should inquire for Billy Ray, and put themselves under his honest guidance and manly care.

—Well, we rose early and packed our blankets and small stores, and made ample preparations for a leisurely and comfortable journey, as well as for a toilsome and severe camp life. And here I will say to all travelers, who may wish to follow our steps, that they will find it much to their advantage to secure good horses and saddles at Petaluma or Santa Rosa, and by no means to rely on getting them at further points of the journey. Horses may be obtained with some difficulty in Russian River Valley, but saddles are scarce, and farmers, horsemen and hunters do not wish to loan them. We had taken full precautions on this head, and our animals cost us only two dollars a day, whether the journey was long or short.

At last everything being arranged, and that large Virginian hospitality of our new and agreeable friend Godwin having been almost exhausted in making us comfortable and preparing for our future necessities, we set forward about 11 A. M., with every prospect of a pleasing and instructive excursion.

The first portion of our journey took us on a course almost directly north, and crossing the stony bed of Russian river, which at this point is very wide and now dry, and following an Indian trail, we soon began to ascend the lofty ridge, beyond two or three of which was the famous Geysers, about 15 miles distant, where we were to build our first camp fire. The ascent of the first ridge was more gradual than uncomfortably steep or tortuous, and from the lofty points of the path the view of the valley was attractive and interesting. It is very heavily wooded, and so are the thousand ravines which lead into it from every direction of its mountain boundaries. Compact sandstone seemed to be characteristic of the rock which rose here and there, in crumbling knolls or boulders above a fertile looking soil, and the whole surface of the foot-hills and mountains, except where clothed with woods, was sear and yellow with a thrifty growth of wild oats.

After gaining the top of the first ridge we descended somewhat, and rode some distance through a broad and fertile vale, lying far up in altitude above the sea, where was a fine pond supplied with springs, and covered with lily leaves, giving one the idea of an oasis in a seared and arid wilderness. Having attained this point in our journey, we were in the neighborhood of a very lofty peak, the highest in this whole range of elevations. It constituted a very conspicuous landmark, and had been frequently observed by us from Godwin's Ranch, as a remarkable object in that region of landscape. This point having no name, we applied to it, in honor of our generous companion, the cognomen of "Godwin's Peek," by which it must be called by all travelers forever hereafter. Here a remarkable geological view was presented. In fact, far down on the ocean side of the ridge which we had just crossed, talcose and serpentine rock had been so frequently and abundantly conspicuous that this whole elevated region seemed to have been pushed up or assisted greatly in its upheaval by broad and vast intrusions of igneous materials. Higher up, similar outcroppings were apparent, even to the summit of the ridge, and other igneous rock of a basaltic character was visible in boulders and projecting masses above the soil near the trail as we journeyed along between the ridges. It was on this trail, between the first ridge and Godwin's Peak, that on looking to the westward I beheld lofty and broad cliffs of sedimentary strata several hundred feet thick, all which strata were conformable with each other, though dipping westwardly at an angle of thirty degrees. They had been cut and broken away so that one cliff had retreated far beyond the other, and if the strata had been prolonged to their original position, the thickness of the sedimentary beds must have been extremely great. Lying on the primitive rock they were probably of paleozoic origin and had been raised to their present position and dip by the intrusions of serpentine and trap, and by the general elevating forces which had lifted the peaks of the mountains from the profound beds of the sea. The view was interesting in the extreme, in a scientific way, and I longed for time to indulge my curiosity with those extremely ancient deposits, which have probably never yet been examined by a competent geological observer. Fossil remains of marine origin may yet be found in these strata, that may be very important objects in unfolding the geological history of this slope of the continent.

A scrutiny of Godwin's Peak as I journeyed on the opposite mountain, led me to believe that it also was of a serpentine character; and the whole region of mountainous country from the Peak to the Geysers, where the rock was exposed, had a serpentine and trappean appearance. This was the highest point in the second ridge, and from it extended a backbone far to the eastward, the ascent of which was by a devious and narrow path often leading along the steep sides of a long and crooked ravine and through chaparral so thick and stiff as almost to take the clothing from the body. The rock which was frequently visible over the whole of this ridge, was similar to that before mentioned except that iron pyrites was very abundant, both in boulders and the mountain mass. Midway between these ridges we stopped to lunch and regale our thirsty lips at a cool and shady rill, whose music, as it babbled down the hill, was in sweet accordance with the balmy cheerfulness of our hearts and the ample charms of landscape scenery all around us. After a half hour's rest we entered the chaparral, and for three or four miles along the steep slopes of the ravine and mountain side, we had rather an arduous task. But the summit gained, a deep and sharp valley, or rather a broad and immense ravine, opened immediately before our admiring gaze, stretching far to the east and west, well wooded, and cut into gorges running deep into its sides, which were filled with a dense and dark green foliage, the appropriate and constant abode of grizzly bears, deer, and smaller wild animals. This great valley was announced to us as containing the Geysers, and whitish patches here and there on the opposite slope, were pointed out as sulphur deposits. The northern side was less thickly clothed with woods than the southern though pines, and firs, and oaks, grew with apparently equal thrift on both slopes of the ravine. The aspect of the whole scene was grand and pleasing. The descent was long and tedious, and just after passing the rocky rivulet at the bottom, we started a fine fat doe. Billy Ray's rifle ball struck her through the thicket on the top of the head, which stunned her so that she fell. He then grappled her by the leg, but she struggled away from him, crossed the stream, and while moving slowly up the opposite bank a ball from my revolver grazed her back. This quickened her trot, and notwithstanding efforts to take her, she made good her escape into the dense thickets of the ravine. This was a sore disappointment to us all. But we resumed our journey and about 5 o'clock unsaddled our horses and established our camp in a beautiful little dell a stone's throw from Mr. Levey's tenantless cot. Here we built our fire, and I ate one of the sweetest meals that I have ever enjoyed—and under the light of a cloudless heaven full of stars, and the comfortable warmth of our blankets, we chatted away the evening hours, intending to examine the remarkable objects of our visit early the following morning. Respectfully yours, C. F. Winslow.

THE SEASONS IN MINIATURE.

Shall I, indulging fickle Fancy's wing,
Essay to paint the morning dress of Spring,
When she, with timid look, and modest face,
Hath fled from wrathful Winter's cold embrace?
Or, gathering courage, to the oaked trees
Hath bound her colors, rustling in the breeze?
Or, wanton grown, and wishing to be won,
Now plays at bo-peep with the mid-day Sun,
Till flowers and blossoms tell of loves repaid,
And favors granted by the yielding maid?
Or, shall the faultless Summer tune my lay,
In all her queen-like Juno majesty?
With less of ornament but more pride,
(No jilting paramour, no would-be bride)
Spouse of the Sun, his own, his wedded wife,
To her—her all, her lord, her law, her life?
Though even she, sometimes, in sylvan shade,
Will ape the coyness of a bashful maid,
And, drest as Spring, retain her fading flowers
Upon the margin of some purling brook,
And there, in Nature's self-built soulless bowers,
Attempt to shun her lover's ardent look:
In spots where shy Diana and her train,
In former times, might hold their rural reign.
Or shall I sing of Autumn's yellow corn,
Her clustered vintage, and her well-filled horn?
Of busy reapers, and of harvest fields,
And all the comforts honest labor yields;
And then go home with her, at eveuing's close,
And in her slumbering arms invite repose—
Till Morning, wide awake, with laughing face,
Chide me for seeking such indulgences?
Such themes, alas! would bring but vain regret
Of bye-gone pleasures I would fain forget,
When I, in former days, in other climes,
Enjoyed the sunniest of happy times,
When Love and Learning soothed, with equal smiles,
My hardest trials, and my harvest toils.
But thou, poor weeping Winter! left and lone,
Stript of all ornament, thy beauty gone,
Widowed and scorned, but introduced to raise,
A higher tribute to thy rivals' praise
(The other Seasons) who, with haughty brow,
Proclaim how much inferior art thou
To them, in all their elegance and grace,
Their gaudy garniture, and flaunting dress,
Thou wert a fitter theme for such as I!
For "what can either of us do but die?"

Lyricus.

[For the California Farmer.]

Caleb Crusty's Experience.

Messrs. Editors: I did not mean that my sisters should be slaves. I hired one man to chop wood, go to market, and do chores about the place; and another for looking after the pigs. My sister Rebecca, the eldest, I installed as housekeeper, and instructed Cecily to act as her assistant, requesting them, in addition, to take the poultry under their management; leaving the pigs to the special province of Susan, who is a strong, hardy person, and used to make the manner in which she could raise them, down-cast, her principal boast.

But, did ever man make such a lamentable miscalculation? My sisters told me they were extremely glad that I had become a rich man, which, they had no doubt, I also was, not so much on my own account, as on theirs, as I could now afford to introduce them into good society, where, they had reason to believe, they were likely to meet with suitable offers. But, whether they did so or not, they were unanimous, they said, in the opinion that, beyond acting as housewives, and looking after the few chickens I then had, they ought not to do anything whatever. I told them frankly, I did not know what advantage their coming out would be to me, if they were not to render themselves useful. To this they replied, that I had no idea of the "home blessings and comforts" which their presence would confer upon me; and assured me that they would exercise such a happy influence on me and mine, that, never till then, had I known in what true happiness consisted. They talked so plausibly, and seemed so sincere, that I resolved they should have a fair trial of what they could do in their joint wisdom. This was a great mistake on my part, as by this concession I lost my liberty. They turned the house upside down. They made me buy a thousand dollars worth of furniture and carpets; and have succeeded in making everything so very fine that I am forbidden, during the day, to enter some of the rooms. Instead of the comfortable suppers which I used to have with the boys, when we got quite social over a couple of bottles of rum, I am now called on to dress for dinner, when, I confess, I would sooner think of going to bed. Then Rebecca has got, all at once, devoted to religion and physic, and keeps a repository of tracts and quack medicines for general distribution. Susan, again, aspires to be an authoress, and has written a number of absurd stories, and so-called Essays, in incomprehensible English, chokefull of big watch dogs, moons of all descriptions, and lovers and little babies in any quantity. By the way, she tells me she has it, just now, in contemplation to furnish you with a series on Wives, Sisters, and Daughters; with which I have no doubt your readers will be much amused. As to Cecily, she has got an old piano on which she makes such horrible noises, that I invariably leave the house when she commences. So much for the influence of sisters on our domestic comforts. Caleb Crusty.

[For the California Farmer.]

Autumn.

Oh! geotle Autumn thou art here;
Thy cooling breeze now fans my brow,
Thy balmy breath is whispering low
In sad and plaintive strains.

Hail! lovely Autumn! in thy sweet sadness thou has come to check the high-toned gaities of Summer, and teach us a lesson of usefulness and submission. For although Summer has fled with all her gaiety and gaudy show, thou hast followed her with thy sweet smile, resigned to do the bidding of Him who sent thee.

Thou art lovely, supremely lovely, in thy pale and sombre hues. Thou vauntest not; but to thee praise is no less due, for thou hast brought to man, beast and bird, a lavish store of grain that a king might crave, and spicy fruits that a queen might covet. From these flow the sparkling wine that fills the cup of the prince; and from these are made the bread and wine, fair emblems of our Saviour's flowing blood and broken body.

Oh! lovely Autumn, kind protector of Spring's beauty, and Summer's charms. Without thee gay Spring or gaudy Summer would have no birth. With a careful hand thou hast scattered and covered the germs of fruit and flower. Thou hast kindly buried them upon the soft earth, that when Spring shall return they may come forth in newness of life and fill the air with their sweet perfume.

At a glance of thought, I deem it but a few days, instead of years, since I left the snowy hills of one of the Atlantic States, with its clear and pebbly brooks. I cannot but contrast those Autumnal days with those of '55 in California. At my present seat the streams are seldom clear. No profusion of golden flowers to remind us that Autumn is here; no white or blue star flower is seen laughing from beneath a sheet of snow; no frost to wilt both leaf and flower ere it decay. Still each hath its charms teaching its lessons of usefulness. Here the parent stalk stands firm, and as old age advances it casts off its garb of youth and beauty, and, like man after a long and well ordered life, crumbles to its mother earth, with all its virtues, "the beauty of age." Here the forests are ever green; and I love to steal silently out under the majestic old oak, near my door, when the bright Autumnal moon is full, with nature for my orator, and the sighs of the dying insects for my orchestra. Calm sadness steals over my soul, and, with faithful memory ever near, I commune with past joys, absent friends and departed spirits.

But soon, too soon, the cold dying breath of Autmun, or the rude Winter's approach breaks my reverie and urges me to a closer tent. But thou frail Autumn hath told us of no joys to follow thee, for Winter with his hoarse, harsh voice, his cold, rough tread, and his heavy floods to spread over the earth, is following close upon thy footsteps. Helen.

Remarks of Rev. O. C. Wheeler,

On Presenting the Prizes to the Lady Equestrians, Thursday evening, Sept. 27.

Ladies and Gentlemen: Though the days are gone when the gallant Knight, with poising lance and glittering sword, with buckler, shield and helmet, rushes to the sanguinary contest, and spurs himself and steed to fiercer strife at every glance of his fair lady's eye, or clapping of hands, yet the spirit which impelled him to his most daring deeds and feats of wondrous strength—the spirit of chivalry—that spirit which ensures to the last and crowning work of Deity, *woman*, the highest consideration, the most sure protection and universal preferment, still lives and will continue to live, and act with increasing purity, while man shall till the soil, or guide the State, or fight sweet freedom's battles. That spirit pervades the heart of every honorable man. It has been seen in earlier and in late times.

This Society, whose annual festive scene is now passing, has opened to woman its door of competition in every department of art and industry free, and while demanding of her none of the considerations which are expected from the sterner sex, has offered her prizes and premiums for excellence, not a whit behind the very chiefest.

Nay, more, it has provided an especial festival for her interest and entertainment, and made it all to her free as the air she breathes. And who that saw her this afternoon,

"Rise from the ground like feathered Mercury
And vault with grace into her saddle,
As it an Angel dropped down from the clouds,
To turn and guide a fiery Pegasus
And witch the world with noble horsemanship,"

could fail to admire, applaud and breathe a new spirit of ancient chivalry refined and purified by modern cultivation?

This departuent of these festivities I know has been the object much criticised, and not a little severe animadversion. And yet I think it entirely defensible by the soundest argument.

Although no Semivarius is now called upon to lead her thronging millions to the battle field, and from her fiery charger give orders, on the execution of which a nation's fate may hang, yet more than a Semivarius studies equestrianism as an art, and practises it as a pastime and a sanitary

exercise. Yes, a Victoria, on whose happy subjects the sun casts perennial light, steps from her glittering throne and passes heedless by every class of cushioned coach and gilded chariot,

"To seize the bridle and the mane
O' steed unused to bit or rein
With nost ils never streaked by pain,
And feet that iron never shod,
And flanks unscarred by spur or rod,
And mounts the horse, the wild, the free,
And like the gale that sweeps the sea,
Through the park and o'er the plain
Heedless of her lagging swain
Goes dashing on."

Ladies: The gentlemen composing the committee of award in the department of Hippodromic exercises, have witnessed your elegant, your queenly performances this afternoon, and have awarded the prizes offered through the society, whose humble Secretary now addresses you. The large experience and mature judgment of those gentlemen would, under any circumstances, be a sufficient guaranty of the justness of their decision; but when at their head we find one whose life has been spent in the saddle, who has not only closely viewed but often met and conquered legions of the most expert horsemen in the world; when at their head we find one whose taste is as refined as that of an American soldier, and whose gallantry must preclude the possibility of a wrong to the humblest of the other sex, I confidently assert that the most disappointed will be satisfied that not the slightest injustice is done to any party.

Nor is there a place on earth, or point in its history, more adapted and calling more loudly for skill in this noble exercise than the vast plains and giddy mountain trails over which many of our ladies are, and over which *all may* be called to travel. To foster them, this exercise is not unpraiseworthy even in a great and influential society.

But this is not the time nor the place to discourse this subject. Nor need we; woman is here to speak for herself, and I know you will listen to her—hark! she says:

"When troubled in spirit, when weary of life,
When I faint 'neath its burdens and shrink from its strife,
When its fruits, turned to ashes, are mocking my taste,
And earth's fairest scene, seems a desolate waste;
Then come ye not near me, my sad soul to cheer,
With friendship's soft accent, or sympathy's tear;
No counsel I ask and no pity I need,
But bring me, oh, bring me, my gallant young steed."

And when one of the most intelligent of her sex has thus spoken, argument, if needed, would be useless.

Miss Stevens—A duty has been assigned me, which, but for the single fact of my inability to do justice to the occasion, would be entirely pleasing—it is the duty of presenting this watch and chain as the *first* prize for accomplished equestrianism. The committee have procured its preparation, as the only proper tribute to such skill. It is of pure gold, dug from our own soil; and its enamel is of unstained brilliance—a purity and a brilliance, equalled only by the same traits, when found in the female character.

May the regularity of its running, and the constancy of its *tick* admonish you of the unceasing progress in this art, which those whose superior you have now been declared, will make to overtake and pass you.

To you, Miss Morgan, has been awarded this elegant saddle. And this, too, is of California manufacture; it would be a grand "first prize" in any other State than ours. But here ladies are entitled to richer rewards and more ennobling tributes. Had you used this saddle to-day, we have little doubt you would have won the first prize, and had it not been for giving you an undue advantage over your competitors, perhaps its use would have been offered you. Now, it is yours, and if you studiously and assiduously use it till this high entertainment shall recur, at the close of a twelvemonth you may confidently anticipate the gratification of your highest ambition.

To you, Mrs. Ferry, I am requested to present this cup, made of material more precious than that which belts a continent, and bears the commerce of nations; more enduring than that which has awakened every nation and changed every commercial relation hitherto existing on the earth, by its development in the mountains of your adopted State. Preserve this as a memorial of the *first* exercise of the kind in which you won it, ever held on the shores of the Pacific; and may you imbibe from it many a cooling draught at the close of an exercise in the saddle, the practice of which will soon render you chief among your equals. Although you must now drink from it alone, may you soon share its use with one worthy of such companionship.

To you, Mrs. Kellogg, I have the pleasure of presenting this most elegant combination of silk, and pearl, and gold. This prize was chosen because it was the richest of its class, and the class was chosen because it was thought that the one who should come out a little behind might need to "whip up" a little. Although you have not fully realized your anticipations, I have no doubt you will still join with us all in singing

"Not all the pleasure that poets may praise,
Nor the wandering waltz, in the ball-room's blaze,
Nor the chivalrous joust, nor the daring race,
Nor the swift regatta, nor the merry chase,
Nor the sail, high-heaving waters o'er,
Nor the gay dance on the moonlight shore,
Can the wild and fearless joy exceed,
Of a fearless dash on a fiery steed."

The reception of the prizes was accompanied with vociferous cheering and clapping of hands on the part of the immense assemblage.

On the part of the ladies, Gov. Bigler pertinently and happily responded.

Gen. Wool, Gov. Foote, Gen. Reddington, Gen. Sutter and Mr Winans addressed the audience happily and effectively.

Thursday last was a gala day for the city and State which will be remembered long years hence.

ADDRESS

DELIVERED BY HON HENRY S. FOOTE,

Before the State Agricultural Society, in Sacramento, September 26th, 1855.

Mr. President: At the close of a political struggle of a character peculiarly exciting, I rejoice to behold before me and around me, on this truly interesting occasion, so large an assemblage of citizens from different parts of our beloved State, whose calm and composed aspect seems clearly to intimate, that with them at least the acrimony so apt to be engendered in contests for civil supremacy has fairly passed away, and that now, after having exchanged hearty gratulations upon the unsurpassed, yet constantly augmenting prosperity and happiness of our infant commonwealth, they are prepared, with all becoming zeal and energy, fraternally to co-operate in the task of exhibiting to the view of our countrymen in general and of the world at large, the astonishing agricultural resources of this youngest of the thirty-one sovereign States, who unitedly constitute the most magnificent national confederacy ever yet known to the page of history. I cannot but entertain, Mr. President, a confident hope that our coming together at this time, under circumstances so auspicious, may be productive of increased good will among our citizens, and have a tendency to secure great and lasting advantages to the cause of Agriculture here and elsewhere.

I shall take it for granted that no one now present, in the least degree doubts that the cultivation of the earth is by far the most important of all the practical occupations which as yet have been known to call forth the energies of man as a civilized and social being; as it is undoubtedly the one best calculated to foster the domestic and social virtues—to maintain the principles of civil order—and to keep alive in the hearts of freemen a fervid and diffusive patriotism. All historic writers have united in bearing testimony to the fact that the tillage of the soil has been uniformly contemporaneous with the commencement of civilization; and one of the most profound and accurate thinkers that America has yet produced, has not hesitated to say, on a grave and imposing occasion, that "man may be civilized in some degree without great progress in manufactures, and with little commerce with his distant neighbors. But without the cultivation of the earth, he is, in all countries, (continued New England's most gifted orator and statesman,) a savage. Until he steps from the chase, and fixes himself in some place, and seeks a living from the earth, he is a roaming barbarian. When tillage begins, other arts follow. *The farmers, then, are the founders of civilization.*" Higher praise than this could not well be imagined; and yet am I tempted to add, that the *progress* of civilization, even in its highest stages of development, seems to have been at all times, and in all countries, pretty exactly proportioned to the advance of agricultural science. Indeed, I suppose that it would be altogether impossible to name a people among whom the agricultural calling was not held in respect, who would not be found, on a sober and scrutinizing examination, to have been deplorably wanting in all those refined and delicate moral graces and high mental capabilities which are every where recognized as indispensable elements of a true and thorough civilization. It is certain that all the enlightened nations of antiquity cherished a most favorable regard for the agricultural vocation; and in some of them this sentiment of respect for what they deemed the primeval occupation of man on earth, was seen to blend itself even with the solemn ceremonials of religious worship. Agriculture was alike honored among the Egyptians, the Grecks and Romans—and the Phœnicians, the Carthagenians, the Israelites, the Chaldeans, the Chinese, and the Japanese. It was the actual occupation of not a few of the most celebrated statesmen that Greece and Rome could boast, and became very early a favorite subject of dissertation among writers of a certain grave and utilitarian cast, both in poetry and in prose. One of the earliest poems of antiquity was that of Hesiod, in which he essayed the illustration and enforcement of scientific husbandry. Other writers, in due season, appeared, who, rivaling his example, either in prose or verse, contributed their quota of instruction and entertainment for the benefit and amusement of their own and of succeeding generations, among whom may be mentioned Mago, Theophrastus, Cato, Virgil, Varro, Pliny, and Palladius.

Without taking it upon myself to determine how far these venerable authors or any of them, may at the present day be safely relied on for the solution of questions connected with the business of tillage as conducted in modern times I venture to suggest, that no writer has yet appeared, who would seem to have brought to the discussion of agricultural and kindred topics higher and happier powers of delineation, a more cultivated literary taste, a more sincere and affectionate sympathy for the tillers of the earth as a distinct class, and a more home-bred and hearty relish for the simple and serene delights of rural life, than the illustrious composer of the Georgics, who in his thrilling and beautiful invocation in behalf of agricultural pursuits, has thus, as it were, addressed in strains of tenderest pathos all the generations of men, as they successively tread the pathway a of earthly existence:

Oh happy, if he knew his happy state,
The swain who, free from business, [illegible]
Remote as his every food from Nature's hand,
And [illegible] returns of cultivated land!
.
Blest as the man who, studying Nature's laws,
Through known effects can [illegible] the secret cause
His quiet mind, superior to all fear,
[illegible] in a quiet state,
Fearless of fortune and resigned to fate.
.
Whate'er concern he hears, but hears from far,
Of tumults and descents, and distant war,
Nor with superstitious fear is awed,
For what befalls at home, or what abroad.
.
He feeds on fruits, which of their own accord,
The willing ground and laden trees afford;
From his loved home no lucre him can draw;
The senate's mad decrees he never saw,
Nor heard, at bawling bars, corrupted law.
Some to the seas and some to camps resort,
And some, with impudence, invade the court;
In foreign countries others seek renown;
With wars and taxes others waste their own.
.
This wretch in earth entombs his golden ore,
Hovering and brooding o'er his buried store.
.
Some, through ambition, or through thirst of gold,
Have slain their brothers or their country sold,
And, leaving their sweet homes, in exile run,
To lands that lie beneath another sun.
The peasant, innocent of all these ills,
With crooked plow, the fertile fallow tills,
And the round year with daily labor fills.
And hence the country markets are supplied—
Enough remains for household charge beside,
The wife and tender children to sustain,
And gratefully to feed his dumb deserving train.
Nor cease his labors till the yellow field,
A full return of bearded harvest yield—
A crop so plenteous as the land to load,
O'ercome the crowded barns and lodge on ricks abroad.

No one, I think, can impartially examine the admirable poem from which I have quoted so freely, whether he shall concur or not with Mr. Addison in pronouncing it "the most complete, elaborate, and finished piece of all antiquity," without finding himself forced to adopt the conclusion, to which I frankly confess my own mind has arrived, that in the age of Virgil, that is to say, nineteen hundred years ago, the people of Italy were by no means either ignorant of the principles of agricultural science, or unskillful in their application. For several centuries subsequent to the Augustan period, agriculture would seem to have flourished in Italy, in Gaul, and in various other provinces of the Roman Empire; and it is even supposed not to have exhibited signs of serious decline until the arising of those causes (whatever they were,) whose co-operative energies brought on that gloomiest period in the world's history, known as the dark ages. When, in the early part of the sixteenth century of the christian era, the light of the Reformation beamed forth brightly and benignly from Central Germany, and the mind of man, electrified and renovated, once more asserted its native freedom and independence—agriculture, from the influence of causes difficult to be defined, does not appear to have revived simultaneously with science, scholastic learning, and the arts in general, but still continued to languish in a state of mysterious and unaccountable inertness, until a period not far distant from our own times. Those who have heretofore taken occasion to explore this point minutely, will sustain me in the assertion that for nearly all that is valuable in this important department of knowledge with which the civilized inhabitants of Europe were not fully as conversant two thousand years ago as we ourselves are at the present moment, we are indebted to eminent chemists, geologists, mineralogists, botanists and mechanicians, whose contributions to the general stock of agricultural knowledge have been chiefly made within the last century and a half.

It is, I am sure, not expected of me that I should on this occasion attempt to exhibit in detail the improvements effected in agriculture of late years on the two sides of the Atlantic. The subject is one of vast extent, and might well supply topics for a series of elaborate discourses, running through many days, and prepared in the closet, by scientific men, with that pains-taking diligence and that rigid regard to accuracy, which can alone impart to such performances any thing of a marked and permanent value. I freely acknowledge, sir, that I have not that familiarity with agriculture which would enable me to do much more than offer a few general observations to those assembled here at the present moment, and to throw out, almost at random, one or two crude suggestions, with the hope alone of giving momentary entertainment to such as have done me the honor of coming hither to listen to me.

The territorial surface of the United States of America is at this moment of such vast extent, and our country is blessed with such a happy variety of soil and climate, that it would be difficult to name a single useful product known either to European or Asiatic tillage, which might not with adequate care be cultivated with complete success upon some portion of our broad domain on this continent. Great attention has been paid of late in most of the States of the Union to the various branches of agriculture, and in not a few of them the most liberal and judicious arrangements have been adopted for the accumulation and spread of agricultural knowledge. Associations, Mr. President, similar in all material respects to that over which you have the honor to preside, have been extensively established among us and several of the local governments of the States, including, I am happy to say, the government of our own State, have deemed it politic to appropriate considerable sums of money, in various forms, with a view to furthering this important branch of National industry. Agricultural Fairs and Cattle Shows upon a grand scale, with their attendant arrangements, have become established among us so firmly within the last twenty years that we are beginning to regard them as an essential portion of what we are in the habit of calling our *domestic institutions*. But, sir, I must be allowed seriously to doubt whether in any of our older States of the Confederacy, a more gratifying display of agricultural products has been made than that which we have been witnessing for a day or two past. Considering all the circumstances connected with the surprising scene now in progress, there is [illegible] Mr President, in a nature both to surprise and to delight.

Ten years ago the whole of what is now known as the State of California, and which has since so naturally become an object, alike of hope, of affectionate solicitude, and of sober and rational admiration to the whole world, was only known to the general mass of our countrymen as a wide extent of sparsely settled territory, understood to be nominally under Mexican rule, of vague and undefined boundaries, stretching grimly along the coast of the far-off Pacific sea. It was a region supposed to be cursed with incurable sterility, for the most part only fit to be the abode of ferocious wild beasts, and of aboriginal tribes yet lingering in a state of unmitigated barbarism. No information of a character at all clear and satisfactory, either as to the country or the people inhabiting it, was possessed by the States of the Atlantic seaboard. Various indistinct rumors were from time to time reaching the great commercial marts on the other side of the continent, some of which may, perchance, now seem to us dimly to have foreshadowed a part at least of the multiplied wonders which have been since realized. The views and wishes of our most astute and far-seeing statesmen extended only to the acquisition of a port somewhere on the Pacific coast, for the general convenience of commerce, and the accommodation of our daring and meritorious countrymen known to be associated with whaling enterprises prosecuted in this distant quarter of the world.

Why, sir, those lion-hearted and unconquerable men, (a worthy representation of whom is with us here to-night,) by whose unequaled valor, far more than by diplomatic tact, this fair Paradise of the Pacific was torn from the reluctant hands of its semi-barbarous possessors—what even did they know of the real value of the acquisition which they were enabling their country to make? Sir, it is quite a curious fact in our national history, that when the treaty of Guadaloupe Hidalgo was under consideration in the American Senate, upon a question involving its ratification by the President of the United States, there were members of that illustrious body, distinguished alike for extraordinary intellectual power, the most consummate literary attainments, and the most steady and intense devotion to the happiness and glory of the Republic, who labored most strenuously to effect its rejection, avowedly on the ground that the vast territorial domain, the acquisition of which was provided for by that instrument, was not by any means worth the sum of fifteen millions of dollars, which was to be paid for it, and who contended even that its bare possession by the United States would prove both a burden and a curse—or, that it would at least be found rather an incumbrance than a benefit. Strong was to be that feeling of surprise which in a few short months was to come upon all the nations of the earth, on learning of the sudden and unexpected discovery within our confines of those rich mineral treasures, now universally believed to be exhaustless.

But strong and pervading as was that feeling, it cannot be at all doubted that one of equal or even of greater intensity would have been awakened, could the fact have been communicated with equal suddenness, and in a form equally satisfactory, that this Eden of the western world contained within her teeming bosom the wondrous agricultural resources which this exhibition so magnificently attests. Who expected, sir, seven years since, when California became an integral portion of this noble Republic, that in the year 1855, she would be sending forth from her grand commercial emporium vast and numerous shiploads of grain and flour, all, too, of her own growth and manufacture, to relieve sufferings which it is next to impossible that the thrice fortunate dwellers in this more than Egypt of the New World can ever be constrained to experience? Let me remind you in passing, Mr. President, that this extraordinary result has been accomplished without the abstraction of either capital or labor from mining enterprises; and that, meanwhile, we have built up and beautified a magnificent commercial mart upon our sea coast, which is the wonder and admiration of all who visit it; we have established large and prosperous towns in the interior of our State, along the banks of our noble rivers, and have caused to spring into vigorous and healthful existence, as it were almost by magic, innumerable lovely villages—some of which are to be found perched on lofty Alpine summits, while others are modestly seated amidst glowing golden plains—and others again are hidden from the view of the surrounding world, in deep sequestered valleys, walled in on all sides apparently by impassable mountains, where the sun's rays shine at mid-day in summer with an intensity hardly known even in tropical climates, and where in the dead of winter the snow sometimes falls to the depth of from thirty to forty feet.

But, to return to the style of interrogation once more: who supposed, Mr. President, a few years since that California would now have it in her power truthfully to proclaim, as she does now, through us, that she is able, one year with another, upon her present agricultural [illegible] without the aid either of irrigation or manure, to raise a larger average crop of wheat, barley, and all the other cereal grains than either England, France or Germany? I repeat, sir, that a few years ago our ever to be remembered country-man, Mr. Wilkes, a gentleman [illegible] from England, [illegible] had visited the [illegible] with a view to improving [illegible] knowledge,) who [illegible] on some such occasion as the present, and that among other [illegible] he should feel the highest average crop of wheat that could be expected in England, [illegible] the land [illegible] and [illegible] twenty-five bushels to the [illegible] Mr [illegible], what my answer would have been, I am sure you will bear me out in [illegible]

that on the best farming lands in this vicinage, and on the San Joaquin river, from thirty to forty bushels to the acre may be confidently anticipated, without the aid of manuring or irrigation.

But what, I pray you, would our friends and fellow citizens in the Atlantic States think or say of me, were I to mention here, partly, of course, for their entertainment, a hundredth part of the wonderful things I have heard, and which seemed to me well attested, touching the results of farming in California? Suppose, for instance, I should say that in the year 1853, one of our California farmers raised from ninety-nine acres of land a crop of barley averaging a little more than one hundred and forty-nine bushels to the acre; that six hundred bushels of potatoes had been frequently produced from a single acre of land; that upon another an equal quantity of beets; upon another twenty tons of tomatoes; and upon yet another that one hundred dozens of cucumbers per day had been grown throughout the season, amounting in the whole to nine thousand dozens; should I not incur serious risk of being charged with gross exaggeration?

Where, beyond the limits of California, would a man be listened to with credence, who should state, what no one now present certainly would question, that delicious peaches had been known here to mature on trees only two years old from the pit? That repeated instances had occurred of a double crop, both of pears and peaches, being raised in the same season! Whoever heard, save in California, of pumpkins weighing one hundred and twenty-nine pounds? of beets, seven and a half feet in length? of a stalk of Indian corn, 24 feet in hight? Where, except in California, can it be asserted and proven, that strawberries ripen during every month of the year, and that it is possible to bring to perfection two thousand pounds of this delicious fruit from an acre of ground devoted to their cultivation?

I am happy to know, Mr. President, that our fellow citizens in the mining section of the State are at this time paying considerable attention to Agriculture in its various departments. In the progress of a recent ramble which I took through that deeply interesting region, I saw wheat, barley and oats, growing in several places most luxuriantly. I beheld in other localities beautiful natural meadows, from which large quantities of excellent grass was mown during the season which is now past. I repeatedly saw grape vines and orchard trees of different kinds growing, and promising in a year or two a most plenteous supply of fruit.

Allow me, here, Mr. President, to call your attention, and the attention of this audience, to an extract from the last official report of our State Geologist, Dr. John B. Trask, whose indefatigable labors have developed an amount of valuable information in regard to the mineral and agricultural resources of California, which should insure him the esteem and gratitude of all who feel interested in the future growth and prosperity of our young and promising State. What I shall read is from the chapter headed "Soils and productions of Los Angeles." After expatiating upon the character of the soil of the vicinage which he is describing, and remarking upon its capacity as a wine-growing and stock-raising country, he adds:

"The culture of grain upon these plains warrants the most sanguine anticipations, and so far as the experiment had been made, the yield has been largely above the average crops of the more northern districts, and should success attend the experiment of the introduction of water for irrigation, full thirty per cent. of these plains may be applied to the rearing of cereal crops, and leave a large margin still for pasturage.

The advantages of water near or on the surface in this section of the country is manifested in the experimental crops of last year on the '*Monte*,' a few miles east of the city. The corn crop of this locality, comprising about 1800 acres, was immense in its yield as in the size of its stalks; a large proportion of it was planted late in the season, but notwithstanding this, the ear was full-formed and well filled in the month of October, and the crop still in the silk. It was no uncommon circumstance to find six full ears on one stalk, and the number of four was much more frequent than any figure below it. I think that it may be safely estimated that the 'Monte' lands will yield an average crop of sixty bushels to the acre. These facts are noticed more particularly as corroborative of what has been advanced respecting the fertility of this line of plains, and with evidences such as have been adduced on so grand a scale as a mere experiment, there seems but little room left to doubt the high qualities for production which these lands will exhibit, should they be tilled with judicious management.

We come now to the consideration of the exotic productions of this part of the State. The position of the mountain chains which separate this part of the State from the districts north of it, their trend and altitude, are productive of far different climatal conditions from those noticeable in any other portion of the country. After passing Point Conception upon the coast, or crossing the last ridge of the San Bernardino chain, in traveling from the north, the traveler is ushered into a widely different climate from any which he has before become acquainted. The atmosphere is entirely divested of that harsh coldness which is found on the seaboard and to some distance in the interior, and at the same time is unaccompanied with that scorching heat incident to the plains and valleys situated among or lying to the east of the ridges comprising the coast mountains or their spurs and ranges. From these circumstances it will be seen that a different class of products would naturally be found, and that exotics of a more southern nativity would flourish, while their destruction would be almost certain beyond this chain.

First among the exotic growths of Los Angeles, is the sweet orange; this tree is found to flourish well without artificial protection from the atmosphere, and attains the hight of forty feet, and in some cases even more than this; its fruit is fully equal to any imported article which has yet arrived in this country. The tree produces bountifully, and is in fruit throughout the whole year. The fruit is generally large and plump, with the pulp well filled; there is not the slightest evidence of anything uncongenial connected with its appearance; it may be said truly to have become habituated to our climate, or to have found in it the kindred qualities of its own tropical native home. I have seen the young tree of two years from the seed producing full, well matured fruit. During the palmy days of the old Missions, they were in the habit of cultivating somewhat extensive groves of these trees, but since their decline, the trees and their culture have been neglected, and the groves in many instances cut down. It is a pleasing fact to know that American citizens resident in this portion of the State, are turning their attention to the propagation of this delicious fruit, and it will be but a very few years before our markets will be supplied from domestic sources entirely. In the cities of Santa Barbara and Los Angeles and the adjacent Missions, I have seen the orange tree forty years old, and in some few instances much older.

The citron is also another fruit belonging to the same natural family, and was formerly cultivated to a considerable extent, and flourishes well at the present time. I have seen this fruit in the gardens of private residences growing to the size of six inches in length by three inches in diameter, its weight could not have been less than 2 lbs.

The date tree, fig, pine, apricot, guava, pomegranate and kindred fruits, find a congenial climate, and a soil adapted to their successful cultivation, and are to be met with at several points in this section of the country. No attempt, so far as I have been able to learn, has as yet been made to produce the pine-apple, although the climate and all other concomitant conditions of locality essential to its culture abound. Some experiments have been made in the culture of tobacco, which have proved highly successful and satisfactory—the Cuban variety is found to flourish as well here as upon its native soil; the great consumption of this article in California will render its cultivation an object of some considerable importance, and as so little care and labor is necessary in rearing it here, it is more than probable that but a few years will elapse before it will find a place in our commercial tables, as an article of home production, and perhaps of export.

The climatal conditions of these plains, and the adaptability of their soils are such that we may reasonably expect, ere a few years shall pass, that cotton, coffee, tea, sugar and rice, the four latter articles particularly, will find a place in our catalogues of home productions, and the only impediment that now stands in the way of their immediate production, is the high price of labor which is consequent upon the sparseness of population. The unoccupied or rather unimproved lands extending from Point Aguilla to San Diego on the line of the coast, and into the interior for distances varying from twelve to fifty or sixty miles, and the extensive valley ranges beyond the first and eastern line of the San Bernardino mountains, offer strong inducements to the immigrant and settler who may be seeking a permanent and agreeable home, and who wishes to cultivate soil as a means of livelihood and source of profit. To such this district of the State furnishes an ample field for his operations, and equally profitable with any other portion of our wide domain."

In view of all that we have seen and heard, in the last day or two, of the progress of Agriculture in California, and in view of the testimony which has been laid before us, in such a variety of forms, as to the capacity of our soil and the genial and varied influences of our unequaled climate, I feel justified in saying, that in my judgment, it would be quite difficult for any one, either here or elsewhere, to name a single plant or vegetable, tree, shrub or flower, whether grown on farms, in orchards or in gardens, which, with adequate care and judicious diligence, might not be successfully cultivated and brought to complete perfection in some part of California. If the progress which we have already made in this interesting pursuit, should be continued for a few years longer, it may be that some classic traveler, sojourning for a season amidst our charming hills and valleys and fertile fragrant plains, may hereafter apply to this modern Ausonia the glowing language of poetry, and exclaim—

"Whatever fruits in different climes are found,
That proudly rise, or humbly court the ground;
Whatever blooms in torrid tracts appear,
Whose bright succession decks the varied year;
Whatever sweets salute the northern sky,
With vernal lives that blossom but to die,
These, here disporting, own the kindred soil,
Nor ask luxuriance from the planter's toil;
While sea-born gales their gelid wings expand,
To winnow fragrance round a smiling land."

United States of America.

STATE OF CALIFORNIA, County of Napa. } Sct. Justices' Court, Napa Township.

The People of the State of California, to William C. Summers,

GREETING: You are hereby summoned to appear before me, at my office, in Napa, township of the county of Napa, on the 15th day of September, A. D. 1855, at 10 o'clock A. M., to answer unto the complaint of Alfred Galbreath, whereupon he claims of you the sum of $84, for work and labor done and performed at your instance and request, when judgement will be taken against you for the said amount, together with costs and damages, if you fail to appear and answer.

To the Sheriff or any Constable of the said County, Greeting: Make legal service and due return hereof.

Given under my hand, this 8th day of September, A. D. 1855.

WESLEY VAUGHN
Justice of the Peace of said Township. { L.S. }

BUSINESS CARDS.

Important to the Dairymen of California.

HORACE GUSHEE,
No. 51 Washington Market, San Francisco,
WHOLESALE AND RETAIL DEALER IN
FRESH BUTTER, CHEESE AND EGGS,

HAVING been engaged in the sale of the products of the dairy for the past two and a-half years in San Francisco, would take this opportunity to return his thanks to those who have favored him with their business, and respectfully solicits a continuance of the same. Consignments from any part of the State by any of the various packets or steamboats, directed to me, will meet with prompt attention, and proceeds of sale forwarded as directed.

Liberal advances made, if required.

Dairymen, whenever in the city, are invited to call and see the various kinds of Butter and Cheese which are received daily from the ranches. v4-10

DUNNE & CO.,
Commission Merchants,
PACIFIC WAREHOUSE,
Corner of Battery street and Broadway, San Francisco.

We are now prepared to receive all kinds of Merchandise on Storage at the Pacific Warehouse, corner of Battery street and Broadway, and when required will make liberal *cash advances* on Flour, Wheat, Barley and Oats, stored with us, whether consigned to us for sale on commission or otherwise.

Farmers, Shippers of Produce to this market, Consignees and Merchants generally, will find it to their advantage, from our low rates of charges, central location, and the fire-proof qualities of our building, to select our warehouse for the storage of their goods. [v4-13 3m] DUNNE & CO.

BOUND FOR THE STATES!

Merchants, Miners and others, bound home, are advised to visit
OAK HALL, Boston, Mass.,
where they can replenish their Wardrobes with complete outfits from one of the largest and best assorted stocks of **Clothing, Furnishing Goods, &c., &c.,** in the United States. Also, every variety of
Boy's Clothing.
☞ One Price, Cash System, giving all an equal chance.
G. W. SIMMONS.
OAK HALL, North street, Boston, Mass. v3-16.

J. HOWELL & CO.,
46½ J street, between Second and Third, Sacramento,

TAKE this opportunity of informing their friends and the public, that they have just received a new and choice select on of **Watches and Jewelry,** Among which will be found Watches of every description, from the best makers—English and French.

Also—Diamond Rings, Chains, Ear-Rings, Pins, Bracelets, Quartz, Jewelry, &c., &c.

☞ Particular attention paid to DIAMOND SETTING. Watches carefully repaired and WARRANTED. v3-20

C. L. NORTH,
MACHINE SEWING,
145 *Sansome street, between Washington and Jackson,*
SAN FRANCISCO.

Grain Bags.

25,000 for sale at 10 cents each;
20,000 " 9½ "

Drillings and Sewing Twine; also, Sewing Machines, warranted capable of sewing 150 sacks per hour, at $100 each. v4-12 4t

SANDS' SARSAPARILLA,
IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of *Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Biles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility,* &c., &c., &c.

IN this preparation all the restorative properties of the root are concentrated in their utmost strength and efficacy; but while Sarsaparilla Root forms so important part of its combination, it is, at the same time, compounded with other vegetable remedies of great power, and it is in the peculiar combination and scientific manner of its preparation, that its remarkable success in the cure of disease depends. It acts simultaneously upon the *stomach*, the *circulation* and the *bowels*; and thus three processes, which are ordinarily the result of the three different kinds of medicine, are carried on at the same time, through the instrumentality of *this one* remedial agent which gently stimulates while it disinfects and expels from the stomach and bowels all that is irritating, and at the same time restores their vigor and tone. Many other preparations imitate it in bearing the name of Sarsaparilla, and in that their resemblance ends, being often prepared from worthless and inert roots, and of course possess no healing or curative properties, and patients in making choice of which they will use should take no other, but that one entitled to their confidence, from the first list of cures it has effected on living witnesses, whose testimonials and residence have been published, and who are still bearing daily testimony to its worth.

Astonishing Cure.

PATTERSON, N. Y., July 20, 1851.

Messrs. A. B. & D. SANDS: Gentlemen,—Having witnessed the most beneficial effects from the use of your Sarsaparilla, it gives me pleasure to send you the following statement in regard to my son. In the spring of 1849 he took a severe cold, and after eight weeks of severe suffering, the disease settled in his leg and foot, which soon swelled to the utmost. The swelling was lanced by his physician, and discharged most profusely; after that no less than eleven ulcers formed on the leg and foot at one time. We had five different physicians, but none relieved him much; and the last winter found him so emaciated and low that he was unable to leave his bed, suffering the most excruciating pain. During this time the bone had become so much affected that piece after piece came out, of which he has now more than twenty-five preserved in a bottle, varying from one-half to one and a-half inches in length. We had given up all hopes of his recovery, but at this time we were induced to try your Sarsaparilla, and with its use his health and appetite began immediately to improve, and so rapid was the change that less than a dozen bottles effected a perfect cure.

With gratitude, I remain truly yours,
DARIUS BALLARD.

We the undersigned, neighbors of Mr. Ballard, cheerfully subscribe to the facts of the above statement.

H. & R. S. HART, A. M. TROWBRIDGE,
GEO. T. DEAN, C. EASTWOOD.

Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, 100 Fulton street, corner of William, New York. Sold also by Druggists generally throughout the United States and Canadas. Price $1 per bottle; six bottles for $5.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento v4-5 3m

Benicia Female Seminary.

THE Fourth year of this institution opens July 23, 1855. This is one of the oldest Female Seminaries in the State, and therefore well known. There is now a full corps of teachers, and those who are well qualified to fill their respective departments. A German lady, and an artist in her profession, is teacher of Music; and a French lady, as skilled in Drawing, is teacher of French and Drawing.

The School and Boarding Department are entirely under the supervision of the Principal.

Terms.—(Payable quarterly, invariably *in advance.*)
For Board and Tuition in English branches, per week...$7 50
Washing, per dozen..... 1 50

Extra Charges.
French, Spanish and Drawing, per month.....$ 3 00
Music, with use of Piano, per month..... 10 00

J. P. DEIGHAN, Secretary. v3-4tf

WAINWRIGHT, RANDALL & CO.,
Real Estate and Stock Auctioneers,
No. 100 Merchant street, San Francisco, California.

WE respectfully inform our friends and the public generally, that we have connected with our other business that of HOUSE BROKERAGE AND GENERAL DIRECTORY, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.

As these new brafiches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.

This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.

This department will include a *registry*, (already prepared,) of all persons, (except Chinese,) within the limits of the city, by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.

To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and address of *forty-three thousand persons*, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.

HOTELS.

MURRAY'S WESTERN HOUSE,
AND
General Office of the California Stage Company.
Corner of Second and D streets, ...MARYSVILLE.

☞ **Open all Night.** ☜

THIS superb first-class Hotel is by far the most capacious and elegant one in California, out of San Francisco, and is excelled by none in that city. It is of brick, perfectly fire-proof, four stories high, and fronts 103 feet on Second street, and 80 feet on D street. Two hundred persons can be accommodated with entire ease, and in the most comfortable style. Particular attention is paid to the wants and comforts of Families.

Its location is central, and is the General Depot of Staging and Steamboating.

Travelers can rely upon being *called in time* for any boat or stage leaving the city.

Those who desire, can entrust their TREASURE and BAGGAGE to the proprietor in person, who is the sole manager of the establishment, and who will be responsible for the same.

Rates of Charges.

Board without lodging, per week	$12 00
do with lodging, per week	$15 to $20 00
do without lodging, per day	$2 50
do with lodging, per day	$3 25 to $4 00

Lodging, 75 cts., $1 and $2 per night.
v4-6 R. J. MURRAY, Sole Proprietor.

Orleans Hotel,
Second, between J and K streets, Sacramento.

THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.

The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also leased the large brick building corner of I and K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.
v3-2 HARDENBURGH & CORSE, Proprietors.

Beaty's Hotel,
(Formerly the Mansion House,)
SAN JOSE.

A. S. BEATY, Proprietor of the above Hotel, begs to inform his old friends and the public, that he has removed from the "Wood Lawn Hotel," Pulgas Ranch, to the above premises, and is now prepared for their reception under more favorable circumstances than heretofore.

He begs to assure all who may favor him with a visit, that no pains will be spared to merit the patronage of the public, and make "Beaty's Hotel," San Jose, second to none in the State.

Gentlemen with their Families visiting San Jose, the Quicksilver Mines, &c., &c., will find at this House suitable accommodations. A. S. BEATY, Proprietor.

☞ HORSES KEPT AT LIVERY.—Stabling, Hay and Grain, and "Turn Outs" provided for Pleasure Parties.

Dillon, Hedge & Co.'s Line of Stages for San Jose, Santa Cruz, Monterey, and the Quicksilver Mines put up at this Establishment. v 412 tf

White Sulphur Springs, Napa Valley.

THE White Sulphur Springs are situated seventeen miles from Napa City, in one of the most beautiful and retired localities in the Valley. The proprietors have this season enlarged their premises, and are now fully prepared, with

Hotel and Bath Rooms,

To accommodate invalids and transient guests. The celebrity which these Warm Sulphur Springs have acquired in the cure of Cutaneous Diseases, and obstinate forms of Rheumatism, have rendered them a popular resort for invalids from all parts of the State, and the united testimony of the Medical Profession has been warmly expressed in their favor.

The Springs possess besides, the advantages of a "Pleasant Retreat," with ample resources for amusement and recreation, and are easily accessible from San Francisco by daily steamboat communication to Napa City.
v4-12 tf EVEY & LILEY, Proprietors.

American Hotel, Benicia.

THIS HOUSE has been established *Five Years*, with out interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

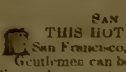
A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.
3v-16 1st C. M. DAVIS, Proprietor.

International Hotel.

THE extensive addition to the Hotel is now finished and ready for occupation, making altogether *one hundred and fifty rooms.* Suites of rooms for families, furnished or unfurnished; also, single rooms to let on reasonable terms.

Day Board—Ten Dollars per week.



The spacious Hall—85 by 35 feet—is elegantly furnished and lighted with gas, with Supper Room that will seat two hundred and fifty, will be let on reasonable terms for Balls, Concerts, Dinner Parties, &c. PECK & FISHER.
San Francisco, Jan. 9, 1855. v4-7

Rassette House.
SAN FRANCISCO.....CAL.

THIS HOTEL offers inducements to persons visiting San Francisco, unequalled by any on the Pacific Coast. Gentlemen can be accommodated with single rooms, or families with suites of rooms.

The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. v4-1

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

Has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

DR. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes us follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]
Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.
Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.
Signed I. BUTTS on the wrapper.

PERUVIAN FEBRIFUGE,
FOR THE PREVENTION AND CURE OF
FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THIS preparation is intended especially as a remedy for the prevention and cure of Fever and Ague, but it is equally adapted to other forms of disease, such as bilious, intermittent and remittent fevers, dumb ague, &c. Its combination being entirely new, it differs widely in its therapeutic effects and operation on the system, from other preparations designed to remove the disease; and such has been the uniform success in its administration, that no case is known where it has failed to cure when timely taken. A single teaspoonful will often prevent an attack of chills and fever; and while operating so effectually as a palliative, its permanency is equally reliable, and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians with the most signal success. In all climates where bilious and remittent fevers prevail, this remedy will be found invaluable, and no person traveling through, or residing in infected districts, should be without it.

Read the following Testimony.
BROOKLYN, N. Y., Aug. 25, 1853.

Messrs. A. B. & D. SANDS—Gentlemen: Having been the past year severely afflicted with Fever and Ague, and living in a district where I have been constantly exposed to repeated attacks, I tried the most approved remedies for the cure of the complaint, and among them took four bottles of India Cholagogue, without producing anything but a partial relief. By the advice of a friend, I was induced to try the Peruvian Febrifuge and am happy to say the very first dose did me much good, and less than one bottle entirely broke up the chills, restored my appetite, regulated my bowels, and effected an entire cure. It also cured one of my children, affected the same as myself, and I have enough left to cure two or three more. A desire to relieve those suffering, as I have done, alone induces me to make the above statement. Yours, very truly,
EDWARD MEHER.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-5 3m.

S. P. Ruggles' Power Press Manufacturing Co.
[Incorporated February 8, 1854.]

THE above named company having purchased of the well known inventor, S. P. Ruggles, Esq., his Patents connected with the Printing Business, are now manufacturing under Mr. Ruggles' immediate superintendence, the following machines, viz.:

	Size of Form in Inches.
Half Sheet Combination Engine	18 by 12
Quarto Sheet Combination Engine	12½ by 9
Half Sheet Cap Job Rotary	10½ by 7½
Card and Bill Head Rotary	7 by 4½
Diamond Rotary Card Press	4½ by 3
Circular and Hat-tip Hand Press	8 by 6
Embossing Press	18 by 10
Cast Iron Imposing Table	26 by 22
Shaving Machine, shaves	27 by 16
Paper Cutter	cuts 27
Card Cutter, Improved	cuts 25
Bookbinders' Rotary Shears	cuts 25
" " larger size in proportion	

These presses are considered by the Job Printers as the best adapted to their wants of any machines ever manufactured.

All orders addressed to their agent, M. B. BIGELOW, 152 Washington street, Boston, Mass., will be promptly attended to.

Mr. Ruggles has also sold to the CUTTING MACHINE MANUFACTURING CO., his Patent ROTATING SHEARS, for cutting [illegible] iron, copper, [illegible] and boiler plates, and all other metals [illegible]. These cutters are a new process for cutting metals, and are intended to supersede all other machines for that purpose.

Varieties.

A New Haven paper, deserihing the localities of three prominent institutions of that city, says: The medical collegc is on the road to the cemetery; the divinity college is on the road to the poor house, and the law school on the road to the jail.

A little girl at school read thus: "The widow lived on a small *limbacy* left her by a relative." "What did you call that word?" asked the teacher; "the word is *legacy*, not *limbacy*." "But, Miss Johnson," said the little girl, "Pa says I must say *limb*, not *leg*."

Out in his Arithmetic.—The Rcv. Dr. Brace, in speaking of the Rev. Timothy Edwards, an old time clergyman of Connecticut, says, that having had ten daughters, each six feet high, he was the owner of sixty feet of daughters. The parson's aritbmetic is wrong. Every miss is as good as a mile—the possessions of the Rev. Mr. Edwards comprised sixty miles of daughters. Thus abundantly blessed, the father may consider himself happy in a great degree (geographical.)—*N. Y. Picayune.*

A Sponge-Bath.—Kendall, of the New Orleans Picayune, relates the following, which occurred in his presencc, lately, at Beden, in Germany: "At this juncture we were joined by an English party, when the subjeet-matter brought under discussion was bathing. 'I takc a eold sponge bath every morning when at home,' said John Bull. 'So do I,' retorted Brother Jonathan. 'Winter and summer,' continued the Englishman. 'My system exactly,' responded the Yankec. 'Is your weather and water cold?' queried John Bull. 'Right chilly,' continued Jonathan. 'How cold?' continued John. 'So cold that tho water all freczes as I pour it down my back, and rattles upon the floor in the shape of hail!' responded the Yankee, with the same cunning twinkle of the eye. 'Were you in the next room to me in America,' he continued, 'and could hear me as I am taking my sponge-bath of a cold winter's morning, you would think I was pouring dry beans down my back.' The Englishman shrugged his shoulders, as with a chill, and marvelled."

The Right Man for the Right Place.—There is not a business of any importance which does not reqnire an exact method, vigilant observation, prompt execution, and a thorough oversight, as well as an entire control, over all the agents and instruments employed. Whoever undertakes to manage a farm, to sail a ship, to conduct a school, or even to keep a shop, without these qualifications, soon and deservedly brings his work to an unprofitable and inglorious end. Our readers may easily supply for theoselves the sort of mishaps which may be certain to occur, soon or late, and bring every thing to a standstill. The farmer may be a gentleman, the captain a good fellow, the schoolmaster a scholar, and the shop-keeper an honest man, but if they have not all the qualities we havo mentioned, and something more, the farm stock will soon be sold, the ship wrecked, the school deserted, and the shop closed. But, of all affairs, that which frotu the nature of the case most requires the largest sharc of these qualities is the conduct of a war. When nation meets nation at the fellest issues, to hurl at one another the accumulated wrath and preparation of centuries—when all the wealth, all the physical strength, the keenest wit, and the most fiery energy of vast empires are aroused and directed to the purpose of mutual destruction, it is ridiculous to imagine that the work is to be done slackly and negligently, softly and sweetly. —*London Times.*

PRINCE'S PROTEAN FOUNTAIN PEN.

[PATENTED JAN. 23, 1855.]

T. G. Stearns, General Agent, 271 Broadway,

Corner of Chambers street, N. Y.

Advantages.—An incorrodible and durable ink reservoir, made of Protean, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time. A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material. Its atructure is simple, and not liable to get out of order.

Direc tons.—To fill tho reservoir with the Piston, remnve the cap by turning it like a screw, insert the pen in the ink half an inch or more, drew up the pistou, then with the thumb and finger on the lower part of the pistoo, draw it up tight into the head of the tube that it may neither move oor allow any pressure o the air. Wipe tho pen with a soft cloth or paper after filling and whenever the cap is removed. The pistou is not to be pushed down until the ink is entirely exhuuated. To push it down pince the thumb and the finger just above the tube, that the pi-ton may not be broken. Put the cap on light ly when the pen is not in nse, to preserve the lnk from drying; and screw it hoine to its shoulder when carried in the pocket.

To fill the reservoir by suction, (the mode adapted to pocket peop,) loosen the small screw, at the upper end, but do not take it out; insert the pen in ink, as above; apply the lips to tho small screw, exhaust the air by suction, and while the pen remains in the ink, turn the screw until it is tight. Or, loosen the screw, insert the tube in a bo tle of lnk, let it remain until the lnk has found its level in the tube, then turn the screw until it is tight, and the pen is ready for u-e.

Tho suction pens should be carried in the pocket th the cap upwords, the piston pens with the c..a -owowards.—

Use good ink, free from sediinen ; Headley & Field's American Fluid, also Bryan & Wilc n's, and Arould's Fluid Ink, recommended to the public, as they will copy. v4-53m

Irving's Life of Washington.

The first editiou of this important work will be in three handsome volumes, octovo, pica type, with portraits and plans. This edition is *published by subscription only.* Price two dollars per volume, in cloth.

The first volume is now ready, ond will be supplied on application, or sent, *post-paid*, to ony part of the United States, within 3 000 miles, on receipt of $2. Subscribers in California, Oregon, &c., supplied, post-paid, for $2 50.

Now ready and for sale at the SACRAMENTO POTTERY, on J street, near Sutter's Fort, a large assortment of Plain and Fancy Flower Pots; Butter, Preserve, Bread and Cak Jars, with covers; Cream Pots, Churns, Milk Pans, Jugs and Stovepipe Safes, of superior quality; with everything else in the line. Wares made to order. Dealers are particularly solicited to call and purchase. Orders to be left at the Pottery, or No. 264 J street.

v3-2 CHARLES TAYLOR, Agent.

AGRICULTURAL, &c.

Important to Millers and Farmers.

The undersigned having discovered a remedy for the injury to wheat arising from Smut, and a plan of renovating the same, has secured by a "Patent Right," his title to the same.

From the experiments made by experienced millers, the most satisfactory results have been achieved. From well attested trials and repeated proofs of the capabilities of its power to clean the smut from the wheat, it has been ascertained that the most perfect purification takes place in the wheat, while at the same time a large saving of time, labor and cost accrues to the miller, and the flour is as pure and white as from the finest wheat.

Farmers who have crops of wheat, now unharvested, may yet save them, for they can easily be assured that their grain can be restored and the value saved to them.

Licences, with all particulars for the use of this Patent Right, can be obtained at the warehouse of the subscriber, on Clay street, between Drum and East, San Francisco.

ALBANY AGRICULTURAL WORKS,

ON HAMILTON, LIBERTY AND UNION STREETS;

WAREHOUSE AND SEED STORE,

No. 52 State Street, Albany, N. Y.

The Proprietors of the above-named establishment being the sole owners and manufacturers of

EMERY'S PATENT HORSE POWER, &c.,

☞ ALL ARRANGEMENTS WITH OTHER PARTIES FOR THEIR MANUFACTURE HAVING EXPIRED ☜

have formed a new Copartnership, under the firm name of

EMERY BROTHERS,

And will continue the manufacture and sale of AGRICULTURAL IMPLEMENTS and MACHINERY, as heretofore, at the old stands of EMERY & CO. By this arrangement the united efforts, and interest of the Brothers, long known to the public, are secured, and no exertions will be spared to meet the wishes of those dealing in and using the class of implements they manufacture—their leading branch being the manufacture of the justly celebrated

Emery's Patent Changeable Geared Railroad Horse Powers,

with the machines to be propelled by it, as Threshing Machines, Saw Mills, and Machinery generally.

These Powers having been submitted repeatedly to the most severe tests and trials to determine their relative merit and utility with those of every known manufacturer, have without exception been awarded the highest prizes for superiority—among which were the following:

N. Y. STATE AGRIC'L SOCIETY, 1854, 1853, 1852, 1851, 1850	MARYLAND STATE AGRICULTURAL SOCIETY, 1853
OHIO STATE BOARD OF AGRICUL., 1854, 1853, 1852, 1851	MISSOURI STATE AGRICULTURAL SOCIETY, 1851
MICHIGAN STATE AGRICUL'L SOCIETY, 1853, 1852, 1851	AMERICAN INSTITUTE, 1852, 1851
INDIANA STATE AGRICULTURAL SOCIETY, 1853	NEW YORK CRYSTAL PALACE, 1853
ILLINOIS STATE AGRICULTURAL SOCIETY, 1853	CANADA PROVINCIAL SOCIETY, 1852, 1851
PENNSYLVANIA STATE AGRICULTURAL SOCIETY, 1853	CONNECTICUT STATE AGRICULTURAL FAIR, 1854

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 224 bushels, of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both kinds of Powers, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. If the crops be extraordinarily heavy or light, greater or less results will follow.

These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by this Circulars, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and full purchase money refunded if not found acceptable to purchasers.

The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, they hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.

They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery. Implements and Seeds, which are all new and of the most approved and complete kinds extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.

The attention of a discerning public is solicited to our present stock of goods, before selecting nod purchasing the coming season.

New Patent

Force and Lifting Pump and Fire Engine Combined.

The undersigned is now manufacturing and has for sale a new PATENT PUMP, which, for utility and power, surpasses anything of the kind ever offered to the public.

For Ships, Railroad Stations, Paper Mills, Factories, and all other places where a large quantity of water is required to be raised, they are peculiarly adapted.

Its construction is double acting, throwing a continuous stream of water, at the rate of from 200 to 400 gallons per minute, (according to size) and can be used as a Lifting or Force Pump, and by the application of Hose can be operated as a Fire Engine of the most efficient kind.

It is simple, not liable to get out of order, can be operated by hand, steam or water power, and need only be seen to be appreciated.

N. HUNT,

26 Devonshire street, New York.

Also for sale—Best quality of Leater Belting and superior Shuttle Sewing Machines.

☞ Orders for the above received at this office. v4-33m.

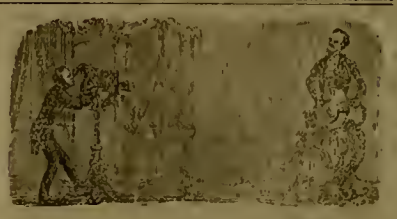
Fall and Winter Clothing!



THE STOCK OF

Summer Clothing

is fresh, and will be closed out at COST. Citizens and strangers are invited to call and examine for themselves.

Notice is also hereby given, that, in compliance with the moral sentiment of he community, and our own convictions of duty, our place of business will be closed on Sunday, feeling confident that a generous public will appreciate our motives and sustain us in our position. G. W. FLINT.

El Dorado Building, corner of J and Second streets, Sacramento. v4-8

San Francisco ahead of the World!

Ever on, an apace with the Age and Times'!

Horrah for Vance's new Daguerrean Gallery! Largest Light in the World, (over 500 feet Glass.)

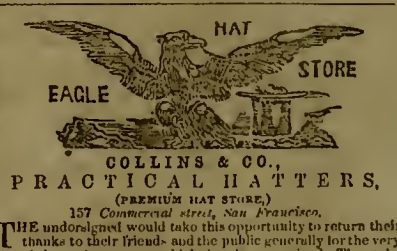
New Building, cor. Sacramento and Montgomery streets.

Why should every one go to Vance's who wishe PERFECT LIKENESSES! Because he has now the ocst arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing leoses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter tha time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.



5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect lifenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

COLLINS & CO.,

Report of the Assessor of Shasta County.

Middletown, Sept. 27, 1855.

Editors Farmer: I received your favor of the 24th, and I hasten to give you all the information that I am at this time possessed of. As I have in my travels through the county, endeavored to ascertain the agricultural increase over last year, I have taken as near as I could the statistics of '54, with those of the present year, which are as follows:

1207	acres of	Wheat	sown in '54,	crop	27,509 bush.
2862	do	Barley	do do		58,836 do
127	do	Corn	do do		2,663 do
76	do	Oats	do do		3,622 do
97	do	Potatoes	do do		7,661 do
2896	acres of	Wheat	sown in '55,	crop	65,378 bush.
2995	do	Barley	do do		74,885 do
203	do	Corn	do do		5,153 do
237	do	Oats	do do		4,950 do
142	do	Potatoes	do do		14,780 do

1059 acres of Grain over '54; 52,786 bushels over '54.

48 acres Potatoes over '54; 7119 bushels over '54.

Tons of Hay cut in '55, 1,714.

Major Redding planted half an acre of Cotton, from which he got 200 pounds of clean gined Cotton, a small sample of which I will send you with this report. The staple is short, but the Cotton is of a very fine quality, and I think if our farmers would turn their attention to the culture of Cotton, they would derive more pecuniary benefit than any crop they could raise, at the present prices of grains. There is no doubt but our climate is admirably adapted to its culture.

Three years ago there was not one fruit-bearing tree in the county. At present there are about 50 peach trees that have borne fruit this year. The following is the number of trees at present in the county: Apricots 84, apples 1573, peaches 3247, pears 263, plum 65, Cherry 35, fig 3, almond 26, quince 102, olive 3, grape vines 5447. The average ages of the above trees are 1 1-2 years.

Amount of live stock—number of horses 790, mules 1037, jacks 55, cows 837, calves 1023, oxen 1180, sheep 170, goats 15, swine 3717.

Value of poultry, $[illegible]. Value of animals slaughtered, $[illegible].

We have at this time twelve saw mills in active operation, the original cost of which was $[illegible]. Expenses of running, per day, $[illegible]. They saw about 24[illegible] feet per day. The average [illegible] per M. There are also two [illegible] the original cost of [illegible] was $[illegible]. [illegible] of cuts [illegible] horse power. Expenses of running per month $[illegible]. They have six runs of stones, making [illegible] per month.

[illegible] are two [illegible] Major Redding's [illegible] and Jackass. The latter [illegible] Washington mill crushes 180 tons per month; cost of running, per month, $1680; and the yield per month $5400.

There is one Artesian well on Major Redding's Ranch, that has been partly completed. At present it is 93 1-2 feet deep, and has 52 feet of [illegible]. The bore of the well is 6 inches. The following are the apparent stratas that have been gone through, viz: Red clay 2 feet, gravel and boulders intermixed with red clay 17 feet, white clay 3 feet, hard sandstone 3 feet, white clay 5 feet, alternate layers of soft sandstone and clay 15 feet, white clay 2 1-2 feet, hard sandstone 2 1-2 feet, white clay 14 feet, washed sand 1 1-2 feet, white clay 3 feet, white clay intermixed with sand 1 1-2 feet, gravel 2 feet.

As for manufactures, our county is like all of the northern ones. With the exception of the mills and brewery we have none but the ordinary mechanical arts among us at present.

At present there have been no other metals found in this county but *gold*, and this portion of the county has labored under great disadvantages, on account of the scarcity of water, but I am happy to state that Mr. J. D. Smith, a gentleman of great energy and enterprise, has nearly completed a large canal, about thirty-six miles long, conducting the waters of Clear Creek to Middletown, Horsetown, and Jackass Flat, covering one of the best mining regions in Northern California. The water will be in about the last of October. This ditch will bring an area of 50 or 60 square miles of $4 diggings, which without this ditch could never be worked.

This is one of the many questions I should like to ask you, and as time is pressing, I will ask but that: The *smut* in this county has destroyed a number of acres of wheat, as it has in different parts of the State, and I have been asked a great many times the cause of it, by a great many farmers, and being unable to give a satisfactory answer—in fact I cannot, for it operates so singular here; farmers who obtained and planted the same seed on their farms, some would have it blasted by the smut, while others would have none at all in their wheat, and in many cases their fields would join, plowed at the same time, sown with the same seed, and the same soil—if you can give us the reasons, and a preventive, you will confer a favor on all farmers.

I do not know of any more at present that would be of interest to you gentlemen.

I am, very respectfully, yours, &c.,
Wm. S. Hughes,
Assessor of Shasta county.

Santa Clara County.

Report of J. H. Moore, Assessor of Santa Clara County.

The quantity of land under cultivation in this county amounts to about 50,000 acres. About 25,973 acres of which is in the following products:

	No. of Acres.	Yield in bushels
Wheat,	20[illegible]	24[illegible]
Barley,	3[illegible]	75[illegible]
Oats,	2[illegible]	6[illegible]
Potatoes,	3[illegible]	[illegible]
Rye,	75	1,875
Buckwheat, some 20 acres, supposed to yield [illegible] bushels per acre.		4[illegible]

Beans.—Some 200 acres have been planted, but the most part have perished for want of moisture and from the continued dry and hot weather in May and June.

Onions.—Number of acres 100, bushels [illegible]. Turnips, beets, cabbage, pumpkins, carrots and almost all kinds of vegetables are raised, but mostly for home consumption.

Fruit Trees.—There are about 12[illegible] set out, mostly young, from 1 to 5 years old; comprising many varieties of apple, pear, peach, plum, cherry, quince apricot, &c. A [illegible] of this number have commenced bearing. And in addition to the above number of fruit trees, there are about [illegible] pear trees that have been [illegible] many years; for [illegible] the trees of the mission [illegible] Santa Clara; also the [illegible] of San [illegible].

Vineyards.—In addition to the orchards [illegible] there are [illegible] vineyards, containing [illegible] vines, in the aggregate [illegible].

Cattle.—Number of American cows [illegible]50, oxen 1921, yearlings 2163, calves 3165, Spanish cattle 9638; total number of cattle, 20,637.

The number of sheep is 10,000; goats 925.

The number of hogs cannot be correctly ascertained, but suppose the number to be about 15,000.

The number of gentle horses, American and Spanish, is 2900; wild California horses, 1750; total, 7650.

There are 433 mules; 73 jacks and jenneys.

The number of artesian wells is 63; depth ranges from 40 to 300 feet.

Of flouring mills there are 7; 17 run of stones, capable of making 500 barrels of flour daily.

The number of saw mills is 10; the kind of lumber sawed mostly redwood and fir. The lumber business is not very profitable, I should judge, from the fact that all who have been in the business any length of time have failed.

The New Almaden quicksilver mine, situate in the the Sierra de Santa Cruz, about twelve miles south of San Jose, is the richest of any mine of the kind in the known world.

The number of common schools organized in this county is 17; private schools 2; seminaries 3; colleges 2; universities 1.

Whole number of pupils taught in common schools 610, private schools 63, seminaries 160, colleges 300, university 80; aggregate number of pupils taught 1213.

Number of citizens liable to perform military service 1532.

Alameda County.

Report of the Assessor of Alameda County to the Surveyor General.

There were in the county 20,000 acres of wheat, yielding 460,000 bushels, and 1978 acres destroyed; barley 13,704 acres, 753,720 bushels; oats 9637 acres, 481,850 bushels; rye 15 acres, 375 bushels; buckwheat 176 acres, 1,700 bushels; corn used green 412 acres, 16,480 bushels; potatoes 4515 acres, 338,450 bushels; tomatoes 27 acres, 674 tons fruit; strawberries 27 acres, 40,500 pounds of fruit. The following additional acres of produce are also given: hay 2740, beans 895, cabbage 206, peas 1-5, onions 19, cucumbers 80, turnips 69, beets 45, carrots 20, garden vegetables 600, apple orchards 229, peach 72, vineyards 34, nurseries 92.

The following is given as the number of fruit trees: apple 19,670, peach 89[illegible], plum 3[illegible], pear 4855, cherry 4117, quince 1728, apricot 2906, nectarine 800, fig 140, currants 1610, grape vines 55,180, and about 3000 ornamental trees.

Among the products of the county were 134,390 pounds butter, 100,000 pounds cheese 24,918 pounds wool, 78,682 dozen hens eggs, 5[illegible] dozen turkey eggs, and 157 dozen duck eggs.

The live stock consists of 2,544 horses, 128 colts 945 mules 5 jacks 3462 cows 2[illegible] calves, 11,218 beef cattle, 517 yoke oxen, 8[illegible] sheep 482 goats, 4,441 hogs, 17,447 chickens, 519 turkeys, 128 ducks, and 170 geese.

There are in the county three flouring mills two driven by steam and one by water power, with an aggregate of ten run of stone and a capacity of [illegible] barrels.

Napa County.

The following report from the Assessor of this county shows that were there [illegible] put in Napa county 11[illegible] acres of wheat, 1784 acres of barley, 12[illegible] 77[illegible] acres of corn, 20[illegible] buckwheat, 72[illegible] potatoes, 41 [illegible] 47 [illegible], and 10 [illegible] estimated at 12 and the [illegible] the acres. The [illegible] are greatly [illegible] last [illegible].

In addition to the [illegible] of hay [illegible] was cut as [illegible] [illegible] [illegible] 15[illegible]. [illegible] [illegible] of [illegible] [illegible] [illegible]

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, OCTOBER 12, 1855.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

SPECIAL NOTICE.—We shall publish one thousand copies of the *Full Report of the Fair*, orations, addresses, reports of committees, awards, full and complete, corrected by the Executive Committee. In addition to this we shall strike off copies extra, which we shall have ready for the steamer of the 20th. As this will be an important and valuable Report for mailing to the States, those that desire copies will please send in their orders immediately—they will be ready at the office, on Fourth street. Price 25c.

Public Improvement.

"Better times coming."

WE have noticed the spirit of improvement springing up everywhere; scarce a city, town, or village that is not beginning to feel the impulse of returning prosperity. This is, however, more perceptible in Sacramento, Marysville, Stockton, San Jose and other cities similarly situated, and in the far inland business marts, than in the great commercial emporium itself, and this can easily be accounted for. In all these cities the masses are *permanently identified* with these places; they are their *homes*, and this coming prosperity is palpably perceived in the improvement upon and around these homes.

Now let wisdom prevail, be wise, husband the resources that flow from this returning prosperity, be not flushed as by success and victory—there may be more trials yet to be borne, and it is best to act prudently in all these great improvements; "sit down and count the cost," and these bright and beautiful clouds that now gild the firmanent will not change to darkness and storm, but like the fair heralds at sue set, they are but harbingers of a brighter morrow. Our heart rejoices when we note these "better days coming."—and we know the cause of them. The *Industry* of the country is being awakened, it is being appreciated. The depreciation of the great products of the earth has ceased, and their value is now being enhanced to a just standard. This increases the value of all property, and it calls into active employment the mechanical labor and all industrial machinery is again set in motion, "old homes" are improved, new ones built, increased comforts are provided within these homes, lands are settled and improved, this creates a demand for all the varied materials of the work, and these demands call out the genius and manufacturing skill of the country, and as the people are thus calling into action their own skill and resources, and making use of them, this interchange of skill and labor at home, instead of seeking it abroad, will always build up and make a country prosperous—*and nothing else can.* Our mines might yield an hundred millions annually, but if all this were exported, and we relied upon other countries for that which could be produced or manufactured here, there never could be permanent prosperity, and the history of the world shows it

We appreciate the miner and the mining interest as highly as any one can; we know the value of this great interest, and we keow the energy and talent displayed by these pioneer workers, these happy mountain levelers, these valley fillers, these river driers—we know they have a spirit of endurance, a genius to plan and a perseverance to execute, that will secure to them a generous portion of the wealth of these mines. And our desire is that this wealth when secured shall be used to *build up and improve our own State*, and for this reason we hold that the gold found within our own borders was designed by Providence for this purpose, as much as the material of our rich soil was intended to raise the products to feed those who shall dwell upon that soil.

The laws of nature are perfect, and the designs of Providence in perfect harmony with nature; and we have no right, no moral right, to frustrate either. The gold was placed in the hills and mountains, that when the proper time came it should be used to build up what had been for centuries the "waste places of the earth," so the soil of our broad valleys had been teeming with richness, capable of feeding the coming millions. Nor have we any more right to remove the gold out of the country and thus prevent its growth, than we have to take out the ingredients that make the earth productive, and carry them to the deserts, thus disarranging nature.

God placed the gold here to make the Homes, Workshops, Factories, Schoolhouses, Churches, Colleges; and he made the earth rich for those who were to occupy them, and when these wise orderings are observed, there will come a prosperity, happiness, and greatness never before vouchsafed to any people upon earth; for we have the *means* within our State for this greatness, this prosperity, and it is this awakening to the true sources of wealth, this cherishing Agriculture, this aiding the mechanic, the manufacturer, and the laborer, this regard for the Industry of California, that bids us see the "better days coming," and wise are they that improve it.

The State Fair.

WHATEVER fault-finders may say, relative to the State Fair of the present year; however much it may come short of what were the expectations of such persons, no candid mind can withhold the assertion that the interest shown for this Exhibition, and the attendance upon it, far exceeded the anticipations of its sanguine friends. The public mind is awakened to its importance. The *Tree* is planted; its roots have taken hold in the soil of the people's affections; the sap is circulating vigorously, and soon we shall see it blossom and mature fruit that shall bless those who gather from its waving branches, for it is indeed the Tree of a STATE'S PROSPERITY.

We have not spoken our own opinions very lavishly yet, neither have we given our own special notes, but have waited to hear others speak. We have now copious notes. We have also the opinions of many public journals, and we shall collect all and give the gist of them in a condensed form soon. The best proof of the complete success and triumph of the enterprise is that several journals that commenced finding fault with the plans and details of tha Fair, several that laid long criticisms before their readers, were obliged to award to the result a complete vindication, and to say it gave credit and honor to the State. If there was any lack of plans and deficiency in complete arrangement, it arose from want of means, the Executive being obliged to forbear in their plans, to a great degree, by reason of want of means to carry forward many details which would otherwise have been accomplished.

At the request of many members of the Society and of others deeply interested in Agriculture, we shall publish an edition of the FARMER containing the Reports of the Executive of the State Society. These Reports will be complete. The edition will also contain the oration, addresses, reports of committees, awards, &c., with full and complete statistics of great value; and as these reports will all be corrected and revised by the Executive Committee, also bearing the signatures of the several committees, complete in one sheet, it will be a valuable document, and should be forwarded to every State in the Union. This edition will be large, so as to supply societies and members fully. It is for this reason that we refrain from publishing our own reports, desiring to give preference to the Society, whose reports will be authentic documents and matters of record. Such special notices and comments as we desire to make will follow in future numbers.

THE SEBASTOPOL PEAR.—This Pear was exhibited at the State Fair, and attracted much notice. The exhibitor, G. H. Beach, Esq., of Marysville, was a great sufferer by the ravages of the grasshoppers. The loss of Messrs. Beach & Shephard must have been from $10,000 to $15,000—and we trust those who want Fruit and Ornamental Trees this fall, will not fail to remember them. Their Nursery is very extensive, and they will and can please purchasers. The following card was attached to the Pear on the table:

This Pear is not exhibited for its size, for it is but half grown; not for its beauty, for the grasshopper depredations have defaced it—but as a veteran.—the only individual survivor of about five hundred bushels, including peaches, plums, cherries and pears. Its fellows, all, without exception, fell victims to the army of grasshoppers. The siege commenced on the 15th of June, and ended by storm on the 1st of August. This individual will be retained, hermetrically sealed, as the *hero* of the great grasshopper battle of the New England Orchard, A. D., 1855.

He is the last Pear of summer left hanging alone,—
All his delicious companions are eaten and gone.

In this orchard, this season, were 3,500 bearing trees, comprising peach, pear, cherry and plum; which, when attacked by this flying army, bid fair to ripen about 500 bushels of fruit; the greater share peaches. And this Pear is the only article which withstood their ravages. The proprietors intended he should mature where he bloomed, but the people, in mass, said no; that the State Fair had a lien on him for the 25th, 26th, 27th and 28th,—and here he is in all his loveliness.

OUR CORRESPONDENTS.—We ask indulgence from those who do not find their communications in print this week. All shall soon appear.

The Revival.

WITH sincere pleasure we record the following action of the citizens of San Joaquin county, on Saturday last. This we rejoice to see, for it tells in plain terms that the great interest of the people, the *industrials*, begin to know their duty, and will do it. We copy from an able leader of the San Joaquin Republican the following sound arguments in favor of their new organization, and we hope such a spirit will prevail throughout the County that the meeting will be generally attended, and a successful issue result from their labors. We will cheerfully give publicity to all that will advance the cause. The editors say:

"The agricultural interests of San Joaquin are greater than her mining interests, and no movement is more calculated to secure their early development than the formation of a County Society. The various interests of the county will thus be canvassed by members of the society from different sections, and profitable discussions will elicit the truth upon various experiments in the science of Agriculture; and thus will this society, through its members, become the disseminator of substantial, practical knowledge.

"This is what our farmers and stock raisers most need. They want some channel through which can be conveyed to them the results of careful and enlightened experiments in their own branches of business. They want an organization of a useful character, supported and encouraged by our best men, whose object is known to be the advancement of the best interests of the country. Our position is a most advantageous one for a ready market. We are on the margin of an immense mining district, the population of which, to a great extent, receive their articles of consumption through this county. A large quantity of our agricultural products find their way to the mountains. Our proximity to the mineral regions give our farming interest an immense advantage over the more distant and southern counties.

"We want a society to increase and stimulate the exertions of our citizens in the useful branches of our prosperity. The results of a noble rivalry are always advantageous, in every community and in every branch of business. Let such a rivalry be encouraged by this society. Nature has done much for the people of San Joaquin. She has given them mines of gold, and what is far better, a rich and inexhaustible soil and an atmosphere that is unsurpassed for its purity and salubrity. Our natural advantages must be developed, and an agricultural society is the best means toward securing this end. Let those whom nature has so much assisted try to assist themselves."

The following is the action of the preliminary meeting:

AGRICULTURAL AND MECHANICAL SOCIETY. At a meeting of the citizens of San Joaquin county, held at the Court House in Stockton, yesterday, October 6th, for the purpose of organizing a County Agricultural and Mechanical Society, Madison Walthall was called to the Chair, and Dr. Chalmers appointed Secretary.

The objects of the meeting having been stated by the Chair, a motion was made and carried that a committee of twenty-three be appointed; to which on motion, the Chairman, Col. Walthall, was added, to meet and draft a Constitution and By-Laws for the government of said organization. The following gentlemen were appointed by the Chair as said committee:

Washington Trahern, I. R. Bradley, C. W. Bradford, Wm. B. Hood, S. Williams, A. Leach, Dr. E. B. Bateman, Benj. G. Weir, T. W. Lane, George Nutall, L. R. Chalmers, Mr. Birdsall, J. E. White, T. J. Keys, Austin M. Sperry, Nelson Taylor, Thos. Marshall, Wm. Biven, Wm. Gerrard, M. L. Bird, M. Walthall, J. W. Hunter, Mr. Ellison, J. B. Kennedy.

On motion, it was resolved, to adjourn this meeting until two weeks from to-day, (20th,) at 2, P. M., to receive the report of the committee.

OUR READERS will find our correspondent from Boston has furnished us with a most interesting letter this number. The sketch of the Fair Ground will give some idea of the efforts now making to awaken the right interest to our cause. Our poetic correspondents are numerous and interesting, and the poor "Wounded Heart" deserves generous sympathy. Betty Martin, it will be seen, is full of heart; none of your prudish coquets, but open, fair and generous—she is truly a heroine of the right kind. Susanna, too, she is truly welcome—as are all our fair and kind correspondents.

A SNAKESHIP SHEDDING HIS SKIN.—This process was performed at the State Society's Rooms, on Monday last. A large house snake was enclosed in a glass vase on the 9th August last, and he has been confined there since, living upon air. On Monday, sixty days from the day of his imprisonment, he cast his skin and appeared in a new and glossy robe. The day before his exchange of wardrobe, he was very spiteful and manifested his venom frequently. This is probably the first instance of thus domesticating a snake of this character, and accomplishing this object. The snake and his cast off garment can be seen at the Society's rooms.

State Agricultural Society.

Sacramento, October 8th, 1855.

AT a meeting of the Executive Committe of the State Agricultural Society, held at their Rooms, the following resolutions were passed:

Voted, That the thanks of this Society be tendered to Hon. C. F. Hagerdon, Bavarian Consul at Philadelphia, for Journals of the Agricultural Society of Bavaria, fourteen in number; and for his courtesy in opening a correspondence for the benefit of this Society.

Voted, That the thanks of this Society be also tendered to J. C. Holmes, Esq., Secretary of Michigae State Agricultural Society, for the valuable Reports of that Society, five bound volumes.

To J. A. Beckwith, Esq., Secretary Vermont State Agricultural Society, for valuable Documents received from him.

To —— Jones, Esq., of Georgia, for a package of his fine Peas, in variety; these will be experimented upon, and full report made of same. Courtesies of this kind from citizens of one State to those of another, confer great good, and will be duly appreciated.

To James Gould, Esq., of Boston, for package of Muriate of Lime. This will also be thoroughly tested and reported upon.

Voted, thanks to C. Mason, Esq., of Patent Office, for valuable parcels of Seeds.

Voted, the thanks of this Society be tendered to J. Q. A. Warren, Esq., of Boston, for his endeavors to benefit this society, through whom the above donations were received and forwarded.

A copy of Records.

O. C. WHEELER, Secretary.

THANKS AGAIN.—We would tender our thanks to Messrs. Wells, Fargo & Co., to the Pacific Express Co., and to their gentlemanly messengers and attaches, for many valuable favors to us editorially and officially during the time of the Fair; especially to Messrs. Wells, Fargo & Co., for their very liberal offer to transmit a large package of samples of the products of our noble State to the United States Exhibition at Boston, and to the American Institute at New York—these packages were transmitted last steamer. Such acts deserve and will receive the approbation of every citizen who feels an interest in the prosperity of our State.

We accord acknowledgments to the Lower Bay State Mills of this city, for their kind donation of the two sacks of Premium Flour; to J. R. Johnson, Esq., for samples of his superior Tobacco; and to Dr. Brown, for same; to Col. L. Sanders, for large squashes—all the growth of Sacramento. To several friends for their samples of various Grains. Those gifts all being valuable at this time, as we are making contributions to various societies East and abroad, to show our products.

Those who have samples of grains, grasses, seeds of any products, large potatoes, (we want the monsters,) or any curious specimens,—we desire them for the purpose of scattering abroad, and due credit shall be given to the growers and their products.

Received from W. C. Reed, Esq., of San Francisco, by the kindness of H. C. Beals, Esq., very handsome samples of "Cotton Batting," made in Japan, from native cotton. Also, "Japan Hemp," a very superior article; pronounced better and stronger than the far-famed Russian. These valuable samples can be seen at the Society's Rooms. To both gentlemen we return sincere thanks.

DREXEL, SATHEN & CHURCH.—This well established banking and exchange house have opened a branch of their house in this city. One of the finest locations has been selected by them as a banking house, on the corner of Third and J streets, and their establishment is neat and beautiful and in keeping with the progress of the house. They have nobly passed the ordeal trial, and are now on the road to fame and prosperity, being the largest foreign exchange dealers and doing the most extensive business as bankers in our State. They deserve success.

A GREAT GEOLOGICAL DISCOVERY.—We have now lying upon our table, says the editor of the Oregon Argus, a fossilized mammoth grinder of the Mastodon Maximus, which was found in a small branch at Canemah, a few days since, by Mr. Samuel K. Barlow. The grinder was perfect when discovered, and weighed three pounds. No less than seven species of the Mastodon have been discovered in different parts of the world,—three in Europe, two in South America, one in India, and one in the United States. That which has been found in the United States is the largest specimen the world has ever produced, and has consequently received the name of M. Maximus. In the Museum of Mr. Peale, in Philadelphia, there is a skeleton put up, which measures fifteen feet in length, and eleven feet in height. The bones of the Mastodon have never been discovered farther east than Burlingtoe, Connecticut, while vast numbers of them have been found in the neighborhood of Big Bone Lick, of Kentucky. We have now the pleasure of announcing the first discovery of this kind on the Pacific coast, by our old friend, S. K. Barlow, who is known all over the Union as the old pioneer who cut the first wagon road through the Cascade Mountains.

Our Literary Department.

BOSTON, Sep. 1, 1855.

"Land, Labor and Gold," or two years in Victoria, by Wm. Howitt. Just published in two neat volumes by Tickuor & Fields.

The world-wide reputation of this talented author, is enough to secure attention to this new work. It lifts the veil from a once unknown region of country, and spreads out to view the geographical features, scenery, &c., and the objects of leading interest. Australia is destined to become one of the greatest and most flourishing countries in the world, and it depends alone on man, whether her progress be slow or rapid. Gold, unquestionably will still be found over thousands of square miles which hitherto are unknown or untouched, and new discoveries will open up immense regions, where the grazier, the agriculturist and the miner will alike find fresh treasures and fresh homes.

"My Bondage and Freedom," by Frederick Douglass, in one volume, illustrated, with an introduction by Dr. James McCune Smith:

This work is divided in two parts—life as a slave, and life as a freeman—and the reader's attention is invited to facts, terrible though they be, yet nevertheless facts. It is the work of an American slave, and should excite American sympathy. There is not a fictitious name or place in the whole volume, everything being literally given and every transaction having actually transpired. It tells the earnest startling truth, and every free press chants its praise. The book is a startlingly interesting one, and shows how Mr. Douglass raised himself by his own efforts, to the highest position in society. "Who would be free, themselves must strike the blow." His style of writing and speaking is most remarkable, and is to some an intellectual puzzle. The introduction is well worth reading, showing the many triumps of his genius in public and private life. *Published by Miller, Orton & Co., 10 Park Row, New York.*

"Archy Moore," the White slave, by Richard Hildreth, with a new introduction:

This book has been pronounced a most extraordinary work. The introduction is a most ingenious one, and gives the ideas and experience of the writer, while living at the south.

It is written with unusual vigor and power of style, and exhibits in a most triking view the abuses of domestic servitude; some of its details are of a deeply interesting character, and would create a dangerous excitement in the old times. The book was originally published in 1836, in two small volumes, and the author was obliged to have the book printed at his own expense, as no publisher dared put his name to it. The first edition was disposed of in a few months, but hardly a newspaper took any notice of it, owing to the disturbed times. A new one is now published, and it is hoped that the book may be found worthy the attention of the reading community. It will produce a sensation. Published by Miller, Orton & Co., Park Row, New York.

"Youatt on the structure and the diseases of the Horse, with their remedies; also practical rules to buyers, breeders, breakers, smiths, &c. Notes by W. C. Spooner, with an account of the breeds in the United States. Compiled by Henry S. Randall. With numerous illustrations:"

This is one of the most valuable and popular works in this country. It has a wider circulation than any other veterinary work, and but for the size of the work would have obtained a still wider circulation. Most of Mr. Spooner's remarks in supplement since 1849, have been added to this work, in the convenient form of notes, several of which will be found valuable. The illustrations are complete in execution and are decidedly superior to those of the late English editions. The book is a valuable one to every agriculturist, and should be carefully perused by every one interested in this important department of American Agriculture. Published by Miller, Orton & Co., New York, and Auburn—to whom all orders should be addressed—and received in Boston by Phillpps, Sampson & Co.

"Agnes De Vere, or the Wife's Revenge," a drama in three acts, by Buckstone; and "Shandy Maguire, or the Bold Boy of the Mountain," by J. Pilgrim, a drama founded on events which occurred in the north of Ireland—from No's 23 and 21 of the series of plays published by Wm. V. Spencer, Washington street, Boston. "Wild Oats" will be the next number, making in all 24 numbers already published.

C. M. Saxton, Agricultural Book Publisher, New York, has just issued, with numerous illustrations, a neat 12mo. volume of 102 pages, "The Rabbit Fancier;" a treatise upon the breeding, rearing and feeding of Rabbits, with directions for their general management, and recipes for cooking and dressing for the table. By C. N. Bement, author of "The American Poulterer's Companion." This is a useful and reliable work, and is of permanent use, to those for whom it is designed. All orders addressed to C. M. Saxton & Co. New York, will be promptly filled, and his publications can also be had at Redding & Co's, Boston.

"Habits and Men," with remnants of record touching the Makers of Both, by Dr. Doran, is the title of a delightful volume, just published by J. S. Redfield, New York. It is full of anecdote, and antiquarian lore, sketching some of the fashions of olden time, and histories of distinguished beaux and tailors who figured in the fashions of those days. The author is a great observer of men, and their habits of conduct and dress, is a fund of good humor, and delightful gossip, love matches and anecdotes, in the volume, as well as a great variety of characters, which renders the book equally interesting and attractive. Received in Boston by Messrs. Jewett & Co.

Gould & Lincoln, Boston, have sent us several valuable and interesting works, to which we would call especial attention:

"*Thesaurus of English Words and Phrases*" so classified and arranged as to facilitate the expression of ideas, and assist in literary composition, by Peter Mark Roget, late secretary of the Royal Society:

—This is a work of great merit, admirably adapted as a text book for colleges, and of high importance to every American scholar. All the words of the English language are classified and arranged so as to facilitate the practice of composition. The purpose of an ordinary dictionary is to explain the meaning of words, while the object of this is to collect all the words, by which any given idea may be expressed. Every writer and speaker should own a copy of this invaluable work, as it is one of the most important aids to composition that has ever been produced.

"The Christian Life," social and individual, by Peter Bayne, M. A. 1 vol. book, 500 pages.

—A large portion of the volume consists of two series of Biographical Sketches, to which attention is the truth and reality of [illegible]. These are preceded and followed by [illegible] upon the truth and [illegible] and brief [illegible] the [illegible] The [illegible] 2 [illegible] subject to [illegible] power, upon the individual and [illegible] is a broadside against the pantheism of Carlyle. Yet the book is marked for great candor. The book is one of the very best that Gould & Lincoln have ever presented to the public.

"The Story of the Campaign," a complete narrative of the War in Russia, by Maj. E. Bruce Hamley, 12mo. paper covers. The narrative first appeared in Blackwood's Magazine, where it attracted attention, as being the most correct account of any yet given, of the Campaign in the Crimea. It was written on the spot by an officer in the British Army, who won quite a brilliant reputation as the author of "Lady Lee's Widowhood." The style of the book is admirable, and the various scenes are fully depicted as if upon canvas. It is expected that the history of future operations will follow, and be issued by the publishers uniform with this volume.

"Ella," or turning over a new leaf, by Walter Ainwell, 16mo. cloth, gilt. This is the third volume in rotation of a new series of volumes called the "Ainwell Stories," illustrative of youthful character, combined with amusement—each volume to be complete in itself. But the series will be connected by events, localities, &c. Published by Gould & Lincoln, Boston.

THE ALTA CALIFORNIA.—Another change, another ownership, another captain and crew, another flag unfurled, and this old and favorite journal is again filling her sails to catch the breeze of public favor. We copy with much pleasure the following "platform," which, if closely observed by such an editorial corps as now assumes the direction, there can be no question of success. Messrs. Pickering, Fitch & Co., the new editors and proprietors, speak thus:

"We have taken charge of this paper, for no other purpose but to make it a faithful reflex of California affairs, and to publish such opinions from time to time as we believe in all honesty will conduce to the permanent prosperity of this city and State."

Never was there a more honorable or brighter prospect opened to a journal than the one now before this paper, for so few journals are, or *dare* be, *independent*, that it is a rare thing to see this carried out. We hope and trust this will be accomplished, so we can welcome a journal that aims more to the prosperity of the country and the advance of great and true principles, "genuine human progress," than to any party, sect, or condition of men or man's selfishness. We welcome these gentlemen back to their old familiar duties and wish them complete success.

THE Wisconsin people are proud of their fertile State. The St. Anthony Express says that a cabbage leaf twenty-six inches long and twenty-four inches wide, raised in Minneapolis, Wisconsin, was exhibited to the editor of that paper a few days ago.

TALL CORN.—The editor of the Hartford Courant tells some great corn stories. He mentions the names of several Hartford gentlemen who have raised corn fourteen feet and eight inches in hight.

The above paragraphs are from our Eastern exchanges. We wish our Eastern friends would come to our State Fair and see the tall corn and large cabbages; they would open their eyes. When we cut our corn stalks we do it from the *saddle*; that's the only way we can reach the corn.

FAIR AND CATTLE SHOW.—We notice by our exchanges that there is to be a Fair and Cattle Show at Santa Rosa, Sonoma county, on the 18th of this month. As there is no paper published in Sonoma, and desirous to make the matter known as widely as possible, we give the notice, hoping the friends will turn out promptly and give it their ready aid and countenance.

SMUT IN WHEAT.—The inquiries of the Assessor of Shasta in the name of many cultivators, shall receive our early attention. We shall endeavor to give all the aid to this subject in our power, before the planting season.

NEW ADVERTISEMENTS.—Please look at the new advertisement columns—many important notices appear this week.

THE origin of Broom Corn as a cultivated plant in the United States, is attributed to Dr. Franklin. It is a native of India. Franklin saw an imported whisk of corn in the possession of a lady in Philadelphia, and while examining it as a curiosity, found a seed which he planted, and from this small beginning arose this valuable product of industry in the United States. In the same manner England and America are indebted for the weeping willow to the poet Pope—who finding a green stick in a basket of figs sent to him as a present from Turkey, stuck it in his garden at Twickenham and thence propagated this beautiful tree.

MRS. KIDDER'S DYSENTERY CORDIAL.—In these days of quackery and humbug when every petty apothecary puts forth his [illegible] and remarkable cures [illegible] know that there are [illegible] and [illegible] Kidder's [illegible] —[illegible] trouble [illegible] have [illegible] power, upon the individual and [illegible] is a broadside [illegible] helped her to a fortune, which she well deserves.

The Grain Market of California.

We desire to call the attention of the Grain growers of this State to the present value of the crop of 1855. From midsummer last we have steadily advised our grain growers to *hold their own grain*. We earnestly believed, from the facts then in our possession, that the advance they would realize upon their incoming crop would help them most materially, and we desired that they should be the parties that should be the gainers, and not speculators.

If there is a class of men who deserve to be benefitted by the natural rise upon the crops of the country, it is those who labor to raise them; and we, believing this, have endeavored to speak firmly, but knowingly. We have never so spoken as to give undue excitement or raise fears, so as to bring in foreign grain, but to caution those interested not to part with the means that would so greatly benefit them. We have often asserted that wheat would reach 3 1-2c. in October, and a higher figure at later dates, and we believe our estimates have been fully realized for the present month, as will be perceived by data; and we as fully believe that the facts which appear now relative to the quantity needed abroad and the demand here with every phase of our markets, give strong assurance that the highest point is not yet attained by 25 per cent. The Reports from the Assessors, which we are now receiving of the condition of each county, should be carefully reviewed—they are important documents.

We publish below the very able and carefully revised report of Messrs. Geo. G. Pope & Co., which has been sent us by that house. This document should be carefully perused; it commends itself to every grain grower's interest. It will be seen that flour and grain are leaving our market in cargoes, and this will continue so long as there is a prospect of a profit. Oregon may furnish her quota—even of 100,000 bbls.—but will it equal the shipment? From whence comes the deficit for California? Will shippers East send flour and grain *to* California, while cargoes are arriving in their own ports *from* California? Will they not rather ship to Valparaiso, or Europe, where prices range much higher?

Messrs. Pope & Co., under date of Oct. 4, say to us—

The great importance of the advices anticipated per steamer at hand, 3d inst., and the anxiety with which they were awaited, induced us to delay our circular of the present month, that our friends might have the benefit of the latest intelligence.

It gives us great pleasure to present so encouraging a picture of the prospect before them.

We desire to call your especial attention to our table of exports of Flour and Grain, from which it will observed, that they have been very large, with a prospect of being continued; and that even Chili, from whom we have heretofore received heavy supplies of breadstuffs, is now looking to us to fill a large deficit in her own market, consequent upon excessive shipments to Australia. It should not be forgotten that our neighbors in Oregon have an abundant supply of Grain, which is as it were at our door, and those best conversant with the subject estimate the amount we shall receive from that source at about equal to 100 000 bbls of Flour.

In the Atlantic States a most abundant harvest has caused a rapid and material reduction of rates and unless checked by a heavy European demand, prices there must recede to low figures.

The fine clippers Kit Carson and Starr King have sailed for Australia, with full cargoes of Flour and Grain, and the Alma has just been put up for the same market with a large proportion of her cargo engaged. It is also stated that a fine clipper will be placed in the berth in a few days.

Though we have been at much trouble, by personal application to the [illegible] for correct statistics of the Agricultural products, we have been unable to make a full report this month, but will be next month to present a correct summary of the amount of Grain and Produce of each county in our State.

FLOUR—At the [illegible] was in moderate demand [illegible] made from day to day, up to [illegible] when the arrival of the mail steamer with advices [illegible] price [illegible] other changed hands at an advance [illegible]

Exhibition Grounds of the California State Agricultural Society.

We present our readers with a view of the grounds where was held the Exhibition of the Society, in the various departments of Equestrian Exhibition, Races, and the Stock of California. The engraving was executed by Messrs. Barber & Baker, and the view was taken before the whole work was finished, and only represents the grounds during some experimental training of the horses for the Exhibition. The length of the stock pens was 600 feet, 200 feet across the ends, thus forming half a hollow square, leaving an opening of 200 feet at the inner entrance, and giving 1200 feet of pens, the whole covered by awnings to shield from the sun. An octagon *corral* of 125 feet was erected in the front, opposite the hollow square, for the wild cattle used in the "Lassoing" exercises.

These grounds are known as the "Louisiana Race Track." They were not what the Executive Committee would have desired, but the best that could be had, and the circumstances of the Society warrant. And we feel confident that when it is remembered that so much indifference to the subject of Agriculture as has been felt, when we announce that some 6,000 or 7,000 persons visited the grounds, such a result must be pronounced a Triumph.

EXHIBITION GROUNDS OF THE CALIFORNIA STATE AGRICULTURAL SOCIETY.
(LOUISIANA RACE COURSE,) NEAR SACRAMENTO, SEPT. 26, AND 27, 1855.

Our Boston Correspondence.

LETTER NO. 6.

BOSTON, August 25, 1855.

MESSRS. EDITORS.—The advent of August seems to have somewhat paralyzed matters. July was dull enough; but August more so. Many are rusticating, and others are waiting for the tide to change.

As to the crops, much can be said, and much has been said. I have sent you from time to time, the news of the wonderful crops, coming in from all quarters of the country. Since my last letter much damage has been done in various portions of the country by the late rains. J. C. Holmes, Esq., Secretary Michigan State Agricultural Society, writes: "Our wheat crop in the southern part of the State was somewhat damaged by the rains, that commenced just as the wheat was ready to harvest, and continued until the wheat began to grow. In the northern part of the State the wheat is but little, if any, injured. Corn, buckwheat, and potatoes, promise well."

Dates of Aug. 17, are at hand from St. Louis, stating that a heavy fall of rain has injured the wheat and other grains prodigiously, and that the rain was still falling with unabated violence. The river was higher than at any previous time this season.

From Vermont my accounts are of a different nature, and state that the prospects of a bountiful harvest were very favorable, notwithstanding the drouth in May and June, and the frequent rains the past month. The wheat has a fine growth. Corn has been somewhat injured by worms, but it is of full growth, and far more than the ordinary quantity will be raised. Potatoes were never better, and no complaints are heard of decay. Of apples there is a fine promise.

In Maine the crops promise a most abundant yield. The hay crop is large and well secured. Wheat promises an old fashioned crop. Oats are heavy, and many farmers have already harvested their crop, and are preparing it for market. Corn has come rapidly forward since June, and the prospect of a fair crop is very good.

In general, the present extraordinary and for many years unparalleled weather, has developed the crops at an extraordinary rate. Marvelous stories of the size of the corn are abundant, and if things go on so much longer, I fear we shall be crushed to death between some of the huge ears mentioned. Such is the immense hight of the stalks that our city friends have taken them for church steeples. Seriously, the corn is turning out magnificently, and as to potatoes, no less can be said of them. An item from a Philadelphia paper may well come in place here. "When Charles VI. had the 'little bill' for building the fortress of the Moro at Havana handed to him, he is said to have briefly glanced at the amount—nine millions of dollars—and then gravely walked to a window of the Escurial, and looked out. 'What do you look for, Sire?' inquired those around. 'For the summit of the Moro,' he solemnly replied; at such a price as this it ought certainly to be high enough to be seen at this distance."

New-York markets are profusely supplied with fruit. Peaches are selling from 25 to 85c. per basket; green gages 25 and 30c. per half peck; plums 50c. per half peck. What glorious times for the lovers of fruit. We have had sudden and extreme changes in the temperature the past week. In the morning it is oppressively warm, and the thermometer falling twenty degrees by night. During the latter part of the week they have had some heavy frosts in the country, but not severe enough to injure the vegetation.

Business in Boston was never more brisk than at present. Purchasers are here in large numbers from the West, and it is very evident that our city will have the trade of the new States of the West to a great extent. There is a large field for enterprising men in the new cities, on the great lines of travel throughout the whole region.

Messrs. Southworth & Hawes have just completed a full length portrait of Mr. Lawrence, copied from a picture taken by them in 1847, which as a work in the photographic art, is a truthful likeness to the original. The size of the copy is 12 by 16 inches. The friends of Mr. Lawrence will be pleased to know, that copies of the above, as well as others of enlarged size, can be obtained of the above celebrated artists. Messrs. Southworth & Hawes' rooms are the general resort of all who enjoy fine pictures in the photographic art, and are well worthy a visit.

The Annual Fair of the American Institute is to be held at the Crystal Palace, New York, on the 3d day of October, and is expected to be the best ever held. The managers have announced that every facility will be offered to the exhibitors for the display of their goods, and valuable premiums are offered of gold and silver medals and cups, books and diplomas. As an encouragement to the youthful talent of our country, they have set apart the sum of $500 as premiums for the productions of apprentices and minors. The whole Fair is expected to be the most brilliant ever held, and invitations are extended to persons engaged in every department of industry in every portion of the Union.

The New York Historical Society have a new fire-proof building in process of erection on Second Avenue, N. Y. The Society have been using efforts for several years to raise a fund sufficient to erect the building to preserve their large and valuable collection of books from fire. The building will be an elegant and substantial structure, and will cost about $62,000, and to be fire-proof throughout. It is expected to be finished by October, but will not probably be ready for the reception of books until spring.

The great *tragedienne*, Madam Rachel, has arrived, and the first great performance is soon to come off. A large number of gentlemen belonging to the press, had chartered a steamer to go down the bay to meet the illustrious stranger, but the English steamer arriving in the night disappointed the numerous company who were dressed for the occasion, and deprived them of the honor they had anticipated.

Among the bequests of the late Abbott Lawrence, were a donation of ten thousand dollars to the Public Library, and fifty thousand dollars to Lawrence Scientific School. The whole amount of his estate is supposed to exceed two millions.

I have to chronicle another new book Publishing House in Boston. A new firm having just commenced business, on the premises formerly occupied by Tappan & Whittemore. Mr. J. M. Whittemore, the junior partner of the above firm, Thomas Niles, Jr., for sixteen years with Ticknor & Co., and Edward H. Hall, from Phillips, Sampson & Co., represent the new firm. Having thorough experience with the book trade in all its branches, they will use their united energies and will add to the already high reputation of Boston as a market for good books. They will also carry on the stationery business in all its branches. Success attend them.

Arrangements are being rapidly completed for the great Exhibition of the U. S. Agricultural Society. Seats are being erected capable of accommodating ten thousand persons. The track for the Horse Show is to be half a mile in length. The premium list, now nearly ready, amounts to over $10,000. It is expected that it will be the most grand affair of the kind ever held in the United States. There will be a large number of Agriculturists present from every State in the Union, with their best stock, and the whole will close with a grand Agricultural Banquet. I shall send you further particulars as they come to hand, and shall also send you full reports of the Fair for the benefit of your readers.

A new suit of rooms has been recently opened in Winter street, by Messrs. Chandler & Clapp, for the sale of fine engravings and water color drawings. From the well known taste of the above gentlemen we may expect none but the best works of art, and having seen the opening display, I can bear witness of the superior collection they offer. They promise the public that they will have the best, and as they have commenced well, I trust that they may be fully successful for their endeavors to please the public by a cultivation of the arts. Every one who travels should feel a desire to know the art of sketching, that they may be enabled to preserve the outlines of a favorite spot, or an attractive piece of scenery. These opportunities are invaluable, and many will regret, when away, the loss of them. By a visit to the rooms mentioned these difficulties can be lessened, and various works are at hand, with full descriptions and directions for this most pleasing study. Let all our California friends remember the above place, on their return to Boston, and they will be fully gratified and astonished at the increase of the arts among us.

There is to be a grand Horse Exhibition at Providence, on the 11th inst., which will call together visitors from all portions of the State. Prizes are offered for the best display, and arrangements are made for a large concourse of people. Delegates from every State Society will be present, and the whole will be on the most liberal scale. A grand banquet will be held at the close of the exhibition, under Wright's mammoth Tent, which is sufficiently capacious to accommodate 3,000 persons. I shall attend the Fair, per invitation, and will send you full reports for your paper.

The weather here has been quite cold for the season, and frequent light frosts have checked vegetation considerably. In Providence it has been quite destructive, having severely injured the vegetables, corn, &c. Our extreme dry weather, and the frost of the latter month, made August an unfortunate month for the Farmers. The mail closes soon, and I must stop. In my next, you will receive reports of exhibitions, &c., and other interesting matter.

Yours, DE QUINCEY.

INGENIOUS.—The editor of the New Haven Palladium states that he has seen, with a great deal of wonder, at the store of Mr. W. T. Cannon, a couple of bottles, each of which would hold over a quart, and in one of which was a saw mill in operation, and in the other a flouring mill also in operation—both mills were moved by a crank in the neck of each bottle. The bottles and machinery are in the possesion of Mr. A. H. Buckingham, who is in the employ of Mr. Cannon. Mr. B. says the machinery was built within their covering about thirty-five years ago, by a person then a resident of New York State, but now deceased. He did it on a wager of $5,000, which he won in less than three years, which was the time allowed for the work. It has been suggested that the glass must have been blown over the chinery; but it is also said that such a thing would be impossible with such kind of bottles. They are filled full with the machinery, which is braced and pinned and otherwise made strong. There are cog-wheels and other wheels. The neck of each bottle is filled with a plug which is keyed close up to the neck. The mystery of getting in the key, when there is hardly room between the plug and the neck of the bottle to get in a tool as large as a shingle-nail, is as great as any other wonder about the ingenious affair. These curiosities may be seen by any body for a few days, without charge, of course.

GREAT BABY SHOW AND FEMALE EQUESTRIANISM.—The great Baby-Show came off at the exhibition inclosure in Doylestown, Pa., lately. The attendance was exceedingly large, and there is supposed to have been 25,000 people present. Twelve babies were entered to contend for the prizes. The first premium of $500 was awarded to Helen Eckhart, of Easton, Pa., four years and six months old, and weighs 78 pounds. Two other premiums were awarded to babies—names unknown. Twelve ladies entered on the race-course as competitors for prizes, among whom were three professional riders from Philadelphia and Boston, who figured coospicuously. The first premium was awarded to Miss Mary A. Roberts, of Doylestown, Pa.; second prem. to Mrs. Aaron, of Norristown, Pa., and the third to Miss Jenkins of Montgomery square. There were about 30,000 people in attendance to witness the ladies' horsemanship. Some of the most magnificent riding ever witnessed was displayed on the occasion. Bets were freely made on the different ladies' riding.—*Doylestown paper.*

EXUBERANT VEGETABLES.—Newspapers everywhere are speaking of vegetable monstrosities, wonderful yields, gigantic ears, etc., showing the remarkable fruitfulness of the earth this season. California, even, is rivalled in her exhibitions of mammoth vegetable productions. The Cincinnati Gazette speaks of corn 16 1-2 feet in hight from a field under ordinary cultivation, and of apples measuring 11 1-2 inches in circumference. The Richmond Enquirer speaks of a farmer in Monroe county who has reaped this year "100 bushels of volunteer wheat off of ten or eleven acres of ground from which he raised a good crop last year." The Winchester Virginian speaks of the unusual spectacle of a second growth of wheat from the stubble of the gathered crop. In Illinois, crops varying from thirty-five to forty bushels of wheat per acre, are not unusual. The fact is, no adequate idea has yet been formed of the harvests already gathered in some parts of the country, and the future is still full of promise.—*Exchange.*

FLORAL DESIGNS.—The following premiums are to be awarded at the annual exhibition of the Massachusetts Horticultural Society for Floral Designs: For the best Design, a prize of $60; 2d best, $40; 3d best, 30; 4th best, $25; 5th best, $20; 6th best, $15; 7th best, $10—$200. Also to be awarded as gratuities, in copies of Allen's Victoria Regia, $100. The committee state that in the award of premiums, regard will be had to the architectural beauty as well as to the arrangement of the materials.

Miscellany.

[For the California Farmer.]

INVITATION TO THE COUNTRY.

TO DAPHNIS.

Dum [illegible], dum [illegible], dum Daphnis.—VIRGIL.

O come from the [illegible] city;
O come to the country with me,
Where [illegible] and [illegible]—
Prepared and provided for [illegible].

Where we're pretty of pigs for the raising,
And heifers, when grown, to give milk;
And the wool from our sheep will be growing,
When spun, will be better than silk.

And the beets we may plant, and potatoes,
The carrots, and cabbage, and kale;
With other good things that await us,
Are more than I've leisure to tell.

Where the grain, when it grows, will get yellow,
And the grass, when it springs, will be green;
And our ale, when it's brewed, may get mellow—
But our friends will be thirsty I ween.

Where the fish that sport in the river,
And the ducks that swim on the lake,
Will be excellent eating, if ever
We are fortunate either to take.

The whole of the world I don't want it,
So I offer my Daphnis a share:
It can give us both room in it—can't it?
Although that we never should pair.

If we do, every loafer who sees it,
And those whom I owe little bills,
Will be sure to pay us a visit,
In hopes I may pay something else.

I am poor, so I wish her to come;
Not a hard, so I beg her to laugh none,
But, "*Ducite ab urbe domum,*
Mea carmina, ducite Daphnin.

LOAFER.

Half an Hour too Soon.—The Excited Yankee.

The hour was approaching for the departure of the New Haven steamboat from her berth at New York, and the usual crowd of passengers, and friends of passengers, news-boys, fruit-venders, cabmen and dock loafers, were assembled on and about the boat. We were gazing at the motley group, from the foot of the promenade deck stairs, when our attention was attracted by the singular actions of a tall, brown Yankee, in an immense wool hat, chocolate-colored coat and pantaloons, and a fancy vest. He stood near the starboard paddle-box, and scrutinized sharply every female who came on board, every now and then consulting an enormous silver hull's eye watch, which he raised from the depth of a capacious fob, by means of a powerful steel chain. After mounting guard in this manner, he dashed furiously down a gang plank and up the plank and up the wharf, reappearing on board almost instantaneously, with a flushed face, expressing the most intense anxiety. This series of operations he performed several times, after which he rushed about the boat wildly, and hopelessly ejaculated: "What's the time of day? Wonder if my repeater's fast? Whar's the cap'n? Whar's the steward? Whar's the mate? Whar's the boss that owns the ship?" "What's the matter, sir?" we ventured to ask him, when he stood for a moment. "Han't seen nothin' of a gal in a blue bonnet, with a white Canton crape shawl, (cost fifteen dollars,) pink gown, and brown boots, hey? come aboard while I was looking for the cap'n at the pint end of the ship—have ye, hey?" "No such person has come aboard." "Tormented lightning! she's my wife!" he screamed. "Married her yesterday. All her trunks and mine aboard, under the pile of baggage, as tall as a Connecticut steeple. The darn'd black nigger says he can't hand it out, and I won't leave my baggage, any how. My wife—only think on it—was to come aboard at half past four, and here it's most five. What's become of her? she can't have eloped. We han't been married long enough for that. You don't think she's been abducted, do ye, mister? Speak I answer? won't ye? O! I'm ravin' distracted! What are they ringing that bell for? Is the ship afire?" "It is the signal for departure—the first bell. The second will be rung in four minutes." "Thunder? you don't say so? Whar's the cap'n?" "That gentleman in the blue coat." The Yankee darted to the captain's side. "Cap'n, stop the ship for ten minutes, won't ye?" "I can't do it, sir." "But ye must, I tell you. I'll pay you for it. How much will tax?" "I could not do it." "Cap'n I'll give you two dollars," gasped the Yankee. The captain shook his head. "I'll give you five dollars and a half—and a half—and a half!" he kept repeating, dancing about in his agony like a mad jackass on a hot iron plate. "The boat starts at five, precisely," said the captain, shortly, and turned away. "Oh, you stunny-hearted heathin!" murmured the Yankee, almost bursting into tears. "Partin' man and wife, and we jest one day married." At this moment the large paddle-wheels began to paw the water, and the walking beam proceeded heavily, shaking the huge fabric to the center. All who were not going to New Haven went ashore. The hands began to haul in the gang plank: the fasts were already cast loose. "Leggo that plank!" roared the Yankee, collaring one of the hands. "Drop it like a hot potato, or I'll heave you into the dock!" "Ya—ya!" shouted the men in chorus, as they heaved in the gang-plank. "Stop, you heathen monkeys!" yelled the Yankee, "or there'll be an ugly suit of work!" But the plank was [illegible] and the boat moved from the pier. In an instant the Yankee pulled off his coat, flung his hat upon the deck, and rushed wildly to the guard. "Are you drunk or crazy?" said a passenger, laying him. "I am going to jump myself into the dock and swim ashore!" cried the Yankee. "I mustn't leave Sairy Ann alone in New York city. You may divide my baggage among ye—let me go—I can swim!" He struggled so furiously that the consequences of his rashness might have been fatal, had not a sudden apparition changed his purpose. A very pretty young woman, in a blue bonnet, white Canton crape shawl, pink dress, and brown boots came towards him. The big brown Yankee uttered one stentorian shout of "Sairy Ann!" clasped her in his arms in spite of her struggling, and kissed her heartily, right before all the passengers. "Where did you come from?" he inquired. "From the ladies' cabin," answered the bride. "You told me half-past four; but I thought I'd make sure and come at four." "A little too punctual!" said Yankee. "But it's all right now. Hallo, cap'n, you can go ahead, now, I don't care about stopping. Come nigh losing the passage money and baggage—came nigh getting drowned, Sairy, all along of you—but it's all right now. Go ahead, steamboat! Rosin up, there, firemen! Darn the expense!" When the sun set, a loving couple were seen seated on the upper deck, the big brown Yankee's arm encircling the slender waist of the young woman in the blue bonnet and pink dress. We believe they reached their destination safe and sound.

APPLES AS AN ARTICLE OF HUMAN FOOD.—The importance of apples, as food, has not hitherto been sufficiently estimated in this country nor understood. Besides contributing a large proportion of sugar, mucilage, and other nutritive matter, in the form of food, they contain such a fine combination of vegetable acids, extractive substances, and aromatic principles, with the nutritive matter, as to act powerfully in the capacity of refrigerants, tonics, and antiseptics; and when freely used at the season of ripeness, by rural laborers and others, they "prevent debility, strengthen digestion, correct the putrefactive tendencies of nitrogenous food, avert scurvy, and probably maintain and strengthen the powers of productive labor."

The operators of Cornwall, in England, consider ripe apples nearly as nourishing as bread, and more so than potatoes. In the year 1801, a year of scarcity, apples, instead of being converted into cider, were sold to the poor; and the laborers asserted that they could stand their work on baked apples, without meat; whereas, a potato diet required either meat or fish.

The French and Germans use apples extensively; indeed, it is rare that they sit down, in the rural districts, without them in some shape or other, even at the best tables. The laborers and mechanics depend on them, to a very great extent, as an article of food, and frequently dine on sliced apples and bread. Stewed with rice, red cabbage, carrots, or by themselves, with a little sugar and milk, they make both a pleasant and nutritious dish.

SELF-SEALING CANS.—Our lady friends will thank us, we are sure, for calling their attention at this time, to a most excellent contrivance for the preservation, in their natural state, of nearly all the varieties of fruits and vegetables. It is a patented invention, and called a 'self-sealing can,' because soldering is dispensed with. With these cans the necessary directions can be had for preserving, without the use of salt, sugar or acid, strawberries, raspberries, blackberries, apples, pears, peaches, tomatoes, green peas, corn and beans, and, indeed, everything of the kind that it may be desirable to keep in fresh state. The mode is so simple that any of the "Biddies" in the kitchen can accomplish it; and more we need not say. These cans may be used year after year and will last a long time, so that on the score of economy alone they are entitled to the attention of housekeepers. From an advertisement in this issue we find that the enterprising and highly respectable firm of Wells & Provost, 321 Pearl st., N. Y., are the sole proprietors, and to them we recommend our readers to apply.

CONSERVE OF PEACHES.—Pare and cut, or split your peaches, and to each pound of fruit put three-quarters of a pound of best loaf sugar; boil them till they are clear; take them out, drain slightly, and spread them on dishes to dry; boil, also, the syrup until it thickens, and each day add a portion of the fruit, which must be exposed to the sun, until it has been absorbed, and the fruit is dry. Then sprinkle sugar at the bottom of your jars, and put alternate layers of peaches and sugar until they are full; step close, and they will keep good a year.

Peach Leather is made by boiling pared peaches till they form a thick pulp. Spread on dishes; dry in the sun till it becomes tough; put it into a dry place, and it will keep well. When wanted for use, soak a portion for a night, in just water enough to swell and soften it; sweeten with good brown sugar, and take part of it. Quinces, preserved in the same way, are also extremely nice for winter deserts.

GRAPE PROSPECTS IN FRANCE.—The Boston Courier publishes the following extract from a letter received from Cognac, by a merchant of that city: "We regret to have but rather unfavorable news to transmit you on the state of our vines. Indeed the appearance of our vines was in the early part of the season very fine; consequence of the cold and damp weather we have had during the spring, there has been such a scarcity of the young grapes, that we hardly expect to [illegible] half a year's vintage, and we are at a loss to say what effect it will have on our grapes when the result can be properly appreciated. The [illegible] are very stiff, and good qualities very scarce."

Ladies' Department.

A WARNING TO ALL YOUNG GENTS WHO PATRONIZE "THE NAPA LADIES' SEWING CIRCLE."

REFLECTIONS OVER THAT STUCK HEART.

ALAS! to see that wretched heart,
Pierced through and through by Cupid's dart,
And thus pierced bleeding there!
Its history to me is known,
Which I, relating as my own,
More sympathy may share.

Safe in a fortress well supplied,
Which long the power of Love defied,
His stratagems and art:
In selfish robes wrapt up I lay,
Which Cupid could not take away,
Or enter with his dart.

Those robes were warp in ev'ry part,
Too well secure a single heart
From its most deadly foe—
But I, amused by silly talk,
By rings and ribbons, rouge and chalk,
Let my defences go,

And, like the dumb unwitted fool,
Who feels the edge of every tool
On which he puts his hand;
Who smooths the wasp, or plays with fire,
And sees not that their gay attire
May contain contraband,

Until a burn (perhaps a sting,
Just covered by some gaudy wing,
With feathers all around,)
Hath struck with pain the verdant boy,
Who now throws down his pretty toy,
To crush it on the ground.

So I, allured by woman's smiles,
Did venture into Cupid's wiles,
More senseless than the blind;
And, like a fool, dismissed my guard—
Unlocked the gates so strongly barred,
And left all hope behind.

For scarce were I the portals by,
When Cupid let his arrow fly,
Which brought an easy game;
Because, as all who look may see,
He captured it by finesse,
And holds me up to shame.

Take warning then, discreet young men,
And shun the track of all women,
For some of them are fair;
And come not near the "circle" here,
Else on that "spit" you will appear,
And get a roasting there.

'49

BETTY MARTIN IN REPLY TO "A FARMER."

In days of old, in harvest time,
Poor Ruth—she went a-gleaning,
When Boaz came by and spoke to her
With words of tender meaning.

The modest maiden raised her eyes
In wonder at the farmer,
Who seemed to think, though seen but once,
She was a very charmer.

But I must better be than Ruth,
For, ere "A Farmer" sees me,
If I could take his words for truth,
Who doubtless means to tease me,

He's over head and ears in love,
And takes me for "encanting,"
And gives me credit, ere I ask,
For gifts which may be wanting.

But let him come to Martinfield,
Dispel his dream or danger,
Or, being [illegible] rely received
For "noticing a stranger."

When should his fancies be confirmed,
And I a meet bride prettily,
And all besides would be [illegible],
It all will rest with

BETTY

[For the California Farmer.]

PETALUMA, 8th October, 1855.

MESSRS. EDITORS: My sister Susan desires me to send you her first contribution. She shows more pluck than I expected she would have done. The only thing I find fault with, is, she calls herself Susanna. Ha! Ha! what next?

CALEB CRUSTY.

Susanna Defends the Fair Sex.

For every one and [illegible]
For [illegible] and [illegible]—WATTS.

MESSRS. EDITORS: There are so few who seem aware, to a proper extent, of all the obligations which the rougher portion of mankind owe to the gentler, that it cannot be out of place for some of us to remind them occasionally, of how far they are our debtors and if they will not concede to us that we have, in all instances, displayed as much strength of character as to admit that we have at various times exhibited more refinement. But before we make any unnecessary admission, or flatter the vanity of those who, if conscious what they are, [illegible] as they would be found to possess, [illegible] to claim for their sex [illegible] are borne out by [illegible]? And I wonder if their pretended superiority does not proceed from the [illegible] under which we have been [illegible] placed?

I am not disposed to become an advocate of [illegible] nor a champion of modern [illegible] but I do wish to get a [illegible] for the purpose of exciting sympathy, but I think it unfair and unmanly to bring us up as if we were intended to be toys, and then blame us because we are not philosophers. But, under all disadvantages, if we take the history of early times, we will find a Semiramis, a Zenobia, a Dido, a Cleopatra, not only "first in the affections of the people," but great as rulers, and builders up of empires, which, till their time, had only possessed secondary importance. If we take more modern history—Was it not in the reign of Isabella, and under her sole patronage, that the great Columbus made the greatest geographical discovery which ever was effected? And, taking the history of a country with which many of us are familiar—When has England ever been so efficiently governed as under female sovereigns? The "good queen Bess" was, during her lifetime, and for long after, treated with a species of worship similar to the veneration, paid in France, to the name and memory of the great Napoleon. And why? For her wise and energetic government. And it is very singular that England, under her reign, reached a degree of literary proficiency which it did not again attain till the reign of another female sovereign, Queen Anne. And in the present day, under the good Queen Victoria, the Institutions of England are getting daily more and more like our own; and freedom, under female influence, is taking the place of intolerance and oppression.

But political subjects I am not much acquainted with; and I have little wish to deprive *the gentlemen* of the fancied security which they seem to enjoy, from the reflection that they are entirely above our comprehension. Well—such may be the case, but Madame de Stael and Miss Martineau are witnesses whom some of them would not like to examine.

But in pure literature the laurels are not all their own. Where is Mrs. Hannah More? Where Mrs. Hemans, Miss Mitford, Eliza Cook, Mrs. Beecher Stowe, and Mrs. Sigourney? They are side by side by Jeremy Taylor and Dr. Channing; by Addison, Goldsmith, and Irving; among the greatest and sweetest writers in our language, and in whose hands, our language has become what it is.

Nor is it merely in making "the sound an echo to the sense" that the female mind has proved that she is capable of equaling her more pretending rival. Can modern times produce a stricter or closer mathematical reasoner than Mrs. Somerville? or one who has done more to advance the interests of Science, by the luminous and comprehensive manner in which she has treated the various subjects which she takes under discussion? Not the distinguished David Brewster. Not the well known Dr. Lardner. But, it would be a mere waste of the reader's patience to produce examples of the capabilities of woman, in mastering and overcoming those studies, which men generally look upon as coming within their own peculiar province, and which, I fully coincide with them, it is better that they, almost exclusively, should devote themselves to. But it is not fair to institute a comparison under circumstances so very disadvantageous to us, the weaker sex, and expect that we should come out triumphantly from a contest, for which our opponents only have been undergoing a regular training. I but we have acquitted ourselves as we have, in the instances I have quoted, I look upon as a convincing proof of what women may become, when they aspire to act as men—in my next I shall endeavor to show how miserably they have failed when they have attempted to act as women.

SUSANNA.

An Admirer of Betty Martin.

CALEB CRUSTY, ESQ. [illegible], 1855.

MR. WARREN: I [illegible] FARMER, that [illegible] to [illegible] Miss Betty Martin is [illegible] pet "not take it yet," and as I wished [illegible] my book, will you please to put the enclosed [illegible] and forget the name to [illegible] as I promise you I know what it is and her [illegible] and I [illegible]. I am sorry to [illegible] to [illegible]; but [illegible] old way I [illegible] to [illegible] a [illegible] for I [illegible] a pet [illegible] [illegible] [illegible] in your [illegible] Ruth Pen [illegible] Squatter. However I [illegible] [illegible] [illegible] as a true, [illegible] it [illegible] [illegible] [illegible] [illegible] Yours respectfully,

[illegible].

MARRIED.

On the 7th Oct., in this city, by Rev. J. A. Benton, G. A. Putnam, of this city, and Miss P. A. Sylvester, of Boston.
On the 4th Oct., in Grass Valley, by Rev. Archbishop Alemany, of San Francisco, John J. O'Farrell and Miss Johnna Sullivan, both of Grass Valley.
On the 4th Oct., on Shaw's Flat, by Rev. S. S. Harmon, John McFarland and Miss Hannah Peeler.
On the 7th Oct., at Daylor's Ranch, by W. R. Grimshaw, J. [illegible], Jordan S. Layton and Miss Jane King.

DIED.

On the 9th Oct., at Dunn's Bar, Andrew Cunningham, formerly of Massachusetts, aged 38 years.
On the 8th Oct., in San Francisco, Margaret Isabella, daughter of John and Mary Jane Kenan, in the fifth year of her age.
On the 1st Oct., in Placerville, Ella B., only daughter of F. and Mary J. Wadsworth, aged 3 months and 15 days.

SPECIAL NOTICES.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

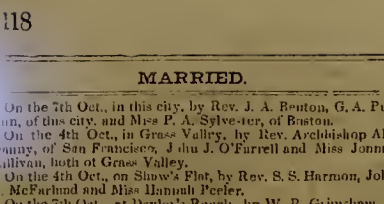
Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with Agriculture.

By order of the Executive Committee.
3-26 C. I. HUTCHINSON, President.

☞ **Read This.**—

BALTIMORE, December 18.

Dr. S. W. Fowle—Boston, Mass. Dear Sir: I feel it to be due to you to say that a young lady, a member of my family, has been suffering for several years under a bronchial affection, and the disease had made such progress, notwithstanding the best medical aid had been consulted, that great fears were entertained that the disease with her, as with so many others, would speedily terminate in death. I was induced, through the persuasion of a friend, to try your DR. WISTAR'S BALSAM OF WILD CHERRY; and after she had taken three bottles, she felt entirely relieved of the attack.



Very respectfully, yours, J. F. M'ELTON.

☞ Be sure it is signed I. BUTTS on the wrapper.

Sold by all Druggists. v4 15 2w

☞ **Roman Eye Balsam.**—Many persons are no doubt sufferers from that partial blindness caused by the bright rays of the sun; all who are exposed for any length of time in a greater or less amount of pain, while to those who are in the slightest degree susceptible of the affections of the eyes, it is often extremely dangerous. Against this difficulty the Roman Eye Balsam is an unfailing specific. Its application instantly relieves the pain and gradually strengthens the eye so that it can bear the sun without complaint. It is also invaluable for inflammation of the eyes, and for that troublesome twitching of the lids.

DR. GUYSOTT'S IMPROVED
Extract of Yellow Dock and Sarsaparilla

Is acknowledged to be the best Sarsaparilla made, as is Certified by the Wonderful Cures it has performed.

☞ Remember this is the only True Original Article.

This Medicine, when used according to the directions,

Will Cure Without Fail,

Scrofula, or King's Evil, Cancers, Tumors, Eruptions of the Skin, Erysipelas, Chronic Sore Eyes, Ringworm, or Tetter; Scald Head, Rheumatism, Pains in the Bones and Joints, Old Sores and Ulcers, Swelling of the Glands, Syphilis, Dyspepsia, Salt Rheum, Disease of the Kidneys, Loss of Appetite, Disease arising from the use of Mercury, Pain in the Side and the Shoulders, General Debility, Jaundice, and Costiveness.

The Best Female Medicine Known.

The Yellow Dock and Sarsaparilla is peculiarly adapted for females of delicate health, resulting from irregularity of menstrual discharges, and other diseases peculiar to their sex. Where the afflicted, that a bottle or two of DR. GUYSOTT'S EXTRACT OF YELLOW DOCK AND SARSAPARILLA will at once regulate those difficulties and renew the natural energies.

Syphilis, Scrofula, and Diseased Blood.

DR. GUYSOTT'S IMPROVED EXTRACT OF YELLOW DOCK AND SARSAPARILLA is a true specific. The proprietors have in their possession over one hundred certificates of the most extraordinary cures effected by it. We can safely say—TRY IT. It revives the drooping constitution, eradicates the bad humors from the Blood, and by its tonic properties restores the invalid to life and vigor. As a spring and summer medicine it has no equal. Its singularly efficacious action on the blood, its strengthening and vivifying action on the system, renders it pre-eminent above all other Sarsaparilla. If you would have the rose brought back to your cheek, a clear, healthy and transparent skin, and life and vigor infused through the system, use Guysott's Extract of Yellow Dock and Sarsaparilla. It contains more of the pure Honduras Sarsaparilla than any other preparation extant, which is chemically combined with the Extract of Yellow Dock and the Extract of Wild Cherry, thus making the remedy more thoroughly efficient than any other Sarsaparilla before the public. At the same time it is entirely free from all mineral poisons, which cannot be said of any other Sarsaparilla compounds.

Sold by all the Druggists in California and Oregon.

TO FARMERS.
For the destruction of Canker Worms, Borers, Grubs, &c., &c., &c.

THE MURIATE OF LIME.

A SUPERIOR fertilizer, and certain destroyer of the Canker Worm, and other destructive insects. It has been composed to take the place of more costly manures, guano, &c., to which it has been pronounced fully equal, and in some respects superior, by those who have tested it during the two past seasons.

As a certain and sure destroyer of the Canker Worm, which has committed such ravages among the fruit trees the past season; of Grubs, Borers and other Worms, which oftentimes render the labor of the farmer of no avail, its qualities have been fully and successfully proved. For this purpose its success (in New England) has been such as to warrant the belief that it will be a sure preventive to the ravages of the Grasshopper, which have been so great the past season in California.

A sample and testimonials from Agriculturists of the first respectability may be seen at the Office of the CALIFORNIA FARMER; and orders sent through Messrs. WARREN & SON will be faithfully fulfilled.

This article is put up in bags of 150 and 200 lbs. each, or in barrels of 220 lbs. JAMES GOULD,
v4-15 3m No. 70 State street, Boston.

Something New and Wonderful in the CALIFORNIA ARTS.

JAMES W. JOHNSTON, Daguerrean Artist, southeast corner of the Plaza, has the pleasure of announcing to the public, from whom he has received many substantial favors, that he has just completed the *enlargement of his Gallery*, and combined with it several magnificent features of the Arts heretofore entirely unknown on the Pacific Coast. He is now prepared to execute in superior style—

1st. Daguerreotypes, as heretofore, on metallic plates, with or without coloring.

2d. Stereoscope Likenesses and Views from Nature.

3d. Daguerreotypes on *Glass* and *Paper*—the most splendid and remarkable discovery of the age. These Miniatures are susceptible of being worked up by the brush of the Painter, to embody all the freshness and naturalness of life, at about one-half the cost ordinarily attending miniatures on ivory, which they far surpass in correctness of delineation. The business has now been commenced at Johnson's Gallery, for the first time in California, where Ladies and Gentlemen are invited to call and examine specimens.

Connected with Johnston's Rooms is a Portrait Gallery, also, where Mr. THOMAS S. OFFICER, late of New York, is prepared to execute Portraits on Canvass in elegant and life-like style.

☞ Call and behold the latest triumphs of Art. v4-15

STATE OF CALIFORNIA, County of Napa. } Sct. Justices' Court, Napa Town'p.

The People of the State of California, to William C. Summers,

GREETING: You are hereby summoned to appear before me, at my office, in Napa township, of the county of Napa, on the 15th day of September, A. D. 1855, at 10 o'clock A. M., to answer unto the complaint of Alfred Galbreath, whereupon he claims of you the sum of $24, for work and labor done and performed at your instance and request, when judgment will be taken against you for the said amount, together with costs and damages, if you fail to appear and answer.

To the Sheriff or any Constable of the said County, Greeting: Make legal service and due return hereof.

Given under my hand, this 8th day of September, A. D. 1855.

MISCELLANEOUS.

SANDS' SARSAPARILLA.
IN QUART BOTTLES.
For Purifying the Blood, and for the Cure of
Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Biles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.

IN this preparation all the restorative properties of the root are concentrated in their utmost strength and efficacy; but while Sarsaparilla Root forms an important part of its combination, it is, at the same time, compounded with other vegetable remedies of great power, and it is in the peculiar combination and scientific manner of its preparation, that its remarkable success in the cure of disease depends. It acts simultaneously upon the *stomach*, the *circulation* and the *bowels*; and thus three processes, which are ordinarily the result of the three different kinds of medicine, are carried on at the same time, through the instrumentality of *this one* remedial agent which gently stimulates while it disinfects and expels from the stomach and bowels all that is irritating, and at the same time restores their vigor and tone. Many other preparations imitate it in bearing the name of Sarsaparilla, and in that their resemblance ends, being often prepared from worthless and inert roots, and of course possess no healing or curative properties, and patients in making choice of which they will use should take no other, but that one entitled to their confidence, from the first list of cures it has effected in living witnesses, whose testimonials and residence have been published, and who are still bearing daily testimony to its worth.

Astonishing Cure.

PATTERSON, N. Y., July 20, 1851.

Messrs. A. B. & D. SANDS: Gentlemen,—Having witnessed the most beneficial effects from the use of your Sarsaparilla, it gives me pleasure to send you the following statement in regard to my son. In the spring of 1848 he took a severe cold, and after eight weeks of severe suffering, the disease settled in his leg and foot, which soon swelled to the utmost. The swelling was lanced by his physician, and discharged most profusely; after that no less than eleven ulcers formed on the leg and foot at one time. We had five different physicians, but none relieved him much; and the last winter found him so emaciated and low that he was unable to leave his bed, suffering the most excruciating pain. During this time the bone had become so much affected that piece after piece came out, of which he has now more than twenty-five preserved in a bottle, varying from one-half to one and a-half inches in length. We had given up all hopes of his recovery, but at this time we were induced to try your Sarsaparilla, and with its use his health and appetite began immediately to improve, and so rapid was the change that less than a dozen bottles effected a perfect cure.

With gratitude, I remain truly yours,
DARIUS BALLARD.

We the undersigned, neighbors of Mr. Ballard, cheerfully subscribe to the facts of the above statement.

PRINCE'S PROTEAN FOUNTAIN PEN.
[PATENTED JAN. 23, 1855.]

T. G. Stearns, General Agent, 271 Broadway,
Corner of Chambers street, N. Y.

ADVANTAGES.—An incorrodible and durable ink reservoir, made of Protean, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time. A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material. Its structure is simple, and not liable to get out of order.

DIRECTIONS.—To fill the reservoir with the fluid, remove the cap by turning it like a screw, insert the pen in the ink half an inch or more, draw up the piston, then with the thumb and finger on the lower part of the piston, draw it up right into the head of the tube that it may neither move nor allow any presence of the air. Wipe the pen with a soft cloth or paper after filling and whenever the cap is removed. The piston is not to be pushed down until the ink is entirely exhausted. To push it down place the thumb and the finger just above the tube, that the piston may not be broken. Put the cap on tight by when the pen is not in use, to preserve the ink from drying; and screw it home to its shoulder when carried in the pocket.

To fill the reservoir by suction, (the mode adapted to pocket pens,) loosen the small screw, at the upper end, but do not take it out; insert the pen in ink, as above; apply the lips to the small screw, exhaust the air by suction, and while the pen remains in the ink, turn the screw until it is tight. Or, loosen the screw, insert the tube in a bottle of ink, let it remain until the ink has found its level in the tube, then turn the screw until it is tight, and the pen is ready for use.

The suction pens should be carried in the pocket with the cap upwards, the piston pens with the cap downwards.—

Use good ink, free from sediment; Headley & Field's American Fluid, also Bryan & Wilcox's, and Arnold's Fluid Ink, recommended to the public, as they will copy. v4-5 3m

WAINWRIGHT, RANDALL & CO.,
Real Estate and Stock Auctioneers,

No. 100 Merchant street, San Francisco, California.

WE respectfully inform our friends and the public generally, that we have connected with our other business that of HOUSE BROKERAGE AND GENERAL DIRECTORY, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.

As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.

This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.

This department will include a *registry*, (already prepared,) of all persons, (except Chinese,) within the limits of the city, by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.

To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and address of *forty-three thousand persons*, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.
v3-18 WAINWRIGHT, RANDALL & CO.

California Stage Company.

Office at the Orleans Hotel, Sacramento.

STAGES leave regularly for the following places: Nevada, Ophir, Auburn, Yankee Jim's, Georgetown, Placerville, Mormon Island, Coloma, Drytown, Jackson, Mokelumne Hill, Stockton, Sonora, Marysville and Shasta, and all parts of the Northern and Southern Mines, every morning, as follows:

All passengers will be called for at their residences and the utmost attention and care paid to the [illegible] and baggage.

Stages arrive in time every day for the [illegible] boats [illegible] Co.

JAS. HAWORTH, President of the [illegible] Co.
J. P. DENEMAN, Secretary. v3-45

AGRICULTURAL, &c.

Important to Millers and Farmers.

THE undersigned having discovered a remedy for the injury to wheat arising from Smut, and a plan of renovating the same, has secured by a "Patent Right," his right to the same.

From the experiments made by experienced millers, the most satisfactory results have been achieved. From well attested certificates and repeated proofs of the unfailing efficacy of its power to clean the smut from the wheat, it has been ascertained that the most perfect purification takes place in the wheat, while at the same time a large saving of time, labor and cost accrues to the miller, and the flour is as pure and white as from the finest wheat.

Farmers who have crops of wheat, now unharvested, may yet save them, for they can easily be assured that their grain can be restored and the value saved to them.

Licences, with all particulars for the use of this Patent Right, can be obtained at the warehouse of the subscriber, on Clay street, between Drum and East, San Francisco.
v4-2 CHARLES CAMPBELL.

Agricultural Warehouse,
193 *Front street, New York.*

THE subscriber offers for sale an assortment of Agricultural Implements of the latest and most approved kinds, among which are the celebrated Premium Plows, which were awarded the highest premium of the American Institute in 1846, 1848, 1849, 1850, 1851, 1852 and 1853. Also, Eagle, Centre Draught, Peoria, and all other plows in general use.

Pitt's, Hall's and Smith's Horse Powers and Threshers, Burrall's, McCormick's, Hussey's, Seymour & Morgan's, and Ketchum's Mowing and Reaping Machines. Yankee self-sharpening Straw Cutters—the best article in use; Corn Shellers, Fanning Mills, Picks and Pick Handles, &c., &c.
v4-5 JOHN MOORE, 193 Front street.

Air-Tight Preserve Jars.
[MYER'S PATENT, 1855.]
An entire new article for preserving Fruits, Vegetables, &c.

THIS jar is the only one among the many presented to and approved of by the Committee of the American Institute of New York. For further information apply to WARREN & SON, CALIFORNIA FARMER OFFICE, where may be seen drawings and samples of the article.

Made and sold exclusively by the North American Gutta Percha Company, 162 Broadway, New York. v4-5 3m.

Atkin's Self-Raking Reaper and Mower.

1,100 OF those important labor-saving machines have been used in the Atlantic States this harvest, and with scarcely any trouble or mishaps. Especially in very heavy Grain was its labor-saving advantages most clearly shown. 300 were used in 1854, 40 in 1853, and 1 (the first) in 1852.

The price of the machines for the next harvest in California or Oregon, with all the necessary extras, delivered in Baltimore, is $300 cash. Send orders to

ALBANY AGRICULTURAL WORKS.

ON HAMILTON, LIBERTY AND UNION STREETS;

WAREHOUSE AND SEED STORE,

No. 52 State Street, Albany, N. Y.

The Proprietors of the above-named establishment being the sole owners and manufacturers of

EMERY'S PATENT HORSE POWER, &c.,

☞ ALL ARRANGEMENTS WITH OTHER PARTIES FOR THEIR MANUFACTURE HAVING EXPIRED &c. have formed a new Copartnership, under the firm name of

EMERY BROTHERS,

And will continue the manufacture and sale of AGRICULTURAL IMPLEMENTS and MACHINERY, as heretofore, at the old stands of EMERY & CO. By this arrangement the united efforts, and interest of the Brothers, long known to the public, are secured, and no exertions will be spared to meet the wishes of those dealing in and using the class of implements they manufacture—their leading branch being the manufacture of the justly celebrated

Emery's Patent Changeable Geered Railroad Horse Powers,

with the machines to be propelled by it, as Threshing Machines, Saw Mills, and Machinery generally.

These Powers having been submitted repeatedly to the most severe tests and trials to determine their relative merit and utility with those of every known manufacturer, have without exception been awarded the highest prizes for superiority—among which were the following:

N. Y. STATE AGRIC'L SOCIETY, 1854, 1853, 1852, 1851, 1850	MARYLAND STATE AGRICULTURAL SOCIETY, 185[illegible]
OHIO STATE BOARD OF AGRICUL., 1854, 1853, 1852, 1851	MISSOURI STATE AGRICULTURAL SOCIETY, 185[illegible]
MICHIGAN STATE AGRICUL'L SOCIETY, 1853, 1852, 1851	AMERICAN INSTITUTE, - - - - - - 1852, 185[illegible]
INDIANA STATE AGRICULTURAL SOCIETY, 1853	NEW YORK CRYSTAL PALACE, - - - - - 185[illegible]
ILLINOIS STATE AGRICULTURAL SOCIETY, 1853	CANADA PROVINCIAL SOCIETY, - - - - 1852, 185[illegible]
PENNSYLVANIA STATE AGRICULTURAL SOCIETY, 1853	CONNECTICUT STATE AGRICULTURAL FAIR, 185[illegible]

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 224 bushels of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both kinds of Powers, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. If the crops be extraordinarily heavy or light, greater or less results will follow.

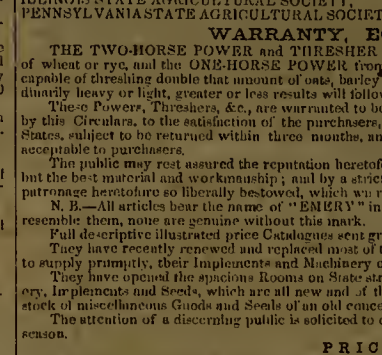
These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by this Circular, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and full purchase money refunded if not found acceptable to purchasers.

The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, they hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.



They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery, Implements and Seeds, which are all new and of the most approved and complete kinds extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.

The attention of a discerning public is solicited to our present stock of goods, before selecting and purchasing the coming season.

ALBANY, N. Y., March 15, 1855. (v4-10 6m) EMERY BROTHERS.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

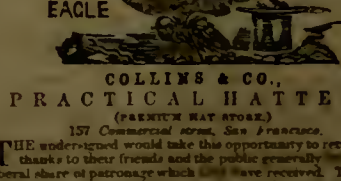
New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishe PERFECT LIKENESSES? Because he has now the most arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.



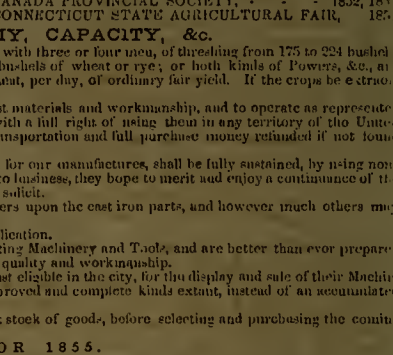
5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1



COLLINS & CO.,
PRACTICAL HATTERS,
(PREMIUM HAT STORE.)
157 *Commercial street, San Francisco.*

THE undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty or finish [illegible] of a Hat; that no real shall wear a finer Hat than can be found at COLLINS & Co.'s Warehouse.

The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in the city.

How to Wake up Sleepers.—A clergyman of one of the farming towns on the line of the Eastern Railroad, resorted one afternoon to the following effectual means to get the attention of his people. He had progressed about half through his sermon when he found that no inconsiderable part of his congregation was sound asleep. Stopping suddenly in his sermon, he coolly remarked, "I will wait and give the congregation an opportunity to wake up." A general movement among the sleepers showed that the reproof was appreciated—and when the preacher continued his discourse he had the undivided attention of the audience. To keep good the impression, the services were closed by singing the hymn, "Arm of the Lord, awake, awake."

A Model Sign Board.—The following was put upon the door of a house occupied by a father and son. The former was a blacksmith and republican, and the latter a barber: "Barnes and sun blacksmith and barbers work done here, horseshoeing and shaving and hare curled bleeding teeth drawing and other farriery work, all sorts of spiritus lickers akording to the late comical treety. Take notis my wife keeps skool and also teeches reeding and riting and all the nother larned langwetches and has assistants if required to teech horitory sowin and mathewmatix and hother fashunable diversbuns."

A Dog Story.—The Sacramento Union tells a queer dog story. A dog having deposited a bone with some putrid meat upon it in his master's house, the cook removed it to the crotch of a tree out of reach. After circling the tree, and concluding that he could not attain the prize unaided, the dog proceeded to a neighboring house and succeeded, by his importunities, in inducing a cat, with which he was familiar, to accompany him, mount the tree, and claw off the "sweet morsel," which he again triumphantly placed in the hall.

The Washington Metropolitan announces the following curious facts: "The new Russian Minister to the United States is called Somonosoff, (saw my nose off.) An attache of the same legation at Washington, Blowmanosoff, (blow my nose off,) besides which, we have Colonel Kutmanosoff, (cut my nose off,) of the Imperial Guard; Marshal Polmanosoff, (pull my nose off;) Gen. Nozebegon, (nose by-gone,) and many others.

Judge a man by his actions, a poet by his eye, an idler by his fingers, a lawyer by his leer, a player by his strut, a boxer by his sinews, an Irishman by his swagger, an Englishman by his rotundity, a Frenchman by his shrug, a justice by his frown, a great man by his modesty, an editor by his coat, a tailor by his agility, a fiddler by his elbow, a cobbler by his feet, and a woman by her neatness,

"Small thanks to you," said a plaintiff to one of his witnesses "for what you said in this cause." "Ah, sir," replied the conscientious witness, "but just think what I *didn't* say."

Great lords pride themselves on the merit of their ancestors, because they have no other; wits on their own merit, because they think it unique; while sensible men never glorify themselves.—*Ninon de L'Enclos.*

Ingham's Improved Smut Machines.

These Machines combine all the apparatus necessary to cleanse Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also remove short straws, white caps, seeds and other foul substances in the most perfect manner. All of the solid worth saving is collected in a receptacle, while the dust and light dust are passed out of the mill, allowing the machine to be put on the same floor with the flour chests or wherever most convenient, without being enclosed. It is a California improvement and designed to meet the wants of this country; Eastern Machines having been found to be inadequate to that purpose. It has received the highest recommendation from all using them, among whom are Pettit & Hodgekiss, Brighton Mills, Sacramento; Brooks & Hall, Happy Valley Mills, San Francisco; Wm. Sharp, American Mills, San Francisco; Babbit & Hale Sierra Nevada Mills, San Francisco; H. S. Hill, Washington Mills, San Francisco.

Those building Mills can save expense and room by using this machine, as they will avoid all the machinery ordinarily used for that purpose.

Orders filled on short notice. SHOP on L street, between First and Second, Sacramento. H. B. INGHAM.

N. B.—All information given, and orders left with Warren & Son, Sacramento, will be attended to.

The following certificate is among the number received; others can be referred to in quantities:

"This is to certify that I have owned H. B. Ingham's Improved Smut Machine, and believe it to be superior to any other. I need no other fixture for cleansing Grain, except the machine itself; it makes no dirt in the mill; occupies but little room; requires less power, and does the work more perfectly than any other I have ever seen or used before.

WM. SHARP, Agent American Mills,
v4-9 3m Pine street, San Francisco."

New Invention!
Now, Count Your Chickens!!

The undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls.

After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from *four to five hundred eggs* can be converted daily into young Chickens, Ducks, Goslings or Turkeys. After the first brood, i. e., nineteen or twenty days, this is the certain result; and it requires but little attention—once every twenty-four hours—the cost of fuel and preparation being only some $2 50 to $3 every twenty days.

This invention will be in full operation at the State Fair in the city of Sacramento, in September next, when all information will be presented. They will soon be offered for sale. In the meantime information can be obtained at the office of the California Farmer; or letters can be addressed to me at San Francisco. JOHN J. FULTON,
v3 26 Third street, South Beach, near South Park.

Irving's Life of Washington.

The first edition of this important work will be in three hand one volume, octavo, plen type, with portraits and plans. This edition is *published by subscription only.* Price two dollars per volume, in cloth.

The first volume is now ready, and will be supplied on application, or sent, *post-paid*, to any part of the United States, within 3,000 miles, on receipt of $2. Subscribers in California, Oregon, &c., supplied, post-paid, for $2 50.

HOTELS.

MURRAY'S WESTERN HOUSE,
AND
General Office of the California Stage Company.
Corner of Second and D streets,.....Marysville.

Open all Night.

This superb fire-proof Hotel is by far the most capacious and elegant one in California, out of San Francisco, and is excelled by none in that city. It is of brick, perfectly fire-proof, four stories high, and fronts 103 feet on Second street, and 80 feet on D street. Two hundred persons can be accommodated with entire ease, and in the most comfortable style. Particular attention is paid to the wants and comforts of Families.

Its location is central, and is the General Depot of Staging and Steamboating.

Travelers can rely upon being *called in time* for any boat or stage leaving the city.

Those who desire, can entrust their TREASURE and BAGGAGE to the proprietor in person, who is the sole manager of the establishment, and who will be responsible for the same.

Rates of Charges.

Board without lodging, per week	$12 00
do with lodging, per week	$15 to $20 00
do without lodging, per day	$2 50
do with lodging, per day	$3 25 to $4 00

Lodging, 75 cts., $1 and $2 per night.
v4-6 R. J. MURRAY, Sole Proprietor.

Orleans Hotel,
Second, between J and K streets, Sacramento.

This above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.

The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also leased the large brick building corner of and K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.

v3-2 HARDENBURGH & CORSE, Proprietors.

Beaty's Hotel,
(Formerly the Mansion House,)
SAN JOSE.

A. S. BEATY, Proprietor of the above Hotel, begs to inform his old friends and the public, that he has removed from the "Wood Lawn Hotel," Pulgas Ranch, to the above premises, and is now prepared for their reception under more favorable circumstances than heretofore.

He begs to assure all who may favor him with a visit, that no pains will be spared to merit the patronage of the public, and make "Beaty's Hotel," San Jose, second to none in the State.

Gentlemen with their Families visiting San Jose, the Quicksilver Mines, &c., &c., will find at this House suitable accommodations. A. S. BEATY, Proprietor.

Horses kept at livery.—Stabling, Hay and Grain, and "Turn Outs" provided for Pleasure Parties.

Dillon, Hedge & Co.'s Line of Stages for San Jose, Santa Cruz, Monterey, and the Quicksilver Mines put up at this Establishment. v 4 12 tf

White Sulphur Springs, Napa Valley.

The White Sulphur Springs are situated seventeen miles from Napa City, in one of the most beautiful and retired localities in the Valley. The proprietors have this season enlarged their premises, and are now fully prepared, with

Hotel and Bath Rooms,

To accommodate invalids and transient guests. The celebrity which these Warm Sulphur Springs have acquired in the cure of Cutaneous Diseases, and obstinate forms of Rheumatism, have rendered them a popular resort for invalids from all parts of the State, and the united testimony of the Medical Profession has been warmly expressed in their favor.

The Springs possess besides, the advantages of a "Pleasant Retreat," with ample resources for amusement and recreation, and are easily accessible from San Francisco by daily steamboat communication to Napa City.

v4-12 tf EVEY & LILEY, Proprietors.

American Hotel, Benicia.

This House has been established *Five Years*, with out interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and hand-somely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *livery stable* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valley-around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.

3v-16 w-tf C. M. DAVIS, Proprietor.

International Hotel.

The extensive addition to the Hotel is now finished and ready for occupation, making altogether *one hundred and fifty rooms.* Suites of rooms for families, furnished or unfurnished; also, single rooms to let on reasonable terms.

Day Board—Ten Dollars per week.

This spacious Hall—85 by 35 feet—is elegantly furnished and lighted with gas, with Supper Room that will seat two hundred and fifty, will be let on reasonable terms for Balls, Concerts, Dinner Parties, &c. PECK & FISHER.

San Francisco, Jan. 9, 1855. v4-7

Rassette House.
San Francisco.....Cal.

This Hotel offers inducements to persons visiting San Francisco, unequalled by any on the Pacific Coast.

Gentlemen can be accommodated with single rooms, or families with suites of rooms.

The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. v4-1

ENORMOUS SACRIFICE IN FURNITURE
IN FORTY DAYS!

HAVING now in Store $150,000 worth of FURNITURE, together with a purchase of $50,000 worth of stock at parties here at *less than home cost*, we now offer to our friends and customers

OUR ENTIRE STOCK

At such Low Prices as to Defy all Competition.

We mean precisely what we advertise, that we *can and will sell cheaper than any other store in the City or State.*

Our stock consists of

ROSEWOOD, MAHOGANY AND WALNUT SETS, FOR PARLORS AND BEDROOMS.

ALSO,

PAINTED SETS, WITH KITCHEN AND DINING-ROOM FURNITURE, IN GREAT VARIETY.

THIRTY THOUSAND CHAIRS!

Bedding and Bedsteads of every Description.

To particularize and describe our stock would require one half of a newspapor, but having

An Enormous Stock,

and at the same time paying storage on much of it, we are

Determined to Sell it

and reduce our expenses, and we solicit the public to give us a call in every instance before purchasing elsewhere.

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." Dr. Carswell, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It Is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

Dr. Boyden, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

Dr. A. H. Macanair, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

Dr. Wm. A. Shaw, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

Samuel A. Walker, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe cold during the past two years, I am induced to express the gratification I feel from the favorable effects thus followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

Hon. Samuel S. Perkins says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]
Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most distressing malady. C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.

PERUVIAN FEBRIFUGE,
FOR THE PREVENTION AND CURE OF
FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

This preparation is intended especially as a remedy for the prevention and cure of Fever and Ague, but it is equally adapted to other forms of disease, such as bilious, intermittent and remittent fevers, dumb ague, &c. Its combination being entirely new, it differs widely in its therapeutic effects and operation on the system, from other preparations designed to remove the disease; and such has been the uniform success in its administration, that no case is known where it has failed to cure when timely taken. A single teaspoonful will often prevent the attack of chills and fever; and while operating so effectually as a palliative, its permanency is equally reliable, and no person traveling through, or residing in infected districts, should be without it.

Read the following Testimony.

Brooklyn, N. Y., Aug. 25, 1853.

Messrs. A. B. & D. Sands—Gentlemen: Having been the past year severely afflicted with Fever and Ague, and living in a district where I have been constantly exposed to repeated attacks, I tried the most approved remedies for the cure of the complaint, and among them took four bottles of Indian Chill Tonic, without producing anything but a partial relief. By the advice of a friend, I was induced to try the Peruvian Febrifuge, and am happy to say the very first dose did me much good, and less than one bottle entirely broke up the chills, restored my appetite, regulated my bowels, and effected an entire cure. It also cured one of my children, affected the same as my self, and I have enough left to cure two or three more. A desire to relieve those suffering, as I have done, alone induces me to make the above statement. Yours, very truly,
EDWARD MEHER.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 1 Fulton street, corner of William, New York. Sold also by Druggists generally.

S. P. Ruggles' Power Press Manufacturing Co.
[*Incorporated February 8, 1854.*]

The above named company having purchased of the well known inventor, S. P. Ruggles, Esq., his Patents connected with the Printing Business, are now manufacturing under Mr. Ruggles' immediate superintendence, the following machines, viz.:

	Size of Form. Inches.
Half Sheet Combination Engine	18 by 12
Quarto Sheet Combination Engine	12½ by 9
Half Sheet Cap Job Rotary	10½ by 7
Card and Bill Head Rotary	7 by 4
Diamond Rotary Card Press	4½ by 3
Circular and Flat-up Hand Press	8 by 6
Embossing Press	18 by 12
Cast Iron Imposing Table	26 by 22
Shaving Machine, sheers	27 by 18
Paper Cutter	cuts 27
Card Cutter, improved	cuts 23
Bookbinders' Rotary Shears	cuts 23
" " larger size, in proportion.	

These presses are considered by the Job Printers as the best adapted to their wants of any machines ever manufactured.

All orders addressed to their agent, M. B. BIGELOW, 152 Washington street, Boston, Mass., will be promptly attended.

Mr. Ruggles has also sold to the CUTTING MACHINE MANUFACTURING CO., his Patent Rotating Shears, for cutting sheet tin, iron, copper, brass, zinc, steel, mill and boiler plates, and all other metallic sheets. This is entirely a new process for cutting metals, and is destined to supersede all other machines for that purpose.

ANSON HARDY, Agent,
152 Washington street, Boston.

And to a third company, called the BOSTON HAND STAMP CO., he has sold his patent for a very ingenious Flexible Hand Stamp, whereby perfect impressions may be made at the rate of sixty per minute, the die adapting itself to the surface to be printed on. A very convenient article for all business men.
v4-12 1y Mr. B. BIGELOW, Agent, Boston.

Benicia Iron Works.

Steam Engine, Boiler and Machine Shop.—The establishment is now in successful operation, and offers the public facilities equal to any in the United States, for manufacturing or repairing Steam Engines of the largest size, Boilers, Brass Castings, Mill Gearing of the most approved patterns, Bloom Iron, Cast Iron Columns, Window Caps or cast fronts.

Contractors and others will do well by patronizing this establishment, as their work will be executed with greater dispatch and at lower prices than any other manufactory in the State.

The company have extended their Pier, and erected a large crane for the accommodation of their customers.

THE SECOND ANNUAL STATE FAIR.

THE Executive Committee of the State Agricultural Society in accordance with duty and with a desire to make known as widely as possible the result of the same, have, after a laborious examination of all the doings of the various Committees, after a thorough examination of all the Reports presented to them, prepared, corrected and approved, what is now laid before the public in this number of the CALIFORNIA FARMER, being the "Result of the Second Annual State Fair." It would be impossible for the Executive Committee to present to those who may read these reports and [illegible] the Executive Committee, the details and the preparatory steps that were necessary to call the attention of the public to the importance of the State Fair.

Long and arduous were the duties, and many the difficulties to overcome, before any degree of interest was awakened to this important subject. The depression of the Agricultural interest for the last two years, and the sacrifice required of men personally to prepare for, and to attend the Annual Fair, were obstacles to be overcome; and the necessity of securing means necessary to carry on the work, was a task of no ordinary character. When it is recollected that not a dollar has been provided by the Act of Incorporation for the support of the Society, that every dollar of the State fund are sacredly devoted to the payment of *premiums* only—then will be perceived the labor required by the Committee to arouse sufficient interest to secure means for an expenditure of several thousands of dollars; this the Committee, after much and continued effort, secured through the action of those who contributed means by membership and by donations. It was with deep solicitude the Executive Committee saw the time approaching when so many and great duties were to be performed—when more than one hundred citizens were to be invited to co-operate and act on the several Committees; Hall of Exhibition to be prepared; ground for Exhibition of stock; yards and pens to be built; hay, grain and water to be furnished—and all the needing courtesies to be extended to strangers, to guests, and to those connected with the duties and interests of the occasion.

The Committee mention these facts that those who are not conversant with their duties and labors—many that have too lightly esteemed them—may have some conception of them, and know that in a country where time is even *more* than money, that what has been accomplished by those who had the work in charge, should cause them to look with a generous and lenient eye upon plans and results that if not all that could be desired, was a [illegible] and deeply interesting Exhibition, the results of which has been highly [illegible] to our State and [illegible] to the community.

When it is also remembered that the government of the Society are voluntary laborers, giving time and means, which to them were more than one hundred times as great as that of any contributor to the Fair; also neglecting engagements and duties which they owe to themselves first—it is to be hoped that a generous public will accord to them for what has been accomplished, under such circumstances, at least a freedom from censure.

The executive, as a board, with these reports hope, that from the facts here presented, those who have an interest in our State will see that with the present increased awakening to the great industrial interest of California, another year shall tell in unmistakable evidence that this Exhibition has made a lasting impression.

C. I. HUTCHINSON, President.
W. W. STOW, 1st Vice-Pres.

A. P. SMITH, Treasurer.
Executive Committee.

Opening of State Fair.

THE Hall of the Assembly Chamber was thrown open to the public at half-past seven P. M. on Tuesday evening, Sept. 25, and, as anticipated, an anxious and expectant crowd soon filled the Hall, amongst whom might have been seen the beauty, fashion and intelligence of our city and State. We noticed conspicuous citizens from many places; and, if we can judge from joyous countenances, we believe all were highly pleased with the evidences presented of the power of our soil to yield almost everything that the heart of man could crave; for the eye must be blind to truth, that seeing these products would not believe.

At eight o'clock the President ascended the platform and delivered the opening address.

Address of Gen. C. I. Hutchinson,

PRESIDENT OF STATE AGRICULTURAL SOCIETY.

Ladies and Gentlemen: Members of the California State Agricultural Society:

THE occasion which calls together this large and respectable assemblage is one of no ordinary interest. Before us, spread out in rich profusion and beautiful array, fresh from the prodigal hand of Nature, we behold the results of California Agriculture—some of the results which, in this young State, and under the auspices of an intelligent people, have followed the application of enterprise and industry. Looking back through the five brief years of our existence as a State, we can hardly fail of being struck with wonder at the position in which we find ourselves placed to-day.

To one accustomed to reckon time by Eastern chronology, and to base his calculations of the period required for the attainment of a given object upon computations familiar to the farmers of older States, this occasion is pregnant with subjects for the most instructive reflections. The past seems like a dream, the memory of which still lingers about him, and he can hardly believe the evidence of his senses when the triumphs of the present are recalled.

Those of us who emigrated from our old and cherished homes five years ago scarcely expected to be called upon to engage in the imposing ceremonies of an occasion like the present. Then other motives prompted our actions, and other hopes inspired our bosoms. Fired with enthusiasm at the brilliant reports which every breeze from the Pacific wafted over our abodes, and dazzled with the golden visions which floated before us, we came to amass wealth in other less noble, but, at that time, more promising pursuits. The love of gold, the thirst for sudden wealth, mingled with a fondly cherished hope speedily to return flushed with success to the endearments of their families, in most instances, probably, alone animated men's minds. Gold was the great object of their ambition—the moving spring—the stimulus of energy, and the ultimatum of their expectations. The all-important subject of Agriculture had not then been deemed worthy of consideration.

The capacity of the soil of California had never been tried. Vague conjectures only growing out of the wild exuberance of uncultivated vegetation, was all upon which the early immigrants could rely to sustain an hypothesis based upon the agricultural advantages of the country in question. It was not even suspected that this region was a great and important interest. The traveler, in summer, over the [illegible] plains of this arid valley, would hardly have supposed that a lengthened drought of five months' duration, was compatible with a successful application of industry to this pursuit. Much less could it have been credited that within the period of his own residence in California, an exhibition of the productions of that same soil would be held, which in variety, in elegance, and in magnitude, might justly challenge comparison with those of any other region of the world.

I need not occupy your attention in endeavoring to prove that Agriculture is the natural or original and most suitable employment of man. The proposition will be admitted by every intelligent mind. Nor is it only his natural and original employment, but it is, of all others, the most useful and honorable. In nothing is the progress of a country towards civilization more clearly shown, than by its advancement in all that pertains to a scientific system of husbandry. It is the foundation of all true enjoyment, the source of genuine and substantial happiness, the employment on which all others depend. If these things are so, it should be the first care of every government to foster and sustain the efforts which are made for its encouragement and promotion—to throw around it the protecting arm of the State, and to make it a prominent object of public concern. Such has been the policy pursued and advocated by many of the ablest and most venerated statesmen of our country. Prominent upon the long list of heroes and statesmen whose mighty energies were lent to the encouragement of Agriculture, and who to precept added practical evidence of their sincerity in the field and on the farm, we find the immortal names of Washington, Jefferson, Jackson, Clay and Webster. The achievements of the latter, the interest which he manifested in this noble pursuit, and the results obtained under his scientific direction and sagacious management, have become familiar to every one. Perhaps it is not so generally known that to Thomas Jefferson belongs the credit of having been the constructor of a mold-board to a plow, which, in its day, surpassed any previously planned, and that it was not deemed beneath the dignity of this great man and patriot, at the very time when engaged in the arduous and responsible duties of President of the United States, to present his model to the Agricultural Society of Paris, and to become himself a competitor for a prize. The same principles, the same settled convictions of duty which animated this great statesman, have prompted the Legislature of California to lend its aid to the development of her agricultural resources. Urged by a laudable desire to encourage those engaged in the business, and to promote an interest which it justly regarded as of paramount importance to our young and growing Commonwealth, they appropriated five thousand dollars per annum for the period of four years, to be distributed in premiums under the direction of this Society.

By the sanction of a legislative enactment, this association was organized a little more than one year since, and commending itself by the noble objects designed to be accomplished, it has enrolled upon its lists of membership nearly four hundred names, a progress highly gratifying and encouraging to all interested in the projects it proposes to accomplish.

It will scarcely be necessary to enter into an elaborate argument to prove the advantages calculated to result from collective associations like that to which we refer; nor will it be expected of me to repeat the oft-told illustrations of the benefits resulting from the annual exhibitions of the products of the soil and the attainments of industry in other branches of useful labor by means of Agricultural Fairs. The beneficial influence exerted by the occasional collection, examination and comparison of the products of farm labor, and the union of those engaged in this occupation for consultation upon matters pertaining to their common interest and welfare is too plain to be doubted. In no other way can the different modes of culture and the capacities of separate sections of a country be so easily and appropriately compared. A system of cultivation adapted to the region of Sacramento may be unsuited to that of Los Angeles, and the soil of the latter may be peculiarly fitted to the growth of certain species of plants which can never succeed under the prevailing influences of the former. The facts bearing upon and [illegible] of general importance to the agricultural interests of our State, can only be [illegible] by [illegible] as that on which we are now assembled.

With the result of the present [illegible] we have every reason to be satisfied. The [illegible] that any of our products [illegible] the [illegible] of articles of the successful cultivation of which we have not evidence before us, [illegible] and [illegible] development, by which some of [illegible] from [illegible] scattered around this hall, fully attest the utility of these associations and demonstrate the capabilities of our State in language more forcible than any arguments which I can use.

It would be impossible in the limited time at my disposal to enter upon a lengthy review of all that has been accomplished in this branch of industry in our State up to the present time. This and other topics of absorbing interest will, no doubt, be ably treated upon by the eloquent and distinguished gentleman who has been selected to address you.

The difficulties with which the early agriculturist in California had to contend were manifold and trying. Like his primitive ancestry, he had an untried and unbeaten track to open and pursue. The expense of cultivation, arising, in part, from the high price of labor, was not the least of the obstacles to an extensive application to this pursuit, and upon the early immigrant, just arrived in the country in search of a fortune, it was a difficulty hard to overcome. With the progress of time, however, this condition of things has changed; labor is cheap enough to be made profitable for employment, yet not so cheap as to degrade the laborer. The result has been an increasing interest in the business, a rapidly expanding area of cultivation, and a vast multiplication of those whose whole energies, strength and capital are employed in unfolding and maturing the wonderful resources which now lie dormant beneath our fertile soil, and the germs of which we behold arrayed around us to-night.

In many respects no section of the world is more favorably situated for the easy prosecution of husbandry than California. In fertility of soil, in the peculiarities of climate, and the relations of heat and moisture which prevail, no section can exceed it. No where are the essential requisites for vegetable growth and maturity more strikingly predominant than here. No where have the first efforts of the laborer been followed by a more flattering result, or a more abundant and profitable yield. Not to speak of other sections of the State, some of which are more advanced than that of the Valley of the Sacramento, we gather from the returns of the County Assessors, that even within the area of this region there have been raised during the present year no less than two millions of bushels of grain of various kinds. And yet, the real capacities of this portion of the State are but just being appreciated. Of the large extent of valuable farming land lying within the counties immediately tributary to this city, a very small portion, comparatively, has yet been subjected to the dominion of the plow, or been made available for purposes of profit and utility.

The following exhibit illustrates the practical result of the working of ten acres of ground on Putah Creek, the present season:

Plowing, 10 acres at $3 per acre,	$30 00
1,000 lbs. Seed Wheat, at 2 1-2c. per lb.,	25 00
Harrowing and Sowing,	18 00
Reaping, Binding, &c.,	35 00
Use of Reaper,	10 00
Threshing,	48 00
Use of Threshing Machine,	15 00
Delivering the same in Sacramento,	55 00
Sacks,	28 00
Total expense,	$264 00
Ten acres yielding 35 bushels per acre is 350 bushels, or 21,000 lbs. at 2 1-2c., is	$525 00
Deduct expense,	264 00
Leaving this sum as the net proceeds of ten acres of ground as stated,	$261 00

This calculation does not include any rent of land, or interest on the investment.

If we deduct for these $61, we have $200 remaining as the clear profits of ten acres of ground in the locality mentioned or $20 per acre.

The above is a calculation based upon experience in one of the staple articles of agricultural value. Increased capital and a more extended application to enterprise are needed to develop our ultimate resources, and to introduce upon a large scale the cultivation of many articles to which our soil and climate are adapted, and which have as yet been only partially tried. Among these not the most in importance is the grape. The success of grape culture here of late years [illegible] not a little [illegible] among those engaged in horticulture. In those portions of the United States at all favorable for its profitable cultivation, many communities, however, have resorted to [illegible] the extensive cultivation of this fruit, among which the principal are in the vicinity of the cities and [illegible] in the manufacture of [illegible] and in the preservation of the grape [illegible].

[illegible]

ity of temperature, and in the absence of those sudden or extreme variations so commonly observed elsewhere, it would seem to compare favorably with the most successful wine growing districts in the world. Without entering further into the philosophy of this subject, or entering upon the discussion of the various reflections to which it gives rise, we cannot present it more forcibly than by quoting an extract from the last number of the Patent Office Report on Agriculture. Speaking of the Southern Valleys of California, it says: "As these features of climate, which are known to be so decisive of the measure of success there, attain singular completeness, as it may be said—that is, the measure of humidity and of temperature becoming of the most perfect mutual proportion, the result is the most extraordinary perfection of vegetable development."

We are perfectly confident that in all the conditions essential to a profitable investment in this business—in uniformity of temperature, in the proportion of atmospheric humidity, the valley of the Sacramento is as favorably situated as most other sections of the State. In the experiments already tried—in the large and elegant specimens exhibited here to-night from gardens in this vicinity, we have abundant evidence of the correctness of these views.

It would be gratifying to be permitted to enter fully and at length upon a broad and comprehensive consideration of the subject of Agriculture. It is, in some respects, one of the most imposing, extensive and truly worthy objects to which we can turn our attention, and next to the common school, of all others the most important and inspiring. A State setting out upon the theater of action, and holding up to the especial regard of its people these two noble subjects—a government sustained by the common school and by Agriculture—cannot fail of being prosperous. It is based upon a rock which Time only hardens and renders more durable; its corner stone is as enduring as the immortal mind which God has breathed into his intelligent creation, and the pillars which sustain it *must* be perpetual. These two—Agriculture and the common school system—belong, indeed, to the same class; they are co-workers together towards the same great end; associate agents for the ameliuration of the race, the ennobling, the improving, the elevation and civilization of man.

To be a farmer—a modern farmer—a successful cultivator—a man must be educated. Ignorance is as incompatible with utility in this, as in other occupations. Education—intelligence is the foundation and the secret of the attainment of all that is valuable. Muscular endurance—brute physical force is no longer the priacipal agent in this vocation. A man must have a head to direct, as well as strength and hands to execute. The routine systems of our ancesters are inunited to the spirit of the present age and generation. Agriculture can no longer be regarded as an art merely, but a science, and in proportion to the application of true scientific principles to the cultivation of the soil, just in proportion as chemistry is made subservient to the necessities of the farm, so will be the success of the husbandman and the reward of his labors.

To Our Friends.

The Executive Committee of the Californis State Agricultural Society wish to tender a hand of cordial greeting to their brethren in the older States, and assure them that the tokens of regard we have recently received in the form of Books, Reports, Seeds, Specimens, &c., elicit the most profound gratitude, and will, as means become available, be duly reciprocated. We would also respectfully solicit the pleasure of such correspondence as similar institutions, in both the Eastern and Western hemispheres may be able and willing to conduct, pertaining to the great general cause in which we are mutually engaged. We also wish to assure all correspondents, donors, and contributors to our library, or museum of natural curiosities, that their co-operation in this work will be a source of sincere gratification to us, and, we trust, no unprofit to them.

Awards of Committees.

The awards and recommendations are published as they were reported by the several committees of awards, in order to give parties at home and abroad the judgment of those who alone were prepared to act upon the real merits of the several cases. The Executive Committee, however, are not yet able to determine how far the means in their hands will enable them to sanction the recommendations for special premiums. This they will settle and publish at the earliest moment practicable; and will also make such other corrections as may be found necessary.

At a meeting of the Executive Committee of the State Agricultural Society, on motion—

Resolved, That the thanks of the California State Agricultural Society be tendered to Messrs, Drexel, Sather & Church, for their extreme liberality in cashing State warrants to the extent of twenty-five hundred dollars, held by the Society, *without charge* for interest or discount—assuring them, that the members and officers of the Society will ever hold this generous act in high appreciation.

Resolved, That this resolution be transmitted to the San Francisco and Sacramento Houses of Messrs. Drexel, Sather & Church.

Attest: O. C. Wheeler, Rec. Sec.

THE CATTLE SHOW

At the Louisiana Course, was throngod with the largest concourse of people ever assembled in the State.

The Stock on exhibition would not have been considered large in some of the Eastern States; but for California, in the infancy of her efforts of this character, as she is, it was creditable in a high degree.

The quality of the stock exhibited would have compared favorably with stock exhibitions in most of the older States. Many animals were finely bred, and commanded much attention.

The Reports which follow furnish the best evidence of the stock exhibited.

Your committee appointed to examine Stock and award premiums for the same at the Annual Fair for 1855, beg leave to state that they have performed the duty assigned them, and submit the following report:

The amount of stock entered was large, and the character of it most excellent. We think it cannot be doubted that the importation and raising of stock in this State is soon to become a leading interest.

Your committee make the following awards:

For best imported or American Stallion, to E. H. Parker, San Francisco, for gray stallion "General Taylor" ..$150
2d do., to A. S. Beaty, San Jose, owner of sorrel stallion, "Napoleon" 75
For best imported American Mare, to Sylvester Tryan, owner of two years old filly "Surprise" 50
2d do., to M. H. Wallace, owner of "Black Hawk, Maid" .. 25
For best California-bred Stallion, to L. A. Gould, owner of brown colt "Kossuth" 50
2d do., to A. B. Treadway, owner of 3 years old colt "St. Lawrence" 25
For best California-bred Mare, to Robert Harris, owner of sorrel filly "Fashion," 18 months old 25
2d do., to D. A. Shaw, owner of 1 year old sorrel "May Queen" 15
For best Breeding Mare and Colt, to W. Williamson, owner of "Maria Downing," and colt "Joe Downing," 6 months old 25
2d do., to W. B. Arnold, owner of "Puss," and colt 4 months old 15
For best span matched Carriage Horses, Black, to Joseph Green, ... 25
2d do., to Jerome C. Davis, Yolo, for span, half Spanish .. 15
For best Cart-horse, to S. J. Crosby, for bay 20
For best Express Horse, to W. Paul, San Francisco, for grey horse "John," 30
For best colt over 2 year and under 3, to W. M. Williamson, Colusa, for filly "Owen Dale," 2 year old 20
2d do. to J. Q. Shirley, for "Young Morgan" 10

Special Premiums Recommended.

For the best "Jack," to J. C. Davis, owner of brown Jack, 4 years old, 14 hands high
For best pair Draft Mules, to J. C. Davis, owner of 2 brown Mules, 16 hands high
For best Mule Colt, 18 months old to J. C. Davis, ...
" " 13 " "
" " 4 " "

Bucks, Ewes, Lambs, Boars, Sows and Pigs.

For best Buck, to J. C. Davis, Yolo 15
For best Ewes and Lambs, to J. C. Davis 10
For best Swine, to J. C. Davis, owner of 1 Boar, (Irish grazer) 20
1 Sow, do } 20
1 pair Pigs, (male and female) }
2d best do., to C. W. Holt, owner of 1 Sow, (Irish grazer) .. 10
1 do., do., (and female pig) 10
1 Boar, (Berkshire) 10

We hereby certify that the foregoing is correct, and that the awards were made as above.

Wm. W. Gift,
J. S. Clark,
G. Kincheval,
Calvin Martin,
J. W. Pugh,
H. R. Covey. } Committee.

The committee to whom was referred the examination and award of premiums in the department of Pacers, Trotters, Roadsters and Saddle Horses, respectfully report the following:

Trotters, Pacers, Roadsters, and Saddle Horses.

For best Trotter, to G. W. Ferguson, for "New York" ...$50
2d best do. to W. T. Grisslm, for "Rhoderick Dhu," 30
3d best do. to Capt. David Van Pelt, for "Prairie Bird" .. 20
For best Pacer, to Wm. Shear, for "Fred Johnson," 50
2d best do. to G. W. Ferguson, for "Lady Mac," 30
3d best do. to C. S. Ellis, for "Wisconsin Chief," 20
"Ned McGowan," and "Little Pet," are recommanded as California Pacers, for special premiums, both owned by Wm. Shear
For best span of Roadsters in harness, to C. Coover, silver Cup, valued at 30
2d best do. to Philip Ripley, Yuba, silver Cup or Plate 20
For best single Roadster, to C. H. Parker, for "Big Boy," silver Cup or Plate, valued at 20
2d best do. to Orrick Johnson, for "Red Bird," silver plate 15
The "Martha Washington," entered by David and John Hoagland, of Yolo, is recommended for a special premium.
For best saddle horse, to S. J. Crosby, for "Curlos," 15
A special premium is recommanded to John Ryan, of Butte, for "Mountain Eagle;" also, to Messrs. Vacca, of Yulo, for two California saddle horses

B. Cahoon,
R. G. Arthur,
Frank Stevens,
J. K. Rose,
David Van Pelt,
A. S. Beaty,
J. C. Davis. } Committee.

The committee appointed for the examination of Cattle on exhibition for premiums at the Fair grounds, beg leave to represent and express themselves highly pleased and gratified with the good taste and excellent judgment displayed by owners of stock there presented, all of which showed unmistakable marks of high breeding; and although the number was more limited than your committee would have anticipated from the almost proverbially enterprising character of Californians, yet it speaks volumes for the future encouragement of stock growers of the Pacific slope.

Few of the stock on exhibition appeared to have been fitted by extra keep or otherwise for the occasion. Indeed, less in the way of care and attention had been expended upon them than the importance of the occasion should have elicited, or the more profitable interests of the proprietors warranted.

Your committee would further respectfully represent, that inasmuch as there were not on exhibition stock to represent the different style and ages of cattle set forth in the schedule annexed for the instruction of your committee in making awards, therefore your committee would earnestly recommend that such vacancies be filled by such other stock of like kind found on exhibition, and truly worthy of consideration, and corresponding premiums.

The following premiums have been awarded by the committee:

Bulls, Oxen, Cows, Heifers, Calves.

For the best Bull, to James W. Cole, for a white Durham..$100
2d do. to H. L. Lovell, Sonoma, for a California bred Durham 50
For best Cow and Calf, Devonshire and Durham breed, to Richard Risk, Sutter; cow four years old, weighing 1,350 lbs, and calf 7½ months old, weighing 800 lbs.... 50
2d do. Durham stock, to Jerome C. Davis, Yolo 25
For best yearling Heifer, California bred, to L. Stone, Colusa 15
For best Yoke of Oxen, seven years old, to Jeremiah Miller, San Jose, (no competition) 40
Instead of the best 6 head of young cattle, for which a premium is offered, and which are not found on exhibition, your committee would recommend the premium to be transferred.

Special Premiums.

For best Milch Cow, Durham stock, 9 years old, to J. C. Davis, Yolo $15
2d do., to C. W. Hoit, for a Kentucky bred Cow, 6 years old 10
To L. Stooe, Colusa, for "Diablo Champion," 5 years old; girth, 8 feet 5¾ inches; hight, 5 feet 5¾ inches; and weighing 2,370 lbs.—we would award the premium for 2d best pair of Working Oxen 20
To Jesse Schultz, for superior white and red roam Durham Bull, 3 years old, we would recommend a premium, under the head of Bulls 15

All of which is respectfully submitted by your committee.

Peter Quivey,
Jas. Shepard,
C. W. Newman,
A. McDuff. } Committee.

[The following reports are continued from those on page 127.]

Report on Native Wine.

The committee find themselves unable to classify the Wine from Manuel Requena, Los Angeles, with any foreign production of the Grape, but consider it a Wine of a fine quality and entitled to the first premium, $25.

We examined the Wines from A. Delmas, (French Garden,) San Jose; also, the sample from Manuel Requena, Los Angeles. We find the White Wine from A. Delmas, a very good article, and to resemble the better grade of Wine grown on the Rhine; it is entitled to the second premium, $15.

The Red Wine is also of an excellent quality, resembling closely the better grade of Bordeaux Claret.

John H. Hill,
S. H. Meeker,
W. C. Waters, } Committee.

Report on Agricultural Implements.

Of the articles enumerated in the regular schedule of premiums under this head, we find none of entirely California manufacture—all having been made in part or wholly abroad.

A Plow made by Messrs. Marshall, of Sacramento, of which the castings were made here, the wood work abroad, commanded much attention. This plow has cast moldboard and landside, with both steel and cast shear and point; is high in the beam; of good pattern, and available for different soils.

A large number of solid eyed picks, excellent pattern and workmanship, were presented by Mr. Herring, of Sacramento. On these the first premium is awarded, of $10.

Another fine sample, of welded eyed picks, of excellent pattern and finish, from Mr. Peaslee of Calaveras—to these we recommend a special premium, of $5.

The committee were gratified in the operation of a model of a Mowing Machine, by N. Augustus Elliott. So far as could be judged from the specimen shown the committee, this machine contains many of the good qualities of Hussy's, Merrill's, and Atkins' reapers. Aside from the addition of the widening apparatus, it possesses advantages in a double knife and larger gearing, giving fair promise of success, which, as a California production and labor saving machine, we trust may be realized.

We also notice a Cheese Press, of a novel construction, but could not learn of its manufacture, or ownership.

The display of Eagle and Clipper Plows, of fine pattern and workmanship; a Hay-cutter of improved construction; also Yokes, Hydraulic Rams, Hose, Pipes, Belting, Horticultural Syringe, light Bit of good power, Post Auger, &c., —all meritorious, from the Agricultural Warehouse of Messrs. Bryant & Co., San Francisco; but were not of California manufacture coming in the schedule of premiums.

Messrs. Baker and Hamilton, Sacramento, also added to the show of superior Agricultural Implements—Hay-cotters, Churns, Seed Drills, Cornshellers, Ox-bows—of excellent quality, but like the former, without the premium limits.

The above memorandum shows the small amount of California manufactures entered for examination, and an entire absence of the larger farming implements of the State, or for the exhibition. Out of the many manufactures of threshing and other machines established within the past two years in the State, it is certainly surprising that some one of the manufacturers has not availed himself of the opportunity and of the liberality of both the State and the Society. With every desire to do ample justice to California manufactures, we find ourselves deprived of the opportunity, by the indifference of those to be most benefitted.

M. Walthall.
J. W. Osborne,
Sam. J. Crosby,
G. H. Beach, } Committee.

Report on Saddles and Harness.

Your committee first examined Saddles, and award the first premium to C. R. Scheuner, of Sacramento, for best Riding Saddle for gentlemen, $15.

The second premium they gave to A. T. Nelson, of Sacramento, $10.

The first premium for Lady's Saddles was awarded to John C. Singleton, of Sacramento, for chaste design and elegant workmanship, $15.

The second best is awarded to A. T. Nelson, of Sacramento, $10.

Another Saddle of beautiful workmanship was exhibited by Mr. Nelson, but did not come within our instructions, as it was of foreign manufacture.

Mr. Nelson, of Sacramento, also exhibited a set of Double Harness, of excellent pattern and fine make, a Bitting Harness of improved style and elegant manufacture; but as neither were made in this State we could not award a premium, but would recommend an honorary premium of $25.

Your committee find on exhibition Two Whips made from the raw material, by J. T. Huff, of Sacramento, and though there is no premium on programme for such articles, they would recommend an honorary award of $20.

All is respectfully communicated.

S. J. Crosby,
S. B Leavitt,
P. Quivey. } Committee.

Miscellaneous.

Works of Art.—The undersigned, appointed a Committee on Works of Art, beg leave to make the following report:

They have examined attentively the specimens exhibited in the various branches of art, and in the department of "Sign and Ornamental Painting," they adjudge the premium due to T. Robinson, $20.

Among the specimens of Oil Paintings, while the works of some other artists are not wanting in merit, they find the production called the "Arabian Girl," by Chas. Nahl, well deserving the prize, $25.

In the department of Water Color Paintings, the "View on the Chagres River," by the same artist, Charles Nahl, is highly meritorious and should take the prize, $20.

In the branch of Wood Cuts, but few specimens came under the inspection of the Committee; one of which is a well executed "View of the Agricultural Fair Grounds," Sacramento, and to this the prize is awarded, $50.

For the best specimen of Drawing, they find a "Monochronatic View on the Hudson," by S. S. Henning, deserves the prize, $10.

The Committee, in conclusion, would remark, that our young State has, as yet, extended so little encouragement to the Fine Arts, it is not to be wondered at that there are comparatively so few specimens exhibited in the present Fair. A brighter promise for the future is, however, even now indicated, which, at the next anniversary of this noble institution, will, we trust, ripen into many more of those creditable and beautiful productions of the artist's genius, which go so far in the great work of refining and elevating the people of every nation.

All of which is respectfully submitted by

Horace Edgar Pratt,
J. W. Winans,
T. M. Logan, M. D.
Committee.

Sacramento, Oct. 1, 1855.

Special Premiums—Silver Plate and Diplomas.—By decision of the Executive Board, all Special Premiums of the Society will be paid in Silver Plate, bearing the inscription of the Society; and all who have a desire for Plate of equal value to their premiums, instead of money, can have the same with incriptions.

The new and beautiful Diploma of the Society is in preparation, and all who are entitled to the minor premiums, can have Diplomas, if they prefer it, to the same amount of money.

Sweet Potatoes.—Some mistake having occurred in making the award in this department, the Executive Committee have made the following corrections:

Premium to J. G. Almond, - - - $25
A special premium to Dr. J. C. Curtis, - 25
do do to Hooker & Fern, - 25

Books and Papers, &c.—We have received many favors from the East, and elsewhere, which we have not had time or space to acknowledge in a proper manner, on account of press of duties relating to the Fair, yet they will receive full notice. It will be seen the whole paper is taken up this week with a most valuable Report of the Fair, which should be kept as a matter of record of California history.

Reports on Fruits and Flowers.—The Reports of the Committees on Fruits and Flowers, are worthy special attention, being full and complete, as Reports of this kind always should be, bespeaking the interest felt by those committees, and reflecting great credit upon the Society, as well as upon the Committees.—Ed. Far.

ADDRESS

DELIVERED BY HON. HENRY S. FOOTE,

Before the State Agricultural Society, in Sacramento, September 25th, 1855.

Mr. President: At the close of a political struggle of a character peculiarly exciting, I rejoice to behold before me and around me on this truly interesting occasion, so large an assemblage of citizens from different parts of our beloved State, whose calm and composed aspect seems clearly to intimate, that with them at least the acrimony so apt to be engendered in contests for civil supremacy has fairly passed away, and that now, after having exchanged hearty gratulations upon the unsurpassed, yet constantly augmenting prosperity and happiness of our infant commonwealth, they are prepared, with all becoming zeal and energy, fraternally to co-operate in the task of exhibiting to the view of our countrymen in general and of the world at large, the astonishing agricultural resources of this youngest of the thirty-one sovereign States, who unitedly constitute the most magnificent national confederacy ever yet known to the page of history. I cannot but entertain, Mr. President, a confident hope that our coming together at this time, under circumstances so auspicious, may be productive of increased good will among our citizens, and have a tendency to secure great and lasting advantages to the cause of Agriculture here and elsewhere.

I shall take it for granted that no one now present, in the least degree doubts that the cultivation of the earth is by far the most important of all the practical occupations which as yet have been known to call forth the energies of man as a civilized and social being; as it is undoubtedly the one best calculated to foster the domestic and social virtues—to maintain the principles of civil order—and to keep alive in the hearts of freemen a fervid and diffusive patriotism. All historic writers have united in bearing testimony to the fact that the tillage of the soil has been uniformly contemporaneous with the commencement of civilization; and one of the most profound and accurate thinkers that America has yet produced, has not hesitated to say, on a grave and imposing occasion, that "man may be civilized in some degree without great progress in manufactures, and with little commerce with his distant neighbors. But without the cultivation of the earth, he is, in all countries, (continued New England's most gifted orator and statesman,) a savage. Until he steps from the chase, and fixes himself in some place, and seeks a living from the earth, he is a roaming barbarian. When tillage begins, other arts follow. *The Farmers, then, are the founders of civilization.*". Higher praise than this could not well be imagined; and yet I am tempted to add, that the *progress* of civilization, even in its highest stages of development, seems to have been at all times, and in all countries, pretty exactly proportioned to the advance of agricultural science. Indeed, I suppose that it would be altogether impossible to name a people among whom the agricultural calling was not held in respect, who would not be found, on a sober and scrutinizing examination, to have been deplorably wanting in all those refined and delicate moral graces and high mental capabilities which are every where recognized as indispensable elements of a true and thorough civilization. It is certain that all the enlightened nations of antiquity cherished a most favorable regard for the agricultural vocation; and in some of them this sentiment of respect for what they deemed the primeval occupation of man on earth, was seen to blend itself even with the solemn ceremonials of religious worship. Agriculture was alike honored among the Egyptians, the Greeks and Romans—and the Phœnicians, the Carthagenians, the Israelites, the Chaldeans, the Chinese, and the Japanese. It was the actual occupation of not a few of the most celebrated statesmen that Greece and Rome could boast, and become very early a favorite subject of dissertation among writers of a certain grave and utilitarian cast, both in poetry and prose. One of the earliest poems of antiquity was that of Hesiod, in which he essayed the illustration and enforcement of scientific husbandry. Other writers, in due season, appeared, who, rivaling his example, either in prose or verso, contributed their quota of instruction and entertainment for the benefit and amusement of their own and of succeeding generations, among whom may be mentioned Mago, Theophrastus, Cato, Virgil, Varro, Pliny, and Palladius.

Without taking it upon myself to determine how far these venerable authors, or any of them, may at the present day be safely relied on for the solution of questions connected with the business of tillage as conducted in modern times, I venture to suggest, that no writer has yet appeared, who would seem to have brought to the discussion of agricultural and kindred topics higher and happier powers of delineation, a more cultivated literary taste, a more sincere and affectionate sympathy for the tillers of the earth as a distinct class, and a more home-bred and hearty relish for the simple and serene delights of rural life, than the illustrious composer of the Georgics, who in his thrilling and beautiful invocation in behalf of agricultural pursuits, has thus, as it were, addressed in strains of tenderest pathos all the generations of men as they successively tread the pathways of mortal existence:

> O happy [illegible]
> [illegible] and debate,
> [illegible] hand,
> [illegible]

Nor with a superfluous fear is awed,
For what he calls his home, or what his land.

> [illegible]

He feeds on fruits, which of their own accord,
The willing ground and laden trees afford;
From his loved home no lucre him can draw;
The senate's mad decrees he never saw,
Nor heard, at bawling bars, corrupted law
Some to the seas and some to camps resort,
And some, with impudence, invade the court;
In foreign countries others seek renown;
With wars and taxes others waste their own.

> [illegible]

This wretch in earth entombs his golden ore,
Hovering and brooding o'er his buried store.

> [illegible]

Some, through ambition, or through thirst of gold,
Have slain their brothers or their country sold,
And, leaving their sweet homes, in exile run,
To lands that lie beneath another sun.
The peasant, innocent of all these ills,
With crooked plow, the fertile fallow tills,
And the round year with daily labor fills.
And hence the country markets are supplied—
Enough remains for household charge beside,
The wife and tender children to sustain,
And gratefully to feed his dumb deserving train.
Nor cease his labors till the yellow field,
A full return of bearded harvest yield—
A crop so plenteous as the land to load,
O'ercome the crowded barns and lodge on ricks abroad.

No one, I think, can impartially examine the admirable poem from which I have quoted so freely, whether he shall concur or not with Mr. Addison in pronouncing it "the most complete, elaborate, and finished piece of antiquity," without finding himself forced to adopt the conclusion, to which I frankly confess my own mind has arrived, that in the age of Virgil, that is to say, nineteen hundred years ago, the people of Italy were by no means either ignorant of the principles of agricultural science, or unskillful in their application. For several centuries, subsequent to the Augustan period, Agriculture would seem to have flourished in Italy, in Gaul, and in various other provinces of the Roman Empire; and it is even supposed not to have exhibited signs of serious decline until the arising of those causes (whatever they were,) whose co-operative energies brought on that gloomest period in the world's history, known as the dark ages. When, in the early part of the sixteenth century of the Christian Era, the light of the Reformation beamed forth brightly and benignly from Central Germany, and the mind of man, electrified and renovated, once more asserted its native freedom and independence—agriculture, from the influence of causes difficult to be defined, does not appear to have revived simultaneously with science, scholastic learning, and the arts in general, but still continued to languish in a state of mysterious and unaccountable inertness, until a period not far distant from our own times. Those who have heretofore taken occasion to explore this point minutely, will sustain me in the assertion that for nearly all that is valuable in this important department of knowledge with which the civilized inhabitants of Europe were not fully as conversant two thousand years ago as we ourselves are at the present moment, we are indebted to eminent chemists, geologists, mineralogists, botanists and mechanicians, whose contributions to the general stock of agricultural knowledge have been chiefly made within the last century and a half.

It is, I am sure, not expected of me that I should on this occasion attempt to exhibit in detail the improvements effected in agriculture of late years on the two sides of the Atlantic. The subject is one of vast extent, and might well supply topics for a series of elaborate discourses, running through many days, and prepared in the closet, by scientific men, with that pains-taking diligence and that rigid regard to accuracy, which can alone impart to such performances anything of a marked and permanent value. I freely acknowledge, sir, that I have not that familiarity with agriculture which would enable me to do much more than offer a few general observations to those assembled here at at the present moment, and to throw out, almost at random, one or two crude suggestions, with the hope alone of giving momentary entertainment to such as have done me the honor of coming hither to listen to me.

The territorial surface of the United States of America is at this moment of such vast extent, and our country is blessed with such a happy variety of soil and climate, that it would be difficult to name a single useful product known either to European or Asiatic tillage, which might not with adequate care be cultivated with complete success upon some portion of our broad domain on this continent. Great attention has been paid of late in most of the States of the Union to the various branches of agriculture, and in not a few of them the most liberal and judicious arrangements have been adopted for the accumulation and spread of agricultural knowledge. Associations, Mr. President, similar in all material respects to that over which you have the honor to preside, have been extensively established among us, and several of the local governments of the States, including, I am happy to say, the government of our own State, have deemed it politic to appropriate considerable sums of money, in various forms, with a view to furthering this important branch of National industry. Agricultural Fairs and Cattle Shows upon a grand scale, with their attendant arrangements, have become established among us so firmly within the last twenty years that we are beginning to regard them as a normal portion of what we are in the habit of calling our *domestic institutions*. But sir, I must be allowed seriously to doubt whether in any of our sister States of the Confederacy, a more gratifying display of agricultural products has been made than that which we have been witnessing for a day or two past. Considering all the circumstances with the [illegible] President, I am sure [illegible]

[illegible] as the State of California, and [illegible]

naturally become an object, alike of hope, of affectionate solicitude and of sober and rational admiration to the whole world, was only known to the general mass of our countrymen as a wide extent of sparsely settled territory, understood to be nominally under Mexican rule, of vague and undefined boundaries, stretching grimly along the coast of the far-off Pacific sea. It was a region supposed to be cursed with inexorable sterility, for the most part only fit to be the abode of ferocious wild beasts, and of aboriginal tribes yet lingering in a state of unmitigated barbarism. No information of a character at all clear and satisfactory either as to the country or the people inhabiting it, was possessed by the States of the Atlantic seaboard. Various indistinct rumors were from time to time reaching the great commercial marts on the other side of the continent, some of which may, perchance, now seem to us dimly to have foreshadowed a part at least of the multiplied wonders which have been since realized. The views and wishes of our most astute and far-seeing statesmen extended only to the acquisition of a port somewhere on the Pacific coast, for the general convenience of commerce, and the accommodation of our daring and meritorious countrymen, known to be associated with whaling enterprises prosecuted in this distant quarter of the world.

Why, sir, those lion-hearted and unconquerable men, (a worthy representation of whom is with us here to-night,) by whose unequaled valor, far more than by diplomatic tact, this fair Paradise of the Pacific was torn from the reluctant hands of its semi-barbarous possessors—what even did they know of the real value of the acquisition which they were enabling their country to make? Sir, it is quite a curious fact in our national history, that when the treaty of Guadaloupe Hidalgo was under consideration in the American Senate, upon a question involving its ratification by the President of the United States, there were members of that illustrious body, distinguished alike for extraordinary intellectual power, the most consummate literary attainments, and the most steady and intense devotion to the happiness and glory of the Republic, who labored most strenuously to effect its rejection, avowedly on the ground that the vast territorial domain, the acquisition of which was provided for by that instrument, was not by any means worth the sum of fifteen millions of dollars, which was to be paid for it, and who contended even that its bare possession by the United States would prove both a burden and a curse—or, that it would at least be found rather an incumbrance than a benefit. Strong was to be that feeling of surprise which in a few short months was to come upon all the nations of the earth, on learning of the sudden and unexpected discovery within our confines of those rich mineral treasures, now universally believed to be exhaustless.

But strong and pervading as was that feeling, it cannot be at all doubted that one of equal or even of greater intensity would have been awakened, could the fact have been communicated with equal suddenness, and in a form equally satisfactory, that this Eden of the western world contained within her teeming bosom the wondrous agricultural resources which this exhibition so magnificently attests. Who expected, sir, seven years since, when California became an integral portion of this noble Republic, that in the year 1855, she would be sending forth from her grand commercial emporium vast and numerous shiploads of grain and flour, all, too, of her own growth and manufacture, to relieve sufferings which it is next to impossible that the thrice fortunate dwellers in this more than Egypt of the New World can ever be constrained to experience? Let me remind you in passing Mr. President, that this extraordinary result has been accomplished without the abstraction of either capital or labor from mining enterprises; and that, meanwhile, we have built up and beautified a magnificent commercial mart upon our sea-coast, which is the wonder and admiration of all who visit it; we have established large and prosperous towns in the interior of our State, along the banks of our noble rivers, and have caused to spring into gorgeous and healthful existence as it were almost by magic, innumerable lovely villages—some of which are to be found perched on lofty Alpine summits, while others are modestly seat d among g[illegible] golden plains—and others again are hidden from the view of the [illegible] deep sequestered valleys walled in on all sides apparently by impassable mountains, which the sun's rays shine at mid-day to warm with an intensity hardly known even in tropical [illegible] and where in the [illegible] winter rains [illegible] fall to the depth [illegible] feet.

But, to return to the [illegible] once more: [illegible] years since, that California would have the her power truthfully to proclaim, as she does now, through me, that she is at one year with another, upon her best agricultural lands without the aid either of irrigation or manure to raise a larger average crop of wheat, barley and all the other cereal grains than either France or Germany [illegible] years ago, [illegible] Mr. Webster a quotation [illegible] from England [illegible] view to [illegible]

[illegible] that on the best farming land in this vicinity and on the San Joaquin river, from thirty to forty bushels to the acre may be confidently anticipated, without the aid of manuring or irrigation.

But what, I pray you, would our friends and fellow citizens in the Atlantic States think or say of me, were I to mention here, partly of course for their entertainment, a hundredth part of the wonderful things I have heard, and which seemed to me well attested, touching the results of farming in California? Suppose, for instance, I should say that in the year 1854, one of our California farmers raised from ninety five acres of land a crop of barley averaging a little more than one hundred and forty-nine bushels to the acre; that six hundred bushels of potatoes had been frequently produced from a single acre of land; that upon another an equal quantity of beets; upon another twenty tons of tomatoes; and upon yet another that one hundred dozens of cucumbers per day had been grown throughout the season, amounting in the whole to nine thousand dozens; should I not incur serious risk of being charged with gross exaggeration?

Where, beyond the limits of California, would a man be listened to with credence, who should state, who no one now present certainly would question, that delicious peaches had been known here to mature on trees only two years old from the pit? That repeated instances had occurred of a double crop both of pears and peaches being raised in the same season! Whoever heard, save in California, of pumpkins weighing one hundred and twenty-nine pounds? of beets, seven and a half feet in length? of a stalk of Indian corn, 24 feet in hight? Where, except in California, can it be asserted and proven, that strawberries ripen during every month of the year, and that it is possible to bring to perfection two thousand pounds of this delicious fruit from an acre of ground devoted to their cultivation?

I am happy to know, Mr. President, that our fellow citizens in the mining section of the State are at this time paying considerable attention to Agriculture in its various departments. In the progress of a recent ramble which I took through that deeply interesting region, I saw wheat, barley and oats, growing in several places most luxuriantly. I beheld in other localities beautiful natural meadows, from which large quantities of excellent grass was mown during the season which is now past. I repeatedly saw grape vines and orchard trees of different kinds growing, and promising in a year or two a most plenteous supply of fruit.

Allow me, here, Mr. President, to call your attention, and the attention of this audience, to an extract from the last official report of our State Geologist, Dr. John B. Trask, whose indefatigable labors have developed an amount of valuable information in regard to the mineral and agricultural resources of California, which should insure him the esteem and gratitude of all who feel interested in the future growth and prosperity of our young and promising State. What I shall read is from the chapter headed "Soils and productions of Los Angeles." After expatiating upon the character of the soil of the vicinage which he is describing, and remarking upon its capacity as a wine-growing and stock-raising country, he adds:

"The culture of grain upon these plains warrants the most sanguine expectations, and so far as the experiment had been made, the yield has been largely above the average crops of the more northern districts, and should success attend the experiment of the introduction of water for irrigation, full thirty per cent. of these plains may be applied to the rearing of cereal crops, and leave a large margin still for pasturage.

"The advantages of water near or on the surface in this section of the country is manifested in the experimental crops of last year on the 'Monte,' a few miles east of the city. The corn crop of this locality, comprising about 1800 acres, was immense to its yield as in the size of its stalks; a large proportion of it was planted late in the season, but notwithstanding this, the ear was full formed and well filled in the month of October, and the crop still in the field. It was no uncommon occurrence to find six full ears on one stalk, and the number of four was much more frequent than [illegible] now it. I think that it may be safely stated that the Monte lands will yield an average crop of sixty bushels to the acre. [illegible] are comparatively [illegible] as compared with the fertility of the [illegible] with every [illegible] have [illegible] grand a [illegible] as a [illegible] but [illegible] for [illegible] would [illegible]

[illegible] now to [illegible] of the [illegible] The [illegible] of the [illegible] separate [illegible] on [illegible] far [illegible]

EXHIBITION GROUNDS OF THE CALIFORNIA STATE AGRICULTURAL SOCIETY.

(LOUISIANA RACE COURSE,) NEAR SACRAMENTO, SEPT. 26 AND 27, 1855.

otics of a more southern nativity would flourish, while their destruction would be almost certain beyond this chain.

"First among the exotic growths of Los Angeles, is the sweet orange; this tree is found to flourish well without artificial protection from the atmosphere, and attains the hight of forty feet, and in some cases even more than this; its fruit is fully equal to any imported article which has yet arrived in this country. The tree produces bountifully and is in fruit throughout the whole year. The fruit is generally large and plump, with the pulp well filled; there is not the slightest evidence of any thing uncongeniel connected with its appearance; it may be said truly to have become habituated to our climate, or to have found in it the kindred qualities of its own tropical native home. I have seen the young tree of two years from the seed producing full, well matured fruit. During the palmy days of the old Missions, they were in the habit of cultivating somewhat extensive groves of these trees, but since their decline, the trees and their culture have been neglected, and the groves in many instances cut down. It is a pleasing fact to know that American citizens resident in this portion of the State, are turning their attention to the propagation of this delicious fruit, and it will be but a very few years before our markets will be supplied from domestic sources entirely. In the cities of Santa Barbara and Los Angeles and the adjacent Missions, I have seen the orange tree forty years old, and in some few instances much older.

"The citron is also another fruit belonging to the same natural family, and was formerly cultiveted to a considerable extent, and flourishes well at the present time. I have seen this fruit in the gardens of private residences growing to the size of six inches in length by three inches in dismeter; its weight could not have been less than two pounds.

"The date tree, fig, pine, apricot, guava, pomogranate and kindred fruits, find a congenial climate, and a soil adapted to their successful cultivation, and are to be met with at several points in this section of the country. No attempt, so far as I have been able to learn, has as yet been made to produce the pine-apple, although the climate and all other concomitant conditions of locality essential to its culture abound. Some experiments have been made in the culture of tobacco, which have proved highly successful and satisfactory—the Cuban variety is found to flourish as well here as upon its native soil; the great consumption of this article in California will render its cultivation an object of some considerable importance, and as so little care and labor is necessary in rearing it here, it is more than probeble that but a few years will elepse before it will find a plece in our commercial tables, as an article of home production, and perhaps of export.

"The climatal conditions of these pleins, and the adaptability of their soils are such that we may reasonably expect, ere a few years shall pass, that cotton, coffee, tea, sugar and rice, the four latter articles particularly, will find a place in our catalogues of home productions, and the only impediment that now stands in the way of their immediate production, is the high price of labor which is consequent upon the sparseness of population. The unoccupied or rather unimproved lands extending from Point Aguilla to San Diego on the line of the coast, and into the interior for distances varying from twelve to fifty or sixty miles, and the extensive valley ranges beyond the first and eastern line of the San Bernardino mountains, offer strong inducements to the immigrant and settler who may be seeking a permanent and agreeable home, and who wishes to cultivate soil as a means of livelihood and source of profit. To such this district of the State furnishes an ample field for his operations, and equally profitable with any other portion of our wide domain."

In view of all that we have seen and heard, in the last day or two, of the progress of Agriculture in California, and in view of the testimony which has been laid before us, in such a variety of forms, as to the capacity of our soil and the genial and varied influences of our unequaled climate, I feel justified in saying, that in my judgment, it would be quite difficult for any one, either here or elsewhere, to name a single plant or vegetable, tree shrub or flower, whether grown on farms, in orchards or in gardens, which, with adequate care and judicious diligence, might not be successfully cultivated and brought to complete perfection in some part of California. If the progress which we have already made in this interesting pursuit, should be continued for a few years longer, it may be that some classic traveler, sojourning for a season amidst our charming hills and valleys and fertile fragrant plains, may hereafter apply to this modern Ausonia the glowing language of poetry, and exclaim—

"Whatever fruits in different climes are found,
That proudly rise, or humbly court the ground;
Whatever blooms in torrid tracts appear,
Whose bright succession decks the varied year;
Whatever sweets salute the northern sky,
With vernal lives that blossom but to die,
These, here disporting, own the kindred soil,
Nor ask luxuriance from the planter's toil;
While sea-born gales their gelid wings expand,
To wiunow fragrance round a smiling land."

REPORTS OF COMMITTEES.

On Farms, Vineyards, Orchards, etc.

To the Executive Committee of the California State Agricultural Society:

The Committee on Farms, Vineyards, Orchards, Nurseries, &c., in the discharge of the duties assigned them, proceeded on the 12th of September last, to the Farm of J. C. Davis, Esq., situated on Puto river, and distant from Sacramento twelve miles. Mr. Davis' Ranch embraces about 8,000 acres of land—one thousand of which, are inclosed with a good substantial fence. Upon this ranch are a large two-story commodious House, with piazzas, and a steam Flouring Mill containing two run of stone, and capable of flouring 300 bushels of wheat in twenty-four hours. The machinery of the mill, also raises water for irrigation, and supplies the wants of his house and barn. The water is first reised into a large iron tank holding 5,000 gallons—and is thence distributed by the arrangement of pipes as required. Blacksmith and carpenter shops, with requisite tools for the accommodation of the various wants of the farm end mill, constitute a part of the Ranch buildings. The arrangement of the Dairy House is admirable, and well adapted to its uses. A large Barn, 60x90, end well arranged; corrals, large and convenient—edd to the improvements already mentioned. There are upon the Ranch 4,000 Grape vines, three years old; five hundred Peach trees, and of other kinds of fruit trees 300. There were 300 acres of Wheet and Oats grown upon the Ranch thie season, of good quality—and it has a fine thrifty Locust Grove, containing 10,000 trees.

The stock upon the Ranch consists of 3,000 heed of cattle, six hundred of which are American, the belance being California stock. Three hundred Americen cows comprise the dairy stock, and seventy-five horses aud mules make up the stock of harness end saddle animals. Mr. Davis hae 4,000 aheep; and hogs, poultry, tools, and implements of husbandry corresponding to the requirements of the Ranch.

The soil is a dark rich loam, with a sufficient admixture of other qualities, to peculiarly adapt it for remarkable growths of grain, grass, &c. It is free from the excesses of wet and drought, and not liable to bake and crack, The entire absence of *rust* during the two last seasons in that locality, while it prevailed to an alarming extent in many other portions of the State, commends it as a desirable Wheat-growing section.

From Davis' Ranch we proceeded up tha Puto river to Wolfskill's Ranch; at the foot of the first of tha Coast Ranges of monntains. Tha evidences remaining of the extent and quality of crops grown upon the Farms intervening between Davis' aud Wolfskill's, were gratifying end encouraging to the California agriculturist.

At Mr. John Wolfskill's we found forty acres inclosed, and containing 3,000 Grape vines, 6,000 of which are in bearing; 150 Peach trees, seventy of which are in bearing; eighty Pear trees in bearing; and Apricot, Quince, Peach, English Walnut, Chestnut, end Almond trees, in vigorous growth. The bearing trees are mostly seedlings. The location is excellent; it can hardly in fact be surpassed, and will, with the efforts that are being made for the improvement of its fruit, soon occupy a position among the finest orchards of the State. Tho gresshoppers nearly destroyed his vineyard, as well as seriously injured other fruits, end trees. He irrigates with water raised by steem from the Puto river. His Ranch embraces 17,000 acres, end he hae 150 head of cattle.

From Wolfskill's our course took us along the foot hills, south, into and through Vacca Valley, into Suisun; thence crossing to Suscol, and stopping at the Messrs. Thompson's, who have 500 acres enclosed, and 9,000 trees in orchard, as follows: 1,500 Apple, of 35 varieties; 50 Cherry, of 18 varieties; 50 Paar, of 41 varieties; 100 Plum, of 27 varieties; 250 Apricot, of 6 varieties; 7,000 Peach, of 34 varieties. Three hundred of these are beering trees. The fruit planting was done in 1853. In addition to the orchards, these gentlemen have 40,000 trees in nursery—of which 30,000 are Peach—the remeinder being Apricot, Necterine, Apple, Plum, snd other varieties. They have 5,000 Los Angeles Grepe vines in their vineyard, and 2,500 in the nursery, of improved culture.

From Messrs. Thompson & Bro.'s we passed up Napa Valley, through Napa City, an interesting and thriving village, situated on Napa Creek, to "Oak Knoll," the residence of J. W. Osborne. Mr. Osborne's Farm, although not entered for premium, is deserving of particular mention, as well as the hospitalities of its proprietor, who afforded us the opportunity of examining his 600 acres of inclosed land, 450 of which were in grain the present season, and containing thirty-five acres in orchard, besides 11,000 trees in nursery, designed for the enlargement of the orchards, together with a fine stock of horses mules, cows, hogs, aheep, brood mares, &c. Mr. Osborne estimates that he will have 3,000 trees in bearing the coming year. He is about introducing into hie premises a supply of water for irrigation, which will materially add to the improvements and value of his Farm, as well as serve desirable orchard and nursery purposes. The buildings, consisting of the residence, barns, grain warehouse, dairy house, &c., are well and tastefully constructed, and their arrengement admirable. Tha large variety of farming implements, of the latest and most approved kinds, exhibited very creditable efforts on the part of Mr. Osborne to be foremost in agricultural advancement. Many more details, and a proper notice of the general cleanliness of his farm, and fine fences, could be mentioned, and would be, if the limit of this report would justify it. In this as in other cases, we shall confine ourselves to an outline of what we see.

Still further up the valley a few miles, we were introduced to Geo. C. Yount, Esq., an old and estimable resident of California for nearly twenty years past. Mr. Yount had entered his Flouring Mill for examination, and the committee were there to examine it. The mill is a first class mill and evinces throughout finished workmanship, combining all the essential requisites for manufacturing superfine flour; doing the work economically, conveniently and cheaply. It contains two run of stone, and cost $30,000. It will compare favorably with flouring mills in any section of the Union. It was interesting to learn from Mr. Yount that he has raised wheat for eighteen years in succession, on the same ground, in that neigbborhood, and that he had never known it to blight until this year, with the introduction of "Yankee seed."

Mr. Yount's Ranch comprises three leagues of land, two of which are in the valley, end of which 800 acres are inclosed. It contains a fine assortment of fruit trees and a vineyard, with several thousand vines in bearing. *An old orchard and vineyard, planted long since, was attractive for its maturity and fine fruit.* Seven hundred acres of wheat were grown by Mr. Yount this season. His Ranch is located ten miles north of Napa city, and at the date of its settlement by him, his nearest neighbor was Gen. Vallejo, at Sonoma, distant twenty miles. This whole tract of valley land can be irrigated with mountain streams, with no expense beyond the necessary cutting of ditches for the distribution of the water.

Still further up the valley we find F. E. Kellogg, cultivating 100 acres of land, containing 1100 fruit trees. He has fifty bearing Apple trees, and the fruit was apparently of choice quality. The location is excellent, and water abundant for irrigation, and all the purposes that pertain to fruit growing and farm convenience.

From Napa we crossed over the dividing ridge, or line of hills, lying between it and Sonoma Valley. Entering the latter we first visited the vineyard and orchard of Messrs. Rose and Jenkins. The location of these gentlemen is a beautiful one, overlooking the valley—and is situated about one and a half miles from Sonoma. It is irrigated abundantly from natural springs, and contains 2,000 old vines, planted fifteen years since, by J. P. Lease. The estimated crop of Grapes the present season, is 40,000 pounds. It contains 8,000 young Vines, 400 bearing Apple trees, 850 Peach trees, sixty bearing Fig trees, besides 500 in orchard and 1,000 in nursery, and a good variety of Cherry, Plum end Pear. There are seventy-one acres inclosed; eighteen of which are in orchard and vineyard. Probably there is no better bearing vineyard in Northern California.

Proceeding next to the residence of Gen. Vallejo, we were most hospitably received and entertained. By the courtesy and politeness of this old pioneer in Agriculture, we were shown through his house, end adjoining buildings—his beautifully arranged end improved grounds, and the various conveniences they possess. The bountiful supply of water for household and kitchen purposes, which empties itself as desired into all the apartments of the General's premises, and furnished by neighboring springs, was much admired. The arrangement of his dwelling house, (the plan of which is his own) as well as the outbuildings end grounds, were very properly complimented by the committee.

From Gen. Vallejo's, we continued up the valley to "Agua Corriente," the residence of W. McPherson Hill, situated in the midst of the foot hills that spur out from the main range on the west side of that valley. Mr. Hill has 125 acres inclosed, and containing 1,100 fruit trees, consisting of Apple, Pear, Plum, Peach, Cherry, and others in extensive variety. He has about 200 trees in bearing, among which are fine varieties of Chili fruits. The abundance of water for irrigation, found on Dr. Hill's premises, explains the desirableness of the location. The product of fruit this season, from this orchard, amounted to several thousand dollars—end the committee were furnished unmistakable evidences of its superior quality.

Returning, we passed over the direct route to Benicia, down to San Francisco, crossed over to Alameda and examined the "Pioneer Nursery" of the Rev. A. H. Myers. His stock consists of 28,000 Apple trees of 72 varieties, 8,000 Peach of 22 varieties, 1750 Cherry of 20 varieties, thirty varieties of Pear, and several of Almond, Apricot, Nectarine, Plum, Quince, Fig, Orange, and 18 of Grapes; Currants, red and white; besides Gooseberries, Raspberries, Strawberries, and ornamental trees and shrubbery, in extent and variety highly creditable. Mr Myers' Nursery excels in the completeness of its assortment—the proportion of each to the other, as they may be promiscuously wanted, and the large veriety of each kind. Other nurseries exceed it in growth under the more favorable influences of location, or irrigation; but this commends itself for the maturity it has attained in a dry soil without artificial aid. The size of the trees in bearing excited great surprise. Among them were small stalks, in appearance, of no more than a few weeks' growth, loaded with fruit, mostly nursery

trees; and in variety, there were forty-one of Apple in bearing, five of Pear, fifteen of Peach, ten of Plum, eleven of Cherry, &c.

By invitation we visited at this place the grounds of Dr. Haile and Mr. Sather, although not entered for premium. Both have extensive Peach orcharda, and the former a very extensive nursery. The trees are large, and thrifty, and much admired.

We next visited the farm of Jesse Beard, Esq., entered for premium, and situated between Union and the Mission of San Jose, in Alameda county. Mr. Beard has 200 acres of choice land inclosed, and 38 acres in orchard, containing about 5,000 trees, well assorted, and of numerous varieties. In addition, he has 3,000 trees in the nursery, of fine growth and appearance, besides some two miles of Osage Orange Hedge, which promises well, but is not far enough advanced yet to serve fence purposes. Mr. Beard has cultivated 190 acres of his inclosed land the present season, and his crops of Wheat, Potatoes, Beans, Corn, &c., have yielded well. His house is one of the most admirably arranged farm residences we have seen, and is creditable alike for the taste displayed as well as the judgment it exhibits in its adaptation to the uses for which it is designed.

At the old Mission of San Jose, we find E. L. Beard, Esq., occupying one of the most desirable localities in California. The fruit of this old Mission orchard is remarkable for its abundance and fine quality.

Immediately adjoining these premises, are the Orchard and Nursery of Messrs. Beard & Lewelling, finely located and well watered. The Orchard and Nursery covers about seventy-one acres, and the Orchard contains 5,700 Apple trees of 30 varieties, 1,800 Peach of 20 varieties, 300 Cherry of 6 varieties, 600 Pear of 34 varieties, 400 Plum of 6 varieties. The Nursery contains 10,000 Apple trees, 2,000 Pear, 4,000 Cherry, 600 Plum, 3,000 Peach, and 40,000 seedling Pear, Apple and Peach trees. The Orchard, in extent and variety, equals, and in maturity, excels any other to which our attention was directed.

It afforded the committee more than ordinary interest to witness the improvements of this pioneer in Agriculture, who among other creditable enterprises in connection with another gentleman not unknown to Agricultural fame, John M. Horner, Esq., built eighty miles of fence on and around their premises, when the cost of the same was more than double what it would be at present rates.

Leaving the Mission of San Jose we arrived after a ride of fourteen miles, at the beautiful and attractive city of San Jose. The hospitalities of its citizens were cordial, frank, and liberal. The evidences of prosperity were unmistakable, and the face of the country, richness of soil, and its producing qualities, mark it as one of the very best Agricultural sections of the State.

There was but a single entry in San Jose that called for the examination of this committee, to wit—the "San Jose Nursary" of Messrs. Provost & Co. However, the committee accepted the polite invitations of several gentlemen of that city, to visit their Farms, Nurserica, Orchards, and improved grounds, and cannot let the opportunity pass without expressing the high gratification they experienced in visiting the residences and improvements of Major Henaley, E. W. Case, Capt. Aram, Mr. Delmas, Messrs. Smith & Winchell, Dr. Bascom, Mr. Franklin, Mr. Lowe, and others. To Messrs. Lowe and Beaty we are under especial obligations for their attentions.

Major Hensley's grounds are spacious, finely cultivated, and ornamented with fine forest shade trees, and shrubbery of varied kinds; an excellent selection of fruit trees, embracing the choicest varieties; a green house, rustic arbor, and an Artesian well, pouring forth its volume of water more than sufficient for irrigation and other useful purposes.

The exhibit of Applas at the hall of exhibition, by E. W. Case, speaks more forcibly than your committee can in behalf of his very superior Apple Orchard, which contains about 850 trees, besides which he has 2,000 in Nursery. The trees show a strong, healthy growth, and are remarkable bearers. Mr. Case has thirty acres inclosed, and an Artesian well on the premises irrigates the whole farm abundantly.

Capt. Aram's place furnished much to admire, both in the Nursery and Orchard, but in his absence we could not obtain the particulars we desired.

Great praise is due to Mr. Delmas for his very interesting and admirably located vineyard, the result of his own labor and efforts. It shows more attention in the vine growing department than any other we visited. The arrangement is tasteful, the growth of the vines luxuriant, the fruit delicious, and its variety astonishing. The native wine exhibited to the committee gave evidence of superior skill in manufacture.

Messrs. Smith & Winchell's "Commercial Nursery," particularly attracted our attention. They have 12,000 Apple trees, 2 years old, of 62 varieties; 4,000 Peach 2,000 Pear on Quince stocks, 25,000 Apple trees of last spring's grafts. Also, Plum, Cherry and other variatias. Messrs. Smith & Winchell's Nursery of Apple trees excited much attention. They are remarkable for their growth and fine appearance, as well as for large variety and choice qualities; and the stock and varieties originating, as they do, from that celebrated fruit growing section of the country, Western New York, [illegible] this Nursery worthy of [illegible]

The Farm of Dr. [illegible] situated near Santa Clara, was [illegible] Company, of which [illegible] The [illegible] has established a [illegible] which commands the ascension of the mountain with a [illegible] and surrounding [illegible]

These, added to a cordial hospitality, rendered our short call a most agreeable one.

Below Santa Clara a short distance, we visited Mr. Franklin's Farm, situated on the Guadaloupe, and containing about 600 acres. This is a highly cultivated Farm, well fenced, with extensive orchards, admirably layed out and arranged; fine landscape gardening, convenient roads leading through it, lined on either side with young locust and other forest trees. All these, and other considerations combine to give it a high position among the fine farms of the State.

The arrangement of Major Hensley's grounds, the rustic work alluded to, and the landscape gardening—the designing and laying out of Mr. Franklin's premises, have been done by James R. Lowe. Mr. Lowe seems to be far in advance of any one else in these respects, so far as your committee have had the opportunity of observing. He also showed us 5,000 Peach trees budded by him late in June last, which have now a growth of three feet; and 12,000 seedling Peach trees, showing a growth of from six to eight feet during the season. No premium is designated in the published programme for these meritorious works. Indeed, it may be contended by some that landscape gardening and rustic work do not add to the improvement of Agriculture, and that no good can result to the State from the bestowal of premiums upon objects of this character. Your committee reason differently. They believe that the cultivation and improvement of the taste in these respects leads to other and more valuable results—that an awakened interest in these must secure desirable improvements in what may generally be regarded the more important interests of Agriculture. Taste, for the beautiful, is seldom unaccompanied with more or less attention to the substantial and reliable. Encourage, then, the adornment of which we are speaking, and the beneficial results so earnestly sought, will assuredly follow, in their season.

We come now to the Nursery of Messrs. Provost & Co., entered for premium. This extensive garden, and nursery, is situated on the Guadaloupe, and embraces seventy acres of rich alluvial deposit from the overflowing of the river, twenty acres of which are in cultivation. They contain: 6,300 Apple trees of 63 varieties: 8,000 Peach of 51 varieties; 18,000 Pear of 49 varieties; besides Almond, Apricot, Plum, Cherry, Nectarine, Strawberries, Grape vines; of the latter, there are no less than 35,000 vines, of 18 varieties. In the ornamental department they have 17,000 Roses of 88 varieties, Catalpa, Locust, Alanthus, &c., to which may be added 3,000 seedling Orange trees, and otherwise a large assortment of Shrubbery, &c. The high state of cultivation, that is apparent in the nursery of these gentlemen, deserves great praise. Everything seems to be well done—and while the large variety of fruit trees, of almost every kind, will attract observation, there are two very remarkable features in the collection of Messrs. Provost & Co. that will enlist more than ordinary attention. Allusion has been made to the number and variety of Pear trees. This department of Messrs. Provost & Co. is much further advanced in all respects, than any other that came under our observation. To our own native and improved Pears, are added the choicest foreign varieties, of which no less than forty-nine sorts can be obtained at their nursery. They have engaged largely in dwarfing, and have a full supply of the different varieties on quince stocks.

The number of Roses in this nursery is no less remarkable than the eighty-eight varieties it contains. Really, it is a forest of Roses.

Fifteen miles from San Jose in the direction of San Francisco we found ourselves at the Mayfield Farm, owned by S. J. Crosby. Mr. Crosby has about 1,500 acres of land, two hundred and fifty of which are inclosed, and seventy-five under cultivation. His wheat produced forty bushels per acre, the present season, of a superior quality. He has 6,000 fruit trees in orchard and nursery—all designed for the orchard, and in variety well selected. Water, for irrigation, has been introduced from a neighboring spring. The country in this neighborhood, was much admired by the committee, and it cannot fail to occupy a prominent position among the desirable farming regions of the State. Mr. Crosby's improvements—house, barn, sheds, &c., are well undertaken, and deserving favorable notice.

Here again are evidences of Mr. Lowe's landscape labors and taste.

Much could be said of the places and improvements, noticed by the committee, on their route up from Mayfield to San Francisco; as well as elsewhere, during their agricultural tour through the sections of the State visited by them—but want of time to collect details with other exercises precludes this pleasure at the present time.

Near San Francisco, and at the Mission Dolores, we visited the Gardens of Messrs. Walker, O'Donnell, and Sontag; though not entered for premium. There is much in each to admire; much that deserves commendation. If the interest of our State and the short time allotted to pursuits of this character in California [illegible] ed, they may fearlessly challenge the rivalry of the world. Each may be said to excel in a particular respect. Mr. Walker for Roses, Mr. O'Donnell for out door Grounds, Flowers, Garden etc., and Mr. Sontag for Strawberries.

The examination of orchards for premiums being now completed, with the exception of [illegible] in Sacramento and vicinity, to [illegible] which the committee were unable to make [illegible] the premises being removed [illegible] and examined their [illegible]

Dairy [illegible] however [illegible] the [illegible] of the Sharon [illegible] tion Company, as exhibited through their polite and gentlemanly Agent, Gen'l Reddington, in furthering the enterprises in which they have been engaged.

The Garden and Nursery of the Rev. O. C. Wheeler, situated on Tenth street, covering two and a half acres, including the space occupied with buildings, is more than ordinarily meritorious, for the extent and variety of Fruit and Ornamental trees, and Shrubbery it contains.

Within this inclosure, Mr. Wheeler has 6,000 Apple trees, of 50 varieties; 4,000 Peach, of 18 varieties; 3,000 Pear, of 20 varieties; 500 Plum, of 12 varieties; 400 Cherry, of 10 varieties; 200 Nectarine, 6 varieties; 300 Apricot, of 5 varieties; 6,500 Grape vines, of 14 varieties; 1,200 Quince, of 2 varieties; Raspberries of 5, and Strawberries of 13 varieties; besides Gooseberries, Currants, &c. Of the Ornamental, he has an extensive variety. The front door yard of Mrs. Wheeler is ingeniously arranged, and should be visited and examined by parties about to engage in enterprises of beautifying and improving their yards and grounds. In the opinion of the committee it is the best thing of the kind they have seen, and they commend it on account of its originality, ingenuity, and beauty, to the consideration of the Executive Board. The entire place, except 100 feet, is surrounded with a good Osage Orange Hedge 1,220 feet long.

A. P. Smith's Gardens, Nursery, Orchards, &c., entered for premiums, and situated on the American river, two and a half miles from Sacramento, were next visited. Mr. Smith's improvements cover an area of fifty acres. His collection of Green-house plants, and Ornamental trees and Shrubbery, embraces about 400 kinds, including many that are rare and valuable. He has 37 varieties of Peaches, 38 of Pears, 38 of Apples, 10 of Apricots, 18 of Plum, 22 of Cherries, 13 of Grape, besides Gooseberries, Raspberries, Currants, &c. Mr. Smith has a Peach Orchard of 2,000 trees, which excels any orchard of the same extent examined by the committee, and contains some of the largest Peach trees we have seen. Mr. Smith has an Ornamental Hedge of Escalonia, far surpassing any other that came under our notice. It is really beautiful. Mr. S.'s Flower Garden deservedly stands first on the list entered for premium, and the only one entitled to a prize. The same may be said of his Vegetable Garden. He has nearly a mile of Osage Orange Hedge, but like others, the plants are yet young.

It was particularly gratifying to the committee to observe the great variety of Seeds, of almost every description, that were being carefully and properly put up by Mr. Smith. Much loss and inconvenience has occurred heretofore, in consequence of our being obliged to rely upon importations for a supply of seeds. It is hoped that hereafter we shall not suffer the too frequent imposition of worthless seed, as well as from the injury it sustains in its transportation to this State.

Of the many interesting and remarkable things seen by the committee, during their tour of observation and examination, perhaps, none excited more surprise than the contents of the little spot of ground, 80 by 160 feet on H street, owned and occupied by Dr. B. B. Brown. It exhibits most forcibly what requisite attention and effort will do. Besides the Doctor's residence, liberal in size, it contains 65 Peach trees, 15 Nectarines, 18 of Apple, Pears, Apricots, Fig, Datea, Gooseberries, Currants, Raspberries, Blackberries, Quince, Almond, Grape, Strawberries, besides innumerable varieties of Ornamental trees and Shrubs, and a large collection of Roses and Flowering plants of various kinds. Indeed, it is literally filled with everything rare in the way of fruit, plant, shrub and flowers. In addition to these, there is a Green-house worthy of attention, and an Osage Orange Hedge, 440 feet long and two years old. The Peaches grown in this inclosure the past season, can hardly be surpassed. Certainly we have seen no spot of ground in the State, if we regard its dimensions, that will compare with this, for the varied collection of fruit trees, and other valuables which it contains.

The committee make the following awards, and recommendations:

Farms.

To J. C. Davis, of Yolo county, 1st premium $200
To Jesse Beard, of Alameda county, 2d do 100

Vineyards.

[It is proper to state that Mr. Myers, being himself a competitor for the premium, did not act with the committee, in determining the awards on nurseries.]

To Messrs. Rose & Jenkins, of Sacramento co., 1st premium ... $75

The committee recommend a special premium to be paid to [illegible] Delmas of San Jose, for the best and largest varieties of foreign Grapes.

Nurseries.

To A. H. Myers of Alameda co., 1st premium $75
To P. Provost & Co., of San Jose, 2d do 50

The committee recommend special premiums to be paid to Messrs. Provost & Co., for their superior Nurseries of Pear Trees and Roses, excelling [illegible] they have seen.

Fruit Orchards.

To Beard & Lewelling, of Mission San Jose, 1st premium ... $75
To Thompson & Brother, [illegible] 2d do 50

Kitchen Gardens.

To A. P. Smith, of Sacramento, 1st premium $50

Flower Gardens.

To A. P. Smith, of Sacramento, 1st premium $50

To A. P. Smith, 1st premium [illegible] $50

The committee recommend a special premium to be paid to A. P. Smith, for his unequalled and highly meritorious Ornamental Hedge [illegible]

To [illegible] Wheeler, for [illegible]

To Mrs. [illegible] Wheeler, for [illegible]

To Jas. R. Lowe, for [illegible]

do [illegible]

do [illegible]

The Committee recommend [illegible]

Dect. B. B. Brown, of Sacramento, for his finely arranged [illegible] cultivated grounds.

They also recommend a special premium to A. P. [illegible] Esq., for his Orchard of two thousand Peach trees, being the finest specimens of bearing trees, of that number, seen by the Committee in their examinations of the Orchards in California.

Also, to Geo. C. Yount, of Napa co., for the best Flouring Mill, a special Premium.

The committee have detailed with a good deal of liberality, the contents of the various Farms, Orchards, Vineyards, and Nurseries they have examined; necessarily swelling this report to an almost objectionable length. It is believed however, that the information communicated to those who wish to improve their Farms and grounds, and set out desirable Orchards, will find this intelligence valuable—and to such, more than to all others, do the objects and efforts of the Agricultural Society address themselves.

Many Farms, creditably improved, and which, if entered for examination, would have commanded a premium, were not entered in consequence of the impression on the part of cultivators that they were not sufficiently meritorious for such entry. It is hoped that similar erroneous views will not prevail hereafter, to the prejudice of the important interests of Agriculture.

There is too much of *routine* observable in the method of farming, generally, throughout the State. Until recently, the advancement that has characterized almost every department of industrial pursuits, has not exhibited the same reforms, and ratio of labor-saving, in Agricultural employments. Farmers have only recently, as it were, become alive to the great improvements that have been, and are making, in this most important department. Machinery, now-a-days, is as successfully applied to the cultivation and tillage of the soil, as it is in the workshops of mechanics.

Farmers have become experimenters, and searchers after new agricultural truths—and their efforts are developing a new state of things in this important science. Results, already attained, have largely increased the interest of investigation. The State and National Councils have waked up to its importance, and it is engaging no small share of their legislative action. The world at large, too, has stopped for a moment to give this subject a thought, and the inhabitants of the Old and the New World, have consulted together for the advancement and improvement of their agricultural welfare.

It is hoped that the Farmers of California will will not only avail themselves of the advantages attained in consequence of these investigations, but that they, too, will add largely to the developments, that are rendering more and more attractive and advantageous, the culture of the soil.

C. I. Hutchinson,
B. Cahoon,
R. Robinson,
A. H. Myers. } Committee.

On Grain, etc.

Being appointed by the State Agricultural Society a Committee to report on Grain, &c., exhibited for premiums at the State Fair, beg leave to report as follows:

Wheat.—Best ten acres, to Peter J. Campbell, 1st premium, - - - - $100
To Munyan & Jocelyn, 2d best do., - 50
Barley.—To Munyan & Jocelyn, 1st prem. $50
Oats.—To Munyan & Jocelyn, 1st pram., $50
Corn.—The fine sample presented by Henry Wilson, of Russian River, we think entitled to the 1st premium on this article, - - $50
Sweet Potatoes.—No. 1—We think the premium ought to be awarded to John G. Almond, his sample being the finest and fairest of the yield of three acres, - - - - $25
No. 2.—The sample presented by the firm of Hooker & Fern, is we think, entitled to a special premium, of - - - - $25
Millet.—Dr. Curtis, of Yolo, presents a very fine sample of this article, of the Chinese variety. He raised one acre—yield 40 bushels. We recommend a special premium of - - $10
Beans.—J. L. Sanford, of Shell Mound, presents a sample of the Chinese Dwarf, which is very fine—quantity raised 1,000 pounds. We think he is entitled to a special premium of $10
Egyptian Corn.—D. Kandall, of Sacramento, presented three stalks of this variety, which we consider worthy of much attention, as the yield is undoubtedly large, and is well adapted as an excellent food for poultry. We recommend a special premium of - - - $10
Flax Seed.—Thos. Edwards, of Sacramento, exhibits a very fine sample of this article, which is entitled to a special premium of - $10
Onions.—Messrs. Hooker & Fern have also presented a very fine article, and the greatest yield on five acres, and duly certified; they are therefore entitled to the 1st premium, - $30

Having no information as to the quantity planted or the produce per acre of the magnificent sample presented by John F. Swift, we cannot report.

Tobacco.—No. 1—The sample raised by J. R. Jackson we think ought to get the first premium [illegible] It is a very fair sample of what California can produce as [illegible] important branch of Agriculture.

No. 2—[illegible] premium ought to be awarded to Fr. B. B. Brown - - $10

J. [illegible]
[illegible]
Chas. [illegible] } [illegible]

On Dairy [illegible] and [illegible]

[illegible] and report [illegible] Cheese [illegible] and [illegible] the [illegible] and [illegible]

from the Dairy of Shepard & Reeves, and consists of one Cheese weighing 185 pounds, and one of 117 pounds. Both are good, but the largest is the best, and for which we award the first premium. - - - - - $25

The second lot is from the dairy of Samuel Lewis, and consists of two small Cheeses, which are very fine, and for which we award the second premium, - - - - - $15

There was but one lot of Butter and one of Bread, both contributed by Mrs. Pugh. They were both very good. For the Butter we award the first premium of $25; and for the Bread a special premium of $10 in plate.

We also examined a very excellent article of Soap, manufactured by J. P. Dyer, and award to him the first premium. - - - $15

L. Frink,
A. M. Winn,
W. Morgan, } Committee.

Report on Flour.

Your committee appointed to adjudge awards on Flour, Buckwheat Flour, and Meal, of domestic manufacture, submitted at the Agricultural Fair, beg leave to report that eight samples of Flour and one of Meal, were handed in for inspection. The Flour was marked as follows: Stanislaus Mills; Stockton City Mills; Star of Pacific Mills; A; Avenue Mills; Marysville Mills; Mission San Jose Mills; No. 1.

Having examined the same, the committee find them of superior quality, and fully equal to the well known brands "Huxall" and "Gallego," for cleanness, fineness, and life, giving evidence that the manufacture of this staple article has attained that perfection and renders it unnecessary, for the future, to look to other than our own industry for the best our country can produce. Too much praise cannot be awarded to the manufacturers of each. In deciding the merits for superiority, the greatest care was found necessary, and after due examination, they decide the sample marked A (Bay-State Lower Mills, Sacramento,) entitled to the first premium; and that marked No. 1 (Phœnix Mills, Sacramento,) entitled to the second premium. To which they award them.

The sample of meal is superior, and fully equal to the best Eastern manufacture.

All of which is respectfully submitted.

J. H. Carroll, Chairman Com.

Report on Fruit.

Mr. President and Gentlemen of the Society:—If heretofore there might have been found a single individual in California skeptical of the adaptation of our soil and climate to the successful cultivation of fruits of almost every variety, he must be blind to the plainest evidence of his senses, longer to continue in doubt. If the assurances of cultivators, the authentic records of former years, and the united testimony of those extensively engaged in horticulture, have failed to satisfy him, surely an examination of the present varied and magnificent array of the productions of the orchard, the vineyard and the garden, must dispel every shadow of doubt.

Of the fruit contributed for competition, it is impossible to give more than a hasty and partial description. The articles presented for the consideration of the committee embrace varieties congenial to almost every latitude and region of the globe, and include nearly all that are desirable for general and extensive cultivation, although, in numerical display—in the number and perfection of certain varieties common to latitudes east of the mountains, the present exhibition cannot compare with some of those held in the older States, yet, it is believed, there can be no disagreement in opinion as to the superiority of our climate in the diversity of choice and delicate fruits capable of being raised under ordinary modes of cultivation. Among the elegant assortment spread out for their consideration, the committee have been not a little embarrassed in satisfactorily determining their relative excellences. Where all are so worthy, it is difficult to make distinctions, and, at the same time, avoid a seeming injustice to some.

In deciding upon the respective merits of the several articles presented before them, they have endeavored to bring to the duty a strict and unflinching impartiality, and in the awards which they have made, they have been governed solely by a regard to the intrinsic merit of the specimens, and the circumstances under which they were cultivated.

Upon the article of "apples," for example, their object was to award the first premium to those samples which combined superiority in size and excellence of flavor, with extensiveness of variety, and not to any one of these qualities alone. At the same time, they felt it their duty to enquire into the mode of culture adopted, although, they regret to say, that in many instances they were unable, at the proper time, to find the cultivators, or to obtain any information upon this important point. The same governing principle was kept in view, in the examination of all the different sorts of fruit presented for their decision, or where two or more samples, equal in development and variety, were before them, they assembled to consider their respective rarity, as well as their quality in other respects.

In carrying out this course, they found many lots of fruit, of great merit, which were excluded from the advantages of the regular premiums allotted by the Society, and with the view of doing full justice to these, and to express their unqualified admiration of their real worth, the committee have recommended special premiums, which they trust will be sanctioned by the Association.

They have understood that many articles have been presented at the Society's rooms, during the season, of which a record has been kept, and many of which were possessed of much intrinsic value. As these will, probably, be reported upon by those who had them in charge, the committee have not specially considered them.

With these preliminary remarks, explanatory of the principles governing them in their award of premiums, they present the following list of articles, coming under their adjudication, together with the prizes conferred:

Apples.—1st. Of this fruit there were presented, on the day of examination by Mr. Case, of San Jose, 10 varieties; by Mr. Myers, of Alameda, 27; by Messrs. Beard and Lewelling, of Mission San Jose, 23; by Mr. Kellogg, of Napa, 9; by Capt. Morgan, Bolinas Bay, 6; Doct. Haile, of Alameda, 1; by Washington Meeks, of Sacramento, 1; by Mr. Gosty, (residence not given,) native apple, 1.

Among the many elegant specimens included in the above, although all were highly creditable, some deserve a particular reference.

The Belle flower, Baldwin, and Gloria mundi, from Mr. Case; these, and the Esopus Spitzenberg, Roxbury Russet, and the fruitful Winesop, from Mr. Kellogg; the Greening and Pippin of Capt. Morgan, No. 5; the Rambo, Baldwin, Virginia Greening, and others, from Messrs. Beard and Llewellin, and the Jersey sweet, the Pearmain, the Golden russet, from Mr. Myers, attracted general attention. The Blue pearmain, from Dr. Haile, and the Newtown pippin, from Mr. Meeks, (the latter raised under a constant shade, yet measuring 14¼x13¾ inches in circumference,) were, also, objects of general admiration.

Among all the beautiful specimens of apples, which were exhibited, those from the garden of Mr. A. H. Myers, were considered worthy of especial consideration, not so much for their size, as for the great variety of kinds presented. As the growth of new wood, and raised without irrigation, they are highly creditable to the enterprising cultivator. The committee call attention to the two trees exhibited by this gentleman, but one year from the graft, and loaded with fruit.

The present exhibition places the suitableness of the climate of California, for the successful cultivation of the apple, beyond conjecture.

PEARS.

Of the pears examined by the committee, there were from Mr. Beard, San José Mission, (large Bergamotte,) the Padre pear, 1 variety; from Mr. Myers, of Alameda, (Doyenne bossock,) 1; from Mr Llewellen, of San Jose Mission, (Seckel,) 1; from Mr. Wilson, black pear of Worcester, 1; from Messrs. Beach & Shepherd, (Maria Louisa, specially named Sebastopol, or sole survivor of the grasshopper seige,) 1; from Mr. Provost, San Jose, two trees of fall Bergamotte, two years old, and bearing the one eleven and the other twelve pears; Messrs. Patch & Clayton, superior sized Padre pears, by many called Bergamotte.

The varieties of this fruit are all fine and worthy of cultivation. The Bergamotte is large and of good flavor, an excellent sort, and well suited to our climate. The Buerre Deil fully sustains its eastern reputation, and the Seckel is as rich and melting, as were ever plucked from the famous trees of Downing. It can never lose its fame for being the best pear cultivated.

PEACHES.

Of this delicious fruit, there were presented by Messrs. Thompson & Bro., Suscol Ranch, Napa, 8 varieties; by Dr. Hale, of Alameda, A. P. Smith, of Sacramento, Mr. Kellogg, of Napa, Mr. Duke, of Sacramento, P. L. Wimmer, of Coloma, (seedling,) 1 variety, each. Mr. Myers, of Alameda, also presented a beautiful drawing of a peach, the red rareripe, which, it is said, ripened on the 10th of July.

All the varieties presented were of large size, and excellent flavor, and in every respect worthy of cultivation. The large Heaths and La Grange, from Messrs. Thompson & Bro., were the objects of general admiration. Among the collection of these gentlemen, were some which were of the 2nd crop of this year. The seedling of Mr. Duke is a handsome peach, and appears to be a great bearer.—The late red Rareripe of Dr. Haile is a beautiful specimen and of fine flavor.

In addition to these, there were on exhibition, in jars, one variety from Mr. A. H. Myers, and one from Capt. Pinnix of Quintay Ranch, Marysville, the largest of which measured 10x9¾ inches in circumference.

QUINCE.

From A. P. Smith, Sacramento, 1 variety, name not specified. The fruit is of good size, but unripe.

GRAPES.

The supply of this excellent fruit was highly creditable to the character of the climate of the State; affording evidence, the most conclusive, of a condition of fitness for this culture unequaled anywhere. Many of the varieties were of the choicest and most delicate foreign sorts. There were from A. Delmas, of San Jose, (foreign sorts,) 9 varieties; from the same, (native,) 1; from Crook & Jackson, (foreign,) 5; from the same, (native,) 1; from A. P. Smith, (foreign,) 5; Mr. Gosty, (native,) 1; Among these were the Chasselas of different varieties, Cannon Hall Muscat, Muscat of Alexandria, Black Hamburgh, White Sweetwater, Royal Muscadine, Black Peters—all of the most delicious kind.

The specimens from Mr. Jackson were beautiful bunches, compact and finely formed, as were also those of Mr. Smith. The ten varieties, in bunches, by Mr. Delmas, were subjects of general admiration, and were raised from grafts made upon native wood, in March of the present year. The same gentleman also exhibited a single vine, of the White Sweetwater, two years from the graft, bearing 25 fine and full bunches.

ALMONDS.

Don Manuel Requena presented one variety, raised in Los Angeles.

FIGS.

Of this excellent fruit, there arrived in time from Redman Park, Santa Clara, presented by Patch & Clayton of San Francisco, one variety. They are of dark color, of fine size, and rich flavor.

STRAWBERRIES.

The only contributors in this branch of horticulture were Messrs J. L. Sandford, of Alameda county, and A. P. Smith, of Sacramento. From Mr. Sanford, there were presented fourteen varieties, *in bearing*, with abundant samples of the fruit of several sorts picked in his gardens. The vines of all the varieties were in fine condition, and the berries all so good as *hardly* to admit of distinction. The Committee were unanimous in awarding the palm, for flavor, to Burr's New Pine, and next, to the old favorite, Hovey's Seedling. The Rival Hudson, the Boston Pine, and the Black Prince, are also fine kinds. Mr. Smith's seedlings were much admired.

LEMONS.

Of this beautiful fruit there were two varieties, one of which was from Don Manuel Requina, of Los Angeles, entered by C. R. Bond, Esq., and another of large size, from Don Louis Vignes, of Los Angeles, entered by Dr. J. J. White, of San Francisco.—Both of these were much admired.

Besides these, there were examinad several fine specimens of the Citron Lemon, from the Sansevaine Bros., of Los Angeles.

ORANGES.

The only specimens on exhibition were two oranges from Don Manuel Requena, of Los Angeles, exhibited by C. R. Bond, Esq. They are large and fine.

WATERMELONS.

Only one variety was brought to the notice of the Committee, contributed by A. P. Smith, of Sacramento. There were specimens of the Orange Melon; their peculiarity being, that the rind, like that of the orange, is easily removed from the pulp of the fruit. It is understood that other varieties were on exhibition from Messrs. Carpier & Point, of Yuba county, a beautiful pair of twin watermelons of 40 pounds, which were unfortunately broken on their way to the Fair.

MUSKMELONS.

No. 1. Four fine nutmegs, by Hooker & Fern, Sacramento:

No 3. Five large Chile melons; by Benjamin Landis, of Yuba.

Messrs. Hooker & Fern, of Sacramento, one fine citron. These were all fine specimens. The Chile melon is said by those familiar with it, to be of excellent flavor.

FRUIT IN JARS.

Gooseberries.—Messrs. Thompson, four varieties, all excellent and of large size.

Peaches.—Capt. Pinnix, Quintay Ranch, Marysville, three fine specimens, the aggregate weight of which is 24½ ozs—Crawford's Late & Oldmixon.—A. H. Myers, one variety of large size; also, in the same jar, some specimens of the Siberian Crab.

In addition to these, now enumerated, the attention of the Committee was called, too late for their being placed in competition for regular premiums, five samples of the Bartlett Pear, from W. S. Smart, of Tuolumne; also, from the same, a number of handsome apples, names not determined.

On the same day, by Messrs. Patch & Clayton, fine specimens of the Bergamot were also presented; and peaches from the Rev. O. C. Wheeler, of Sacramento—being a seedling. Mr. W. has named it the "Honey Cling," a cognomen which it fully merits, by its delicious flavor. It is of full size, measuring 8 to 10½ inches.

In the award of premiums the committee have been governed by the principles above stated. They have endeavored to discard all extrinsic influences, and to base their decisions upon merit alone.

It will be seen, hereafter, that they have freely availed themselves of the privilege granted them of recommending *special* premiums. They have done so, because they believed that the articles enumerated have all possessed so many excellencies, as to deserve this mark of the appreciation in which their cultivation is held by the committee, and, as they believe, by the members of the society. They have also regarded this a most appropriate method of encouraging the farmer to renewed and increased efforts to extend the field of fruit culture, and to exhibit the real capacities of our climate for this favorite occupation. They believe, that those who have thus early achieved such wonderful and gratifying results, and have been instrumental in introducing this interesting branch of horticulture into our State, richly deserve the small token which the committee recommend to be awarded them, not so much for the intrinsic value of the awards, as for the associations with which they are connected.

With these reflections in view, the committee have decided the premiums as follows, to-wit:

Apples.

For best specimens, to Mr. Case $30
For 2d do to Beard & Lewellyn 15
Between these last and those of Mr. Kellogg, there was so slight a difference, that the committee beg leave to propose a special premium to Mr. Kellogg, Napa, of 15
To A. H. Myers, Alameda, committee recommend, in consideration of the excellence already mentioned in connection with his fruit, a special premium of 30
Also to Capt. Morgan, of Bolinas Bay, a special award of ... 10

Strawberries.

First premium to J. L. Sandford 30
Second do. to A. P. Smith 15

Gooseberries in Jars.

The committee recommend a special premium to Messrs. Thompson 15

Pears.

First premium to Mr. Lewellyn (finest in *kind*), the Seckel .. 20
2d do do A. H. Myers 10
Special premium to E. L. Beard 10
do do L. Provost—two trees two years old .. 20
do do E. Wilson—Black Pear of Worcester .. 10
do do Sebastopol, the hero of the Grasshopper-war, (Beach & Shepard) Marysville .. 10
do do Messrs. Patch & Clayton 10
do do W. S. Smart, (Bartlett) 10
The last on this list, if it had been before the committee in time for *regular* competition, it in their opinion, would have received the 1st premium.
For best specimens of Quinces, to A. P. Smith 20

Grapes.

For best exhibit of Foreign Grapes, to A. Delmas 30
2d best do do do A. P. Smith 15
A special premium for Foreign Grapes to Crook & Jackson .. 10
For best exhibit of Native Grapes, to Mr. Gasty 20
2d best do do do Crook & Jackson 10
A special premium, for vines two years' growth, foreign, to A. Delmas 20

Peaches.

First premium to Messrs. Thompson, Suscol Ranch, Napa .. 25
2d do A. P. Smith, Sacramento 15
A special premium to P. L. Wimmer, Coloma 40
do do Dr. Haile, Alameda 10
do do Mr. Duke 10
do do Rev. O. C. Wheeler 10
do do Mr. Pinnix and Mr. Myers, each $10 .. 20
do do Mr. Myers, for Red Rareripe (July 10) .. 10

Lemons.

For best, to Don Luis Vignes, Los Angeles, by T. J. White, .. 15
To Don Manuel Requena, Los Angeles, special premium 10
To Sainsevant Bros. Los Angeles do do 10

Oranges.

For best specimens, to Don Manuel Requena 15

Watermelons.

For best six, to A. P. Smith 10

Muskmelons.

Lot No. 1, Hooker & Fern, 1st premium 10
To Benj. Landis, 2d do 5
To Mr. Frank, special premium 5
To Hooker and Fern (Citron,) 5

Almonds.

To Don Manuel Requena, ... 15

Figs.

To Patch, Clayton & Co. Santa Clara 20

Mangroves.

To A. J. Grayson, San Jose, special premium 10

In closing their report, the committee cannot forbear the expression of the gratification afforded them by the exhibition of so many elegant specimens of fruit. They regard with pride and pleasure the wonderful results attained in this branch of industry in our young State—results which reflect the highest credit upon the enterprise of our people, and establish beyond all question, the superior advantages of our soil and climate.

The rapid growth of trees, and early maturity of fruit—the short time required for the fructification of many kinds of trees after grafting, and their unexampled productiveness, are circumstances which have given to the Horticulture of California, features peculiar to it alone. Peach trees bearing two crops in a single season—apple trees loaded with fruit, one year from the graft—grape vines hanging full of fine and delicious clusters, upon grafts of five months growth, are instances of precocity and prolificness rare at least, if not without a parallel in any of the States on the Eastern side of the Rocky Mountains. These things are worthy of being recorded, and, if known to cultivators in other sections of our country, must attract their particular attention, and induce many to seek a new home under the clear sky and genial climate of the Pacific shores.

W. FLINT,
JAMES R. LOWE,
J. F. MORSE,
F. KUHLER,
B. B. BROWN, } Committee.

Report on Vegetables.

The committee upon Garden Vegetables having examined the exhibit presented for competition, divided the different varieties into lots, each lot containing all the vegetables of a particular kind, offered by one individual. The number shown in many of the lots was so small that the committee in most cases were obliged to decide altogether on *quality*, without reference to *quantity*. This is much to be deprecated, as two or three samples from a lot of vegetables but seldom conveys a true idea of the average crop.

The committee have made the following awards, and beg leave to report accordingly:

For best exhibit of Pumpkins and Squashes, to B. Landis .. $10
2d do., to A. P. Smith 5
For best exhibit of Beets, to Dr. Morgan 10
2d do., to J. S. Curtis 5
For best exhibit of Carrots, to Dr. Morgan 10
For best exhibit of Parsnips, to Dr. J. S. Curtis, Yolo 10
2d do. to J. E. Johnson 5
For best exhibit of Salsify, very superior, to A. P. Smith 10
For best exhibit of Turnips, to Dr. Morgan 10
For best exhibit of Tomatoes, to J. L. Sanford 10
For best exhibit of Cabbage, to J. E. Johnson 10
2d do., to J. S. Curtis 5
For best exhibit of Cauliflower, very fine, to J. E. Johnson .. 10
For best exhibit of Egg Plants, to J. E. Johnson 10
For best exhibit of Sweet Potatoes, to J. G. Almond 10
2d do., to Dr. J. S. Curtis 5
For best exhibit of Peanuts, to Dr. J. S. Curtis 10
For best exhibit of Peppers, five varieties, all perfect and very fine, to J. E. Johnson 10

Report on Flowers.

Mr. President: The Committee to whom was delegated the adjudgment of *Præmia* for Flowers, respectfully report, that in the discharge of their duty they have been pleasingly impressed with the triumphs of Floriculture and taste in our land. In these genial regions, where every living object feels the influence of the vital heat and stimulating air around us—where it may be truly said, without a metaphor that Nature laughs in one eternal Spring—our fancy and perceptions have been vividly quickened by the rosy smiles of Flora, while scrutinizing the philological meaning of her works,—

"So wisdom may be found on every page,
That bears the impress of an earnest spirit,
Seeking the Good, and True, and Beautiful."

It has been elegantly written that of all the minor creations of God, flowers seem to be most completely the effusion of his love of beauty, grace, and joy. Indeed the pious Chateaubriand says, that they, as well as all created objects, may be considered the imagination of the Deity, rendered visible. If such then be the case, how highly favored is this chosen land—the second Eden of Creation—made, it would seem, expressly to gladden the heart of the wandering exile, and to declare the Gospel of Beauty to a world rushing madly to bankruptcy in every high and holy obligation. With imaginations kindling from the environment of place and circumstance, your Committee have been led through flowery paths to revel in the beauties of Grecian fable—in the wonders of enchanted castles and fairy bowers—amid the magnificence of palatial gardens—amid the glory and gallantry of the age of romance. With Tasso, they have roamed through Syrian lands—

"Where soft perfumes diffuse from every flower,"

and from the Ionian isles, where highest art is decked with immortal amaranth—onward they passed to fair Italia, where from Baccanto Tazzas may be drawn fit nectar for the fabled gods. In chivalric Castile they dallied

——"Awhile in the bower,
O'er which the white leaved orange flower
Breathes its ambrosial sweets,"—

here they went rejoicing on to farther lands, where Persian maidens weave the lotus and the jasmine with the classic hibiscus and the drooping mimosa, into garlands. In Japan, now near at hand, they regaled their eyes with purest lilies and

chaste ozone lies fit symbols of those fair Beings whose mortal beauty is thus inadequately expressed, and whose mental charms cannot be duly typified 'till we shall reach that land where the flowers never die! Time and words would fail your Committee to convey the full utterance of the inspiring ideas they experienced during their enraptured excursion among the flowers. So they will only add, in summing up the result, that from these living but perishable emblems of human life they have gathered, not tha maxims of miserable worldly wisdom, but of that immortal philosophy which teaches to render unto Cæsar the things which are Cæsar's, and unto God the things which are God's.

Under the influence of such feelings and considerations, and with hearts overflowing in gratitude for the pleasant places in which our lot is cast, the committee would urge that too much credit cannot be bestowed on all the competitors who have developed each in their respective departments, such radiant evidences of the boundless benevolence of the deity. They would, however, specially recommend as most worthy of consideration and award—

1st. J. B. Saul, of Sacramento, for the design and execution of that evergreen Temple—henceforth to be ever-living in our memories—that cynosure of all eyes, when, in one glorious galaxy, were clustered beneath its Gothic arch the honored representatives of Church and State, to award the palm to beauty and to grace.....$25

2d. A. P. Smith, of Sacramento, a Pioneer of Fruits and Flowers; whose brilliant display of 134 Pot Plants, shows what industry and skill can in a few short years accomplish, in such a soil and climate as ours.....25

3d. H. Suntag, of Mission Dolores; whose collection of 30 varieties of joyous roses, attests that the days of mourning have passed away, and that the Queen of Flora herself has taken the harp from the willows on which it has so long hung.....10

4th. Kuhlau & Co., of Sacramento; whose gorgeous display of 16 varieties of Dahlias, if they are destitute of fragrance, are not without value, for they entitle him to the premium .10

5th. O'Donnall & Co., of San Francisco, who has displayed the best taste in a pair of Vase Bouquets 10

6th. Wm. O'Brien, who has come in second best for the same Floral Art.....5

7th. Kuhlau & Co., who not satisfied with the work of his two hands in arranging Bouquets, has with his six-hand Bouquet carried off the prize.....10

8th. Wm. O'Brien, of Sacramento, who follows suit in the same achievement, marits half as much.....5

9th. A. P. Smith, who has immortalized himself with an Evergreen Wreath, 50 yards long.....25

10th. Messrs. Saul and O'Brien, gardenars of A. P. Smith, who have enwreathed their names in flowers, in the space of 30 yards 20

The committee find that there has been no competition for indigenous flowers or for a second Floral wreath, and therefore suggest that the premia offered for these articles be awarded to O'Donnell & Co., of San Francisco, in consideration of the select plants and rare exotics exibited by them; among which is an infant seedling of the gigantic Washingtonia, or monster Conifera of Calaveras. They also take this opportunity of suggesting that some appropriate award be bestowed on Mr. Thomas O'Brien, of Sacramento, for the ingenuity displayed in a miniature Flower Garden; inasmuch as it is out of their power to confer a prize on him, he not being a member of the Society and of course being thus excluded from competing. Last, though not least in our memories, stands the exquisite Baccante Tazza, so tastefully decorated with flowers by Mrs. J. P. Robinson, of this city, and already alluded to in our previous remarks; it constituting one of the chief points of attraction and admiration. To this lady the committee recommend as a special and honorary premium the ornate cameo *porte monnaie*, now on exhibition, from Messrs. Howard, Borradaile & Co., as the most fitting testimonial of their appreciation of her contribution.

Had they not transcended the limits of their instructions, the committee would have recommended for further award, the splendid vase-bouquets contributed by Mr. Eisenmenger. As it is, however, they must rest satisfied in thus making honorable mention of the same, as well as of a choice collection of 38 varieties of Greenhouse Plants from the Floral Gardens of Kuhlau & Co., Sacramento.

In conclusion, the first of the undersigned members of the committee regrets that from the absence of F. W. Macondray, Esq., of San Francisco, and Chas. Weber, Esq., of San Joaquin, the duty of drawing up so hurriedly this report should have devolved on one unfamiliar with the subject. With the invaluable aid, however, of Mr. Provost, of Santa Clara, whose right judgment and experience have been called into requisition, as the catalogues prepared by him will show. It is hoped the decision arrived at, will thereby appear based upon a proper and impartial discrimination.

All of which is respectfully submitted.

THOS. M. LOGAN, M. D.,
LOUIS PROVOST,
E. A. SHEPARD,
} Committee.

Sacramento, September 28, 1855.

Since the closing of this Report, we have the pleasure of recording the arrival of thirty varieties of rare and choice Roses, in fine bloom, from the San Jose Nursery, owned by Mr. Louis Provost.

THOS. M. LOGAN, M. D.,
Chairman Committee on Flowers.

Manufactures and Home Industry.

MILLINERY, MANTUAMAKING AND NEEDLEWORK.

Your committee appointed to examine and make awards in the departments of Millinery, Mantuamaking and Needlework, respectfully report that they performed the duties assigned them with care, the department being very fully represented.

After careful examination we make the following awards:

For best Millinery, to Mrs. Taylor, of San Francisco.....$10
The committee recommend a special premium of plate, to Mrs. Chatfuck, of Sacramento 5
For best Needlework, to Mrs. Stevens.....10
The committee recommend a special premium of plate to Mrs. Johnson.....10
Also, to Mrs. D. Kendall, of Sacramento, a special premium of plate.....10

MRS. C. L. HUTCHINSON,
MRS. R. CHENERY,
MRS. M. WALTHALL.
} Committee.

HATS AND CAPS.

The committee of award in the department of Hats and Caps, respectfully report that they have been much interested in their examinations with the superior quality of articles exhibited, and would award the first premium to Collins & Co., of Eagle Hat Store.

WM. M. BAGGS,
A. SPERRY,
R. T. BROWN.
} Committee.

BROOMS, STOVES AND POTTERY.

Your committee of award in the department of Manufactures and Home Industry, (covering the articles of Brooms, Stoves and Pottery,) respectfully report, that they have examined the articles presented, and feel much pleasure in commending the beautiful and well-designed Cooking Stove and Furniture manufactured and exhibited by David Kendall, Esq., of Sacramento.

Also, the Brooms exhibited by Lusk & Co., of Sacramento, and Messrs. Chase & Co., of Yuba. Mr. L.'s Brooms, as also his samples of Broom Corn, are of a superior character.

The specimens of Pottery we think equal to any we have ever seed.

We therefore make the following awards and recommendations:

For best Cooking Stove, to David Kendall, of Sacramento..$15
For best specimen of Tinwork, do do ...10
For best Brooms, to Lusk & Co 5
For best specimens of Pottery, to Messrs. Oatman & Taylor .25
The committee also recommend to the Executive the following:
To Chase & Co., of Marysville, for Brooms and Broom Corn, a special premium of 5
To Lusk & Co., an honorary premium for Brooms.....
To D. Kendall, an honorary premium of 50

Respectfully,
J. R. CRANDALL,
Chairman of Committee.

Works of Art.

EMBROIDERY AND WAX WORK.

The undersigned committee appointed to examine and report upon "Embroidery and Wax Work," having attended to that duty, ask leave, respectfully, to report.

The duty assigned to your committee was a pleasing one, and the undersigned found much gratification in the examination of the various specimens of work in each department.

A Chair Back and Seat, the work of Miss Arabella Smith, received a close examination by your committee, as between that and the beautiful Chair by Mrs. Eisenmenger the contest came for prize. The former, however, has received the verdict in favor, and they award to Miss Smith the first prize of $25.

The above work of Mrs. Eisenmenger, the Chair so tastefully wrought, receives the award of your committee, the second prize of $15.

They are called upon to express their admiration of that most superb piece of work by Mrs. G. O. Whitney, of San Francisco—"The Death of George Douglass, the Black Warrior." This magnificent picture was set in a very gorgeous frame, and attracted the admiration of every visitor; and your committee regret that they have no power to award a premium to so deserving an artist. The picture, having been made out of the State, is precluded a premium. They, however, bespeak for it high commendation.

The committee would recommend the following as deserving the notice and encouragement of the Society for special premiums:

The beautiful finished piece of Embroidery, "The Flight into Egypt," by the Sisters Notre Dame, San Jose, your committee esteem one of so much interest, and so finely executed, that they recommend a special premium.

The Case of Hair Work—being the hair of the the Eisenmenger family, attracted much attention as a valuable relic of a family.

Mrs. L. D. Allmand exhibited a piece of block Embroidery.

Two pieces rich Embroidery were exhibited by Mrs. Hemenway, to which the committee recommend a special premium in plate of $15.

The raised Embroidery of Mrs. Stephens, the committee esteem very beautiful, and would have recommended a premium, but its having been wrought abroad precludes it. They recommend it to the notice of the Society.

The beautiful Table Cover wrought by Mrs. J. L. Sandford, tha committee would declare worthy a special premium in plate of $20, and so recommend.

An Infant's Cloak, Dress, and pieces of Worsted Work, all received the notice of the committee, as very creditable specimens. Made by Mrs. Stephens.

A Lamp Mat was exhibited by J. Flatt, made by a lady in Benicia.

An Embroidered Lamp Mat, by Marion Baillie, Sacramento.

A specimen of raised Embroidery, by Emily Baillie, Sacramento.

The Net Shawls and Worsted Scarf of Mrs. L. D. Allmand were specimens of taste and industry that deserve encouragement, being the labor of two months of close attention. For this they recommend a special premium in plate of $15.

The collections of Wax Work deserve special notice for their beauty and correctness. The collection of Wax Fruit, by Miss Abby Ann Warren, (Mrs. Harrison,) fac similies of the fine fruit exhibited at the last year's Fair, are deserving of high reward as splendid specimens of art. To these they award the highest premium, $10.

The Rose Trees and Basket of Wax Flowers, the work of Miss "Lilly Dale," attracted much attention, and the committee, in view of their beauty and excellence, award the second premium, $5.

The fine collection of Wax Flowers of Mrs. H. A. Smith were beautiful, and the committee recommend a special premium of $10 in plate.

The committee cannot close their report without the remark, that it is very pleasing to note the increased interest felt for every branch of artistical needlework from those of our sex, and we trust each year will give a still increasing interest, and an advancing taste, and a higher genius.

MRS. J. NEVETT,
MRS. P. H. BURNETT,
MAS. A. H. MYERS,
MRS. J. NEELY JOHNSON.
MISS E. M. QUIVEY.
} Committee.

[The Reports are continued on page 122.]

LADY EQUESTRIANS.

On Thursday evening, Sept. 27, at 8 o'clock, the largest assembly ever convened at the capitol, the most intellectual, the beauty and fashion of our city, with hundreds from every portion of the State, thronged the Assembly Chamber to listen to the awards there to be made to the successful Equestriennes of the day.

REPORT OF THE COMMITEE.

Agreeably to instructions received from the Executive Committee of the State Agricultural Fair, the Committee appointed, composed of Maj. Gen. John E. Wool, Gen. A. Reddington, Hon. R. Chenery, Col. Gift, and Chief Jostice Murray, have the honor to report—

That they attended the Louisiana Race Course, for the purpose of witnessing the Equestrian prowess of the Ladies and Gentlemen who appeared and entered for that purpose, and to award the premiums to the most accomplished riders, as provided for in such cases by the Executive Committee.

Of the first four Ladies entered, to wit: A. Ann Stevens of Sacramento, Louisa E. Morgan of Bolinas Bay, Mrs. Fern, and Mrs. Mary Kellogg, of Sacramento, and after the most accomplished and surprising feats of horsemanship, the Committee unanimously agreed to award as follows:

First prize, a Gold Watch and Chain, worth $115, to Miss Ann Stevens.

The second prize, a Saddle, worth $50, to Miss Louisa E. Morgan.

Third prize, a Silver Cup, worth $25, to Mrs. Fern.

And the fourth prize, a Riding Whip, worth $15, to Mrs. Mary Kellogg.

Of the Gentlemen, entered for the premiums provided in such cases by the Executive Committee, unanimously award as follows:

To S. J. Crosby, Esq., of Santa Clara, the first premium, $50.

And to E. B. Crocker, Esq., of Sacramento, the second prize, worth $25.

JOHN E. WOOL, U. S. A.,
ALFRED RENNINGTON,
S. J. HENSLEY,
R. CHENERY,
ALVIN EISHER,
} Committee.

The prizes were duly and most appropriately presented by Rev. O. C. Wheeler, Secretary, as follows:

Remarks of Rev. O. C. Wheeler,

On Presenting the Prizes to the Lady Equestrians, Thursday Evening, September 27th, 1855.

LADIES AND GENTLEMEN: Though the days are gone when the gallant Knight, with poising lance and glittering sword, with buckler, shield and helmet, rushes to the sanguinary contest, and spurs himself and steed to fiercer strife at every glance of his fair lady's eye, or clapping of her hands, yet tha spirit which impelled him to his most daring deeds and feats of wondrous strength—the spirit of chivalry—that spirit which insures to the last and crowning work of Deity, *woman*, the highest consideration, the most sure protection and universal preferment, still lives and will continue to live, and *act*, with increasing purity, while man shall till the soil, or guida tha State, or fight sweet freedom's battles. That spirit pervades the heart of every honorable man. It has been seen in earlier and in late times.

This Society, whose annual festive scene is now passing, has opened to woman its door of competition in every department of art and industry free, and while demanding of her none of the considerations which are expected from the sterner sex, has offered her prizes and premiums for excellence, not a whit behind the very chiefest.

Nay more, it has provided an especial festival for her interest and entertainment, and made it all to her free as the air she breathes. And who that saw her this afternoon

"Rise from the ground like feathered Mercury
And vault with grace into her [illegible]
And as Angels speed down from the clouds,
To turn and guide a fiery Pegasus
[illegible]

could fail to admire, appeared and [illegible] the spirit of ancient [illegible] by modern cultivation?

This department of [illegible] has been the [illegible] of severe and adverse [illegible] by the [illegible]

Although [illegible] to [illegible] ...ery [illegible] ...ces of which a fate may [illegible]

than a Semiramis studies equestrianism [illegible] art, and practises it as a pastime and a [illegible] exercise. Yes, a Victoria, on whose happy subjects the sun casts perennial light, steps from her glittering throne and passes heedless by every class of cushioned coach and gilded chariot,

"To seize the bridle and the mane
Of steed inured to bit or rein,
With nostrils never streaked by pain,
And feet that iron never shod,
And flanks unscarred by spur or rod,
And mounts the horse, the wild, the free,
And like the gale that sweeps the sea,
Through the park and o'er the plain
Heedless of her tingling swain
Goes dashing on."

LADIES: The gentlemen composing the committee of award in the department of Hippodromatic exercises, have witnessed your elegant, your queenly performances this afternoon, and have awarded the prizes offered through the society, whose humble Secretary now addresses you. The large experience and mature of judgment of those gentlemen would, under any circumstances, be a sufficient guaranty of the justness of their decision; but when at their head we find one whose life has been spent in the saddle, who has not only closely viewed, but often met and conquered legions of the most expert horsemen in the world; when at their head we find one whose taste is as refined as that of an American soldier, and whose gallantry must preclude the possibility of a wrong to the humblest of the other sex, I confidently assert that the most disappointed will be satisfied that not the slightest injustice is done to any party.

Nor is there a place on earth, or point in its history, more adapted and calling more loudly for skill in this noble exercise than the vast plains and giddy mountain trails over which many of our ladies are, and over which *all may* be called to travel. To foster then, this exercise is not unpraiseworthy even in a great and influential society.

But this is not the time nor the place to discuss this subject. Nor need we; woman is here to speak for herself, and I know you will listen to her—hark! she says:

"When troubled in spirit, when weary of life,
When I faint 'neath its burdens and shrink from its strife,
When its fruits, turned to ashes, are mocking my taste,
And earth's fairest scene, seems a desolate waste;
Then come ye not near me, my sad soul to cheer,
With friendships soft accent, or sympathy's tear;
No counsel I ask and no pity I need,
But bring me, oh, bring me, my gallant young steed."

And when one of the most intelligent of her sex has thus spoken, argument, if needed, would be useless.

Miss Stevens—A duty has been assigned me, which, but for the single fact of my inability to do justice to the occasion, would be entirely pleasing—it is the duty of presenting you this watch and chain as the *first* prize for accomplished equestrianism. The committee have procured its preparation, as the only proper tribute to such skill. It is of pure gold, dug from our own soil; and its enamel is of unstained brilliance—a purity and a brilliance, equalled only by the same traits, when found in the female character.

May the regularity of its running, and the constancy of its *tick* admonish you of the unceasing progress in this art, which those whose superiority you have now been declared, will make to overtake and pass you.

To you, Miss Morgan, has been awarded this elegant saddle. And this, too, is of California manufacture; it would be a grand "first prize" in any other State than ours. But here ladies are entitled to richer rewards and more ennobling tributes. Had you need this saddle to-day, we have little doubt you would have won the first prize, and had it not been for giving you an undue advantage over your competitors, perhaps its use would have been offered you. Now, it is yours, and if you studiously and assiduously use it till this high entertainment shall recur, at the close of a twelvemonth, you may confidently anticipate the gratification of your highest ambition.

To you, Mrs. Fern, I am requested to present this cup, made of material more precious than that which belts a continent, and bears the commerce of nations; more enduring than that which has awakened every nation and changed every commercial relation hitherto existing on the earth, by its development in the mountains of your adopted State. Preserve this as a memorial of the *first* exercise of the kind in which you won it, ever held on the shores of the Pacific; and may you imbibe from it many a cooling draught at the close of an exercise in the saddle, the practice of which will soon render you chief among your equals.

To you, Mrs. Kellogg, I have the pleasure of presenting this most elegant combination of silk and pearl and gold. This prize was chosen because it was the richest of its class, and the class was chosen because it was thought that the one who should come out a little [illegible], might need to "whip up" a little. Although you have [illegible] anticipations, I have no doubt you will still join with us all in saying—

"Not as the pleasure that poets may praise,
[illegible]
[illegible]
[illegible]
[illegible]
Of a fearless dash on a fiery [illegible]

The reception of the prize was accompanied with vociferous cheering and clapping of hands on the part of the immense [illegible]

On the part of the ladies [illegible] very gracefully and handsomely responded.

Gen. [illegible] Gen. Reddington, Hon. [illegible] and Mr. Wilson addressed the [illegible] ply and sociely.

The day of exhibition having been [illegible] ...er the Fair, and the [illegible] ...of the [illegible] so [illegible] was partly [illegible]

The Presentatien.

On behalf of the donor, Col. Warren prasented, iu the following speech, a magnificent saddlc, exclusively of home manufacture:

DEAR GENEHAL: In all the associations, in all the duties, in all the pleasures of this most interesting Exhibition, there has been none that could have been assigned to me, more in accordance with my wishes—none more gratifying—none more ennobling, than that of addressing one who has ever been the friend, the true friend, the generous friend, of all who sought a home upon this golden shore.

To you, the early Pioneer,
Did gathering thousands come;
You hade them all a welcome here,
None were refused a home.

You fed the hungry, the naked clothed;
To all was freely given;
Your sool by *sweet compassion* moved—
That *attribute* of Heaven.

It is indeed a most happy duty to meet you, to address you, and to strive to show, that however dark the clouds may sometimes lower around you, thera will come some ray of light—some joyous song, to cheer and meke glad your heart; and in the great battle of life, if the mass forget their duty to one who has done so much for them, there will ever come the outpourings of warm and affectionate greetings from those who never can forget the NOBLE PIONEER OF CALIFORNIA.

It is more blessed to give than to rceeive; this you know—for your whole life has spoken it by the unbounded liberality which has ever marked your course; and he assured,* that however dark may be the present hour to you, sure as there is a God above, so sure the clouds must pass and reveal a brighter day to you. In the clear distance I hear the sound of the spirit-stirring drum, and the echoing bugle's notes; already methinks I see the waving banners of advancing armies, and their song is—"Honor to the brave."

Quick through the heart the blood is rushing,
And quick from memory's fount come gushing
Those generous acts, that never part,
Or leave a manly, noble heart.

It is no idlc panegyric thus to address you. Every ear that hears me knows the tribute is thine. Every generous heart must respond to it in grateful emotion, and every eye tell it by a tear.† We look yonder upon the wall and we see in that beaming face the joy that rose in your heart as you labored for others, forgetful of yourself or the future. What would have been the condition of this city—this State—our nation, had no "Sutter'a Fort" been built, no "Sutter's race", been cut?

To you, General, to your name will ever be linked the history of the discovery of that, which moves with as much power as was sought by Archimides—it *has moved a world*. As you look around this hall and see the beautiful adornments—as you behold the rich and varied products of this bounteous soil—as the eye catches the manifestations of genius, called into existeuce by the circumstances which have changed, not only this pleco and coontry, but the world—I say, when you behold all this—these evidences of human progress, your noble heart does and will rejuice, although the change may bring a tear from your eyes or wring a pang from your heart—for the price of this change, this good to the many, must make you feel it, in the sacrifice of self. These mighty changes are marked by yon *crumbling Fort*, where your proudest and happiest moments have been apent. "Sutter's Fort," "Sutter's race," "Hock Farm," may crumble, fall, and pass away, bnt the noble deeds of the early and brave *Pioneer* shall be like the pure gold which springs from them—they shall grow brighter and brighter, to the perfect day.

Turning from that picture of earlier daya we look upon another,‡ in which we think wo see shades bespeaking care, anxiety and sorrow; and still we see, rising superior to all, from that speaking eye, a voice aaying—

"Life is real—life is earnest,
And the grave is not its goal.
'Dust thou ert—to dust returneth,'
Was not spoken of the sool.

"Not enjoyment I end *not* sorrow,
Is our destined end and way;
But to act that *each to-morrow*
Finds us farther than to-day."

And thus have you labored. The walls built by you, to guard you from a hostile foe, have given place to cultivated fields, and blessed homes now stand where once the "Red Man roamed"—and the broad prairie, that for eenturies lay wild and uncultivated, patched by the burning sun—

That earth refreshed by wint'ry showere,
Gives forth the goldee grain;
This garnered, theo the fragrant flowers
Come springing forth again.

What a proud and glorious satisfaction is yours, dear sir, to see, to know all this, and to know, when you shall be called from this earth, that you can aay with that noble Chief LOGAN, "Who ever came to Sutter'a home hungry and he gave him no bread? Who ever came tu Sutter'a home thirsty and he gave him no drink?" Yes, dear General, yours ie indeed a proud satisfaction, and one that can never pass away.

With heartfelt satisfaction I now preaent to you this gift. This, to which the highest award of this Society haa been rendered, the generous owner, Charles Scheuner, Esq., bids me present to you. The donor ia himself your countryman—both early pioncers—he, with a spirit of true generosity feels that no better disposition could be made of it than to present it to you.

This gift—how appropriate—designed to make your pathway easier through life. Accept then, General, this gift; accept it as the free will offering of a true friend; and as you stand with your foot in your stirrup, remember that your foot rests upon the *native wood* of California. And these figures upon this saddle-cloth, (this, too, the product of the "cattle of a thousand hills.")—these figures—this noble Bird, the emblem of the lofty aim of America and her institutions—see in his beak the "stars and stripes"! you know that proud bird, as you vault into your saddle, will hear you upward and onward; and those roses, *thornless* here, and surrounded by the oak and the olive, emblems of Truth and Fidelity—these are fitting testimonials to represent the faithfulness of a friend.

Accept then, General, this gift. God grant that as you pass through life, it may aid you and give you an easier journey. If you are called upon to ascend the rugged steep, the Eagle shall aid you, and bear you up. Fear not to mount. Try the pass, up, up, its ragged steep; you shall win at last, and rest in a land fragrant with friendship, perennial with honor; for oh, has it not been your desire to bless and make others happy? and is not your own heart rewarding you?

How blessed to *aid others*, to make their way through life easy and happy. You, dear General, know and have felt this; and you, Mr. President,—and you—and you; and the remembrance must come like sweet perfume upon the altar of the heart.

Take, then, dear General, this gift, and with it the warmest, best wishes of your friend and countryman. Take it, and know that it comes to you with the best and warmest prayers of all that hear me, and all that know you, that you may yet be spared to see and enjoy better and brighter days.

The gift was received with evident emotion by the venerable Pioneer, who remarked in the course of his speech, that for twenty years he had been almost constantly in the saddle. (Loud cheering.)

* Alluding to the unsettled "Sutter Titles."
† The Portrait of Sutter.
‡ The large, full Portrait of Sutter, owned by the State.

Tha Auctian.

Col. Warren next ascended the rostrum, and proceeded to strike off a quantity of fruits and shrubs for the benefit of the widowed *beneficiare*. The first two plates of fruit brought $5, each, after which, two handsome apples were sold for *twenty-one dollars*, to R. T. Brown, Esq. The competition for these was very spirited and exciting. Tho net proceeds of the sale amounted to some $75.

By 11 o'clock the audience had dispersed, the lights were turned down, and the mammoth pumpkins left *vis a vis* with the portraits of the distinguished personages which adorn the chamber. And thus endeth the California Capital Fair.

Omisaions.

FROM various causes over which the Executive Committee had no control, several articles which were on exhibition escaped the observation of the committees in whoso departments they severally belonged. By reeson of the absence of some members of those committees whose province it was to prepare the details of reports, errors and omissions have occurred which the government very much regret; but when the magnitude of the onterprise is contemplated, when the unceasing and innumerable claims upon tho time of the Executive are seen by these reports—when these are truly considered, then an apology will not be needed from them for what haa been left undone. Some committaes left but pencilings of their labors, and these briefly naming the person to whom the award was made; others enter into a detail of reasons irrelavent to the subject; again others do not define or do not understand the work in hand, and have performed their duty in haste; while aomo have not reported at all.

These errors and deficiencies tha Committee, as a matter of duty to the public and to the enterprise in which they are engaged, have endeavored to rectify, and for this purpose they have annexed the following list, as those that have come tu their knowledge; and should there be others that have still escaped notice, the Committee will cheerfully have them duly acknowledged. It should be well understood, however, that even with all the efforts to have every article entered and recorded, very many articles were brought into the Hall without giving notice to those in charge of that department—many without name or place where from—thus, not only giving labor and trouble, but causing error and confusion, and in most cases these neglects on the part of contributors were the cause of the omissions in the reports.

The Executive Committee feel in duty bound to speak of the following contributions as deserving especial notice, and regret they were not duly noticed by the proper committees:

Tha collection of Essential Oils, manufactured by Dr. J. L. Polhemus, of Sacramento, an early pioneer and a druggist of high standing, are the first specimens of Extracts from the native herbs of California. The collection consists of Wormwood, Pennyroyal, and Pepparmint; also, pure Sulphur, and Flaxseed—exhibited in handsome and appropriate vases. To Dr. J. F. Polhemus the first manufacturer of Essential Oils from our native herbs, the Committee award a Silver Cup, with suitable inscriptions, value - - $25

Colored Water Sketches of our native Birds, exhibited by A. J. Grayson, Esq., of San Jose, one of California's earliest pioneers—a gentleman whose efforts have done much to give our State a name and fame. These sketches from his hand are most highly meritorious, being, as he states, his first efforts, and but recently finished. The collection consisted of the Tropic Bird, the Wood Duck, and the Road Runner. Of the latter bird, the following letter from Mr. G., is of great interest:

COL. WARREN—Dear Sir: I send yon for the Exhibition, three drawings of birds, taken from nature, and life size. I am quite an amateur in this business, and cannot hope to win a prize as an artist; but as ornithological specimens are interesting to some, and more particularly as I send a drawing of a new genus, undescribed before, I thought they might prove acceptible as something new in the fauna of our country.

The "Tropic Bird" is seen sometimes on tha coast of Lower California, but more abundant farther south.

The "Wood Duck" is common all over the United States.

The "Road Runner" I have described as a native of California.

Thus seying, I consign them to your cere, and
Respectfully remain yours,
A. J. GRAYSON.

THE "ROAD RUNNER."

This is a very peculiar and rare bird, and is found, I believe, only in California. As it is not described in any ornithology that I have seen, I offer it as a new genus. It seems to be a distinct and isolated species from all other birds. It is always seen upon the ground when first discovered, and, from its fleetness, one would suppose it to belong tu the Ambulatory or Gallinacious class; but when examined, it resembles them in no particular. It does not run or walk like those birds, but leaps or jumps with both legs at the same time, and that so rapidly too, when pursued, as to outstrip a dog.

It cannot rise from the level ground by the aid of its wings, but, when pursued, immediately directs its course for the nearest hill, from the summit of which it sails off a few hundred yards towards the next one. The most remarkable thing about it is its feet, they being more like those of clinging birds, such as the Woodpecker or Parrot, having two toes behind and one before, with very sharp claws. But, unlike them, it is seldom seen in a tree unless pursued very closely, when it has been seen to spring from the ground to the lower branches at a hight of ten or fifteen feet, at a single bound. It prefers running along a road path when pursued, if it should be conveniently at hand, hence the name the old Californians give it, "Courier del Camino"—Road Runner.

I have seen several of these birds in my travels over the country, and have never seen one with any other bird, either of its own or any other kind. It is excessively shy and solitery, inhabiting the wildest and most desolate places, from Lower California to the most unfrequented recesses of the Sierra Nevada Mountains. It is found most commonly in the Coast Range. The first one I ever saw was not far from the North Fork of the American River, in the foot hills of the mountains. It sprang up from the side of the steep hill as soon as it discovered me, and without flapping its wings, sailed off towards the bottom of the ravine. I then thought it a species of Pheasant with which I was acquainted, and felt desirous ever afterwards to obtain a specimen.

I have seen them often since, about the Coast Range, but can say very little of its habits, from my own experience; I have heard from native Californians that it will destroy snakes—even the Rattlesnake. From its general appearance I have no doubt that it feeds upon small reptiles, grasshoppers and other insects.

I have never heard a cry or note of any kind given by this bird. It has no song to cheer its solitude, but silently and lonely it pursues its avocations, in the wildest spots of California. The figure which I have drawn and sent to you for inspection, was taken from a specimen procured in the Coast Range near San Jose; it is just the size and color of the natural bird in every particular, having measured every portion accurately.

The specimen from which it was taken, was an adult male bird.

These drawings excited a lively interest, and the Committee feel that, in the efforts made by Col. Grayson to present thus the "Ornithology of California, it is but a just tribute to award a Silver Cup, of - - - - - $25

The Committee examined a very superior and large Hair Mattrass, manufactured by C. Scribner, of San Francisco. This being truly *domestic*, and valuable, they award Silver Plate, $20

The very handsome Painting by Dr. F. M. Logan, of the Fruits of California, deserves from the Committee high commendation. Aside from the beauty and merit of this Painting, it contains a high value from the fact of its being a true description of the superb fruits raised by one of the earliest cultivators of California, A. P. Smith, Esq. This valuable Painting has been most generously donated to the State Society, by the artist. To the painter the Society award a piece of Plate, with inscription, value - - $25

A specimen of Penmanship, in handsome frame, from J. Kittridge, exhibited at the Hall, and omitted in the report rendered, the Committee found to be a highly creditable to so young an artist, and so worthy of notice and consideration, they award The Diploma of the Society.

The cask of Cream Ale exhibited at the Hall, by Messrs. Lyon & Co. of San Francisco, and sent through their agents Messrs. Grim & Co., was designed by the manufacturers *for the examination of the tasting Committee*—and every reporter pronounced it a superior article. The Committee award it the Diploma of the Society.

ACKNOWLEDGMENTS.—The Executive Committee in closing their labors, cannot forget the generous assistance which has been tendered to them from many sources, and tendered in such a manner as to relieve them from much of the difficulty and weariness of their labors.

Their first acknowledgments are due to those Ladies, who, with their accustomed efficiency and taste, rendered such valuable aid in the decorations of the Hall.

To Gen. J. W. Denver, Secretary of State, for his courtesy and aid to the Society by tendering the use of the Assembly Chamber, etc., for the Exhibition; and to Patterson, Esq., who has charge of the rooms, for his politeness and attentive efforts to promote the success of the Exhibition, the Committee return thanks. Also, to Messrs. Nevett & Co., for the generous loan of their beautiful Fountain; and for the taste displayed by them in its arrangement, adding, as it did, greatly to the beauty and comfort of the Hall.

Also, to Miss Tozer and others, of the Quartette Club, who very kindly volunteered their services to add to the interest of the occasion. Their generous aid was tha more acceptable being tendered upon the evening when the proceeds were devoted by the vote of the Society to a benevolent object.

An acknowledgement is due to Mrs. E. L. Beard, of Mission San Jose, for a case containing a very handsome Olive Wreath. The Committee regret that by the delay of tha conveyance, this did not come to hand before tho close of the Fair.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the Executive Committee,
v3-26 C. I. HUTCHINSON, President.

THE
CALIFORNIA FARMER,
And Journal of Useful Sciences.

Published every Friday Morning, at the Office on Fourth street, Sacramento City.

THIS Journal will contain Valuable Agricultural Statistics, from all parts of the States, together with Original Scientific and Literary Articles. The aim of the proprietors will be to make it an acceptable FAMILY PAPER, containing interesting matter relative to Household Literature, from several able Lady Correspondents.

TO ADVERTISERS.

In order that our patrons may have some idea of our circulation in this country and abroad, and the benefit which may be derived from advertising in our journal, we publish the following list as comprising some of the principal places in which our journal circulates, showing how useful it will be to those who wish their business widely known:

San Francisco,	Sacramento,	Stockton,
Marysville,	Grass Valley,	Nevada,
Rough and Ready,	Downieville,	Yreka,
Shasta,	Columbia,	Sonora,
Colusi,	Sonoma,	Santa Clara,
San Juan, Monterey co,	Santa Rosa,	Santa Cruz,
San Jose,	Mission San Jose,	Napa,
Nicolaus,	Benicia,	Petaluma,
Placerville,	Pajaro Valley,	Oakland,
Alameda,	Union City,	Alvarado,
Auburn,	Bodega,	Hamilton,
Bidwell's, Butte co.,	Los Angeles,	Monterey,
Knight's Landing, Yolo,	Martinez,	Ione Valley,
Uniontown,	Humboldt Bay,	Salem, O. T.,
Port Townsend, O. T.,	Oregon City, O. T.,	Portland, O. T.
Washington Territory,	Sandwich Islands,	&c., &c., &c.

To every Post Office and Express Office in this State, and to nearly every State and State Agricultural Society in the Union. In addition to this, it is sent to many of the principal cities in England, Scotland, Ireland, France and Belgium.

We desire to state, in addition to the above, that *Real Estate Owners* and all who desire to secure quick sales of *Farms* or *Farming Lands*, *Stock* or *Produce*, will find this medium of advertising particularly beneficial.

Manufacturers, Mechanics, Artizans and *Proprietors of New Inventions*, as well as *Importers of Implements* of all kinds, should bear in mind our paper.

All who supply *Families* should remember the CALIFORNIA FARMER is the channel of communication direct.

Those who desire to have a knowledge of the Home Industry and increasing products of the country—a record of the Agriculture, for their own use, or for *mailing* to the States, are particularly invited to examine this paper; it will contain full and particular records of the *Annual Exhibition* of the present year, being important data relative to California.

N. B.—Sample copies will be forwarded when desired.

Very respectfully,
WARREN & SON,
Editors and Proprietors, Sacramento City.

Great Staple of California—Tobacco.

This product must inevitably become a great staple production of California. The samples of Tobacco at the Fair, by J. R. Jonnson, of Sacramento, were of superior quality. The manner of cultivation and the success that attends it, as noted by him in the following letter, are worthy especial notice. Dr. Brown, of this city, presented at the Fair a plant in a growing State, as a handsome ornamental plant, in a tub, and when in full foliage and bloom like this, it is very beautiful; this, with other specimens, is highly creditable to him. We hope due attention will be given to Mr. Johnson's letter; he is a practical and earnest cultivator. Our friend the Doctor is also one of our best amateur cultivators.

Annexed is Mr. Johnson's letter:

Home Wood Garden, American Flat, Sacramento county, Oct. 8, 1855.

Editors Farmer: I take pleasure to communicate through your much valued paper, the California Farmer, my knowledge and experience in the cultivation of Tobacco, for the past year, 1854—specimens of which I exhibited at the California State Agricultural Fair, held at San Francisco, and also at the Fair of the present year, held at Sacramento city. The crops produced were from the plantings of the early and late, making two crops in one year. I feel gratified to say, the result proved worthy of the notice of several good judges of the leaf—and take the opportunity to lay before the readers of the Farmer, the manner and mode of its cultivation in California, so far as my knowledge extends.

On the 20th of February I sowed the seed, and at a period of twenty days the plants appeared, quite small, and apparently of slow growth, until three weeks after; then the plants grew rapidly, and in two weeks were sufficiently large to transplant. In the month of April, about the 20th, I began transplanting, placing them three feet apart each way. The land was well plowed and finely pulverized, and the plants lost none of their vigor, but grew rapidly. While thus doing, hoeing the plants, and keeping clear from weeds, is a requisite not to be neglected. When the plants have attained to a growth of leaves, from eight to twelve, stripping three to four of the lower leaves off the stalk, is the first attention towards producing the leaf; this is termed "Priming." In a week or ten days, the plants will have attained a further growth, and new leaves shot from the top sufficient to number eight to twelve—at which juncture pinch out the top, known as the "bud shoot, and termed Topping." This being done the vigor of the stalk is directed toward the development of the remaining leaves, which in time become thick and velvety and attain to luxuriant and fruitful, exhibiting an astonishingly luxuriant growth. Persons who have never noticed a flourishing growth of Tobacco, could not be a moment realize the grandeur of a field of the "weed" so much liked, and yet its pernicious use condemned. While the leaves are thus maturing, a shoot termed the "sucker," grows out from the stalk, where the leaf projects, and in every instance should be pinched out, otherwise the supply of the stalk will pass the leaf and be drawn into the sucker, thereby retarding and unqualifying the crop.

During the growth of the plant, and from its earliest stages, it is subject to the worm, (though not so numerous in new countries as the old,) which comes from the egg deposit of a fly during the evening twilight, and the heat of the sun hatches the worm, which is most destructive while young. When they make their appearance so, they should be plucked off immediately. The morning is the most propitious, as the heat of the day warns them to retire into the shady part of the plant, when they are difficult to be found.

The stage of ripening is known by the leaves becoming leather-like, and turning yellow-green and spotted, giving evidence of decay, and losing the verdure of their former appearance. Such being the state of the crop, avoid being too anxious to harvest, for often inexperienced planters cut it before thoroughly ripened, and lose in weight and quality that which patience and a neighborly consultation might gain.

In the month of August the April planting will be thoroughly matured. For cutting, the morning and evening are to be preferred, as the day sun is too severe and will burn the leaves. Cut the stalk close to the ground, and by no means let the California sun wilt the plant more than thirty minutes. Great care should be taken with this process, known as the wilting, before hanging up to dry; if not, the leaves may be rendered worthless.

Having perfected a crop, the dry house is next in order, which can be made after the style of a long shed, roofed and closed in on all sides, sufficiently ventilated to avoid drying too quick, or what is generally termed "house-burn." Good drying and evidence of a successful crop is known by the leaf gradually turning a bright yellow and followed by a bright brown, drooping gracefully, without crisping or curling.

The stalks are suspended upon poles, by strings tied to the buts, and hanging side by side, so as not to touch; the drying arrangement will easily dictate the mode and manner of hanging up, only be careful to have a free circulation of air. A space of 30 feet by 15, three tiers from ground floor to the roof, will contain from 600 to 800 pounds, or twenty five hundred plants, (light and heavy tobacco varying.)

In six weeks, the first crop I raised from my April planting which I harvested in August, was sufficiently dried to sweat and strip, and being anxious to experiment upon the sweating operation, I did so in the following manner.

[TO BE CONCLUDED.]

California Seeds—Illinois Osage Orange.

Bullard's Bar, El Dorado county, Sept. 24, 1855.

Messrs. Warren & Son: Gentlemen—A few days since I received a letter from Professor J. B. Turner, of Illinois, a distinguished agriculturist and horticulturist of whom you have probably heard. I had sent to Prof. Turner some time ago, some seed of grass gathered upon Humboldt (or Mary's) river, which I thought might be valuable for hay; and some Alfalfa, or Chili clover seed. He acknowledges the receipt of the seed, and writes: "The California clover did admirably, and will be of great value in this and the adjoining States. It is now (20th May) up knee high, and ready for mowing. The other specimen of grass was so given to spreading that I was afraid it would be extremely troublesome, and was therefore obliged to cut it up. I should be exceedingly glad to receive any seeds from you, which in your opinion would be valuable to us. I intend and will take the greatest care to the planting and cultivating of them."

Prof. Turner sent me in his letter the small parcel of Osage Orange seed which you will find inclosed, with these instructions in regard to sprouting them: "Soak the seed three days in water just warm enough to hold your hand in it, taking them out and airing them twice each day. Then put them in wet cotton or [illegible] them in a warm place and they will sprout in eight or ten days. Then plant them in the garden, and water them if dry. Cover them with straw in the fall, if very small, in order to protect them from frost."

It occurred to me that possibly these directions of Prof. Turner (who has successfully and extensively introduced Osage Orange hedges into Illinois) might possess some interest and importance to you. Having no garden or home of my own, and no personal interest in these matters, I send you the seed and directions. Having myself seen many miles of Osage Orange hedge in Illinois, grown from plants obtained from Prof. Turner, and capable of turning any kind of stock, "from a rat to an elephant"—to use the expression I once heard him make—I know him to be the very best authority in the matter.

I do not write this in the way of a communication to your paper, but, hoping you may make it of some service, write to you as gentlemen whose labors in the cause of Agriculture have won my respect and admiration. Begging pardon for the length of this careless letter, I am,

Very truly yours, Chas. E. Lippincott.

Statistics from County Assessors.

YUBA COUNTY.

The Assessor of Yuba county makes the following report to Hon. S. H. Marlette, Surveyor General:

In accordance with your request, as per circular dated March 1st, 1855, I send you the following statistical report for Yuba county. In the absence of the late County Surveyor, who is at present engaged in surveying a road through the "Henness Pass," I have taken his statement, made in 1852, of the number of acres of land in Yuba county. Your circular was not received in time for me to report the amount of gold taken from the mines in this county, as a large part of the mining portion of the county had been assessed previous to the reception of your circular. I can only say, that from the best information I can obtain, there has been more gold taken from the mines situated in this county, during the present year, than any previous year, since the first discovery of gold in this State.

In relation to the cultivation of fruit trees (I had the promise but as yet have been unable to obtain) a report of the observations of Messrs. Beach & Shepard, who have a large nursery and orchard on the east bank of Feather river, between Yuba and Bear rivers. In their orchard, the most of the trees are three years old, and they would have had the present year a large yield of peaches, had they not been destroyed by that pest of California, the grasshopper. From my own observation I think the climate of this portion of the Sacramento Valley, not adapted to the cultivation of the apple and pear, but think they may be cultivated to advantage in the small valleys among the lower spurs of the Sierra Nevada mountains.

There is some portion of the boundary line of this county, that is not plainly defined and which in my opinion, should be surveyed and more plainly established. The act of the Legislature dividing the State into counties and establishing the boundaries thereof, defines the boundary line between Yuba county and Plumas and Butte counties, as commencing at the Lexington House, thence down the dividing ridge between the waters of Yuba and Feather rivers to the source of Honcut, thence down the middle of the main branch of Honcut creek to where the same empties in Feather river.

The south branch of the Honcut has heretofore been considered as the main branch, but I have been informed by two of the deputies of the U. S. Surveyor General of this State that the north branch of said creek is the main branch, and in such is the fact, Yuba county is losing the revenue upon a large amount of property situated between the two [illegible]. Your attention is respectfully requested upon this subject.

Below I send you such statistics as I have been able to collect during the past year.

Respectfully, &c., [illegible] County Assessor.

The whole number of acres of land as per assessment of County Surveyor is [illegible] of which [illegible] are actually cultivated. There are 80,000 acres suitable for grazing. The number of acres of mineral lands, unsusceptible of cultivation, and mostly heavily timbered, is 174,960.

Number of acres of wheat 1,845, total number of bushels 3[illegible],900; barley 2[illegible] acres 54[illegible] bushels; [illegible] acres, 1,400 bushels; tons hay [illegible]. There are 8,200 fruit trees, and 17,000 vines.

The number of horses is 1,272, mules 1,074, cattle 6,045, sheep 805, hogs 5,378.

The number of saw mills driven by steam is 6, assessed value of same $19,500; number driven by water 16, valued at 38,600; amount of lumber manufactured during the past year 3,875,000 feet; cost per thousand to manufacture $15; value per thousand $25.

There is one flouring mill propelled by water, the assessed value of which is $3,000, and it has manufactured 150 tons of flour in five months, averaging 39 pounds from a bushel of wheat. The flouring mills propelled by steam number five; assessed value $44,000; and they have ground during the past year 69,406 bushels of wheat, and 26,456 bushels of other grain. In the above mills are twelve run of stone.

Of incorporated turnpike companies there are two—the Yuba Turnpike Company, from Marysville to Camptonville, length 40 miles; and the Branch Turnpike Company, from Oregon House to Lexington House, 31 miles. Cost of constructing the above roads $35,000.

Number of toll bridges 7, assessed value $48,000; ferries 8, assessed value $7,500; water ditches 18, assessed value $117,400; quartz mills 2, assessed value $31,000; fire companies 5, cost of engines and hose carriages $16,725. Number of members of fire department Oct. 1st, 1855, 231. Expenses of fire department of city of Marysville during the past year, $18,457.

NEVADA COUNTY.

The following is the Report from Nevada county as furnished the Surveyor General, Hon. S. H. Marlette, by Assessor John McCoy, Esq.:

The quantity of land claimed by actual settlers is 29,974 acres; assessed valuation of same $192,375. Number of acres under cultivation 4,300; acres of wheat 1,100, barley 1,500, oats 350, corn 50, hay 700, potatoes 300, other vegetables 300.

Fruit trees flourish well and considerable interest is manifested in their cultivation. Peach trees often produce two years after planting. In a few years we will be plentifully supplied with every variety of fruit. The present number of fruit trees under cultivation is 3,200, of which about three-fourths are peach. The cultivation of the grape is attempted with some show of success.

The county being mountainous and not adapted to grazing, is mainly dependent on the agricultural portions of the State for a supply of animals. The number of animals in the county is estimated as follows: Horses and mules 1,500, cattle 2,300, swine 7,800.

There are 41 ditch companies supplying the miners with water, the aggregate length of which is 682 miles, and the assessed valuation of the same $345,900. The average price of water per inch is about 50 cents.

There are eight toll bridges in the county, of which the assessed valuation is 2[illegible].

The number of quartz mills in successful operation is 16, of which five are run by water. Tons of rock crushed per annum 7[illegible]; average yield per ton, $[illegible]5; cost of raising and crushing per ton, $15; aggregate value of machinery, $[illegible],000. The total amount of original investments in quartz is estimated at not less than $2,000,000.

We have 32 saw mills in operation in the county, capable of cutting 2[illegible] feet of lumber per month. The value of rough lumber is from $25 to [illegible] per M. No county abounds in better timber.

There is one grist mill in the county, employing a capital of $2[illegible] and manufacturing [illegible] barrels of flour per annum, valued at $[illegible], besides grinding [illegible] tons of barley per annum.

The amount from the latest returns [illegible] the average yield of [illegible] pounds to the bushel.

From a [illegible] kept at the [illegible] House at Grass Valley, we learn that [illegible] are subject to every [illegible] of the [illegible] Valley [illegible] amount to [illegible] more.

N. W. Dunn, Esq., County Assessor of Sierra County, has furnished the Surveyor General [illegible] in the following [illegible]

Mr. [illegible] County [illegible] Assessor [illegible]

The [illegible] number of acres of land as per assessment of County Surveyor is [illegible] of which [illegible] are cultivated. [illegible]

in acres, in cultivation in the years 1854 and 1855:

	1854.	1855.
Wheat, acres,	2,345	6,500
Barley,	4,868	5,287
Oats,		75
Vegetables, melons, &c.,		125
Hay, tons cut,	1,121	2,700
Total acres in cultivation,	7,213	12,287

The amount of live stock was—horses 1,604, mules 262, oxen 930, cows 1,748, stock cattle 8,132, yearlings 1,387, calves 867, hogs 5,761, sheep 4,122, goats 4. Value of poultry $4500.

The indigenous timber of the country is oak and pine.

There are 200 peach trees in bearing; but, as yet, no apples have fruited.

There are two steam grist and saw mills, each with two run of stone. Their aggregate original cost was $30,000. They use 25,000 bushels of grain per month, and produce 5,200 barrels or 200 pound sacks of flour.

The crops of all kinds were much injured by grasshoppers, and several fields of wheat were entirely destroyed by them.

The wheat crop of 1855 was 101,500 bushels, being an average of but 15 1-2 bushels per acre. Barley, 94,066 bushels, being but 18 bushels per acre. Oats, 1,500 bushels, or 20 bushels per acre. Except the ravages of the grasshoppers, Mr. Dunn gives no reason for the short crop.

SANTA CRUZ COUNTY.

We are under obligations to J. F. Pinkham, Esq., Assessor of Santa Cruz, for the following Report, kindly furnished to us:

SANTA CRUZ, Oct. 1, 1855.

ENTRON FARMER: In compliance with your request I send you the following report of the agricultural products, and other information called for in your circular:

The following is the amount of stock in the county: American oxen 400, cows 500, beef and stock cattle 350; California oxen 300, cows 500, beef and stock cattle 4,850; American horses 175, mules 175, sheep 2,200, hogs 3,400, goats 40, California horses 1,200.

The number of acres of wheat sown was 4,000, of which only 1,500 were harvested, the balance having been spoiled by smut and rust. In wheat sown in situations where there was a free air through it, the rust is not so bad. I believe the rust is caused by the heavy fogs and dews which prevail during the nights being followed by very warm days. In the upper portions of the county, and where cold winds are prevalent, the grain is good. The average yield of wheat throughout the county is about 20 bushels per acre.

Acres of oats 1,200, of which only 700 were harvested. Average yield throughout the county 28 bushels per acre. Those not harvested, in same condition as unharvested wheat.

Barley, 1800 acres, yield per acre 30 bushels; beans, 250 acres, yield per acre 40 bushels; potatoes, 500 acres, yield per acre 300 bushels; onions 45 acres; buckwheat 50 acres, yield per acre 30 bushels; cabbages, 8 acres; peas, 6 acres; corn, 90 acres, yield per acre 35 bushels. Acres of gardens, 50.

Apple trees from one to three years old,	3,000
Pear trees in the Old Mission Orchard,	51
Pear trees from one to three years old,	300
Peach trees from one to three years old,	300
Grape vines from one to four years old,	7,000
Of apricot, cherry, plum, quince, and nectarine,	200

Total number barrels lime burned and shipped 30,609, of which Messrs. Davis & Jordan burned 21,409. It is of two qualities, a fine-grained grey colored, and a white crystalized; there are inexhaustible beds of it within one mile of the town of Santa Cruz.

There has been discovered lately, about four miles from town, a mass of auriferous quartz, lying in masses—no regular lead or vein. Some that has been taken out was very rich, one bucket full yielding two dollars and ninety-six cents. The placers have produced since last March about $5000. At present there are about twenty men at work, making from one dollar to two dollars and fifty cents per day to the man. The extent of the gold region is about twelve miles by four, which has been but poorly prospected as yet. The gold is found all through the dirt, on the surface, as well as next to the bed rock.

There are also large quantities of iron ores, —chromets and sulphurets. There are also several sulphur springs, and in the lower and eastern end of the county there are a number of asphaltum springs.

About one-third of the county is adapted to tillage and grazing, the balance being barren hills and heavy redwood and pine timber lands.

There are four flouring mills in the county, with six run of stone, grinding 60 barrels per day to the mill. There are eleven saw mills, eight water and three steam, cutting each about 1,200 feet of lumber per day. There is one furnace, owned by E. Anthony & Co. with a steam engine of eight horse-power attached, for machine purposes. There are five shops where wagons are made, six blacksmith shops, and eight dry goods and grocery stores. On account of the imperfect titles by which land is held, the improvement of farms is not great. Total amount of taxable property, $1 000,000.

The foregoing is correct, to the best of my knowledge. Very respectfully, yours, &c.,

JOHN F. PINKHAM, County Assessor.

REPORTS ON FRUITS AND FLOWERS.—The Reports of the Committees on Fruits and Flowers are worthy special attention, being full and complete, as Reports of this kind always should bespeaking the interest felt by those committees and reflecting great credit upon the Society, as well as upon the Committees.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, OCTOBER 26, 1855.

The Californian State Agricultural Society's Exhibition Room are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society' Rooms, where subscriptions and advertisements are received.

How do you Keep Your Grounds so Clear of Weeds?

IN our various rambles over the State we gather many little incidents that tend to illustrate great truths.

"Great oaks from little acorns grow,"
Great truths from simplest words may flow.

Passing over a large farm, orchard and garden, this summer, we were pained to notice the appearance of neglect, and the visible retrogade movements of trees, shrubs and plants. We were walking with the proprietor and making inquiry if it would not be very advantageous to his estate to bestow more care and cost upon what had been so well designed. We made particular inquiries into each department of culture, and were much interested by the answers given. We learned that the original plans were all good. The farm was well designed, well fenced, had good buildings, the very best implements, stock, material—all sufficient; but the evidence was before us, the land was not well cultivated. Trees were grass-bound and stinted, the soil in the orchards, nurseries and gardens was dry, hard baked and impervious to air or moisture; and the whole scene to us was painful in the highest degree.

In a climate like ours, where the soil always demands *deep cultivation and constant care*, where success can only be attained by a personal attention, and by a practical knowledge of the wants of the soil and the wants of every product raised upon that soil, it cannot be expected that any beneficial results can be obtained, that any great or permanent good can be secured, unless the owner has either a practical knowledge or a love of the science of agriculture, sufficient either *to take hold himself*, or to see that those to whom his estate is intrusted know how to perform their duty.

We have too much experiment, without a basis for it: in the instance to which we have alluded, the proprietor had tried many experiments with his laborers, acting himself as the overseer. He had employed men of various nations, and had finally concluded to employ *seamen* to carry on his farm. He could hire them much cheaper, and as produce was low it was important to economise, and the result was, that while the time was expended in teaching his men how to drive horses and oxen, and to hold the plow, the season of plowing was past, and the consequence was as we have stated—orchard, garden and nursery were overrun with grass and weeds, and, when we saw it, presented but a pitiful appearance.

We drew from such experiments this lesson—that it is better for every farmer who sees the need of the *best implements to work with*, to be sure to get men who understand how to use them; and it is far better to plow and plant no more than can be well and thoroughly cultivated.

Turning from this scene of a neglected farmer, we come to another. We called upon a friend who cultivates a large and extensive nursery and garden, and we could not but help noticing the great contrast between it and the one we had so recently visited. Here no grass or weeds were seen, but a clean, well tilled and deeply cultivated field, presenting a healthy and moist surface, which was clearly indicated upon every tree, shrub, vine and plant upon the ground; and here we noticed, too, that a much less number of laborers were engaged than on the one last spoken of, although the labor in view appeared much greater. We were more than pleased, we were instructed and gratified, by a long and interesting investigation of cause and effect, all of which were plainly visible.

We turned to the proprietor and asked the question which stands at the head of this article—"How do you keep your grounds so clear of weeds?" The answer came just as we expected. *I work!*

Here was the grand secret—if secret it be. Here was the proprietor, with coat off, laboring with his own hands—hands, heart and mind in the work, and the result was before us, of well cultivated and prosperous grounds. In the other case the proprietor was an overseer and directed as well as he might, but was dependent upon others for the success of the happiness of himself and family. In the last case the proprietor understood his business, and employed none that were not qualified to perform the duties required of them.

The depression upon the great agricultural interest the past year, has in many cases compelled men to labor who never labored before, and it will prove a blessing to them, for they will learn that most useful of all lessons in farming—that

"He that by the Plow would thrive,
Himself must either hold or drive."

Dairy Produce.

We have been favored by our friends Gushee & Co., with a "leaf or two of their ledger," which enables us to lay before our readers some estimate of the value of the dairy products of *one valley only*. The sketch is from the products of Petaluma Valley, and will tell well in the figures we give.

We shall be furnished with accounts of sales and important data from this firm, and we feel it a duty to say to all who deal in produce, that it is for their interest to call and become acquainted with Messrs. Gushee & Co. We are much indebted for these reports and shall look to them for a regular monthly report hereafter.

Monthly Account of Sales Rendered, August, 1855—Net to the Farmers.

Butter	12,767½ lbs.	$2,202 59.. Average ₱ lb	72c
Cheese	2,787½ lbs.	537 72.. do do	19½c
Eggs	1,361½ doz.	$2,113 65.. do ₱ doz.	62½c
Chickens	1,325	913 20..	63c
Gross Amount		$12,786 65	

GUSHEE & CO., 57 Washington Market.

San Francisco, Sept. 24, 1855.

Butter from one Dairy in eleven months.

	Number pounds.	Value.	Average ₱ lb.
November	178½	$160 20...	90
December	463½	378 46	81½
January	423	346 19	81½
February	617½	407 21	65½
March	826½	509 00	61½
April	550½	292 94	53½
May	813½	406 74	50
June	1,102½	564 22	51½
July	825½	360 25	67½
August	557½	436 85	78½
September	351½	281 00	80
Total in eleven months	6,709	$4,342 06	64¾

This is the net amount paid. GUSHEE & Co., 51 Washington Market.

MAGNANIMOUS.—We cannot let this opportunity pass to express our high sense of the noble and generous act performed by the Banking House of Messrs. Drexel, Sather & Church, of which mention was made in our last issue. This well known and firmly established house, though but very recently established in this city, were made acquainted with the fact that the State Agricultural Society held the bonds of the State from which means were to be raised to meet the Premiums which had been awarded by the State Society, and although the bonds would not fall due for some three months, and if thrown into the market would require a sacrifice which would prevent the Society from accomplishing all the good they intended, with a generous desire to promote the general interest, this house, through their energetic head in this city, Thos. S. Fiske, Esq., promptly tendered the full amount of the bonds, two thousand five hundred dollars, without interest or discount—thus enabling the Society to meet the calls for Premiums instantly. This act should be kept in honorable remembrance.

EXTRA MAIL FACILITIES.—We rejoice for ourselves and for our friends also, that are and have been complaining for a long time about the derangements of the mail, its tardiness, &c., &c.—we rejoice to announce better days coming, for we have received an evidence of unprecedented dispatch, through the regular mail, of the Sonoma Bulletin, dated January 4, 1854, *only twenty-one months* from Sonoma. This improvement we attribute wholly to the Agricultural Exhibition recently held in that place. Had it not been for this, we verily believe this paper would not have reached us before January 4, 1856. Dry your tears, friends, we need sorrow no more after such dispatch.

THE GRAIN MARKET.—The condition of the grain market is a matter of great rejoicing to the cultivators of the soil, to the hardy yeomanry of our golden State. It is most fortunate that the grain growers very generally held on to their grain, as advised by us—for this they are now reaping the benefit. The very handsome price now realized will enable the mass to free themselves from their embarrassments, and to make improvements in their farms and dwellings, and this will give an impetus to trade. This is already perceived, and we wish the merchant would give the credit of the present prosperous times to the right source—to agricultural prosperity.

PATENT OFFICE.—The State Agricultural Society having received a valuable parcel of seeds from S. T. Shugut, Esq., Acting Commissioner of the Patent Office, together with circulars touching the same, the thanks of the Society were voted in return, and the circulars and seeds committed to those whose duty it is to act upon them.

International Hotel.

"There is a tide in the affairs of men,
Which, taken at the flood, leads on to fortune."

OUR friends, Messrs. Peck & Fisher, of the International Hotel, at San Francisco, must have well understood the value of right action, as indicated by this title which rolls on to fortune, for they are on the road both to fortune and fame. A short stay at their fine house, last week, assured us of this fact. The International Hotel is well known to be one of the largest and best regulated hotels in the city. On Sunday last the house was full to overflowing, besides many were unable to obtain entrance, although there are upwards of two hundred rooms; forty, fifty, and sixty, is the average number daily, and one day last week, seventy-two arrivals were registered. As we have said, there is a system and order maintained throughout—everything is done promptly. The gentlemanly proprietors and the polite attendants make a stay pleasant.

We must, however, do full justice to what we esteem one of the principal causes of the popularity of this House, Geo. W. Grannis, Esq., so universally and so favorably known, who stands at the desk to welcome all who come, we esteem one of the most successful caterers for public favor among the hotels of the State; he is always at his post, affable and gentlemanly in all his deportment. He always secures favor, and we feel sure the proprietors had in view the motto we adopted when they secured the services of friend Grannis, for by so doing they expected it would lead on to fortune. We hope, for the continued success of the House, Mr. G. will be long continued at a post he fills with so much credit to himself and success to the Hotel.

A WELL FURNISHED HOUSE.—Great difficulty has been experienced in times past to find that kind and variety of furniture, that while it was needed, was genteel and appropriate. Very much depends upon the appropriateness of size and style of furniture, as compared with the size and style of the rooms where it is placed; the color, shade and finish of the rooms should guide in the selection of the style and quality of the furniture. All these difficulties are now of little moment, for whatever may be the size of the rooms or the house, or whatever the style of furniture wanted, the most lavish taste or the most economical desire, can be suited by a visit to the extensive warerooms of Messrs. Howes & Co., Montgomery street, San Francisco.

We made a visit to this establishment the present week, as a matter of economy, to find a small piece of furniture at a moderate rate—knowing their prices were very low—and while there we went through their almost endless rooms. One cannot realize the vast amount and the complete variety this one House have on hand, without a personal visit; from the most superb collections of costly marble top sets, and all the other choice and elegant pieces of furniture, to the simple articles for common domestic uses, this House can furnish, and what is best of all at the lowest possible price. We found what we desired, and we feel certain every visitor that shall call can be suited also. So we would say to all, go to Howes & Co.,—for there will always be found, at the lowest rates, all that is wanted for a *well furnished house*.

FAVORS RECEIVED.—We have been the recipient of many favors the past few weeks. Several of which we have not yet acknowledged, but which we now with thanks recall.

From the Premium Mill of Geo. C. Yount Esq., a sack of his superior Flour. We shall accept his kindness—eat, be refreshed, and remember the giver.

We cannot forget the bounteous quantity of strawberries, presented us by J. L. Sanford, Esq., of Shell Mound Ranch. To say they were good or excellent, were faint praise. If our friend heard the praises bestowed upon him by the coterie of friends that enjoyed his most delicious fruit, at our sanctum, he would be perfectly satisfied.

A box of fine seedling Peaches we have received the present week, from Messrs. Haven & Baker, of Napa. They are called the Virginia Seedling, and these being the first bearing, are not equal to what is expected after a little more cultivation. Many thanks for this excellent fruit.

A wonderful curiosity was presented to our office, by Geo. R. Nesbitt, Esq., of Sacramento, consisting of a mass of squirrel bones taken from the hollow of an oak tree of about five feet in diameter. The whole mass was many bushels, and by appearance had lain for ages. Many complete skeletons are embedded in the mass. The Specimen can be seen at the Rooms.

SECOND ANNUAL STATE FAIR.
SUPPLEMENTARY.

The following are some of the regular reports of the committees to the California State Agricultural Society which were omitted last week for want of space; these which were in but part of the edition, are republished:

Report on Flowers.

Mr. President: The Committee to whom was delegated the adjustment of *Premia* for Flowers respectfully report, that in the discharge of their duty they have been pleasingly impressed with the triumphs of Floriculture and taste in our land. In these genial regions, where every living object feels the influence of the vital heat and stimulating air around us—where it may be truly said, without a metaphor that Nature laughs in one eternal Spring—our fancy and perceptions have been vividly quickened by the rosy smiles of Flora, while scrutinizing the philological meaning of her works,—

"Each written page in every page,
That bears the impress of an earnest spirit,
Seeking the Good, and True, and Beautiful."

It has been elegantly written that of all the minor creations of God, flowers seem to be most completely the effusion of his love of beauty, grace, and joy. Indeed the pious Chateaubriand says, that they, as well as all created objects, may be considered the imagination of the Deity, rendered visible. If such then be the case, how highly favored is this chosen land—the second Eden of Creation—made, it would seem, expressly to gladden the heart of the wandering exile, and to declare the Gospel of Beauty to a world rushing madly to bankruptcy in every high and holy obligation. With Imaginations kindling from the environment of place and circumstance, your Committee have been led through flowery paths to revel in the beauties of Grecian fable—in the wonders of enchanted castles and fairy bowers—amid the magnificence of palatial gardens—amid the glory and gallantry of the age of romance. With Tasso, they have roamed through Syrian lands—

"Where soft perfumes diffuse from every flower;"

and from the Ionian isles, where highest art is decked with immortal amaranth—onward they passed to fair Italia, where from Bacchante Tazzas may be drawn lit nectar for the fabled gods. In chivalric Castile they dallied

—"Awhile in the bower,
O'er which the white-leaved orange flower
Breathes its ambrosial sweets,"—

ere they went rejoicing on to further lands, where Persian maidens weave the Lotus and the Jasmine with the classic Hibiscus and the drooping Mimosa, into garlands. In Japan, now near at hand, they regaled their eyes with purest lilies and chaste camellias, fit symbols of those fair Beings whose mortal beauty is thus inadequately expressed, and whose mental charms cannot be duly typified 'till we shall reach that land where the flowers never die! Time and words would fail your Committee to convey the full utterance of the inspiring ideas they experienced during their enraptured excursion among the flowers So they will only add, in summing up the result, that from these living but perishable emblems of human life they have gathered, not the maxims of miserable worldly wisdom, but of that immortal philosophy which teaches to render unto Cæsar the things which are Cæsar's, and unto God the things which are God's.

Under the influence of such feelings and considerations, and with hearts overflowing in gratitude for the pleasant places in which our lot is cast, the committee would urge that too much credit cannot be bestowed on all the competitors who have developed each in their respective departments, such radiant evidences of the boundless benevolence of the Deity. They would, however, specially recommend as most worthy of consideration and award—

1st. J. H. Saul, of Sacramento, for the design and execution of that evergreen Temple—henceforth to be ever living in our memories—that exposure of all eyes, when, in one glorious galaxy, were clustered beneath its Gothic arch the honored representatives of Church and State, to award the palm to beauty and to grace.....$30

2d. A. P. Smith, of Sacramento, a Pioneer of Fruits and Flowers; whose brilliant display of 134 Pot Plants, shows what industry and skill can in a few short years accomplish, in such a soil as ours.....25

3d. H. Sontag, of Mission Dolores; whose collection of 30 varieties of joyous roses, attests that the days of mourning have passed away, and that the Queen of Flora her self has taken the harp from the willows on which it has so long hung.....10

4th. Kuhlau & Co., of Sacramento; whose gorgeous display of 16 varieties of Dahlias, if they are deficient of fragrance, are not without value, for every entitled to the premium.10

5th. O'Donnell & Co., of San Francisco, who have displayed the best taste in a pair of Vase Bouquets 10

6th. Wm. O'Brien, who has come in second best for the same Floral Act.....5

7th. F. Kuhlau, who not satisfied with the work of his two hands in arranging Bouquets, has with his six-hand Bouquet carried off the palm.....10

8th. Wm. O'Brien, of Sacramento, who has come out in the same as before.....5

9th. [illegible] who has [illegible] with a Rose Wreath, 50 years [illegible]

10th. [illegible] and O'[illegible] A. P. Smith, who have shown the best Dahlias, the prize of 5 yards 30

The committee feel that there has been no competition for many flowers or for a second Floral wreath and bouquet; and that the premia offered for these should be awarded to O'Donnell & Co., of San Francisco, in consideration of the great merits and rare excellency of these works, which must ever remain [illegible] Washington [illegible]

Calaveras. They also take this opportunity of suggesting that some appropriate award be bestowed on Mr. Theodore O'Brien, of Sacramento, for the ingenuity displayed in illuminating the Flower Garden; inasmuch as it is out of their power to confer a prize on him, he not being a member of the Society and of course being thus excluded from competing. Last, though not least in our memories, stands the exquisite Bacchante Tazza, so tastefully decorated with flowers by Mrs. J. P. Robinson, of this city, and already alluded to in our previous remarks; it constituting one of the chief points of attraction and admiration. To this lady the committee recommend as a special and honorary premium the ornate cameo *porte monnaie*, now on exhibition, from Messrs. Howard, Borradaile & Co., as the most fitting testimonial of their appreciation of her contribution.

Had they not transcended the limits of their instructions, the committee would have recommended for further award the splendid vase-bouquets contributed by Mr. Eisenmenger. As it is, however, they must rest satisfied in thus making honorable mention of the same, as well as of a choice collection of 38 varieties of Greenhouse Plants from the Floral Gardens of Kuhlau & Co., Sacramento.

In conclusion, the first of the undersigned members of the committee regrets that from the absence of F. W. Macondray, Esq., of San Francisco, and Chas. Weber, Esq., of San Joaquin, the duty of drawing up so hurriedly this report should have devolved on one unfamiliar with the subject. With the invaluable aid, however, of Mr. Provost, of Santa Clara, whose ripe judgment and experience have been called into requisition, as the catalogues prepared by him will show, it is hoped the decision arrived at, will thereby appear based upon a proper and impartial discrimination.

All of which is respectfully submitted.

Thos. M. Logan, M. D.,
Louis Provost,
E. A. Shepard,
} Committee.

Sacramento, September 28, 1855.

Since the closing of this Report, we have the pleasure of recording the arrival of thirty varieties of rare and choice Roses, in fine bloom, from the San Jose Nursery, owned by Mr. Louis Provost.

Thos. M. Logan, M. D.,
Chairman Committee on Flowers.

Report on Mathematical Instruments.

The Committee to whom was assigned the duty of examining Mathematical Instruments, having carefully examined the same, submit the following report:

There were presented for examination ten instruments, of various kinds, manufactured in California, by Wm. Smoltz, Mathematical Instrument maker, of San Francisco.

These Instruments comprise nearly every thing required in the profession of Civil Engineering.

They are exceedingly well manufactured, will give correct results, and for finish are not excelled by any of the Instrument makers in the United States.

The 1st, is a Transit Instrument, with a very simple but valuable improvement, by which the variation of the needle is at all times known by reading the card. It has also a reflector designed to illuminate the cross wires while taking sight observations. This instrument is highly creditable to the maker.

2d. A Y Leveling Instrument, with 4-inch Compass, for running courses for ditches, roads, &c.; a very convenient arrangement, containing the Compass and Level, and especially adapted to California. Instrument well made and good glasses.

3d. A Y Leveling Instrument, with an independent screw, for giving grades, fall, or elevation—a valuable arrangement. After leveling the instrument by means of this screw, the Telescope is either raised or depressed, to any grade or fall, without disturbing the level of the bar. This does not in any way interfere with the ordinary use of the Level for other purposes, and is peculiarly fitted for running grades of water ditches.

4th. A light mountain Y Leveling instrument, designed expressly for ditch work. This is a beautiful instrument, perfect in every respect, but reduced in size. It is so light that it can be carried with the tripod, in one hand. The instrument may be carried in an ordinary pocket, and is intended used as a case. It is in fact a miniature Level, faultless in workmanship, accurate in use, and cannot fail to become highly valuable in the Engineers of California.

5th. One surveyors' 6-inch Variation Compass—a fine instrument, and equal to any manufactured in the United States.

6th. One Mountain Barometer, for ascertaining the level above sea, by boiling water. Appears well made, of convenient form, and well put up, and should be found fully equal, if not superior, to the Barometer for that purpose.

7th. A silver Hydrometer [illegible] with copper case. The instrument attached, well finished.

8th. One sliding 14-ft. Leveling Rod, divided into tenths—careful, convenient, and well made.

10th. A pointed Leveling Rod—well adapted for ordinary use in California.

Your Committee have examined these Instruments with great interest, and are highly pleased to be able to report so satisfactorily upon them.

Coming as they do, the first offerings to the cause of Science, they are peculiarly interesting. It has been prophesied that California would, in a few years, outrival her sister States in the production of almost every article now raised by them. Few can doubt it, after witnessing the display of her products now around me; but we hazard the prediction that she will at that time exclusively of her sister States, not have a Mathematical and Scientific [illegible] as if the display before us can be taken as an indication of future excellence.

Very respectfully, Thos. Q. Jones,
Chairman Committee.

Miscellaneous.

We, the undersigned, a Special Committee appointed to examine a [illegible] in the middle [illegible] that we find [illegible]

and would recommend the several premiums annexed, viz:

Mr. Dawes, of San Francisco—Rack for Drying Clothes; improvement on one exhibited last year. - - - - - $10

Lippincott & Vaughn, of Stockton—Essence Peppermint, Bitters, Soda, Mead and Syrups. 25

J. W. Greist, of San Francisco—One Washing Machine called "May Queen," - - - 10

H. B. Ingram, of Sacramento City—One Smut Machine for cleaning Wheat; considered of superior workmanship and great utility. - 50

Encinal Tanning Co., San Francisco—One lot Calf Skins, Harness and Sole Leather, well tanned soft and pliable, - - - - - 20

Bulkley's Patent Kiln Dried Lumber, we admire, and would recommend to mechanics and undertakers of California.

J. S. Curtis, Chairman.

We, the undersigned, a Special Committee appointed to examine "Manhattan Hose Carriage," Built in San Francisco, by Woodside & Brown, on California street; and Painted by Theodore Kimball, No. 150 California, cor. of Spring street—find both carriage and painting of superior order of workmanship, reflecting great credit on the mechanic arts of our State, and fully demonstrating the fact with many other convincing proofs brought before us during our Annual Exhibitions, that California will soon be able to take care of herself.

We would respectfully recommend to the Executive Committee to have prepared two separate Diplomas, and forwarded to the parties above mentioned, as an evidence of our appreciation of their skill, and as co-workers with us in developing the resources of our new, but great State.

J. S. Curtis, Chairman.

The committee on Trees, recommend a special premium to be awarded to Messrs. Smith & Winchell, of Commercial Nursery, San Jose, for one Apple Tree, second year from graft—$15. For one Apple Tree, this year's bud $10. These trees are of extraordinary growth, and very fine.

Jas. R. Lowe,
Wm. Paul,
S. J. Crosby.
} Committee.

Your committee in the department of Poultry respectfully report that they award the first premium of $10 to C. W. Hoyt, for best three fowls, —the same being beautiful and large specimens of White Shanghais. S. B. Leavitt, for Com.

Report on Equestrianism.

Agreeably to instructions received from the Executive Committee of the State Agricultural Fair, the Committee appointed, composed of Maj. Gen. John E. Wool, Gen. A. Reddington, Hon. R. Chenery, Col. Gift, and Chief Justice Murray, have the honor to report—

That they attended the Louisiana Race Course, for the purpose of witnessing the Equestrian prowess of the Ladies and Gentlemen who appeared and entered for that purpose, and to award the premiums to the most accomplished riders, as provided for in such cases by the Executive Committee.

Of the first, four Ladies entered, to wit: A. Ann Stevens of Sacramento, Louisa P. Morgan of Bolinas Bay, Mrs. Fern, and Mrs. Mary Kellogg, of Sacramento; and after the most accomplished and surprising feats of horsemanship, the Committee unanimously agreed to award as follows:

First prize, a Gold Watch and Chain, worth $115. to Miss Ann Stevens.

The second prize, a Saddle, worth $50, to Miss Louisa P. Morgan.

Third prize, a Silver Cup, worth $25, to Mrs. Fern.

And the fourth prize, a Riding Whip, worth $15. to Mrs. Mary Kellogg.

Of the Gentlemen, entered for the premiums provided in such cases by the Executive Committee, unanimously award as follows:

To S. J. Crosby, Esq., of Santa Clara, the first premium, $50.

And to E. B. Crocker Esq. of Sacramento the second prize, worth $30.

John E. Wool, U. S. A.,
Alfred Reddington,
S. J. Hensley,
R. Chenery
Alvin Fisher.
} Committee.

Owing to the necessity of completing more perfectly the awards, and to be able to know how far the Executive can go in following the recommendations of the several Committees, in the bestowing of Special Premiums, and to what value and extent, the remainder of the reports cannot be ready for a brief time. When complete we shall make a copy to all who have received No. 16.

LAY THE DUST.—We call attention to one of the best plans we have ever seen to *lay the dust* yet invented, and we cheerfully say to the patronage of success to the able inventor, A. P. Ellis, of the Pioneer Planing Mill. The plan is a covering of [illegible] upon the road—by [illegible] means of [illegible] way [illegible] to [illegible] the [illegible] and a [illegible] We would [illegible]

Literary Intelligence.

Boston.

Mason Brothers, New York, will soon publish [illegible] the Old West Room, a new work from the pen of a lady [illegible] Weary at Work and the Weary at Rest." They have also in press "A Tale of Saxon Slavery in Sherwood Forest," by Henry W. Herbert, the well known author of several historical works.

D. Appleton & Co. have published a story of fashionable life, called "Light and Darkness," or the Shadows of Fate.

J. C. Derby, New York, will soon publish "The Hidden Path," a new novel by Miss Harland, of Richmond, Va., whose "Alone," and other previous works, have had remarkable success. (10,000 copies have been ordered in advance.) New editions of Don Quixote, in one 12mo. volume complete; also, the adventures of Gil Blas, in the same style—will be issued by the same publisher the coming season. They will be illustrated by English plates. "Isora's Child," a new novel, written by a lady of great talent, is in press and will soon be issued.

A. Morris, Richmond, Va., has in press a new book upon the true view of slavery, entitled "Sociology for the South," or the Failure of Free Society by Geo. Fitzhugh, Esq.

"Curtis Emerson," or life at Cliftonville, is the title of a very interesting work, to be issued by James French & Co. Boston, in September. Also, by the same publisher, "Kate Stanton," or a page from Real Life.

Phillips, Sampson & Co. will publish Sept 1 a new work by Richard Hildreth, entitled *Japan as it Was and Is*. An accurate and reliable map, full indexes, notes and a Glossary are added. A valuable work for the student.

Crosby, Nichols & Co. will publish Sept. 1, "Pictures of Europe," Framed in Ideas, by Rev. C. A. Bartol—a new and brilliant work.

The Annual *Trade Sale*, under the title of the New York Association of Booksellers, will take place the latter part of September, concluding with a Grand Banquet at the Crystal Palace, at which Thackeray intends to be present. The tables are to be furnished exclusively with fruit of the first quality.

W.

☞ Childs & Peterson, Philadelphia, will publish in October, 1855, in one large handsome octavo volume, beautifully illustrated, the *Year Book of Agriculture*, or the Annual of Agricultural Progress and Discovery for 1855, exhibiting the most important discoveries and improvements in Agricultural Mechanics, Agricultural Chemistry, Agricultural and Horticultural Botany, Agricultural and Economic Geology, Agricultural Zoology, Meteorology, &c.

☞ G. P. Putnam & Co. New York, will soon issue Bayard Taylor's India, China, Loo Choo, and Japan; also, a new edition of "Views A-Foot." They have also a new Work of Frederica Bremer, which will be issued simultaneously with its publication in Sweden and England.

☞ James French & Co. Boston, have in press a work entitled "Rambles in Eastern Asia," by Dr. Ball, which will be issued in September.

☞ Just received from T. B. Peterson, Philadelphia, a complete set of Charles Dickens' Works, in five volumes, splendidly gilt and finely illustrated—containing a portrait of Charles Dickens, with over four thousand very large double columned pages, handsomely printed and elegantly bound. "Peterson's" is the only complete and uniform edition of Charles Dickens' Works published in America, and can be had from his large Publishing Establishment, Philadelphia, or from his agents in any portion of the globe. The name of Peterson is associated with many of the best standard works, and none are unworthy of notice as the one above mentioned, and the valuable collection of Mrs. Southwick's Works, whose fame has already reached from ocean to ocean. To all who are desirous of adding select standard works to their libraries, we would cordially recommend to their notice the establishment of T. B. Peterson, Philadelphia. His publications can always be found at the principal booksellers in California.

W.

Our Agents at San Francisco.—We desire to call the attention of our patrons and friends to the advertisement of our Agencies at the Bay City. L. P. Fisher, Esq., is the General Agent of the principal newspapers in the State, and few men can so well act in this capacity as Mr. Fisher; he understands his business, and performs it well. Mr. Fisher will attend to our business, receive advertisements, subscriptions and other agencies and orders for us. Papers will always be found at his office. (See advertisement.)

Our paper can also be had at the newspaper stands of Messrs. Ullman and Leland in the Post Office Area.

Dr. E. S. Cooper's Eye and Ear Infirmary. Dr. Cooper was introduced to our acquaintance several months ago, by letters to us from eminent men in the States of Ohio and Illinois, as a gentleman of high reputation and established surgical skill. Since his arrival he has opened an Eye, Ear and Orthopedic Infirmary in this city, where patients can have comfortable rooms and [illegible] attention. The following communication of notice of his departure from his home in Illinois we find in the Peoria (Ill.) News:

"We learn that a [illegible] Dr. E. S. Cooper, [illegible] is going on a tour to the Pacific coast, intending to settle in San Francisco, where he has decided to make his permanent home. We know of no one [illegible] Dr. Cooper, [illegible] for [illegible] last two years [illegible] community have been crowded with patients from various parts of the [illegible]

Correspondence.

Letters from the Coast Range.—No. 4.

GEYSERS, Sept. 12, 1855.

EDITORS FARMER: Camp life is apt to make green hands at the business rise early in the morning, and so, betimes, (yesterday,) we woke with the birds, and chatted and laughed over our hot coffee as they warbled and frisked among the broad-spreading oaks and the dark-wooded ravines that composed the scenery around us. Mr. Iredale and our zealous young Nimrod were off early with their rifles, and, descending the steep declivity, crossed the fine little brook at the bottom of the ravine, called Pluton river, to scour the woods of the opposite hill sides for game. The distant crack of their guns, now and then, told us of their enjoyments, and though several deer were shot at, and a grizzly wounded, our palates were no better off for their bad luck. The Indian was left to clear up the kitchen, while Godwin led Parker, Johnson, and myself, over the sloping irregularities of the mountain side, to give us our first view of the Geysers. Both slopes of this immense ravine, at the narrow bottom of which the river Pluton babbles rapidly along over rocks and stones, are scored into numerous minor ravines or "gulches" that run up into their sides several hundred feet, and in some places, many hundred yards, at right angles with the main ravine. Some of these are deep, others are more superficial, and while some are densely filled with trees, undergrowths and tangled running vines, the constant abode of deers, bears, quails, and wild game of different sorts, others are open and free from all such vegetable growths. The entire southern slope is free from sulphureous deposits, and all signs of recent igneous action; but on the northern side of the Pluton river, here and there for several miles, and high up above the bed of the stream are observed whitish patches of barren and broken surface which, on close examination, are found to have been produced by igneous and sulphureous action. The same appearance is observable, in some places, low down the slope and even on the perpendicular banks which bounds for some distance the course of the main stream near the Geyser ravine. All these spots are highly charged with sulphur, which is visible, in some places, in fine and beautiful crystals, and in others, in concrete masses or in offensive exhalations that ooze from little openings in the surface, often mixed with steam, and issing as they escape from their plutonic confinement. There are large patches of surface where this sissing, steaming process is going on, and whence sulphureous odors are evolved of such intensity as to charge the air with extreme offensiveness. In fact the whole atmosphere of the great ravine is more or less impregnated with the smell of sulphur and sulphureted hydrogen. Even at long distances from the outlets, the nostrils were suddenly assailed with strong fumes of brimstone and other hideous or compound gases, which assured me that violent chemical reactions were transpiring among the elements of the globe deep down in its mysterious and incalescent bosom. But all these numerous little vents of vapor and gas, though surprising when the traveler first beholds and stands over them, are nothing when compared with the intense plutonic excitement which exists in one of the large chasms that runs into the northern slope, at right angles with Pluton river. This is the great attraction of this strange and fearful region, and is the abode of boiling springs, and roaring currents of steam surcharged with heat, of strong smells, of heavy and blinding clouds of condensing vapors, and of salts of iron and of alumina, of soda, and magnesia, and of acids so strong that the crumbling dust of the rocks will set the teeth on edge. All this action, all these phenomena are transpiring in SERPENTINE ROCK, whose vast intrusions from the boiling bowels of the planet have served to elevate this region of the Coast Range.

After crossing Pluton river and approaching the neighborhood of the Geysers, I embraced all opportunities to observe the superficial materials overlying the serpentine wherever outeroppings or broken surfaces exposed the composition of the deposits. These consisted of angular fragments of sandstone of small sizes mixed with yellowish sand and clayey earth to the depth of several, and in some places, of many feet. Its general appearance was that of drift, but it might have been produced by the contact of hot dykes intruded into sandstone beds beneath the water, during the process of elevation of the Coast Range, and just previous to its emergence above the sea. On the summit of one sharp ridge in the neighborhood of the Geysers, though several hundred feet above them, I observed a fragment of fine sandstone, reddened by solutions of iron, distinctly laminated, and splitting easily like common slate. In many places along the summits of the main ridge there were outeroppings of shapeless crags and boulders, the character of which I could not observe on account of their great hight and inaccessibleness.

The springs which are visible in this region appear in various places from beneath these loose deposits, and between them and the underlying serpentine rock. Where the heated water and steam make their egress, there have been fissures made in the igneous rock by subterranean forces, and after the rain water has percolated through the superficial deposits on the mountain it enters these cracks and sinks so far as to come in contact with the serpentine heated to various degrees of temperature, so that in some places the springs are merely warm, and in some places at boiling heat. In others, the temperature of the serpentine is so great as not only to heat the water and change it into steam, but to surcharge that steam with heat to such a degree as almost or quite decompose it. The igneous rock throughout this entire mountainous district, whether basaltic or serpentine, I observed to be largely studded with iron pyrites—and this material being constituted of sulphur and iron, its decomposition by intense heat in connection with water, and this in the midst of magnesian rock, would explain the largest amount of mineral and chemical exhalations, solutions and concretions which are eliminated from this great laboratory of nature. There was only one fact in the whole catagory of phenomena that with the small amount of scientific knowledge in my profession, I could not readily understand, and this was the streams of deep blue and almost black liquid that flowed from some of the orifices in the ravine. A prolonged and careful scientific examination of this locality, however, I am convinced would bring to light the whole field of simple and compound substances which are disengaged or wrought upon by intense plutonic or subterranean forces.

Having premised somewhat on the general condition of the exterior of this remarkable locality, and on the nature and causes of the phenomena visible to the traveler as he stands, for the first time, on the mountain side and looks down into an awful and marvellous abyss, I will spend a few moments in giving you a description of my own observations as I leaped from rock to rock, wandering and enjoying, and burning my fingers in testing the temperature of steam, water and fissured rock, from top to bottom of this realm of Pluto.

The approach to the Geysers, from our camping ground, near Mr. Levy's cabin, was by a trail obliquely ascending the slope to the east for some hundred yards, crossing two or three old sulphur outlets of inferior interest, when it struck round the spur of a great ridge below which the steaming and roaring abyss suddenly opened in desolate and amazing grandeur. After my first view I was so filled with wonder that I was involuntarily constrained to stop at almost every step to catch new feelings of delight and surprise, while my companions were hailing me to hasten forward, and rushing onward themselves like thirsty oxen to refreshing fountains. All these plutonic exhibitions appear in a wedge-shaped ravine, running nearly straight into the side of the great slope that I have already described, half a dozen yards wide at the bottom, and a hundred or two yards wide at the top. Its descent is considerable, and so interrupted by boulders or breaks that the little stream coursing down its bed, leaps here and bubbles there, is gathered into a small basin in one place, and runs away in tortuous and broken channels in another. At first, where the little rill (little at this season of the year, but in winter and spring much larger) enters the ravine, it is cold and pure, soon afterwards it grows warm by the issue of warm springs from the fissures in the rocks; still later it becomes much hotter by degrees and charged with mineral matters, and after having passed the heated rocks and boiling springs, it becomes cool again, and at its entrance into Pluton river is quite cold and clear, but so charged with saline substances as to leave whitish coatings on the stones where it has washed and evaporated. The sides of this ravine are completely barren as far as the general slope of the hill into which it runs, where the verdure suddenly commences and trees even in some places grow upon and overshadow its borders. Still, here and there in the bottom of this acrid and rancorous vale, a clump of the most verdant grass, of a knotted and peculiar texture, would spring up and flourish, and even on the calcined dust of the rocks so acid and nauseous that the tongue and teeth were turned and wounded by its pungency. I observed whole swarms of busy little ants, full of delight, roaming in pursuit of some choice and toothsome nutriment. Ah, said I, how like everything else in the broad realm of nature is this strange scene; and man in the amplitude and glory of his developments, or the baseness and depravity of his nature, shall not escape from its similitude! While the best and most exalted are far short of perfection in all things; the most atrocious, ignoble, and down trodden have here and there a green and fragrant, though a knotted, herb growing at the bottom of their terrible or desolate hearts, on which some humble and innocent creature shall depend for support and enjoyment. But there was about as much opportunity for a man to moralize on figures of speech in the Geysers, as there was for Dives in old times, when he became interested in the enjoyments of Abraham afar off; so I turned again to experiment on the temperature and taste of the water and the dissolving rocks.

[TO BE CONTINUED.]

Our Boston Correspondence.

LETTER NO. 7.

BOSTON, Sept. 18th, 1855.

THE late severe drought has seriously affected the Crops which have not been gathered in, and caused the farmers much damage. Day after day has passed for six long weeks, and no rain, and the earth is parched and dry. Even the trees have suffered, and the whole country is drying up for want of rain. The full crop of grass will be meager enough, and hay will command high prices; vegetables are plenty, however,—and in the country, abundance of all kinds. In Portsmouth, N, H., potatoes are selling at forty cents per bushel; while in Boston, they sell in the markets and provision stores, at twenty-five cents per peck.

Reports are now coming in from all sections of the country, and I will give you a summary of the Crops in the southern and western country, from my correspondence. In Georgia, the largest wheat crop ever known; corn crop immense—never better; cotton very promising. Alabama—cotton good; the crops of wheat and corn are large, and fully meet the expectations. In Louisiana, they will have an average yield; the drought having somewhat affected the crops. Mississippi—wheat abundant; corn and cotton promise well. Texas—all crops very abundant; corn, large and handsome yield. Florida—crops yield very heavy, and cotton fine. Tennessee—more than the average of wheat, corn and rye; everything looks finely. Indiana—grain crop better than ever known. Ohio will have an average yield, but not so promising as could be wished. Illinois—there will be an abundance of everything; from all sections of the State, the yield is very large. Michigan is not behind, and will rank with Illinois. In Maryland the tobacco crop is good, and other crops will turn out promising, including fruit and hay. From Virginia, potatoes and wheat will come in abundantly, and the wheat is of an excellent quality. I have these reports from the best sources, and the prospect for another year's business is very promising. The estimate of the wheat crop, in the aggregate, is—142,000,000 bushels; some say, 200,000,000.

In the State of Indiana, on the Miami river near Elizabethtown, may be seen at one sight, from an eminence, one body of corn of 1,600 acres, divided only by a few fences. At an average of sixty bushels to the acre, which is below the average; this body of land will yield 960,000, or nearly 1,000,000 bushels. This beats the gold diggings of California.

Geo. W. Payne, Esq, of Farmington, Ct., has growing upon his farm, a lot of Minnesota rice, full eight feet high, and promise an abundant yield. He thinks it equal to the Southern rice, and is confident that it can be profitably raised in that meridian. It is sown on swampy land unfit for other cultivation.

The Apple crop promises to be more abundant, than for several years past. In western New York farmers have commonly been obliged to prop up their trees, on account of the quantity of fruit, and the farmers have made contracts to sell them on the trees, from six to ten cents a bushel. The crop of apples will be immense all over the Eastern States.

The large crops of wheat have been pressing forward from the West, in such quantities as to embarrass the roads, and the Illinois Central railroad in anticipation of this has ordered three hundred additional freight cars. Large quantities of wheat are daily arriving from southern Illinois, and as high as 300,000 bushels are expected from one station alone.

A meeting of the Boston and European Steamship Company has been held, and the committee appointed to solicit subscriptions report, that the absence of many capitalists from the city has somewhat interfered with their progress, but a belief is favored that the accomplishment of the enterprise will be successful. Col. Enoch Train goes to Europe by this week's steamer, for purposes connected with the subject.

The corner stone of the building for the Public Library is to be laid with suitable ceremonies on Sept. 17th. The date has been wisely selected for this purpose, as it is the *two hundred and twenty-fifth* anniversary of the first settlement of Boston. A quarter of a century ago, the day was observed with great eclat. The addresses are to be delivered by his Honor the Mayor, and Hon. Robert C. Winthrop.

The Annual Fair and Horse Show of the Rhode Island Agricultural Society have taken place the past week, and visitors were present from all parts of New England and the South. The grand Horse Show took place at the Washington Trotting Park, and some of the most beautiful specimens of the kind were exhibited. The address was delivered in a very able manner, by B. P. Johnson, Esq., Corresponding Secretary of the N. Y. State Agricultural Society. The premiums distributed at the Horse Exhibition amounted to $3,400. Through the politeness of Jos. J. Cooke, Esq., President of the Society, I was favored with facilities for witnessing the exhibition; but owing to the severe heat was obliged to leave before the exhibition closed, much to my regret. Many thanks are also due to C. J. Keith, Esq., the Secretary of the Society, for favors shown to provide accommodations for my stay, which I was obliged to decline. The whole affair passed off well; and great credit is due to the Board of Managers for their efforts to accommodate the crowd during the extreme uncomfortable weather.

Hon. Robt. C. Winthrop, Chairman of a Committee of the Massachusetts Society for the Promotion of Agriculture, has sent to the Hon. Marshall P. Wilder, President of the U. S. Agricultural Society, one thousand dollars, to aid in defraying the expenses of the Grand Exhibition to be held in Boston, next month. The whole lot of land, some thirty-two acres, is being graded as rapidly as possible; one hundred and thirty-two carts, and three hundred men, being employed constantly at it. The land will be sown down with grain, surrounded by a race course, with a high fence.

The second Annual Exhibition of the Connecticut Agricultural Society is to be held in Hartford, during the second week in October. Preparations have been made for an imposing display of the Agricultural products of that State. Major Deming, of Hartford, will deliver the Address.

Messrs. Hovey & Co., of Cambridge and Boston, have produced a new Pear, which they have named the "Boston Pear." It is a summer Pear of medium size, very juicy and sugary; in flavor not unlike the Bartlett. A gratuity of $20 was awarded to the producers, by the Massachusetts Horticultural Society. The Springfield Republican says, "it is undoubtedly the best Summer Pear in existence; and if it were a foreign production, would command fabulous prices."

The excitement for the past week has been the "Baby Shows." One of white babies at Music Hall, under the management of P. T. Barnum and Col. Wood; the other, of colored babies, at Chapman's Hall, under the management of Mr. Bateman. They have been fully attended, and have drawn hundreds of strangers to the city. The full accounts, with premiums awarded, I forward you for insertion if you have room.

The Street Railroad over West Boston Bridge, is progressing with all dispatch. The rails are to be delivered by Nov. 1st. The timbers will be laid before that time and the paving completed, on a large portion of the road. By the middle of November we may expect to see the cars running regularly between Boston and Cambridgeport.

The Boston Music Hall is now occupied by the Massachusetts Horticultural Society for their Annual Exhibition, which opens this day. From a glance at the interior, before the doors were open to the public, I should judge it to be the finest display ever held. Some splendid floral designs, temples, pagodas, etc., and mammoth vegetables, are conspicuous. But it will require a second and longer inspection to note the various departments, which I shall make to-morrow, and shall send you the full reports, with premiums, etc.

I must add, in closing, that we have just been visited by a most refreshing rain, which has gladdened the hearts of all. It is still raining, and I hope will do so, as we need all we can get after the severe drought. The wells and springs all over the country have been dry, but the grateful showers will now cause "all nature to rejoice."

I trust in my next to give you a full account of my tour through the State of New York, with visits to the principal stock farms I have mentioned. The Exhibition of the N. Y. State Agricultural Society takes place at Elmira, the first week in October, and as I shall be there to see, you may expect a full account of the great Exhibition. Hoping your pardon for briefness at this time, I remain yours, truly, DE QUINCEY.

COULDN'T SPARE HIM.—"I say, Squire, what'll you take for that 'ar dog o' your'n?" said a Yankee peddler to an old Dutch farmer, in the neighborhood of Lancaster, Pa., "what'll yeou take for him? He ain't a very good-lookin' dog; but what was yeou calc'latin' may be he'd fetch?" "Ah!" responded the Dutchman, "dat dog ishn't wort not'ing 'most; he ishn't wort you to buy 'um." "Guess tew dollars abeout would get him, wouldn't it? I'll give that for him." "Yaas; he ishn't *wort* dat." "Wall, I'll take him," said the peddler. "Shtop!" said the Dutchman, "dere's one t'ing about dat dog I gan't sell." "O, take off his collar; I don't wan't that." suggested the peddler. "Taint dat," replied Mynheer, "he's a boor dog; but I gan't *sell de wag of his dail when I comes home!*"

Miscellany.

"THE HEART THAT KNOWETH ITS OWN BITTERNESS."

BY ALICE.

THERE is a little unseen world—
Oh, tell me, is there not?
Within each fond and glowing heart,
Where strangest things are wrought;
A world of thrilling prospects,
And of rushing delight;
A world of keenest bitterness,
And aye, of blackest night.

A spot where none may enter,
Though ne'er so kind and true,
For an angel guards the portal,
And will not let you through;
Shut out from all observers,
There may we reveal free—
Indulge our sweetest fancies—
Enjoy our brightest glee.

But one there is, and only,
Whose eye surveys the whole,
Whose voice can still the tempest
That rages in the soul.
He knows our feeble nature,
And He kindly deigns to live
Within our hearts, to guide us,
If we will but believe.

Our Literary Department.

BOSTON, Sept. 18, 1855.

"BITS OF BLARNEY,"—by Dr. Shelton Mackenzie. Published by J. S. Redfield, New York:

This is the work as announced in press, and doubtless many have have been eager to see it. It is now published, and will meet with a large sale. The better to describe the work, I quote the following, from the author's introduction: "The book is Irish to all intents and purposes, and is put forth with the least possible pretence. It contains legends, familiar to me in my youth; stories which, more or less, are literally 'founded upon facts;' recollections of eccentric characters, whose peculiarities it would have been difficult to exaggerate; and sketches of the two great Irish leaders of the last and present century—Grattan, who won national independence for Ireland, and O'Connell, who obtained emancipation for the great majority of his countrymen." The sketch of O'Connell has extended almost to a biography, and is very full and interesting, and the author appears to have an estimate of the Agitator's real character. In this volume he is certainly entitled to a niche, having been the greatest professor of blarney these latter days have seen or heard. Received through Messrs. John P. Jewett & Co., Boston.

GUY RIVERS, A Tale of Georgia—by W. Gilmore Simms. Published by J. S. Redfield, Beekman street, New York:

This work commences the series of Border Romances of the South, to be published in six volumes, uniform with Simms' Revolutionary Tales. Guy Rivers was first published some twenty years ago, by the author, who first commenced a professional career in literature which has been wholly unbroken since. It was his first deliberate attempt at prose fiction, and the reader can now detect the difference of manner which exists between the first and latter half of the story. Portions have been trimmed and amended, that the passage of the reader may be made easy through its over-massed intricacies. The author says, "Something has been done, nay a great deal, towards the pruning of the style and supplying the delicate finish. The reader would perhaps be surprised by a comparison of the new with the old edition in this respect." With the hope that what has been done will suffice to render "Guy Rivers" more acceptable than before, is is now surrendered to the public. Received through John P. Jewett & Co., Boston.

THE PROPHET, or Mormonism Unveiled—illustrated by nine beautiful engravings: 1 vol., 12mo.; 400 pages. Published by Wm. White Smith, 195 Chesnut street, Philadelphia:

This is the greatest work ever written on the subject. The system of Mormonism never attracted so much attention as at present, and we would advise all who would gain a knowledge of this monster system of corruption and vice, to read this work. It will be seen that the author is thoroughly acquainted with the subject. The whole plan is laid open, commencing with the early history of Joseph Smith, to the time of his death—the discovery of the Mormon Bible, the mystery of the Golden Tablets, the revolting and shameful spiritual wife system, under the covering of which the holiest ties of domestic life are invaded, and atrocious crimes committed. A true and concise view of the disturbances, and the preparation, made by Brigham Young and his Patriarchs, to set at defiance the government of the United States. The book contains the records of the prophet's family and himself, from early years to manhood, his career as a prophet, and his success in intrigue and villany. The book contains Illustrations of the principal scenes in which he figured, his mode of life, and his violent death by the hands of the mob. It is one of the most exciting works ever read.

T. B. Peterson, Philadelphia, has just published "The Yellow Mask;" complete in one volume; paper cover—from Dickens' Household Words. A remarkably interesting story, in twelve chapters. Also, a neat little pamphlet, giving directions how to preserve ripe fruit and vegetables fresh, through the year. Received at Messrs. J. P. Jewett & Co.'s, Boston.

"Practical Landscape Gardening," with reference to the Improvement of Rural Residences, giving the general principles of the art, with full directions for planting shade trees, shrubbery and flowers, and laying out grounds. By G. W. Kern, Just published by Moore Wilstach, Keys & Co., Cincinnati. The preface says: A demand has for some time existed in this country for a work explaining in plain words as possible, the principles of the art of Landscape Gardening, as well as the practical operations connected with it. To supply this demand, in part, and to disseminate a knowledge of the art of gardening among a large class of our agriculturists, whom existing works have failed to reach; to give such light to all, as will enable them, even if settled in the wilderness, to add beauty to their residences, these have been the aims of the author in placing the present volume before the public. The late lamented A. J. Downing was the first to bring the art of landscape gardening, as practised in Europe, to the notice of the American public. His untimely death was a severe loss to the art, and to the country. Although no one has been found to fill his place, the art has many worthy representatives, both East and West. Among these, we will mention Adolphus Strauch, Esq., of Cincinnati, to whose enlightened and refined taste the West is indebted for some beautiful specimens of the art, to which he has devoted himself.

This work is divided into two parts—the Theory and Practical operations of Landscape Gardening, and a Treatise upon Pleasant Grounds, Cemeteries, &c., to which is also added Directions for the Kitchen Garden, enabling all to have a good and early supply of all kinds of vegetables, &c., of their own raising. This work is particularly adapted to farmers and country gentlemen, who take pride in adorning their places, and to whom this book will be found agreeably instructive, combining the floral garden, the pleasure ground and the orchard.

Received through Phillips, Sampson & Co., Boston.

How to Succeed.

A correspondent out West, thus writes of a character he has met. The lesson inculcated by the history of the man, is one which commends itself to every person who would succeed in life. Read it:

On a small Mississippi steamer, I met a remarkable character. He was a native of an Eastern State, and had gone west to make his fortune. While our boat was tied to the bank for an hour, he gave me an account of the course he had followed, and the difficulties he has contended with. He started for the West with a small sum of money and the blacksmith trade. He went down the Ohio as a steerage passenger, reached St. Louis, thence up the Illinois till his money had failed. He stopped and worked to get his purse recruited to reach a friend's house. There he worked a month to pay a man for bringing a chest from Illinois river. Finally he reached Chicago, got a contract on the Illinois and Wisconsin Canal, was getting rich, when Illinois scrip made him poorer than when he began. Then the chills and fever laid him up for a year. Let this suffice as a specimen. At last he returned to Chicago, bought enough boards on credit to make a blacksmith shop, by sticking the ends in the ground, and bringing the tops together. In this he began to make *plows*, which his father-in-law had rented. From that time he has gone steadily forward, until his car factories cover the principal parts of two squares in the city, which he purchased, one for some fifteen hundred dollars, and the other for some six thousand. The city is already far beyond him, and by the rise of property alone he is rich, while his factories are bringing him a fine revenue.

He had accomplished his object, but concluded his narrative by saying, that had he life to begin again, and he knew that by enduring all that he had endured, he could attain the same wealth rather than undergo the hardships he would sacrifice the prospective wealth, and be content with a mechanic's day wages." I believed him, as I looked at a man of thirty eight, as much careworn and broken as a man of fifty.

AN exchange says that green leaves or wraps green peas and roasting-ears may be had every day in winter at a very trifling expense. They are all preserved by being pulled away.

Ladies' Department.

TO "BETTY MARTIN."

YES, I'll come when the leaves of the forest are shed,
And nature's enshrouded with gloom;
When the sweet-scented rose and each flow'ret hath fled,
And are buried alike in the tomb;
When the wail of the blast shall be heard with a sigh
For the loved ones now scattered and gone,
For the joys that have fled, as the moments that fly,
And the hopes that deceived, one by one—
Then I'll come, and we'll talk of the dear ones at home
In the land that is distant afar,
Of the tears that we shed as we left them to roam
With but hope as a talisman star—
Sweet delusion! how few the reality find,
Yet new ones a beacon light raise
As a guide to the great—who that looks not behind—
But onward, win laurels of praise.
Mark the leaves of the forest, when autumn's chill blast
Shall have withered and borne them away,
And the parental tree as with sorrow o'ercast,
She wails the sad dirge of decay;
But the spring-time shall come when the winter is gone,
And enrobe it with verdancy fair,
Teaching all still to hope, yes, forever hope on,
And, in hoping, forget to despair.
Then I'll come, and though nature in sorrow is clad,
Having donned a dark mantle of gray,
We will hope for the spring to make merry and glad,
And for friendship, true friendship, we'll pray—
For a friendship to last till this life shall have fled,
Though misfortunes and sorrow are ours,
And at last, with a tear of regret for the dead,
Strew the grave of our friend o'er with flowers.

COSUMNES, Oct. 6, 1855. RURAL TOM.

Another Admirer of "Betty."

SUTTER COUNTY, Oct. 14th, 1855.

MESSRS. EDITORS FARMER: Sirs—Inclosed I send an Acrostic Poem to "Betty Martin," for the insertion of which, in your valuable journal, I will feel much obliged. Nothing could induce me to allow my humble production to go before the public, were it not that I deem it the only proper manner by which fair "Betty" may be approached; and though it may possess but little merit as a poetical effusion, yet I would here assure the lovely subject of my poem, that I expect to be able more surely to please when the time may come for throwing aside poetry, and, when opportunity may offer, for conversing in plain prose. I am, indeed, late in entering the list, possibly a "day after the fair," and must here apologize for my dilatoriness, yet I have sufficient confidence in the good nature and charming disposition of the lovely "Betty," not to believe that for this cause alone I would be rejected.

Yours respectfully, TILLAGE.

ACROSTIC.

Beauty, upon her brow may sit enshrined;
Even every movement may be full of grace—
Tell not of that where sense so most refined,
Through all her poems we so surely trace: [face.
Yea! more attractive far, than the most radiant loveliness of
Most closely have I read her "Rural Lays,"
Admiring every thought their lines portray;
Remarking, as I spoke their well won praise,
That love, bliss, peace, (edit train!) shall smooth the way
In life, of him whose suit is heard and merit weighed,
Nor found too free to suit that most accomplished maid.

TILLAGE.

Female Education.

WE have received from H. C. Beals, Esq., MS. copy of the public Exercises at St. Mary's Hall, at Sonoma. We are glad always to give publicity to such proceedings, and to do all in our power to foster and cherish and advance the cause of Education, and especially Female Education—and we publish with pleasure the Address of the Rev. Dr. Ver Mehr, which will be read with interest; and wishing we had space for more in this number, we heartily commend this cause to all who desire the rapid progress of intellectual freedom.

REV. DR. VER MEHR'S FAREWELL ADDRESS AT ST. MARY'S HALL, SONOMA.

Respected Friends: It is now the third time the Pupils of St. Mary's Hall have, (to use a business term) laid their balance account before a discriminating public.

During two days, examinations have gone on, from half hour to half hour, in all the branches of knowledge desirable for young Ladies to acquire. This evening they have displayed before you, gems of Literature, Poetry and Music. I trust they have done it with that modesty which is the crowning virtue of strong-minded women, and with that freedom and self-reliance which becomes American [illegible], whose influence is to be felt in the length and breadth of California.

For your hospitable presence, for your approbation, we give you thanks in the name of our well-beloved Pastor.

We give you thanks in our own name. For this is our work [illegible]—for this we live and breathe, and toil and [illegible].

We give you thanks in the name of American principles and progress.

Though not born in America, and some thirty years I have [illegible] my feet, and found [illegible] would be New—[illegible] the sound of spring and [illegible] would of reading and progress. I have been as much as a stranger, I have [illegible] among the clergy. I was sent as a Missionary to San Francisco, where I labored for years and founded a church, now occupied by the Protestant Episcopal Bishop; and since two years I have labored in this Valley to establish a school of learning and Christian education, for our American daughters. Of my five American born daughters, three are born in this State. Well may I esteem myself as fully identified with American principles and progress. Well may I hope that you will continue and increase your patronage of an Institution, which I desire clearly to be understood to rest on the broad platform of *public usefulness*.

And this patronage, my friends, is wanted now, more than ever. The school has attained that degree of solidity, which seems to promise *real* success. The tree planted with care and some bitter sorrow, has began to shoot its roots. For an Institute of Education is not a machinery which you can put up at a day's notice, and set agoing. It is like a tree which is to be planted in well-prepared soil—to be constantly watered, constantly trimmed, and constantly guarded against extremes of heat and cold. Its locality, its system of instruction, its system of discipline, its teaching, its daily routine, all this has to be established—perfected in detail, harmonized in its *ensemble*, and brought to bear upon *one* point, a high tone of Christian morals—a high tone of intellectual culture.

I said St. Mary's Hall has just begun to shoot its roots; the germ has sprung up; these day's Exercisee may give a well-founded expectation of what the plant may become, if fully developed. Help us then, my friends, with your hearty and extensive co-operation, with your conscientious and influential recommendations, that St. Mary's Hall may become an institution, which, in all its departments, in all its branches of instruction, will rank as high as any in the estimation of an enlightened American public.

My Dear Children: Again, the last evening has come;—to-morrow we separate. With all the joy you feel, and ought to feel, of seeing your homee again—I know, my dear children, that there is not one, no not one amongst you, who does not in her heart feel deeply attached to St. Mary's Hall; not one who this moment does not regret whatever was not quite right, and does not rejoice for efforte made successfully. But I may thankfully say, during these five months, there was very little which was not right, and much which was successfully bettered. I may, without bossting, say that your hearts appreciate the care and affection bestowed upon you. I may, without boasting, say that your time in St. Mary's Hall has not been lost. Your examinations have proved it—the neat and modest performances of this evening have proved it.

For these, your exertions, I am going to distribute the rewards due to your zeal and application. But remember what I have often said, these rewards ought to be nothing but encouragements to further exertions; and these exertions nothing but stepping stones, as it were, to obtain that great and eternal prize of a conscience void of offence, of duty performed faithfully to God and man.

The Coquette Rebuked.

LORD N——, a nobleman, both by nature and birth, was noted for his virtue, his unassuming manners, and grace and elegance of person. He had married, when quite young, a lady of equal rank with himself, though she was by no means handsome; but he loved her with most romatic fervor.

The Countess of L—— was a most superbly beautiful woman, and once, in company with a number of friends, boasted that she could conquer Lord N——, if she could only gain his attention long enough. The boast was received with doubt by her friends.

"He is eminently a Christian man," said one.

"A fig for his Christianity!" said the Countess, contemptuously. "I tell you I can make him 'sue me for a smile.' I wish I could gain his arm for a quarter of an hour."

Her wish was gratified; that very evening, at a brilliant party, Lord N—— and his lady appeared. Blazing with costly jewels, radiant as a peri, the unprincipled Countess riveted every eye; she was indeed fairer than a poet's dream. With the most delicate manœuvering, she gained the attention of Lord N——, and walked triumphantly through the blaze of beauty, casting significant glances on those she met who had heard her idle boast.

But though as polite as the most accomplished man of the world, she could see that Lord N—— was totally unmoved by her elegant style or her coquettish airs and glances. Finally, as he gave some little quotation, which he commented delicately complimented by the approval of his wife, the Countess ventured to answer; she was piqued because he had quoted his wife, that pure Lady N——, before her, the impure, the [illegible]-fledged belle of the whole empire. Lord N—— turned his dark eyes full upon her —

"My dear madam," and he [illegible] manner [illegible] was [illegible] would [illegible] was a thousand [illegible] other women however brilliant and [illegible] may be."

The [illegible] to the [illegible] and [illegible] of the Countess; she felt how [illegible] was the [illegible] of sense, but she did not [illegible] Lady N——

"I [illegible] my lord, [illegible] you must have [illegible] your lady [illegible] pains! You should be [illegible]"

I [illegible] and I [illegible]

n the divine language of Scripture, 'the heart of her husband doth safely trust in her."

The etiquette was silenced; her animation gone; and those who noted it, knew the reason why. As for the Countess, she was heard often afterwards to declare, that could she obtain a husband like Lord N——, she should consider herself *the happiest woman in the world.*

EXPORT OF FLOUR TO CHILE.—We have been informed by the agent of the clipper bark Hermione, advertised to sail for Valparaiso, on the 25th inst., that the has left the wharf and will go to sea to-morrow. This is the only vessel up for that port; and quite an anomaly in the San Francisco trade, as she carries a full cargo of flour to a place from whence we received our supply a short time since.—*Alta, 24th.*

ASIATIC SHEEP.—Some of the finest sheep that had been shown in the country, were on exhibition at the State Fair, from the ranch of J. M. Hamilton, Esq., of Napa, and by some neglect were not reported. These sheep are of the largest species, and of an uncommon prolific breed giving three and four, and often five lambs at a time. They are denominated the *Flat Tail Asiatics.* With heavy fleeces, they make large and very superior mutton. We would recommend all who desire a fine variety, to procure them of Mr. Hamilton while he has them to spare.

SPECIAL NOTICES.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all department: are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the Executive Committee.

v3-26 C. L. HUTCHINSON, President.

☞ **Read This.**—

BALTIMORE, December 18.

Dr. S. W. Fowle—Boston, Mass. Dear Sir: I feel it to be due to you to say that a young lady, a member of my family, had been suffering for several years under a bronchial affection, and the disease had made such progress, notwithstanding the best medical aid had been consulted, that grave fears were entertained that the disease with her, as with so many others, might speedily terminate in death. I was induced, through the persuasion of a friend, to try your DR. WISTAR'S BALSAM OF WILD CHERRY; and after she had taken three bottles, she felt entirely relieved of the attack.

Very respectfully, yours, J. F. M'ILHTON.

☞ Be sure it is signed I. BUTTS on the wrapper.

Agent for Sacramento, C. MORRILL, corner K and Third streets.

Sold by all Druggists. v4 15 2w

☞ **Roman Eye Balsam.**—Many persons are no doubt serious sufferers from that partial blindness caused by the bright glare of the sun; all who are exposed for any length of time feel a greater or less amount of pain, while to those who are in the slightest degree susceptible of the affections of the eyes, it is often extremely dangerous. Against this deficiency the Roman Eye Balsam is an unfailing specific. Its application instantly relieves the pain and gradually strengthens the eye so that it can bear the sun without complaint. It is also invaluable for inflammation of the eyes, and for that troublesome burning twitching of the lids.

Agents—HENRY JOHNSON & CO.,

v4-15 1m 146 Washington street, San Francisco.

☞ **Religious Notice**—The "Pacific Baptist Church" (Rev. O. C. Wheeler, Pastor) will hold Divine Service every Sabbath, at 10½ A. M., and 7½ P. M., in "Temperance Hall," corner of 10th and J streets. The public is respectfully invited to attend. Seats free. v4-4

SMITH'S POMOLOGICAL GARDENS,

Ametom River, 2½ Miles from Sacramento.

THE Proprietor of these extensive Nurseries and Gardens will be prepared to supply all the best varieties of Fruit Trees of the following kinds:

Apple, Pear, Peach, Plum, Cherry, Quince, Nectarine and Apricot; Grape Vines of every valuable variety; Gooseberry, Currant, and Raspberry Vines, &c.

ALSO.

Green House Plants of every rare and beautiful variety; Flowers, Shrubs, and Plants, Shade and Ornamental Trees, Bulbous Roots, &c., &c., &c.

These will be ready as soon as the season of transplanting shall commence. Orders will be received at any time, and delivered in the order in which they are booked.

Garden Seeds.

THE Proprietor will also offer a large variety of Fresh Garden Seeds, at Wholesale and Retail, of one own raising and putting up. Great care has been taken to select the very best varieties, and to keep them pure and unmixed. They are all of the present year's growth, the same varieties having been used by the Proprietor in his own grounds for the last three years. The produce which has been exhibited in our markets is the best proof of their quality.

The undersigned would be pleased to see purchasers at his grounds, where the produce can always be seen in every stage of growth. [v4-17] A. P. SMITH.

ST. MARY'S HALL, Sonoma.

REV. DR. VER MEHR AND WIFE.....PRINCIPALS.

The Winter Session Begins on the 1st November.

TERMS PER SESSION OF FIVE MONTHS.

Entrance fee, payable only once	$15
Board and Tuition	150
Washing, it done at the Institution	30
Mending, do do do	15
EXTRA CHARGES.	
Music, with the use of Instrument	$10
Drawing	20

Payments are to be made by half sessions of ten weeks in advance. It is unavoidable, in future, to adhere in all cases to this rule. Pupils will be entered at any time, and charged accordingly; but, in ordinary cases, not for less than one session.

The instruction is thorough, because few but competent teachers devote all their time and energy to the same end. There is taught nothing but what is really and practically useful, and even this with due regard to the wants of each pupil.

For further particulars, address REV. J. L. VER MEHR, Sonoma. v4-16 1m

SAN JOSE NURSERY.

THE San José Nursery and Gardens, formerly known as L. Provost & Co., is now carried on in all its branches under the immediate eye of the present proprietor, who is sole director and owner of the same, having purchased the interest of his former partner.

L. Provost, the present owner, will now offer to his patrons and friends one of the largest and fine-t collections of Fruit Trees that can be found in any Nursery in the State, consisting of all the most desirable kinds of Apple, Pear, Plum, Cherry, Peach, Apricot, Nectarines and Quince, with a very extensive list of Grapes and Figs, a beautiful list of choice Ornamental Trees of rarest kinds, and Green House Plants in great variety.

The collection of Roses in these Gardens cannot be equalled, for nearly *twenty thousand* of the most beautiful plants, large sizes and rare kinds, can be found here.

Purchasers will be sure to be satisfied if they will visit the Gardens, where they can find much to please them, which the Proprietor will show them with pleasure.

☞ The Nursery is situated in the city of San Jose, immediately above the City Mills. L. PROVOST,

Orders for the above received at this Office. v4-3 3m.

S. P. Ruggles' Power Press Manufacturing Co.

[Incorporated February 8, 1854.]

THE above Patent, and any having purchased of the well known inventor, S. P. Ruggles, Esq., his Patents connected with the Printing Business, are now manufacturing under Mr. Ruggles' immediate superintendence, the following machines, viz.:

	Size of Form in Inches.
Half Sheet Combination Engine	18 by 12
Quarter Sheet Combination Engine	12½ by 9
Half Sheet Cap Job Rotary	10½ by 7¼
Card and Bill Head Rotary	7 by 4½
Diamond Rotary Card Press	4½ by 3
Circular and Hand-up Hand Press	8 by 6
Job Stop Press	18 by 10
Card Iron Imposing Table	36 by 22
Shaving Machine, shaves	27 by 16
Paper Cutter	cuts 27
Card Cutter, improved	cuts 25
Bookbinder's Rotary Shears	cuts 25
" " larger size, in proportion.	

These presses are considered by the Job Printers as the best adapted to their wants of any machines ever manufactured.

All orders are to be sent to their agent, M. B. BIGELOW, 152 Washington street, Boston, Mass., will be promptly attended to.

Mr. Ruggles has also sold to the CUTTING MACHINE MANUFACTURING CO., his Patent ROTATING SHEARS, for cutting sheet tin, iron, copper, brass, zinc, steel, nail and boiler plates, and all other metallic sheets. This is entirely a new process for cutting metals, and is destined to supersede all other machines for that purpose.

ANSON HARDY, Agent,
152 Washington street, Boston.

And to a third company, called the BOSTON HAND STAMP CO., he has sold his patent for a very ingenious Flexible Hand Stamp, whereby perfect impressions may be made at the rate of sixty per minute, the die adapting itself to the surface to be printed on. A very convenient article for all business men.

v4-12 1y M. B. BIGELOW, Agent, Boston.

TO FARMERS.

For the destruction of Canker Worms, Borers, Grubs, &c., &c., &c.

THE MURIATE OF LIME.

A SUPERIOR fertilizer, and certain destroyer of the Canker Worm, and other destructive insects. It has been composted to take the place of more costly manures, guano, &c., to which it has been pronounced fully equal, and in some respects superior, by those who have tested it during the two past seasons.

As a certain and sure destroyer of the Canker Worm, which has committed such ravages among the fruit trees the past season, Salt Grass, Borers and other Worms, which oftentimes render the labor of the farmer of no avail, its qualities have been fully and successfully proved. For this purpose its success (in New England) has been such as to warrant the belief that it will be a sure preventive to the ravages of the Grasshopper.

Also, Plaster of Paris, Ground Bone, Peruvian Guano, Nitrate of Soda, Sulphate of Potash, Sulphate of Soda, Sulphate of Magnesia, Sulphate of Iron, Sulphate of Copper, Sulphate of Zinc, Sulphate of Ammonia, Muriate of Ammonia, Muriate of Potash, Muriate of Soda, Muriate of Magnesia, Muriate of Iron, Muriate of Copper, Muriate of Zinc

Varieties.

HOLMES FOREVER!—The finest of wits, Oliver Wendell Holmes, sent two poetical letters to the "Post Office" of an Episcopal Fair at Pittsfield. In one of them the first stanza was:

"Fair lady, whosoever thou art,
Turn this poor leaf with tenderest care,
And—hush, O hush thy beating heart—
The *one* thou lovest will be there!"

On turning the "poor leaf," there was found a one dollar bill with some more verses beginning:

"Fair lady, lift thine eyes and tell
If this is not a truthful letter.
This is the one (1) thou lovest well,
And nought (0) can make thee love it better. (10.)

A LARGE FAMILY.—A correspondent, writing from Orland, says there is a man in that town, about sixty years of age, who is the father of twenty-two children,—four by a first wife, and eighteen by his present wife, who is forty-nine years of age. Between the oldest and youngest of these children there is a difference in age of but twenty and one-half years, but there are six pairs of twins among the children by the second wife. Our correspondent thinks that, if any one is entitled to a tract of land, this man is,—and we agree with him.

SOLD BADLY.—"Bob, that's a fine horse you have there; what is he worth?" "*Three hundred and fifty dollars.*" "No, not so much as that!" "Yes, every cent of it, and another fifty on top of it." "Are you sure?" "Yes, I'll swear to it." "All right." "What are you so d—d inquisitive for?" "Merely for assessing purposes. I am the assessor for this Ward, and only wanted to know what you rated your nag at."

ACCORDING to a writer in the Rochester American, a colored man named Richard Stanup formerly a slave of Washington, is now living with his sixth wife, at Urbana, Ohio, at the good old age of 108 years, who has in his possession the original papers giving him his freedom, in Gen. Washington's own handwriting. He owns about 100 acres of land, bought with money given him by his illustrious master.

A GENTLEMAN on board a North river steamboat received his key from the clerk, who pointed to a state-room marked B. By mistake he opened the one next his marked A., where he discovered a lady passenger making her toilet. "Go away, go away!" screamed the lady. "Letter B," yelled the clerk. "I am not touching her at all!" shouted the indignant traveler.

A WEALTHY farmer in the State of New York, being engaged in a law suit with a Mr. Havens, wrote the following classical epistle to his attorney:—"'*Squire Wells:* Sir, if the suite of *Heaven's* goes agin me, I want you to kerry it up to a *higher corte*, for God knows I don't owe him one cent."

THE following notice, says the Salem Gazette, may be seen in a Blacksmith's shop in the town of Essex:—"No Hosses Shod on Sunday except sickness and deth."

AN exchange tells an incredible story of a boy who caught a hungry dog and tied him by the tail then coaxed him out of his skin with a piece of liver.

Ingham's Improved Smut Machines.

THESE Machines combine all the apparatus necessary to cleanse Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also remove short straws, white caps, seeds and other foul substances in the most perfect manner. All of the offal worth saving is collected in a reservoir, while the smut and light dust are passed out of the mill, allowing the machine to be put on the same floor with the flour chests or wherever most convenient, without being enclosed. It is a California improvement and designed to meet the wants of this country; Eastern Machines having been found to be inadequate to that purpose. It has received the highest recommendation from all using them, among whom are Pettit & Hodgekins, Brighton Mills, Sacramento; Brooks & Hull, Happy Valley Mills, San Francisco; Wm. Sharp, American Mills, San Francisco; Babbit & Hale, Sierra Nevada Mills, San Francisco; H. S. Hill, Washington Mills, San Francisco.

Those building Mills can save expense and room by using this machine, as they will avoid all the machinery ordinarily used for that purpose.

Orders filled on short notice. SHOP on L street, between First and Second, Sacramento. H. B. INGHAM.

N. B.—All information given, and orders left with WANZER & SON, Sacramento, will be attended to.

The following certificate is among the number received; others can be referred to in quantities:

"This is to certify that I have one of H. B. Ingham's improved Smut Machines, and believe it to be superior to any other. I need no other fixture for cleansing Grain, except the machine itself; it makes no dirt in the mill; occupies but little room; requires less power, and does the work more perfectly than any other I have ever seen or used before.

WM. SHARP, Agent American Mills,
v4-9 3m Pine street, San Francisco."

New Invention!
Now, Count Your Chickens!!

THE undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls.

After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from *four to five hundred eggs* can be converted daily into young Chickens, Ducks, Goslings or Turkeys. After the first brood, viz., nineteen or twenty days, this is the certain result; and it requires but little attention—once every twenty-four hours—the cost of fuel and preparation being only some $2 50 to $3 every twenty days.

This invention will be in full operation at the State Fair in the city of Sacramento, in September next, when all information will be presented. They will soon be offered for sale. In the meantime information can be obtained at the office of the CALIFORNIA FARMER; or letters can be addressed to me at San Francisco. JOHN J. FULTON,
v3 25 Third street, South Beach, near South Park.

Pottery! Pottery!!

NOW ready and for sale at the SACRAMENTO POTTERY, on J street, near Sutter's Fort, a large assortment of Plain and Fancy Flower Pots; Butter, Preserve, Bread and Cak Jars, with covers; Cream Pots, Churns, Milk Pans, Jugs and Stovepipe Safes, of superior quality; with everything else in the line. Wares made to order. Dealers are particularly solicited to call and purchase. Orders to be left at the Pottery, or No. 264 J street.
v3-2 CHARLES TAYLOR, Agent.

MEDICAL.

DR. GUYSOTT'S IMPROVED
Extract of Yellow Dock and Sarsaparilla
Is acknowledged to be the best Sarsaparilla made, as is Certified by the Wonderful Cures it has performed.

☞ **Remember this is the only True Original Article.**

This Medicine, when used according to the directions,
Will Cure Without Fail,
Scrofula, or King's Evil, Cancers, Tumors, Eruptions of the Skin, Erysipelas, Chronic Sore Eyes, Ringworm, or Tetter; Scald Head, Rheumatism, Pains in the Bones and Joints, Old Sores and Ulcers, Swelling of the Glands, Syphilis, Dyspepsia, Salt Rheum, Disease of the Kidneys, Loss of Appetite, Disease arising from the use of Mercury, Pain in the Side and the Shoulders, General Debility, Jaundice, and Costiveness.

The Best Female Medicine Known.

The Yellow Dock and Sarsaparilla is peculiarly adapted for females of delicate health, resulting from irregularity of menstrual discharges, and other diseases peculiar to their sex. We assure the afflicted, that a bottle or two of DR. GUYSOTT'S EXTRACT OF YELLOW DOCK AND SARSAPARILLA will at once regulate those difficulties and renew the natural energies.

Syphilis, Scrofula, and Diseased Blood.

DR. GUYSOTT'S IMPROVED EXTRACT OF YELLOW DOCK AND SARSAPARILLA is a true specific. The proprietors have in their possession over one hundred certificates of the most extraordinary cures effected by it. We can safely say—TRY IT. It revives the drooping constitution, eradicates all bad humors from the Blood, and by its tonic properties restores the invalid to life and vigor. As a spring and summer medicine it has no equal. Its singularly efficacious action on the blood, its strengthening and vivifying action on the system, stands pre-eminent above all other Sarsaparillas. If you would have the rose brought back to your cheek, a clear, healthy and transparent skin, and life and vigor infused through the system, take Guysott's Extract of Yellow Dock and Sarsaparilla. It contains more of the pure Honduras Sarsaparilla than any other preparation extant, which is chemically combined with the Extract of Yellow Dock and the Extract of Wild Cherry, thus making the remedy more thoroughly efficient than any other Sarsaparilla before the public. At the same time it is perfectly free from all mineral poisons, which cannot be said of any other Sarsaparilla compounds.

Sold by all the Druggists in California and Oregon.
PARK & WHITE, Sole Agents,

DR. R. H. McDONALD, Sacramento.
v4-15 RICE & COFFIN, Agents, Marysville.

SANDS' SARSAPARILLA.
IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of *Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Biles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.*

IN this preparation all the restorative properties of the root are concentrated in their utmost strength and efficacy; but while Sarsaparilla Root forms an important part of its combination, it is, at the same time, compounded with other vegetable remedies of great power, and it is in the peculiar combination and scientific manner of its preparation, that its remarkable success in the cure of disease depends. It acts simultaneously upon the *stomach*, the *circulation* and the *bowels*; and thus three processes, which are ordinarily the result of the three different kinds of medicine, are carried on at the same time, through the instrumentality of *this one* remedial agent which gently stimulates while it disinfects and expels from the stomach and bowels all that is irritating, and at the same time restores their vigor and tone. Many other preparations imitate it in bearing the name of Sarsaparilla, and in that their resemblance ends, being often prepared from worthless and inert roots, and of course possess no healing or curative properties, and patients in making choice of which they will use should take no other, but that one entitled to their confidence, from the first list of cures it has effected in living witnesses, whose testimonials and residence have been published, and who are still bearing daily testimony to its worth.

Astonishing Cure.

PATTERSON, N. Y., July 20, 1851.

Messrs. A. B. & D. SANDS: Gentlemen,—Having witnessed the most beneficial effects from the use of your Sarsaparilla, it gives me pleasure to send you the following statement in regard to my son. In the spring of 1848 he took a severe cold, and after eight weeks of severe suffering, the disease settled in his leg and foot, which soon swelled to the utmost. The swelling was lanced by his physician, and discharged most profusely; after that no less than eleven ulcers formed on the leg and foot at one time. We had five different physicians, but none relieved him much; and the last winter found him so emaciated and low that he was unable to leave his bed, suffering the most excruciating pain. During this time the bone had become so much affected that piece after piece came out, of which he has now more than twenty-five preserved in a bottle, varying from one-half to one and a-half inches in length. We had given up all hopes of his recovery, but at this time we were induced to try your Sarsaparilla, and with its use his health and appetite began immediately to improve, and so rapid was the change that less than a dozen bottles effected a perfect cure.

With gratitude, I remain truly yours,
DARIUS BALLARD.

We the undersigned, neighbors of Mr. Ballard, cheerfully subscribe to the facts of the above statement.

ALBANY AGRICULTURAL WORKS,

ON HAMILTON, LIBERTY AND UNION STREETS;

WAREHOUSE AND SEED STORE,

No. 52 State Street, Albany, N. Y.

The Proprietors of the above-named establishment being the sole owners and manufacturers of

EMERY'S PATENT HORSE POWER, &c.,

☞ ALL ARRANGEMENTS WITH OTHER PARTIES FOR THEIR MANUFACTURE HAVING EXPIRED have formed a new Copartnership, under the firm name of

EMERY BROTHERS,

And will continue the manufacture and sale of AGRICULTURAL IMPLEMENTS and MACHINERY, as heretofore, at the old stands of EMERY & CO. By this arrangement the united efforts, and interest of the Brothers, long known to the public, are secured, and no exertions will be spared to meet the wishes of those dealing in and using the class of implements they manufacture—their leading branch being the manufacture of the justly celebrated

Emery's Patent Changeable Geered Railroad Horse Powers,

with the machines to be propelled by it, as Threshing Machines, Saw Mills, and Machinery generally.

These Powers having been submitted repeatedly to the most severe tests and trials to determine their relative merit and utility with those of every known manufacturer, have without exception been awarded the highest prizes for superiority—among which were the following:

N. Y. STATE AGRIC'L SOCIETY, 1854, 1853, 1852, 1851, 1850	MARYLAND STATE AGRICULTURAL SOCIETY, 1853
OHIO STATE BOARD OF AGRICUL., 1854, 1853, 1852, 1851	MISSOURI STATE AGRICULTURAL SOCIETY, 1853
MICHIGAN STATE AGRICUL'L SOCIETY, 1853, 1852, 1851	AMERICAN INSTITUTE, ... 1852, 1851
INDIANA STATE AGRICULTURAL SOCIETY, 1853	NEW YORK CRYSTAL PALACE, ... 1853
ILLINOIS STATE AGRICULTURAL SOCIETY, 1853	CANADA PROVINCIAL SOCIETY, ... 1852, 1851
PENNSYLVANIA STATE AGRICULTURAL SOCIETY, 1853	CONNECTICUT STATE AGRICULTURAL FAIR, 1854

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 224 bushels, of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both kinds of Powers, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. If the crops be extraordinarily heavy or light, greater or less results will follow.

These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by this Circulars, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and full purchase money refunded if not found acceptable to purchasers.

The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, they hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.

They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery, Implements and Seeds, which are all new and of the most approved and complete kinds extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.

The attention of a discerning public is solicited to our present stock of goods, before selecting and purchasing the coming season.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishe PERFECT LIKENESSES? Because he has now the most arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting pictures that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

COLLINS & CO.,
PRACTICAL HATTERS,
(PREMIUM HAT STORE,)

Great Staple of California—Tobacco.

Home Wood Garden, American Flat, Sacramento county, Oct. 8, 1855.

[CONCLUDED.]

I made a concoction from ten pounds of first quality prunes, and one pound liquorice, and boiled alternately six gallons of water, using prunes and liquorice in part, as my judgment led me as to quantity required to dampen the layers of stalks I was preparing to sweat. This liquid must be cooled to lukewarm heat. Form a pen of ten feet long, and six feet wide, against a wall, then put layers of the plants upon the floor, and sprinkle, "with a corn wisp," sufficient to dampen, and in successive layers, till about four feet high; then cover closely with blankets, on the top, and let remain for fifteen to twenty hours—by examining, it will be known how the process of sweating has succeeded; if satisfactory, strip the leaves from the stalk and tie up in bundles or hands, and lay them on the floor, after which turn them as often as dampness remains in the bundles, which may be the case for three or four days. During this process the leaves will turn a beautiful brown color. When dried sufficient for packing, make bales of two hands in breadth, six in length, and ten deep, wrap it closely in muslin, and remain for three days, or as the case may require. During this time it will be going through another process of sweating, after which air it thoroughly, dry it well, and pack it again. Care must be taken to not let the leaves mold, and to avoid it, examine carefully and air again if necessary—all of which attention is required before entirely packing or laying by for market. This process may seem to the novice a very assiduous task, but the pleasure of taste and aroma produced in the now cured Tobacco, will amply repay the labors and attention, for fine quality of leaf for cigars, thus prepared in the absence of rain, or a moist atmosphere.

My second crop of Tobacco planted in June, I harvested the 25th of September, and dried in time for the rains to moisten the leaves, and undergo the process of curing in "case," a term well known among planters; after which I put it through the same sweating process, and produced a fair quality of tobacco. I am of opinion the June crop will yield heavier leaf, having the advantage of more plentiful dews.

The yield per acre of the kind I raised would average 1,200 to 1,500 pounds, it being a fine quality. The seed I obtained from the Island of Cuba, and is there known as the "river fine leaf," cultivated upon river or low lands, and exclusively for the manufacture of cigars. The quantity of seed to sow for raising plants is a lady's thimble-full for sixteen square feet.

There are some twenty-two kinds of Tobacco, and to decide the climate of California, if tried would be found adapted to the growth of any or all the different kinds of Tobacco, and perhaps equally as congenial and the quality of leaf, as is grown upon the Island of Cuba, or any part of the known globe.

I believe that the peculiar soil for producing the article lies stretched along all the rivers, bays and valleys of California, and only requires to be tried. It is a well demonstrated fact, that the soils of the California rivers and bays are pregnant with the ingredient requisite to the growth of Tobacco, generally known as the saline. I will here quote an author upon the analysis of the "weed:"

"Tobacco contains nitrogen and the alkalies in large quantities, and but very little of the phosphates. The ash is shown in the analyses of Fresenius and Hill to consist of—potash, 30.67; lime (mostly with a little magnesia), 33.36; gypsum, 5.60; common salt, 5.95; phosphates, 6.03; silica, 18.39—in 100 parts of the ash. The inferior kinds of Tobacco, contain a larger proportion of lime, and the superior qualities the largest of potash."

In my simple effort to interest your readers, if any errors occur, may they deal with them gently. I remain, your most ob't serv't,

J. R. Johnson, Jr.

Results without Reasoning.

LIME AND PLASTER.

The value of lime or plaster, on land, depends on the component parts of the soil to which it is applied. If there is too much iron, or sulphuric acid in the soil, it wants lime to neutralize the acid, and change it into plaster—on such land, plaster is positively injurious.

If land is destitute of iron, or does not possess enough to form the sulphuric acid necessary to decompose the old vegetable matter, then put on plaster—the sulphur in the composition of plaster supplies the deficiency—on such land, lime is injurious, as it neutralizes the little acid in the soil, of which there is a deficiency already.

The evidence of too much iron in the soil is the appearance of it in oxyde, or rust, on the stones—iron scum on top of water filtered through it—the grass or clover standing in detached bunches, with bare ground between them—the roots of clover or herdsgrass standing, in the spring, two or three inches out of the ground—lame grass and clover dying out, and wire grass, sorrel, and sour dock succeeding them—all, or any of these indicate the presence of too much acid in the soil. Then keep off your plaster and put on lime, which will combine with the acid, and neutralize it, and form a new compound (plaster) which is beneficial to vegetation. Plaster, as it is already charged with sulphuric acid, is absolutely injurious to such land.

The reason the ground appears so bare, or free from vegetable matter when it is overcharged with iron or sulphuric acid, is that the acid has eat up the old stubble.

The presence of this acid in the soil, is the cause of sorrel, sour grass, and sour dock—they are excrescences through which nature is trying to relieve her stomach of mineral bile. Give her a good dose of lime, and it will operate like soda on the sour stomach of a person.

If there is a lack of iron, or sulphuric acid, nature gets *the dyspepsia*, and can't digest the vegetable matter in the soil. Then apply plaster, the sulphuric acid of which will soon afford relief and the vegetation decomposed by it (instead of being eaten up, as the case is where there is a surplus) will go to the nourishment of the plants. *Lime and plaster, then, are not manures, but medicines to regulate the stomach of Dame Nature.*

FERTILIZERS.

The fertilizing principle is *ammonia*. It is the article that gives such pungency to the air of the horse stable. The great object in making manures, is to keep this ammonia, (or perhaps I shall be better understood in calling it nitrogen,) from escaping into the atmosphere. It is much lighter than common air, and unless detained by something for which it has an affinity, it will soon, in a volatile state, escape into the air. In hot weather it is formed, and escapes much more rapidly than in cold weather. The atmosphere, consequently, in hot weather, becomes highly charged with it—and a heavy shower precipitates it to the ground. This is the reason why vegetation so rapidly springs up with fresh color, after a thunder shower. It is not caused by the rain, but by the ammonia, or nitrogen brought down in it. If this gas, (or rather compound of gases) escape from manure, it is no better than [illegible]

Plaster and [illegible] are [illegible] for fixing it. Every [illegible] be well supplied with [illegible] and decomposing [illegible]

MANAGEMENT OF SWAMPS

Swamps from the decay of vegetable matter, are generally *sour*—and peat, or bog swamps, contain resinous matter, which acts as an *antiseptic* or preserving principles to the vegetable matter. On such lands apply the lime bountifully. It combines with the rosin and forms soap, and the old vegetable matter then decays as fast as any other. On such land, plaster is good for nothing.

MANURE.

Lime should never be applied to land with manure, nor till the manure has become incorporated with the soil—as it disengages the ammonia and allows it to escape. Plaster may be beneficially sown with manure, as it detains the ammonia. So pulverized charcoal, which can be gathered round forges, furnaces and old coalpit beds, is first-rate to sow on a newly manured field.

PHOSPHATE OF LIME.

A cow that gives milk takes as much phosphate of lime from the soil in a year, as is supplied by 82 pounds of bone meal. To keep cows in good milking order, then, 82 pounds of bone meal, for each cow, must be spread on the pasture where they are kept. The want of this is the reason why milk men living in and near cities, have to thicken their milk with chalk, and magnesia—phosphate of lime in the soil has become exhausted, and the milk is but little better than water filtered through a cow.

Children brought up on it lack the material for bones, which is the cause of the puny young ones in our large cities. If the phosphate of lime has become exhausted in the soil, every farmer should preserve all the bones he can get, and have them ground into bone meal, and give a single handful to each cow two or three times a week, in her mess. (I take it for granted, the farmers all mess their cows.) Although the phosphates cannot be fully supplied, when exhausted, without bone-meal applied, to the land, yet sub-soil plowing will bring up much from below, and help supply the deficiency.—*L. V. B., in Amherst Farmer.*

A Model Farm—A Challenge.

John Singerson and brothers, of Missouri, challenge the farmers of the whole Union to produce a farm to excel theirs in variety of productions, amount of production and extent of surface cultivated. Their farm is located about seven miles south of the city of St. Louis, and has been under cultivation less than ten years.

All persons who think they can excel Singerson farm, and desire to enter the lists for a "sweepstake" prize, are required to deposit $500, and the award is to be a service of plate, of the value of the deposit of the competitors after deducting the necessary expenses of the Commissioners making the award, who are to consist of one from each State appointed by the Governor thereof, of such States only, however, as have competitors for the prize. The Commissioners are to visit the farms, and decide the matter in the months of September and October next.

How many competitors can the Empire State produce? What say our farmers of the Mohawk Valley—"the heart of the world?" As a matter of interest to our readers, we subjoin a description of the Singerson farm which we find in the St. Louis Democrat:

"Statistics will better show its properties than elaborate descriptions of scenery. Four hundred acres of pasture grove and lawn—one hundred and fifty acres of meadow eighty of wheat, sixty-five of oats and rye, corn and potatoes enough to supply the numerous family and stock—nine miles of Osage orange hedge, well trimmed, and much of it large enough to turn cattle adds greatly to the picturesque beauty of the rolling prairie; inclosing pastures, orchards, nurseries, flower gardens and fields—a verdant patchwork binding all together, protecting and ornamenting at the same time. There are two hundred acres of orchard just coming into vigorous usefulness—eight thousand peach and apricot trees, and from present appearances, some of them will give many a rich treat ere the wintry winds sweep over us again. Pear, apple, plum and cherry bear swift witness of the good time coming.

"Twenty-five acres of strawberries have already given our St. Louis a fair share of the fruit, and dozens of acres are now growing to fill the old beds and enlarging them by the acre. Three hundred thousand grape cuttings were put out this spring, and [illegible] are doing well—forty thousand evergreens, fir and [illegible] cuttings—two hundred and two thousand peach trees are ready for the [illegible]—twenty bushels of peach stones and seven bushels of apple seeds have been planted, and [illegible] are growing finely. A great variety of fruits are cultivated by the [illegible] and delicious [illegible]

[illegible] have been [illegible] have."

This paragraph [illegible] is [illegible]

The Difficulty of Judging between First-rate Animals.

The following, from the Mark Lane Express, may be read with profit by those acting as judges at our public Fairs. The recommendation in the last paragraph is equally applicable to our State Societies:

Sir: Allow me to offer a few remarks on this subject, as applicable to the approaching meetings of our leading agricultural societies, now close at hand.

The difficulties which are often experienced by the most competent judges, in deciding between two really first-rate animals of a first-rate sort, are greater than the majority of people who have never acted in the capacity of judges have any idea of. I am happy to say that at the meetings of the Royal Society, such cases frequently do occur, and, I hope, always will, and with the wish that what I here assert may tend to assist judges on their laborious duties, I am induced to trouble you with these remarks.

I will take an instance of two first-rate shorthorn bulls, neither of them having a faulty point. Judge A. says, "What a superb back No. 1 has!" B. says, "But look at that depth of carcase in No. 2!" "But the length of quarter in No. 1!" continues A.; and in return B. draws attention to the silky texture of the skin of No. 2. The question is here put to Judge C. who *should* decide the case; but he has to balance, in *his* mind, whether a superior back is more to be considered than extraordinary depth of carcase; and again, is a first-rate quality of hide equivalent to an unusual length of quarter? And thus points, without having some definite value attached to them, might be compared one against another *ad infinitum*, without ever coming to a satisfactory conclusion.

Now, what I wish to see is, a definite value affixed to every point in the perfect animal, and when such cases of nicety as I allude to do occur, let the judges take point by point, and compare value in numbers, and then the animal commanding the highest amount would be the one selected. If the perfect animal were 50, the component parts might be something as follows:

	Bull.	Sheep.	Boar.
General appearance	8	12	10
Back (length and width)	8	10	8
[illegible]	6	4	5
Width of rump and [illegible]	5	4	5
[illegible] (accuracy of carcase)	5	5	4
[illegible]	5	3	3
[illegible]	4	4	9
[illegible]	4	5	2
Bone	1	2	2
Fineness of legs	2	1	2
	50	50	50

This table is merely on a rough scale; but I think if the committee of the Royal Society would devote one of their meetings to the consideration of the subject their time would be wasted; and a scale made under their direction, similar to the above, [illegible] to the agricultural public as an authentic data to refer to.

Hoping that these remarks may draw the attention of our great [illegible] to the subject I remain, yours, &c.

X. X.

A New Gate.

As [illegible] trivance [illegible] we [illegible] has been brought to our notice by Mr. [illegible] of [illegible] New Jersey for which he has a [illegible] patent. [illegible] a gate [illegible] we [illegible] gate [illegible] the [illegible] gate [illegible] the [illegible] gate [illegible] the

when it opens *from him*, and the end thus opened gently passes round a quarter of a circle and stops; he then again touches the lever, when the gate describes another quarter of a circle, and is then closed.

The great objection to self-acting gates heretofore has been their liability to being readily opened by cattle. In Mr. Woodruff's invention that is impossible, for the two treadles must both be pressed at once, as by a wheel, and they are so arranged that the broadest hoof could only act upon one of them at a time.

The principles involved in the construction of these gates are simple and readily understood, and they can be constructed by any carpenter in the country. The expense of using this invention we think quite moderate in comparison with the advantages it possesses, being ten dollars only, we understand, for all the necessary fixtures, including the right to use them. The wood work may be massive and highly ornamental, or light and rigidly plain, as will best suit location or taste of those who use it.—*The Inventor, N. Y.*

Sonoma County Fair.

A correspondent of the Petaloma Journal writes from Santa Rosa, Oct. 19, as follows:

Our village was thronged yesterday with people from all parts of the country, who came to visit the Fair of the Agricultural Society. The shaded plaza in front of the Court House, was selected for the place of Exhibition, and here was gathered a fine collection of horses, mules, and horned cattle.

The large Durham bull belonging to Lovell & Brother, of Vallejo township, attracted universal attention. This animal is four years old, and received a premium at the recent Exhibition at Sacramento. Several fine stallions were also much admired, particularly Sir Charles, a dark bay, seven years old, belonging to Mr. Seabring, of Bodega; and a light bay, belonging to Mr. Tate, of Santa Rosa; the latter took the first premium.

After the crowd had gazed their full at the animals in a state of repose, they were enlivened by a display of the locomotive powers of the horses, both under the saddle and in harness. A large gray horse, belonging to Mr. Robinson of Petaluma, excited much remark; with good training, he will no doubt become a fine trotter.

At 4 o'clock, the company adjourned to the Court House, and listened to a few introductory remarks by Dr. Hill, the President of the Society, and an interesting address from C. P. Wilkins, Esq., on the importance of the application of the sciences to Agriculture. The proceedings of the day were brought to a brilliant and harmonious close, by a ball at the Masonic Hall.

We subjoin a list of the premiums awarded, for which we are indebted to Mr. Powers, Secretary of the Society. The first premiums were money; the second and third, diplomas of the Society:

Best Stallion, $10, to Mr. Tate, of Santa Rosa; second best, to Mr. Seabring, of Bodega; third best, to Mr. Manning, of Green Valley.

Best Stud Colt, premium to Mr. McMinn; second best, to Mr. McDowell.

Best Brood Mare, $8, to Julio Carillo, of Santa Rosa; second, to Mr. Stanley, of Petaluma; third, to Mr. Watson.

Best Colt, $5, to Mr. Seabring, of Bodega; 2d, to Mr. Tate, of Santa Rosa.

Best Riding Horse, $5, to Mr. Wright, of Santa Rosa. Best Buggy Horse, $5, to Mr. Robinson, of Petaluma. Best Draft-Horse, $5, to Mr. Stanley, of Petaluma. Best Mule, premium to Mr. Wright, of Santa Rosa.

Best Bull, $8, to Lovell & Brother, of Vallejo township.

Best Cow, $8, to Mr. Wright, of Santa Rosa.

Best Calf, $5, to Mr. Wright, of Santa Rosa.

Best Beef Steer, $5, to Mr. Clark, of Santa Rosa.

Best Specimen of Cheese, $3, to Mr. Tiffe, of Petaluma.

Best Specimen of Wheat, $5, to Mr. Neal, of Santa Rosa.

Best Specimen of Saddlery, $2 50, to Mr. Barnard, of Rosa.

Yours. W.

THE TRIBUNE OF SACRAMENTO.—Sebastopol has been taken by the Allies, and so amid the changes of circumstance and place, other events have transpired. *French*, Russian or *American* interest *May* or *May* not be affected, still we cannot look on without some degree of interest in the matter of our cotemporary of the Tribune. We know no party, have no partialities but for right—but ever rejoice in the success and prosperity of our neighbors and friends; and now that the great political or pecuniary siege which has been carried on relative to the Tribune, is amicably settled, we rejoice and hope each and all are satisfied. We feel happy to welcome our friend the Mayor of Marysville, to our goodly city; we know his zeal and ability carries weight, strength and success to the work in which he is engaged. We welcome him as a citizen—as a friend; we welcome him as an editor. In these several capacities, each in their several spheres of usefulness, we hope for success and prosperity to our friend, without reference to politics or any local or sectional matters. Having often experienced the kindness and courtesy of Gen. Allen, we honor him for his manly qualities and goodness of heart.

We understand that a new weekly paper is to be published at Benicia, by Thos. McGeorge & [illegible] called the Solano County Herald.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, NOVEMBER 2, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

STEAMER MAIL.

THE next mail for the Atlantic States will close at the Post Office in this city Saturday, at 1 o'clock. An extra bag will be kept open until 11 o'clock, Sunday morning, to be sent on the Sunday boat. The steamer leaves San Francisco Monday morning.

Full Reports of Exhibition ready for mailing, at the office, on K street.

Exchanges.—Will our colemporaries that exchange with us, have the kindness to direct our papers to *Sacramento*.

To Correspondents.—MSS. copy from W.—De Quincey—H. E.—Viola—Helen—S. W.—and H. E. G., received and will duly appear. Will Helen have the kindness to favor the Editor with her address and much oblige? ar.

The Granary of the World.

FOR more than two years, as we have watched the resources of California developing under the fostering hand of scientific Agriculture, and as we have carefully noted how lavishly a bounteous Providence has furnished the means of supply to countless thousands in our fertile valleys, our attention has been directed to the peculiar features of our State in her soil and climate, and her capabilities to supply other nations with the "staff of life." We have always, from the commencement of our advocacy of the cause of Agriculture in California, been steadfast in the belief that California was destined to become ere long "the garden of the world." This firm belief has induced us to labor to the best of our ability to present from time to time the various subjects of the most prominent importance to the public. Our business was Agriculture, and in that business we introduced from all parts of the world, trees, seeds, plants and shrubs, with the view of experiment and sale. We urge the subject with our pen, over our own and various signatures, for several years. In '54 we commenced the publication of the CALIFORNIA FARMER, and although a doubtful and costly experiment, our desire was to do all that was in our power to awaken an interest that when once aroused we were sure could never cease, but "like good seed on good ground, bring forth an abundant harvest. We believed, then, that our Golden State, by her "Golden Grain," would ere long far outshine the gold of her rich placers. In '54, in a memorial which we had the hooor to forward to Washington, asking the National Government to grant means for an Agricultural College in California, the following language was used, and we can as firmly reiterate the same sentiments now:

"We see in this State a promise of future greatness in this ennobling science, we see that this State is destined to be the "*Great Granary of our Nation.*" It may be destined of God, if rightly understood and appreciated, to be the source of supplly when other portions of our beloved country shall be in want."

At that time ('54) the grain crops of '53 were beginning to manifest their importance, and so great was the abundance of the year '53, that inquiries were made, where shall we find a market for our surplus products? Our answer has ever been, "a way will be opened;" the great peculiar changes of our country as well as the condition of our crops, the rise and fall of the price of breadstuffs, the changes in the markets abroad, the wars of Europe, and the demand from thence,—these with the singular fact that the great market of Chili, a source from whence California received her first supplies, is now in need of breadstuffs in return, and the new markets opening in Valparaiso and Australia; these with the shipments to New York, Boston, and other markets in our own country, present views worthy of the highest consideration of every friend of our State.

The present condition of the world, when viewed in relation to the markets, presents an assurance that California with her broad and fertile valleys will in brief coming years be indeed one of the great granaries of the world.

We would now call the attention of our readers to our Grain Reports, being the sketches of the conditions at home and abroad.

CORRECTIONS.—The prize for Grain, awarded to Messrs. Munyan & Jocelyn, was intended for J. E. Johnson, Esq, of Centreville, whose collection of grain was of much interest. Messrs. Munyan & Jocelyn were the surveyors and measurers, and furnished the certificates of the crop.

The name of E. B. Crocker was erroneously given in the equestrian performances; it should have been J. C. Crocker, Esq., to whom the prize was awarded.

The Grain Market.

THE news by last steamer has caused some sensation in our Grain and Flour markets, and from the condition of Europe there is good reason for it. If our farmers will be so kind as to look over the files of this paper for the past four months, they will see that that we suggested for their guidance was not without good authority. We had data for what we said. We did not wish to raise any undue excitement and draw into our market produce from abroad, to the injury of our own own producers; but our aim was to urge farmers *to hold on to their grain themselves*, and thus reap the benefit which we knew would accrue to them from this course. Every statement we have made in relation to the markets, abroad and at home, has proved true, and our hard working farmers that have held on to their grain have made a handsome gain by it.

The short crops of Grain in England, France and Germany, with the destruction of immense quantities in Russia, all serve to create the large demand for Grain that is now pouring into the United States. This demand will prevent any shipment to this State from the East. Chili, Australia and Valparaiso are purchasers, and California has not enough for her own consumption, to say nothing of the *seed Grain* wanted within sixty and ninety days. What then shall prevent an increased value to the Grain and Flour now on hand in California? and this increased value must be the result of a legitimate rise in price by reason of scarcity, and not a mere matter of speculation.

To the United States all Europe will look for their supplies of breadstuffs, and the shipment, now rapidly increasing, will be immense. Whatever fluctuations may occur in our own markets here, or in the State, or at the various points of shipments, resulting from overstocking the market at any moment, it must be borne in mind that the value of breadstuffs cannot remain at a low figure, but must reach a high value and remain so for a period of months.

We make no particular schedule of prices, simply stating that the market at the present moment is in an unsettled state, but with a strong upward tendency. A single paragraph from the New York Herald of Oct. 1, which we give below, will show the state of the market there, and it is some indication of what the future will be.

There were large shipments of breadstuffs from this port last week. In nearly every Continental port to which exports were made there were shipments of flour. To Liverpool the value of breadstuffs shipped exceed that of cotton. Flour, wheat and corn will enter as largely into our exports this year as in any one previous, except, perhaps, the year of famine in Ireland. We have an abundance to send, and the probability is that there will be a demand on the other side for all we can find ships to carry. The outward movement has but just commenced.

FOR THE EAST.—Among those citizens who leave for the East by this steamer, we see the name of our fellow citizen, W. C. Waters, Esq., one of the very earliest comers to this State in '49. Capt. Waters has long been most favorably known as connected with the Steam Navigation Co., as their agent in this city, and more recently as agent of the Sitka Ice Co. Few men are more extensively known, few men as popular.

We remember Capt. Waters and his mining company in the placers—our companies were side by side, and many a social and pleasant hour we can call up in memory, and for more than six years we can call to mind many acts of kindness and courtesy received at his hands. Capt. W. leaves us to visit his family, after a long absence, and bears with him the earnest wishes of a wide circle of friends. We hope that his passage may be a speedy and a pleasant one, that he may find those near and dear to him in health ready to greet his return, and that in all good time he will come to us again in health, and with his family, where he will find his friends ready to greet his return—as he shall come well accompanied to make California his "permanent home."

AGRICULTUNAL FAIRS.—Our exchangea by this mail are full of reports upon Agricultural Fairs. Every State, county and city, almost, throughout the old States, have been engaged in these festival scenes; and such has been the enthusiasm that the great mass of the people have made it their chief business to become interested, and to give their time and attention to them. Were we to attempt a report of them it would require more than the entire space of our paper to name them. We rejoice at this, for it is the best evidence we need of the prosperity of the people. We shall receive Reports of the principal Fairs, specially prepared for the FARMER, by the junior editor now attending them.

Epidemic, among Fowls---Query.

STOCKTON, Oct. 18th, 1855.

EDITORS FARMER: Presuming your columns are open to such a note as this, I wish to know of your subscribers, skilled in such matters, or of you, the causes and the *remedy*—if any is known—for the prevailing epidemic among the domestic fowls. I could discover no visible cause, either internally or externally. The cause I don't know, but the effect is near this: They become suddenly insensible and apparently blind; droop their heads down (not their *wings*—different disease altogether) and linger from five to twenty-four hours and then die. We had fourteen to die, or rather take sick in one hour, on yesterday, which are all now dead, and prospect for more to share the same fate.

The fowls of several immediate neighbors are in the same plight. If you or any of your subscribers could give cause or remedy, you would greatly oblige, Yours, &c. COLFON.

NOTE.—We call the attention of our correspondent *Colfon*, to the advertisement of Dr Chapman—"To Poulty Raisers." This remedy we believe, from the reports that reach us, to be the very thing needed. (See advertisement.)—ED.

THE PETALUMA JOURNAL.—A little time since we noticed the preparations for the Santa Rosa Agricultural Fair, and as in duty bound we gave it a notice, with the hope of calling public attention to it and inducing increased attendance. Our friend of the Petaluma Journal feels a little grieved at what we said, supposing we did not give his paper due hooor. These were our words:

"As there is no papor published at Sonoma, and desirous to make the matter as widely known as possible, we give the notice, hoping the friends will turn out and give it their ready aid and countenance."

Now don't be *too fast*, friend Thompson; we *did not* say there was no paper published in Sonoma *county*—but none in *Sonoma*. We alluded to the Sonoma Bulletin, which ceased to be, some time since. We stated just what was true. *But*—we acknowledge our short comings—we own we did forget (only for one moment, however) that there was a "Petaluma Journal," but not till it was too late for correction, i. e. till the Journal rebuked us for our remissness, by waking us from our "Rip Van Winkle slumber." And now that the Colonel is awake and ready to make the *amende honorable*, he will promise not to forget, but bear in constant remembrance that when speaking of *Sonoma* it embraces all the interests of the *county* which are guarded with a jealous eye by the proprietor of a journal whose editor claims it as his *Petaluminious* Journal, to which we have always accorded with pleasure a high rank as among our exchanges, being neatly printed, well managed and with every prospect of success, which we sincerely hope will ever attend it. And now neighbor we have only one way of retaliation for your attack upon your "ancient and venerable friend" the Colonel; we would call your attention to *your own words*. You say we "are sadly in want of a map of California." *That is too true*, and we will only refer you to the *best of authority* for your duty in such a case:

"If a man seeth his brother in *need* and shutteth up his bowels of compassion from him, how dwelleth the love of God in him?" &c.

We shall not suppose our brother Thompson is devoid of *compassion*, and shall therefore look for an "elegant map of California," by early express. Let it be on *rollers* brother, and we will hang it up in our sanctum, and whenever we are writing about *Sonoma*, our eyes shall turn to *that map*, as the eyes of the thirsty traveler turn to the waters, and in tones of gratitude—

Our lips shall murmur,
Thompson, Thompson, Petaluma.

Farewell, brother. We copy now from the Petaluma Journal, the doings of the Fair, and feel pleased to record so good a Show.

DR. WINSLOW'S LETTERS.—The letters of Dr. C. F. Winslow, from the Geysers, which are being published in our journal, will be found full of deep interest, and should be carefully reviewed. To the scientific mind they are of intense interest, as they relate to the wonderful phenomena of these singular springs, which have and are still exciting so much interest at home and abroad. In addition to this the style of our correspondent, his graphic delineations of the events connected with the tour, will afford a pleasure of no ordinary character.

SECOND NOVEMBER.—This is a day long to be remembered in the *history of Sacramento*. It was on the evening of November 2d that this city was laid in ruins by the most calamitous fire that has befallen any city on the Pacific Coast; although not as extensive as that of San Francisco, yet its effects were more disastrous to individual interest. But Sacramento has risen again in new beauty, and is one of the finest cities of this El Dorado of the West.

California State Agricultural Society's Annual Meeting.

SACRAMENTO, Sept. [illegible], 1855.

The California State Agricultural Society met in the Senate Chamber, at 2 o'clock, A. M.

The President C. I. Hutchinson, took the chair, and called for the reading of the minutes of the last Annual Meeting.

He proposed to read the entire pages of the Executive Board for the year; but this being objected to on the ground that it would consume time unnecessarily, he by request, read the Constitution that had been drawn up by the Board, which, after several amendments, was adopted.

On motion of E. B. Crocker, Esq., of Sacramento, it was

Resolved That this Society will establish a permanent Room at Sacramento, and that the Corresponding Secretary shall be a resident of that place.

S. J. Crosby moved that the next Annual Fair be held at San Jose, (Santa Clara county,) which, after full and free discussion, was carried by a large majority; and on motion of G. H. Beach, of Yuba, was made unanimous.

On motion of J. K. Rose.

Resolved, To proceed to the election of officers for the ensuing year.

J. M. Osborn of Napa, and J. W. Pugh of Sacramento, were appointed tellers. The balloting resulted as follows:

For President,
E. L. Beard, of Alameda.
Vice Presidents.
Samuel J. Hensley, of Santa Clara;
C. K. Garrison, of San Francisco;
J. C. Yount, of Napa;
J. A. Sutter, of Sutter;
Rev. A. H. Myers, of Alameda;
G. H. Beach, of Yuba;
W. W. Gift, of Contra Costa.
Corresponding Secretary,
J. L. L. F. Warren, of Sacramento.
Recording Secretary.
Rev. Eli Corwin, of Santa Clara.
Treasurer.
Dr. L. H. Bascom, of Santa Clara.

Mr. Osborn moved, that in ensuing years there be a time set apart by the Executive Committee, sometime during the Fair, for the several classes of Grain and Fruit Growers, Mechanics, Manufacturers, etc., represented in this body, to meet and interchange their sentiments and results of experiments in their several departments.

After discussion and explanations, the motion was adopted unanimously.

On motion of Mr. Warren—

Resolved, In view of the mournful event which transpired in this city yesterday, by which a citizen was deprived of live, leaving a wife and child, we continue the Fair through Monday and evening, and tender the income for the relief of the widow of the deceased.

On motion of Dr. Curtis—

Resolved, That the officers and members of this Society yield their privileges as members on Monday next, and all pay the regular charge, to aid the widow and orphan.

On motion of Mr. Warren—

Voted, That the thanks of this Society be tendered to the Steam Navigation Co., for great liberality shown the government of this Society in their present enterprise.

Voted, That the thanks be tendered to the California Stage Co., for their aid to the enterprise.

Voted, Thanks to Wells, Fargo & Co., Pacific Express Co., and all others who have generously aided.

Voted, That the thanks of this Society be tendered to the proprietors of the Presbyterian Society for the use of the church for the Oration.

On motion of Mr. Myers—

Resolved, That the acting Executive Committee of this Society are entitled to the thanks of all who feel an interest in the great cause which we aim to advance, and we hereby cordially tender the same, for the perfection of all their arrangements for the Fair, which we are now about to bring to a close, and for the faithful and able manner in which they have discharged their onerous and multifarious duties.

On motion, the Society took a recess till 7 1-2 o'clock, this evening.

EVENING SESSION.

The President assumed the Chair, at 7 1-2 o'clock. Waiving the strict rules of order, the Society indulged in a season of free discussion upon various matters pertaining to the general interests of Agriculture.

Mr. Warren, who has been the Corresponding Secretary of this Society since its organization, and who was this morning re-elected for the ensuing year, tendered his resignation, to take effect on the 1st of January next.

On motion of D. Kendall, the resignation of Mr. Warren was accepted, and the Society proceeded to the choice of a successor, which resulted in the unanimous election of C. I. Hutchinson.

On motion of Mr. Myers,

Resolved, That this Society adopt the California Farmer as its organ, and recommend the same to the support of all the members, and especially the farmers throughout the State.

On motion, *resolved*, That the renting of a Room be left discretionary to the Executive Committee.

On motion of Col. Warren—

Voted, That the thanks of this Society be transmitted to the Hon. H. H. Doty, bearer of dispatches from Japan, for several parcels of seeds from that country, and for his prompt attention to these great interests, and for an offer of further remittances of the Society's moneys on his return to Japan.

On motion, adjourned *sine die*

O. C. Wheeler, Rec. Secretary

At a meeting of the Executive Committee held this day it was resolved that the foregoing report be published in the California Farmer.

D. C. Wheeler, Rec. Sec.

Sacramento, Oct. 29, 1855.

Vote of Thanks.—The State Agricultural Society passed the following resolutions at its meeting, yesterday:

Voted The thanks of this Society to C. Shugert, Esq., of Patent Office Washington, D. C., for valuable parcels of seeds by the last two steamers, and for twenty-five copies of Reports of 1854, from Patent Office.

Thanks to Gen. J. L. Minor, Secretary of Missouri Agricultural Society, for Reports of Second Annual Fair, and his able Address.

Physical Education.

One of the most cheering signs of the times which we notice relative to health, is the earnest attention which is now being paid to the physical education of children and youth. In nearly all our schools some regard is paid to an active exercise of the pupils, and in our high schools and seminaries regular systems are being adopted—and in some of these there are interesting gymnastic performances as among the regular duties of the school—and this is now being particularly introduced into our Female Seminaries. This is as it should be.

How many lives have been lost, and how much happiness sacrificed, by the old notions that a girl must never run, skip, jump or dance in the open air, or before folks. How much of mind, intellect and heart has been lost to the world, by reason of a want of the free and full exercise of the body. What can be expected of a being that is bound down, cribbed and confined to study, and never permitted to look off their books, to smile or talk, or in any way enjoy a degree of freedom. This wrong system has been like a dark cloud to human progress, and to human happiness. Thank God, a wise and happier day is dawning, and all the most intelligent minds see the value and necessity of educating the body—all the physical powers, in order to secure healthy action and a cheerful tone to the heart and mind.

Among all the means of exercise, that which is most desirable is that of Dancing. This accomplishment, for so it must be called, gives full scope to all the muscular powers of the body, creates a healthy circulation of the blood, adds grace to the movements of the body, and inspires the mind with joyous vivacity and sprightliness, which adds to length of days.

We are pleased to know that in most of our female seminaries a great interest is manifested in physical education; and we are also pleased to learn that some established system of gymnastics suitable for both sexes, will be introduced as early as possible, at least into private institutions, if not into our public schools. While speaking of Dancing, we cannot but speak in high terms of dancing taught by C. C. Clapp, of this city. Having had the pleasure to enjoy an evening in witnessing the progress of his pupils, we are confident that few teachers are so well qualified as Mr. Clapp to perfect pupils in this graceful accomplishment; and parents that wish their children to enjoy life and the use of their physical powers, will act wisely in calling on Mr. C. And speaking of children, we have seen some full grown children that might be improved in their movement and gestures by a call upon Mr. Clapp. We are confident he has the power to shake off that stiffness and awkwardness so unpleasant, which is a result of the early neglect of physical education.

A Magnum Bonum Sweet Potato.—We have received one of the finest specimens of Sweet Potato that has probably ever been raised upon the Pacific coast. The sprout from which this Potato was raised was planted about the middle of July, by Hooker & Fern, on the banks of the Sacramento, upon the ground where an early crop of Irish Potatoes had been harvested. This Potato was dug Nov. 1st, and weighs 11 1-4 pounds; is beautiful in form, and fine in grain. We shall forward it to the East, with other California specimens, by W. C. Waters, Esq., who leaves on the steamer of Nov. 5th.

Poor Boston!—What a job for an undertaker! Our quondam friend J. Judson Ames, late editor of the San Diego Herald, who so recently left us for a visit East, we see, has at last been handed over to the "Sexton." Alas, poor Boston! how thou art changed as by the touch of some bright fairy. We trust you will be *renewed in form and beauty*, for as we read your epitaph which is below, we cannot forget you.

Married, at ——— Vt. J. Judson Ames late Editor of the San Diego Herald, and Miss [illegible] Sexton.

Literary Intelligence.

The most intellectual book of travels which has been received this season, is said to be Burton's, published by Crosby, Nichols & Co., Boston. It is a truly valuable work, made up of the reflections of a Christian scholar in Europe, upon art, society and nature, and is written with much eloquence. A volume of travels must be extremely picturesque, and abound in original ideas, to succeed with the mass of readers—and such works grow on the public attention, even if they do not have instant popularity. Mr. Burton's work will have a permanent niche in the library of American travelers.

J. S. Redfield, New York, has issued the old favorite Guy Rivers, in a new edition; also, an amusing picture of Irish humor, called "Bits of Blarney," by Dr. Mackenzie. Notices and descriptions of these may be found in our Literary Department.

Charles Scribner, New York, has in press, a new work entitled "America,"—a sketch of the political, social and religious culture of the United States of America, in two lectures delivered at Berlin. It will be quite an interesting book. The author is a German scholar who has devoted much of his time and thoughts to America and its institutions.

Mason Brothers, publishers of the New York Musical Review and Gazette, offer three hundred dollars, in prizes of $200 and $100, respectively, for the best two songs, with pianoforte accompaniment which shall be sent to them, prior to the first day of October next. Heretofore, it has been customary to entrust the awarding of prizes to a select committee; but it is now proposed that the entire musical public shall, to some extent have a voice in the matter. The best eight compositions will be published in the Review and Gazette, and upon the merits of these the subscribers to that publication will vote.

Mason Brothers have also in in press, a new story entitled "The Rag Picker," or Bond and Free"—it will be issued in a few weeks. Their last new novel, "Ollie," is said to have been written by Mrs. Millard, the wife of a member of the New York bar.

The American Publishers' Circular, a weekly gazette, is just issued under the auspices of the New York Book Publishers Association. It is edited by Mr. Charles B. Norton, publisher of the Literary Gazette. The object of the Circular will be to give early and complete lists of all new publications, American and Foreign, and will be a useful medium of communication for the Trade. The following item, is well worth copying: "It has been ascertained by careful computation, that the entire value of the books named in the catalogue of the Philadelphia Trade Sale, commencing on the 11th of September,—estimated at the trade prices, as printed, is over $370,000. While that of the New York Publishers Association Catalogue, for their sale, commencing on the 18th of September, is over $400,000.

T. B. Peterson, philadelphia, has in press a new novel by by Mrs. Southworth, whose prolific pen has given to the public more works of fiction, than any other female novelist in this country. The work is entitled the "Deserted Wife," and will be printed in one large volume of six hundred pages, neatly bound in cloth. We have received in advance of the publication, the first fifty pages of proof copy, and we bespeak for it a strong interest. It is of deep moment, full of thrilling incident and of a high moral character.

Miller Orton & Mulligan, Park Row, New York, have in press—Henry VIII. and his six wives, a new and interesting work, by Henry William Herbert.

John P. Jewett & Co. Boston, have in press, a new History of India, from the earliest period to the present times, written by the Rev. Dr. Allen, who for twenty years has been missionary there. It gives a full account of the condition of Christianity among the Hindoos.

Messrs. Gunpil & Co., print publishers, of New York, have just issued an excellent lithographed view of the city of Sebastopol, and the country round it, including Balaklava on the one side, and the river Katcha on the other. The print is accurate, and beautifully executed. It is very desirable that all should have a correct map, in order to understand the progress of the siege.

Highly Important News.

SEBASTOPOL TAKEN—IMMENSE LOSS OF LIFE.

By the arrival of the Sonora at San Francisco, on Monday evening, we have news in the highest degree important, Sebastopol having at length fallen.

The French attacked the Malakoff and the Careening Bay and the English the Redan. Six repulses were sustained by the French before the Malakoff, but on the seventh they carried the work in splendid style, and hoisted their eagles on the Malakoff. The slaughter was terrible, and is estimated at 2 000 English, 15 000 French, and as many Russians, making the aggregate of upwards of 30[illegible] men. Five French generals are reported to have been killed including Gen. Bosquet.

During the night succeeding the assault, the Russians evacuated the entire south side first blowing up the defences, sinking all the ships, firing the town, and leaving nothing but smouldering ruins. A large allied force was marching along the coast to interrupt the retreat of the Russians in and. The allies found immense materials of war in Sebastopol.

The Fall of Sebastopol.—On Saturday, 8th Sept., being a twelvemonth since landing in the Crimea, and three hundred and sixteen days after the opening of the siege, a final victorious assault was made on the Malakoff. The assault was preceded by a terrific bombardment, and a dispatch from Gortschakoff, permitted to transpire at Berlin, saying "Our works suffered," prepared the public for the result.

Precisely at noon of the 8th the whole disposable force of the besieging army moved forward in a fourfold attack. The extreme right of the French attack was directed against the Little Redan, which they carried, but had to abandon on account of a fierce charge from the Russians. The second and principal attack of the French was against the Malakoff which after six repulses they carried by storm and occupied the same day. A third attack made by the English against the Great Redan, [illegible] for a while they succeeded [illegible] a temporary possession of the salient angle of the work, but were soon driven back [illegible] at 2 o'clock and withdrawn. The fourth portion of the assault was made by the French against the Little Redan, [illegible] the Central Bastion, but [illegible]

The other events of the siege are embodied in the following official dispatches:

The Redan on the side of Careening Bay could not be maintained in the face of the powerful artillery which overwhelmed the first occupants of that work, but which however, our firm settlements in the Malakoff will speedily cause to succumb, together with the Redan, which our brave allies seized, attacking it with their habitual vigor. But here, as with our own troops on the side of the Careening Bay, our allies were compelled to cede the works again to the powerful artillery and reserves of the enemy. At the sight of our eagles flying on the Malakoff, General Desalles made two attacks upon the Central Bastion. These, however, did not succeed, and our troops returned to their trenches. Our losses are serious, and cannot yet be precisely indicated. They are amply compensated for by the capture of the Malakoff, the consequences of which will be immense. Six hundred and fifty soldiers and twenty-seven officers were taken prisoners in the Malakoff.

Evacuation of the Southern Side.—Gen. Simpson in his dispatch says: "Sebastopol is in possession of the allies. The enemy during the night and this morning evacuated the south side, exploding their magazines, and setting fire to the whole of the town. All the men-of-war were burnt during the night, with the exception of three steamers, which are plying about the harbor, and the bridge communicating with the north side is broken down. Our casualties are great. During the night the Russians have sunk all the remaining line of battle ships in Sebastopol harbor.

Armistice and Capitulation.—Paris correspondence says—Gen. Pelissier telegraphed for instructions in case Gortschakoff should ask to capitulate, and the reply reported is: "That the Russians must surrender at discretion, lay down their arms, and give up all the fortified places in the Crimea, including Odessa, with all the munitions of war, and without doing any previous damage thereto," but Gortschakoff has not yet asked for terms.

Russian Statement.—The resolution of Prince Gortschakoff exhibits the energy of a great commander. It saves Russia from an inextricable position, into which a false interpretation of points of honor would have thrust her. The Russian army, concentrated north of Sebastopol, will henceforth have that unity of movement and action, which until now was wanted.

Sebastopol of the South is replaced by Sebastopol of the North, which is a formidable position, bristling with innumerable guns, which a compact army henceforward will defend.

Impartial history will do Gortschakoff justice, who by making a sacrifice, and avoiding useless effusion of blood, has preserved for Russia an army trained to war by a struggle of a year's duration, and placed that army in a position which enables him to command a situation.

Russian Accounts.—Accounts from St. Petersburg are received, giving the following from Gortschakoff, dated Sebastopol, Sept. 8—noon:

The enemy received fresh reinforcements incessantly. The bombardment continues very violent. 10 o'clock, P. M.—The garrison of Sebastopol, after sustaining an infernal fire, were repulsed today. Although the assaults were made, they could not drive the enemy from the Bastion Kornilloff. Our brave troops, who resisted to the last extremity, are now crossing to the northern part of Sebastopol. The enemy has found nothing in the southern part but the bloody ruins which his attack has made. The passage of the garrison from the southern to the northern side has been achieved with extraordinary success, and our only loss on that occasion is about 100 men killed. We left in the southern part only 500 men, grievously wounded.

Subsequent Dispatch from Gen. Pelissier. Crimea, Sept. 10, 11 P. M. I inspected Sebastopol and its lines of defense to-day. The mind cannot form an exact picture of our victory, the full extent of which can only be understood by an inspection of the place itself. The multiplicity of the works of defense and the material means applied thereto, exceed by far anything hitherto seen in the history of war. The capture of the Malakoff, which compelled the enemy to fly before our Eagles, already three times victorious, has placed in the hands of the Allies an immense amount of material, and an immense establishment, the importance of which it is not possible to state exactly. To-morrow the Allied troops will occupy the Karalbana and the town and under their protection an Anglo-French Commission will be occupied with making out a return of the material abandoned to us by the enemy. The exultation of our soldiers is very great.

Sept. 12 11 P. M.—The enemy has destroyed the remainder of his fleet. Nothing remains in the harbor.

Destruction of the Russian Navy at Sebastopol.—Some estimate can be made of the power of Russia, when we know what was lost [illegible] at Sebastopol by the [illegible]. Nine of the line 14 5 [illegible] and 9 of [illegible], 4 frigates of [illegible] 5 [illegible] and brigs 11 war transports; [illegible] and 2 [illegible] [illegible] 1 [illegible] a part [illegible] the [illegible] piece [illegible] away—[illegible] and the [illegible]

To Relieve [illegible]

Correspondence.

Letters from the Coast Range.—No. 4.

GEYSERS, Sept. 12, 1855.

[CONCLUDED.]

As I descended into the ravine from the upper part of the hill, I stepped out to the brow of an abutment of apparently unstable rock and earth which juts into the apex of the ravine, and which afforded a commanding view of the roaring and steaming abyss below, and beyond, and on the right side of me. It would be difficult to describe my impressions, as they were so deep, strange, and complicated. I had never seen anything like it in my life, and I stood silent and transfixed with amazement and interest, till disturbed by the bawlings of my companions to come down from that perilous and overhanging promontory that seemed ready to slide at any moment. So I descended and commenced a detailed examination of the stupendous wonder itself, and endeavered to collect facts enough to unravel the mysteries of its demonstrations. It would be impossible to tell the numerous magnificent outlets from which steam and gases of one sort and another sissed and escaped. They were countless, and on every hand at the sides and bottom of the ravine, and all depended on minute cracks leading to a greater or less extent into the profounder depths of the serpentine rock. But there were three great and remarkable outlets. The first in observation was to the right (the west) and rather below me, as I stood on the promontary just described, but high up on the calcined side of the chasm, and from this there was a large and forcible expulsion of steam with great noise. It was constant; and dense clouds of vapor were formed immediately and borne off by the varying direction of the wind. Some distance beyond, and near the bottom of the chasm, on the west side, was a hole some six inches in diameter, from which poured a jet of steam so hot and forcible that it did not begin to condense visibly till near a foot from the aperture. Its force was so great that it projected small stones and large pieces of light earth, several feet, when they were thrown to the outlet. We amused ourselves for some time with these experiments. This jet was steady and uninterrupted, never breaking nor altering its force, or roaring for an instant. Directly opposite to this, on the eastern side of the chasm, and a few feet higher, were several holes from two to four inches in diamoter, from which were projected jets of steam alternating with uniform periods of repose. Every few minutes a jet would be more violent and expulsive than the rest, when a flow of boiling hot water would simultaneously take place from the inferior opening, and spurts of drops would be forced out several feet, from the highest ones. All these evidently communicated with the same cavern within the rock, for the changes of action were simultaneous and uniform in the whole of them. Near and over this spot I could hear an obscure subterranean roaring, and feel the earth tremble beneath my feet with the violent agitations of a boiling flood. This, on the whole, was the most interesting and fearful spot that I witnessed in my examination of this chasm, and it was only from this that the term "Geysers" could be made applicable to the place.

The deposits of sulphur in small masses of brilliant crystals are numerous, forming around apertures in the earth which often appeared no larger than needles or pipe-stems. The prevailing mineral deposit is sulphate of iron or copperas, and the colors of this vary all the way from that of whitish efflorescences loss or more tinged with oxidos, to that of pure green vitriol. The strongest acid solutions impregnate the earth in many places, and the whole surface appears calcined and efflorescent like air-slaked lime, but moistened and made pasty by absorption of moisture. There were some acids of crystaline form whose character I could not determine. Epsom salts I observed in several places, and magnesia also, in impure masses. In fine, the chemical combinations thrown out from this rock by the decomposition of water, and the elements of the serpentine by intense igneous action, were numerous and very curious; and I could conceive of no other cause for the blue and black pigment suspended in the water which flowed from some springs, than the formation of phosphate of iron or native Prussian blue, among other products of decomposition and reaction.

It was early in the morning when we made our first visit to the Geysers, and among the curiosities enjoyed, there was one great luxury. This was a delicious warm bath in a natural basin, some ten feet in diameter and four feet deep, where the hot water was forcing in from crevices in the sides and bottom, and a cold stream about eight inches in diametor pouring into it over the rocks a few feet above. The whole was overhung by a sort of opeu cavern, studded with stalactites of sulphate of iron, so moist, however, that the least touch destroyed them. We had great sport in this bath, for in some spots the temperature was unendurable, and if we happened to get even a finger beyond certain bounds, there were sudden starts and screams of pain, and many a prank to get each other into "hot water." But the most of the basin was of a genial warmth, and we could stand breast high in the bath, and, leaning against the wall of rock, allow the cold cascade to tumble on the head; and within a foot of this, while seeking support from a jutting crag, my hand fell on a perpendicular crevice, from which was issuing scalding water, and the rock itself, for some inches from the crack, was insupportably hot.

In the afternoon, about 5 o'clock, we made another visit to the Geyser chasm and prepared for another luxurious bath. The first one who stepped into the water screamed and hopped out. The next, supposing this humbug, made a bold rush for the middle of the basin, but came out rather quicker than the first, and, on a more careful examination of the water, our anticipations changed to disappointments, for the water was hot enough to cook eggs. We afterwards learned that this change of temperature from morning to afternoon was diurnal and uniform, and that the cause probably depended on the chilliness of the night affecting the springs of the rill and cooling the rocks.

The quantity of water which sinks into the fissures of the rock, and which is poured out again altered in temperature and mineral quality, is not very great. In the winter I am told the plutonic action is much more intense and the steam much more abundant. At present the stream at the bed of the Geyser chasm at its entrance into Pluton river is not over a yard wide and three or four inches deep. In the early morning and in the winter the steam condenses so that the whole ravine and neighborhood are enveloped in a thick white cloud.

At the lower part of the range, on the west side, a perpendicular cliff of stratiform rock presents itself, highly inclining to the west and north, the strata varying from one to three and four inches in thickness. The outer surface was whitish and sculptured into a beautiful network in many places, resembling some forms of calcareous crystalizations. It was exceedingly hard, and on fracture resembled light colored flints with a brilliant network of interstitial deposits running through it. On careful examination and study, I made up my mind that it was originally a succession of layers of fine feldspathic clay, deposited under quiet water and so situated as to be frequently exposed to solar heat. From this cause it would crack into a thousand delicate fissures, into which silicious deposits had been infused and the strata subsequently had been subjected to intense heat, by which the whole bed had become semivitrified. Such are the changes that in ancient, and more recent ages have probably transpired by the action of meteorological and mechanical agents external to the globe, and by the metamorphic effects of the intense heat of the serpentine intrusions from the interior.

While exploring this region, the inquiry was constantly forcing itself on me whether the cause of calorific action was superficial and the result of chemical decompositions, or profound plutonic. Before seeing the spot I had supposed it connected with volcanic phenomena; but my first impressions of the locality itself, led me to question the accuracy of these ideas altogether. A closer scrutiny, however, and a calm consideration of all the facts with a comparison of these phenomena, with those which I have observed in the hot springs and burning heat transmitted through the rocks and soil of the old volcanic island of St. Pauls in the Indian Ocean, have led me to believe that both of these causes, chemical and plutonic, are at work either together or in succession to produce the calorific phenomena at present exhibited in the Geyser region of the coast range. To enter into a philosophical discussion of this subject so exclusively scientific, broad in detail and profound in inquiry, would be out of place here, and I wish only to make record of my observation and views for the purpose of exciting the attention of persons whose education may be better suited than my own to a clear elucidation of so interesting a field of investigation.

After surveying this singular spot to our satisfaction, we continued our stroll down the bed of the chasm and rested for a while in the refreshing shade of some fine oaks which grow on the southern side of the Pluton river. Here I could see the gas bubbling up from a score of minute fissures in the bed of the stream, and in many places whitish deposits were diffused over the stones around them. There are fine trout in this brook, and in spots the sportsman's success is delightful and abundant.

To return to camp, we recrossed the stream, leaping from rock to rock, and began to ascend a slippery trail up the precipitous bank of the river. The dry oats made the soles of our boots as smooth as glass, and in some places the path was very perilous, overhanging precipitous slopes, where a misstep or a slip would have let us down fifty or a hundred feet in the stony bed of the ravine. It was at one of these difficult passes, where the path led up nearly a perpendicular break in the ground some four feet high, and where the toes could only find support in imperfectly formed steps worn in the earth, that a ludicrous incident occurred that made us, who were in advance, laugh so heartily, that we all came near rolling down hill. In our party was a corpulent gentleman, fond of fun, and a lean gentleman, who had joined us at Petaluma, who was fond of poking fun; and it so happened that in this case both found themselves for once in a singular predicament. The lean gentleman was ahead, and the portly gentleman coming up behind out of breath, covered with perspiration, and florid with heat and freight, suddenly perceiving the almost impassible steep, was seized with dizziness and perplexity, and in a broken voice implored his lean companion "for God's sake to lay down on his belly and let him pull himself up by his heels." The latter looked first at himself then at the precipice, then at the perplexity of his friend, and in the most magnanimous manner he laid himself down as requested, and our corpulent and gasping hero laid hold manfully on his friends nether extremities and pulled himself out of his slough of dismay. Notwithstanding the situation of the whole of us was perilous and undesirable, yet the scene exhibited by our worthy companions was so rich, that at the risk of breaking our necks, we made the hills ring with laughter at the expense of the principal jokers of the party.

Thus we enjoyed the jaunt and explorations of this day, mingling scientific curiosity with the frankest social converse, and returned to camp with minds richly laden with knowledge and hearts overflowing with cheerfulness and delight. Here we found Mr. Levy, who had returned from his ride down the country, and his humble cabin was opened to us to sleep in, and a most generous hospitality in every particular was extended to us by him.

Quail shooting, hunting, rides over the hills, foot explorations of ravines through the tangled vegetation, of which we sometimes had to cut our way at the risk of coming in contact with grizzly bears filled up the occupations of the day, and prepared us for another coarse but delicious meal at eventide. The camp fire became again the theater of many a pioneer and Indian tale of interest, excitement or horror; and in these recitals Billy Ray began to unfold the voluminous and hair-breadth experiences which had checkered the wild and yet youthful years of his life. At last the ample hospitality of our new and good friend Levy crowned the charms and adventures of this day's existence, and in preference to sleeping on the ground, we stretched ourselves out six in a bed, which was said to have, on one occasion, accommodated seven.

Respectfully, yours, &c., C. F. WINSLOW.

Our Literary Department.

BOSTON, Sept. 18, 1855.

[CONCLUDED.]

"THE INNS AND OUTS OF PARIS," or Paris by day and night, by Julie de Marguerite. Published by Wm. White Smith, Philadelphia:

There has never been a volume published, which has elicited such unbounded praise, in London and Paris, as well as from all parts of the United States, and although the fascinating work has been issued but a few weeks, the first edition is entirely exhausted, and another in demand. Persons of eminent literary talent have been extravagant in its praise, and no one can read it without pronouncing it the most delightful volume of the season. It is a daguerreotype of the Parisian World, describing its palaces, churches, theatres, people, drives, promenades, and all objects of interest, interspersed with the historical events and thrilling scenes which were enacted in France. Some of the chapters of this work appeared in a New York journal of a high character, from thence they were copied into several European periodicals. Encouraged by this, the author was induced to complete the work. There have been English and Americans, who have resided years in Paris, and never set foot in a real Parisian house and home—for the general opinion is that the Parisians live in the streets, and receive their friends either on the Boulevards or in the cafes. One must go about to see Paris, but to save the trouble, they will find this work will answer all purposes. Too high praise cannot be bestowed upon it, and it is destined to meet with a large sale and unbounded popularity. We cheerfully yield our voice to the general favor accorded to the "Inns and Outs of Paris."

"THE ARCH BISHOP," or Romanism in the United States, by Orville, S. Belisle—12mo. 400 pages, splendidly illustrated—published by Wm. White Smith, Philadelphia:

The writer of the work above mentioned, has made a very bold attempt, and has entered a new field. No one can form an estimate of the value of the work until it is read. It is necessary that the whole book should be examined, that a correct judgment may be formed in regard to its use. This startling romance, is founded in part, on event which have occurred within the author's knowledge, and includes some of the well known occurrences, connected with the progress of Popery in this country, within late years, especially the great anti-Catholic riot in Philadelphia. The American mind is becoming fully awake to the immense interest the work involves, and the deepest interest is manifested to the developments contained in it. This remarkable volume has passed through six large editions, and the demand is increasing. Attention is directed to the startling events in the work—the efforts of Bishops and Priests to obtain possession of church property; the confinement of young females against their will, in convents; the sending of a Nuncio from Rome on a spiritual mission to America; the mockery of the Host being carried through our streets, and the hat of an American citizen cast from his head, because he would not pay obeisance to it, as it passed. The book is bold, truthful, and startling, and is destined to be read in every corner of the land.

"WILD OATS."—No. 25 of Spencer's Boston Theatre, is just received—a comedy, in five acts, by John O'Keeffe. The comedy of Wild Oats was first produced at Convent Garden, London in 1794. It was produced at the Boston Theatre the past year, with approbation. Many who have seen the older Wallack, will remember his assumption of the lively, rollicking, and noble-hearted strolling player. To be found at C. P. Kimball's, San Francisco.

"THE MISTAKE OF A LIFETIME," published by W. V. Spencer, Boston, has been handed us. The book is in paper covers, and written by Waldo Howard. The author says, the two extremes of life created by poverty and riches will be depicted, and the extremes of virtue and vileness passed in review before the mind's eye. The book will be found very interesting and exciting, and will please the California traveler.

MAGAZINES.

Our acknowledgments for Hunt's Merchants' Magazine for September; an excellent number, containing an article in favor of English and American intervention in "Teadom," to allay the excitement there, and to finish a war that will never result in any good. Also a long and very interesting article upon the History of the Town of Quincy, (Mass.,) which will be read with interest. Besides its far-famed granite, it is the birth place of two Presidents of the United States—John Adams and John Quincy Adams—and many visit Quincy from afar, to gaze upon the spot where these illustrious men were born; also the birth-place of Hope, the great European banker, who went from it a poor boy and amassed in foreign lands a princely fortune; and lastly the native place of the editor and proprietor of this Magazine, the first work of the kind ever published which has found its way into every part of the world. Though the circulation of the above Magazine is immense, still there are many who are not aware of the valuable and important commercial statistics, as well as agricultural and mercantile matter with which the columns of the Merchants' Magazine are monthly filled, making it the best and only reliable Magazine for the business man published in the country.

Hovey's Magazine for September comes to us, containing a description of the villas and gardens of Newport, R. I., one of the most fashionable watering places on the Atlantic Coast. Also, a lengthy and interesting article upon the Measure worm, which has been discovered about the trees in New York; a complete drawing of the worm is given. The usual discoveries in Horticulture, and the monthly operations for the Florist, are quite interesting, and sustain the high reputation of the Magazine. Hovey & Co., publishers, Merchants' Row, Boston.

Panorama of Life and Literature, for September, published by Littell, Son & Co.; a very interesting number, and fully keeps up to the standard promised by the publishers. This number contains an interesting article upon Alexander II., the present Emperor of Russia, with other attractive reading.

Harper's Magazine for September, is abounding in treasures for the mind. It has the finest number of engravings yet presented, and is a treat for a month to come. Harper's Story Book, No. 10, contains an entire description of the immense establishment of the Messrs. Harper, with numerous illustrations of the different departments—a rich treat for the juveniles.

C. Reagles, publisher, 208 Broadway, N. York, has sent us the New York Horticultural Review, for October, a new Magazine, and an attractive one, containing articles upon Landscape Gardening, Free Culture, Cultivation of the Grape, etc., with many fine engravings of fruits, new villas, etc., etc.

T. B. Peterson, Philadelphia, has sent us the "School Boy," a new story by Charles Dickens, published regularly by T. B. Peterson. It is not necessary to speak of Dickens' works. They are well known the world over. The works of Dickens have been more extensively read than those of any other author. No one who pretends to have a library, should be without a full set of his novels. The complete set can be furnished by T. B. Peterson, Philadelphia, and all should avail themselves of the opportunity.

Miscellany.

ONE BY ONE.

One by one the sands are flowing,
One by one the moments fall:
Some are coming, some are going,
Do not strive to grasp them all.

One by one thy duties wait thee,
Let thy whole strength go to each,
Let no future dreams elate thee,
Learn thou first what these can teach.

One by one (bright gifts from Heaven)
Joys are sent thee here below,
Take them readily when given,
Ready, too, to let them go.

One by one thy griefs shall meet thee,
Do not fear a thronging band;
One will fade as others greet thee,
Shadows passing through the land.

Do not look at life's long sorrow;
See how small each moment's pain,
God will help thee for to-morrow,
Every day begin again.

Every hour that fleets so slowly,
Has its task to do or bear;
Luminous the crown and holy,
If thou set each gem with care.

Do not linger with regretting,
Or for passion hours despond;
Nor, the daily toil forgetting,
Look too easily beyond.

Hours are golden links, God's token,
Reaching Heaven, but one by one
Take them, lest the chain be broken
Ere the pilgrimage be done.

IT IS HARVEST.

It is harvest! It is harvest!
Fruitful season of delight;
O'er the hills, along the valleys,
How the prospect glads the sight;
Ply the scythe, and ply the sickle,
Blooming maiden, stalwart swain—
Frames wax stronger, hearts grow nobler,
Reaping of the golden grain.

It is harvest! it is harvest,
Garner up the precious corn,
Fill your ricks and fill your barns,
Till the last load home is borne.
But he generous, O ye farmers;
There is plenty, never fear;
Leave for little Ruth the gleaners
Here and there a scattered ear.

It is harvest—it is harvest,
At the last great trumpet's sound,
Who will rank 'mong the full eared wheat?
Who 'mid worthless tares be found?
In life's spring time, gentle reader,
Sow the seeds of love and faith;
There's a harvest, there's a harvest,
And the reaper, it is Death!

The Poor Governess.

BY FRANK HARWOOD.

"How perfectly ridiculous!—did you see Ellen Stanley at Mrs. Mayhew's, Louisa? asked the haughty and fashionable Laura Adams of her companion, as they sat employed with their delicate embroidery the day after an elegant party."

"Yes. And I was perfectly astonished that she presumed to attend a fashionable party, like Mrs. Mayhew's. If I was nothing *more* than she is, I should not dare to be seen by my acquaintances; and yet she goes to parties, as though she was of great consequence."

"None invite her except Mrs. Mahew, and Mrs. Clifton, and a few who pretend to think something of her, because they say she is intelligent and refined. For my part I consider her uncommonly vulgar for mingling in fashionable life," said Mrs. Adams.

"Who is it, Laura, that is so vulgar?" said Mr. Adams who had been dozing on the sofa, as she heard Laura's conservation.

"Oh! only the governess at Mrs. Mayhew's" said Laura.

"Well, what of that? What is there bad about her? One would think she was a renegade by your talk."

"She's nothing but a governess, but she affects so much, that I am disgusted with her."

"Did she ever trouble you?" said her father. "No, and I would wish never to be troubled by her." said Laura haughtily.

"But, come now, I must hear more of this vulgar governess. Who is she? Come,—out with it," said Mr. Adams.

"She is the daughter of a merchant that came from New York sometime ago. Her father is said to have been one of the richest men in the city of New York. But a destructive fire consumed nearly all of his property and ruined him. He came to this city afterward with the wreck of his property and lived a few years in despair and died, leaving one daughter, Ellen."

"And this daughter then turned governess." said her father.

"Yes."

"Well what has that to do with vulgarity?"

"She tries to mingle in fashionable parties, as though she was rich. And then she takes no more notice of me than she would if we were so many seamstresses. She always wears her plain and simple dresses which circumstance turns strangely towards her."

"Well, Miss Laura I see the trouble now. Here's a broke-down merchant's daughter, who has turned governess; and you have refused to patronize her because she is poor—because she no longer rides in her carriage and no more dresses in her stiff ruffled silks. Ah! Miss Laura, I fear your heart is growing proud. Let me tell you that virtue is found oftener in the domicil of the poor, than in the mansion of the rich Let me tell you a little story that happened under my own personal observation, and then see if your heart don't soften some."

"Many years ago, there stood in a distant part of the city an old and dilapidated house, whose clapboards hung by one nail, and whose roof let in the pouring rain to its wretched inmates. In one apartment in the second story lay a woman stretched on a bed of *death*. Beside her knelt a little boy of eleven summers who sobbed so bitterly, that his mother's words were scarcely heard. Although so young, he felt his mother's death in all its bitterness. He knew that when that mother was gone, his last earthly friend was departed. He knew should that life, which was fast ebbing away, become extinct, he would be an orphan alone in a cold and heartless world of strangers. He tried to calm himself, and his mother's voice rose in broken accents to God, in prayer. That night her pure spirit had passed away, and left that tender boy without a known friend on earth, She had been the wife of a respected and honorable mechanic; but by an accident he was injured, and soon sickened and died from internal injury. In the days of their prosperity, they had accumulated considerable of a sum, which was carefully laid by; but in the lingering disease which carried the mother away, their little sum was nearly spent. They had enough to carry them comfortably along, with what she earned. But now it was nearly gone, and who will wonder, that she felt sad to leave a child without money, without friends, and without a home, but alas! it was all over now. A few kind neighbors performed the last sad rites of duty to the dead, and the boy was in reality alone.

On the following day as he was out on the street for some errand,—his eyes full of tears, and his heart cast down, he saw a gentleman just before him drop something on the walk. He picked it up and it proved to be the gentleman's pocketbook; by the name on it, he saw whose it was, and carried it into his store. "Well done, my little lad, you're a man!" said the gentleman, kindly. "You're honest too, I guess you've got a good mother." The little fellow looked so pitiful, and full of sorrow that the gentleman noticed him. "What's the matter, little sir? You look very sorrowful. You want your reward, I suppose. Well, you shall have it." "Oh, no sir! I *don't want* your money." "Not want my money? well, what *do* you want? Come tell me." So he told him his little story of his father's death. then his mother's, and his own unutterable sorrow, and as he concluded, he saw a tear standing in his kind friend's eyes. The gentleman had a little daughter of about his own size who happened to be in the store at this time, and as the lad ended his story, she whispered a few words in her *father's* ear. What that was you may guess, for he immediately said, "well, well, we'll see about it." "Come my lad show me your home?" The gentleman seemed perfectly satisfied and said. "Well sir, how would you like to live with me? I have'nt got any little boy." "O sir, I should be *so* happy. How glad it would have made mother to have known that I have got a friend." "You've got a friend in me, and I guess you'll have one in little Annette."

"The boy soon went to live with his kind benefactor, and found a generous foster father and mother. He found in 'Annette' a gentle and affectionate sister. Time passed on and the boy grew to be a man; and with his growth grew those principles of honesty and purity that had been instilled into his mind, by a lost mother. You may think that I know much of other people's affairs, but that youth was my most intimate friend. We were much together, and had no secrets that were unknown to each other. My friend's foster-father had given him a good education, and brought him up as he would his own son. He was so much pleased with his honest integrity and upright principles, that he took him in as partner, and in after years, when the old gentleman's health failed, he became the heir to his immense wealth, by taking the beautiful Annette to be his bride. Perhaps you will think it strange that an entire stranger should take notice of a little boy, and adopt him for his son. But when he heard the boy's name, he found it was the son of an old and intimate friend of his youth. Hence his kindness. And now Miss Laura, when you see a poor child, or a poor governess, remember that perhaps they would make the brightest stars in society, if they had the chance. Remember also that virtue and piety are oftener found among the poor, than among the rich. And when you scorn a poor child, or pass heedless by a poor boy whose bright face is lit up with smiles, and his large round eyes look happiness, or his face wears the expression of sorrow,—then stop and help that lad along by some kind word and look, for remember *that little boy*, years ago, was your *father*, and *that kind girl* is your *mother!*"—*Drew's Rural Intelligencer.*

SOUND DOCTRINES.—"*Better days Coming.*" The following truthful doctrine will find response in every heart that is true to nature and natures God. In a sermon, delivered by Rev. Dr. Bellows, of New York, before the Western Unitarian Conference, is the following paragraph:

"For my part, I say it in a solemn way. I have lived to become supremely suspicious of any one who does not love pleasure in any form. I cannot trust the man that never amuses himself. always sober—that has no appetite for natural pleasures of sportiveness and play that are common in the human soul. I know that nature takes her revenge on such virtuous. I expect to find secret vices, malignant sins, or horrid crimes springing up in this hot bed of confined air and imprisoned space; and, therefore, it gives me a sincere moral gratification anywhere, and in any community, to see innocent pleasures, and popular amusements resisting the religious bigotry that frowns so unwisely upon them. Anything is better than that dark, dead, unhappy social life—prey to ennui and morbid excitement, which results from unmitigated puritanism, whose second crop is usually unbridled license and infamous folly."

LADY EDITORS.—Several of our exchanges are edited, in part, or chiefly, by ladies, and we gladly bear testimony to the fact, that most of them are superior to papers of similar aim, which are conducted by men only. They are more interesting, and have more literary merit. They are less devoted to kindling a blind, political fury in their readers, have more space for matters of permanent interest, and are more bold in the expression of opinion. Indeed, we are inclined to think, that the editorial profession is one in which a considerable number of intelligent women might find, and perhaps, in time, will find, congenial and profitable employment; particularly since, in that profession, a lady may act beneficially upon the public mind, without the inconvenience of personal publicity. Margaret Fuller, it will be remembered, conducted the literary department of a daily paper, with general acceptance. Mary Howitt, Eliza Cook, Mrs. Hall, are editors; and, in this country, we could give a long list of editorial ladies, many of whom are known in that capacity, and more of whom are not. It may not be advisable, in any case, for a lady to set up a paper, and become tho principal and responsible editor; that would be too toilsome and distracting, and, probably, not advantageous to the public; if it should consist of only three members, we think an accomplished woman might be included, much to the advantage of the paper and its readers.—*Home Journal.*

ELOQUENT AND TRUE.—The London (Eng.) Advertiser, speaking of the United States and Great Britain, uses the following language.

"Contemplate England, groaning with taxation and struggling in sanguinary war; with her trade deranged, her population discontented, her government the corrupt machine of an oligarchy, and her revenues squandered for she knows not what; and contrast her with America—the America that the British cabinet ministers treat with so much indifference, whose statesmen are cultivating the arts of peace, and whose commerce is gathering a golden harvest to the nation. She it is that stands boldly forward to her civil greatness; she it is that presents a striking contrast to the military despotisms of Europe; she it is that—with her thousand miles of unguarded coast, her unwalled cities, her meager navy—combines within herself the elements necessary to a great military nation. Peace reigns at her fireside; her throne is not in mourning. Her legislators are devising means to relieve an overflowing treasury, her trade is vigorous, her people are increasing beyond comparison in wealth, her government is at least cheap and useful. Would that we could say the same! England spends her blood and treasure in fighting the battles of unthankful neighbors, America fights only her own battles—she fights them quick and well."

THOUGHT.—Thought is the noblest attribute of the soul—the chief quality which raises man above the brute—a source of unceasing enjoyment, and the fountain from whence comes the incentive to every noble action. It is a faculty which is strengthened by use, and made healthful and vigorous by age, The mortal frame may be bowed low beneath the ponderous weight of rolling years—it may stand leaning over the opening grave, still, thought is unshaken. It can wander back, with electric speed through the dim vista of the past, and ponder over by-gone deeds. It can glide along on fancy's buoyant pinions into visionary worlds, and hold converse with cohorts of airy spirits. It can penetrate the dark clouds, and ramble over the trackless plains of imminensity among the unnumbered bodies that move on in silent majesty through the deep blue concave of the skies. It can scale the sacred battlements of high heaven, and be among the sweet music of the airy choir that surrounds the crystal throne of the great Jehovah. It can sink down into gloomy Tartarus amid Plato's miserable subjects, who are compelled to drink the deadly waters of the Stygean river. It knows no elevation too steep to climb, no distance too far to travel, and no depth too deep to fathom.

Thought never dies. It will live after the mortal part shall have moulded into dust; and the marble slab, erected in honor of its name and remembrance, shall have crumbled to atoms beneath the destroying touch of ages. Eternity shall acknowledge it as an equal in point of duration, and realms yet unexplored be brought under its investigation.—*Waverly.*

YANKEE AGRICULTURAL IMPLEMENTS IN ENGLAND.—Salmon's American [illegible] has obtained a silver medal, and attracted much attention at the annual exhibition of the Royal Agricultural Society of England, which took place at Chelmsford about the 24th of July last. The report of the Agricultural Gazette says it supersedes [illegible] peas, beans [illegible] from clover, and [illegible] wheat, and appears to [illegible] operation. Honorable [illegible] for the extraordinary operation recommended [illegible] advertisement [illegible] A Yankee [illegible] separate new from old wheat.

Ladies' Department.

One of "Betty's" Admirers.

SUTTER COUNTY, Oct. 14, 1855.

MESSRS. EDITORS: SIRS—I see by your last issue, now before me, that "Betty," with her characteristic kindness, has condescended to notice my humble effort directed to her praise. Now, I hardly know how to proceed. My first impulse upon reading her beautiful reply, was, to petition you for her private address, that I might open a private correspondence, and, like Ovid, lay siege to her heart through the medium of sonnet; but upon a second thought, I have concluded that as the days of chivalry and romance are past, and bloomers, woman's rights, and strong minded women have taken their place, that it would be vain to expect a young lady, though possessing all the virtues of olden days, to surrender her fort of love to a more unsubstantial tissue of love sonnets, without knowing the strength and valor of the besieging party; I therefore think it better to avail myself of the frank invitation offered me me to visit Martinfield; and if you will be so kind as to send me by private note, her real name, (if I have not got it) and place of residence, I will then set out—

In search of scenes my fancy raised to view,
The cot where dwells that maiden fair and kind,
Whose heart is open, generous, frank and true;
By virtue, truth and purity refined.

Yours respectfully, A FARMER.

Home and Woman.

If ever there has been a more touching and eloquent eulogium upon the charms of home, and its dearest treasure, woman, than is contained in the following extract from the Inquirer, it has not been our fortune to meet it:—

"Our homes—what is their corner-stone but the virtue of woman? And on what does the social well-being rest but on our homes? Must we not trace all other blessings of civilized life to the door of our private dwellings? Are not our hearth-stones guarded by the holy forms of conjugal, filial, and parental love, the corner stones of Church and State—more sacred than either—more necessary than both? Let our temples crumble and our academies decay—let every public edifice, our halls of justice, and our capitals of State, be leveled with the dust—but spare our homes. Man did not invent and he cannot improve or abrogate them. A private shelter to cover in two hearts dearer to each other than all the world; high walls to exclude the profane eyes of every human being—seclusion enough for children to feel that mother is a peculiar name—this is home, and here is the birth-place of every virtuous impulse; of every sacred thought. Here the Church and the State must come for their origin and support.

Oh, spare our homes! The love we experience there gives us our faith in an intimate goodness; the purity and disinterested tenderness of home is our earnest of a better world. In the relations there established and fostered, do we find through life the chief solace and joy of existence. What friends deserve the name compared with those whom a birthright gave us? One mother is worth a thousand friends—one sister dearer than twenty intimate companions. We who have played on the same hearth, under the light of smiles, who date back to the same season of innocence and hope, in whose veins run the same blood; do we not find that years only make more sacred and important the tie that binds us?—Boldness may spring up, distance may separate, different spheres may divide; but those who continue to love at all, must find that the friends who God himself gave, are wholly unlike any we choose for ourselves, and that the yearning for these is the strongest spark in our expiring affection."

WOMAN'S TRUE BEAUTY.—It is a low and degrading idea of that sex which was created to refine the joys and soften the cares of humanity by the most agreeable participation, to consider them merely as objects of sight. This is abridging them of their natural extent of power, to put them upon a level with their pictures. How much nobler is the [illegible] of beauty heightened by virtue and [illegible] as it draws no observation. Colors artfully spread upon canvas may entertain the eye but not the heart; and [illegible] no more are to the natural graces of her person any exciting qualities, but to allure and to amuse as a picture but not to triumph as a beauty. [illegible]

[illegible]

A PRIVATE CONFESSION.—[illegible]

SPECIAL NOTICES.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the Executive Committee.

v3-26 C. I. HUTCHINSON, President.

☞ **Oxygenated Bitters.**—The annexed statement of Prof. A. A. HAYES, M. D. State a-sayer, is ample testimony of the scientific manner in which this medicine is compounded, and recommends it to Professional Men, as worthy a fair trial in their practice:

An opinion having been asked for of me, in consequence of the formula for preparing oxgenated bitters having been known to me, I express the following, in form:

The composition of these Bitters includes those medicinal substances which experienced physicians have long resorted to for special action on the system, when deranged by fevers, Dyspepsia, Agues, and General Debility, resulting from exposure or climate influence.

These are rendered permanent, and remain active, in this preparation, as a consequence of the scientific manner in which they are combined.

It was a well founded inference, that the preparation, used in larger or smaller doses, would prove a valuable *General Medicine*, which experience has demonstrated.

In this medicine, no metallic salts can be found, by the most delicate chemical trials. Respectfully,

A. A. HAYES, M. D.,
Assayer to the State of Massachusetts.

No. 1 Pine street, Boston, 16th Dec. 1850.

☞ **Bronchitis and Cough Cured.**

BOSTON, August 15.

Dr. S. W. Fowle—Dear Sir: Having been troubled for a considerable time with a bad Cough and Bronchial affection, I was induced to try a bottle of DR. WISTAR'S BALSAM OF WILD CHERRY, which I am happy to say entirely removed the difficulty. I deem it but justice to say thus much for the benefit of those who may be similarly afflicted.

GEORGE H. DAVIS, (Firm of Hallett & Davis,)
Piano-Forte Manufacturers, Boston.

I hereby certify that I am personally acquainted with George H. Davis, Esq, and have the fullest confidence in the above statement. H. G. BARRUS, Practising Physician.

Boston, Aug. 15.

Such testimony can be relied on.

☞ Be sure it is signed I. BUTTS on the wrapper.

Agent for Sacramento, C. MORRILL, corner K and Third streets.

Sold by all Druggists. v4 1 3 2w

☞ **Roman Eye Balsam.**—Many persons are no doubt serious sufferers from that partial blindness caused by the bright glare of the sun; all who are exposed for any length of time feel a greater or less amount of pain, while to those who are in the slightest degree susceptible of the affections of the eyes, it is often extremely dangerous. Against this difficulty the Roman Eye Balsam is an unfailing specific. Its application instantly relieves the pain and gradually strengthens the eye so that it can bear the sun without complaint. It is also invaluable for inflammation of the eyes, and for that troublesome burning twitching of the lids.

OXYGENATED BITTERS,

CONTAINING NO ALCOHOL,

A CURE FOR

Dyspepsia, in all its various forms; Heartburn, Habitual Costiveness, Acid Stomach, Loss of Appetite, Nervousness, Coldness of the Extremities, General Debility and Asthma.

THESE Bitters are approved by some of the best physicians, who use them in their practice. Scientific men have more difficulty in overcoming and controlling the various symptoms of Dyspepsia than almost any disease in the world. They are so various, in different individuals and cases, that it has seemed impossible sometimes to obtain even temporary relief from suffering. But a medicine has been discovered which proves, beyond a doubt, that in most cases a permanent cure can be effected. By avoiding stimulants, and using the *Oxygenated Bitters* strictly according to directions, a healthy tone is imparted to the digestive system, and strength to perform its natural functions.

Ample testimony to the truth of this can be had by reference to numerous certificates in possession of the general agents. We have no hesitation in pronouncing the Bitters a sure cure for **DYSPEPSIA.**

From J. C. Dunn, Esq., City Treasurer.

BOSTON, June 6, 1852.

Gentlemen: I have been for some years troubled occasionally with severe attacks of Indigestion; have consulted many physicians, tried Allopathy and Homeopathy, and can truly say, I have received more speedy and effectual relief from the use of *Oxygenated Bitters*, procured from you, than from all other remedies, and most cheerfully recommend them to all who suffer from a similar affliction. Yours truly,

JAMES C. DUNN.

DR. HENRY E. MORRILL, a skillful Physician of New York city, in his remarks on Dyspepsia, says: "The most effectual medicine to improve the tone and energy of the stomach, is that prepared by Dr. George B. Greene, and called the Oxygenated Bitters. I would publish the receipt for preparing this valuable medicine, if I knew what it was, but as I do not, I can only recommend its use. It seems to me to be improperly called 'Bitters,' at least in the popular acceptation of that term, for it contains no Alcohol or other Spirit, and is rather sour than bitter. Though here, by the way, I cannot too earnestly caution the dyspeptic sufferer against using the thousand and one advertised 'Bitters,' the basis of which is alcohol, or other ardent spirits. They impart no real energy to the stomach.

The stimulation which they excite is only temporary, and sure to be followed by a reaction which at length will inevitably wear out the stomach. This medicine obviates these objections. It has been analyzed by that distinguished chemist, Prof Hayes, M. D., *State Assayer of Massachusetts*, who declares that 'the medicinal articles used are those prescribed by the most eminent physicians, for the diseases for which these Bitters have been so eminently successful.' I have employed them in a multitude of cases, and have uniformly found that when used according to the directions, they gradually, but surely, remove, one by one, the various distressing symptoms which cluster around the confirmed dyspeptic, restore to the stomach its lost energies, and thus lead the patient back to the enjoyment of permanent health and strength."

It has also been used by the following persons, and received their unqualified approbation:

Prof. EDWARD E. PHELPS, M. D., Dartmouth College.
Hon. MYRON LAWRENCE, Ex-President Mass. Senate.
" SAMUEL S. PHELPS, U. S. Senator from Vermont.
" J. F. SIMMONS, U. S. Senator from Rhode Island.
" L. H. ARNOLD, formerly Governor of Rhode Island.
" H. D. FOSTER, Member of Congress from Pennsylvania.
" SOLOMON FOOT, U. S. Senator from Vermont.

Many other individuals of the highest respectability can be referred to, who will confirm all that has been said in favor of the Oxygenated Bitters

Prepared by DR. GEORGE B. GREEN.

Borders—Of every description, suitable to match. Also, an endless variety of

Paper Curtains—With a great variety of

Window Shades—Among which are Landscape, Street, and City Views, Bouquet Centers, &c.

For sale, wholesale and retail, by

GEO. W. CLARK, 131 Clay street, near Sansome,
v4-17 3m San Francisco.

Important to Millers and Farmers.

THE undersigned having discovered a remedy for the injury to wheat arising from Smut, and a plan of removing the same, has secured by a "Patent Right," his title to the same.

From the experiments made by experienced millers, the most satisfactory results have been achieved. From well attested trials and repeated proofs of the capabilities of its power to clean the smut from the wheat, it has been ascertained that the most perfect purification takes place in the wheat, while at the same time a large saving of time, labor and cost accrues to the miller, and the flour is as pure and white as from the finest wheat.

Farmers who have crops of wheat, now unharvested, may yet save them, for they can easily be assured that their grain can be restored and the value saved to them.

Licences, with all particulars for the use of this Patent Right, can be obtained at the warehouse of the subscriber, on Clay street, between Drum and East, San Francisco.

v4-2 CHARLES CAMPBELL.

New Invention!

Now, Count Your Chickens!!

THE undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls.

After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from *four to five hundred eggs* can be converted daily into young Chickens, Ducks, Goslings or Turkeys. After the first brood, i. e., nineteen or twenty days, this is the certain result; and it requires but little attention—once every twenty-four hours—the cost of fuel and preparation being only some $2 50 to $3 every twenty days.

This invention will be in full operation at the State Fair in the city of Sacramento, in September next, when all information will be presented. They will soon be offered for sale. In the meantime information can be obtained at the office of the CALIFORNIA FARMER; or letters can be addressed to me at San Francisco. JOHN J. FULTON,

v3 26 Third street, South Beach, near South Park.

Benicia Female Seminary.

THE Fourth year of this institution opens July 23, 1855. This is one of the oldest Female Seminaries in the State, and therefore well known. There is now a full corps of teachers, and those who are well qualified to fill their respective departments. A Gardener with Capital Wanted.

A GARDENER of Experience and of Education is wanted; one who is fully qualified to take charge of a valuable Nursery and Garden, and who can command a moderate capital of $2,000 or $3,000 can hear of a situation where he can join in this interest, which, rightly conducted, will lead to a satisfactory future.

A note, with real signature and specifications, addressed to "CALIFORNIA FARMER OFFICE," will be duly attended to. v4-15 1m

NEW YORK.

Fruit and Ornamental Trees.

[illegible]

Apple, Pear, Peach, Plum, Cherry, Quince, Nectarine, Apricot, Grape Vines, Gooseberry, Currant, Raspberry Vines, &c.

ALSO,

Green House Plants of every rare and beautiful variety; Flowers, Shrubs, and Plants, Shade and Ornamental Trees, Bulbous Roots, &c., &c., &c.

Those will be ready as soon as the season of transplanting shall commence. Orders will be received at any time, and delivered in the order in which they are booked.

Garden Seeds.

THE Proprietor will also offer a large variety of Fresh Garden Seeds, at Wholesale and Retail, of his own raising and putting up. Great care has been taken to select the very best varieties, and to keep them pure and unmixed. They are all of the present year's growth, the same varieties having been used by the Proprietor in his own grounds for the last three years. The produce which has been exhibited in our markets is the best proof of their quality.

The undersigned would be pleased to see purchasers at his grounds, where the produce can always be seen in every stage of growth. [v4-17] A. P. SMITH.

SAN JOSE NURSERY.

THE San Jose Nursery and Gardens, formerly known as L. Provost & Co., is now carried on in all its branches under the immediate eye of the present proprietor, who is sole director and owner of the same, having purchased the interest of his former partner.

L. Provost, the present owner, will now offer to his patrons and friends one of the largest and finest collections of Fruit Trees that can be found in any Nursery in the State, consisting of all the most desirable kinds of Apple, Pear, Plum, Cherry, Peach, Apricot, Nectarines and Quince, with a very extensive lot of Grapes and Figs, a beautiful lot of choice Ornamental Trees of rare kinds, and Green House Plants in great variety.

The collection of Roses in these Gardens cannot be equalled, for nearly *twenty thousand* of the most beautiful plants, large sizes and rare kinds, can be found here.

Purchasers will be sure to be satisfied if they will visit the Gardens, where they can find much to please them, which the Proprietor will show them with pleasure.

☞ The Nursery is situated in the city of San Jose, immediately above the City Mills. L. PROVOST,

v4-17 Nurseryman and Florist.

PIONEER NURSERY, ALAMEDA.

S. P. Ruggles' Power Press Manufacturing Co.

[*Incorporated February 8, 1854.*]

THE above named company having purchased of the well known inventor, S. P. Ruggles, Esq., his Patents connected with the Printing Business, are now manufacturing under Mr. Ruggles' immediate superintendence, the following machines, viz.:

	Size of Form in Inches.
Half Sheet Combination Engine	18 by 12
Quarter Sheet Combination Engine	12½ by 9
Half Sheet Cap Job Rotary	10½ by 7½
Card and Bill Head Rotary	7 by 4½
Diamond Rotary Card Press	4½ by 3
Circular and Hat-tip Head Press	8 by 6
Embossing Press	18 by 10
Cast Iron Imposing Table	26 by 22
Shaving Machine, shares	27 by 16
Paper Cutter	cuts 27
Card Cutter, improved	cuts 25
Bookbinders' Rotary Shears	cuts 25
" " larger size, in proportion.	

Those presses are considered by the Job Printers as the best adapted to their wants of any machines ever manufactured.

All orders addressed to their agent, M. B. BIGELOW, 152 Washington street, Boston, Mass., will be promptly attended to.

Mr. Ruggles has also sold to the CUTTING MACHINE MANUFACTURING CO., his Patent ROTATING SHEARS, for cutting sheet tin, iron, copper, brass, zinc, steel, nail and boiler plates, and all other metallic sheets. This is entirely a new process for cutting metals, and is destined to supersede all other machines for that purpose.

ANSON HARDY, Agent,
152 Washington street, Boston.

And to a third company, called the BOSTON HAND STAMP CO., he has sold his patent for a very ingenious Flexible Hand Stamp, whereby perfect impressions may be made at the rate of sixty per minute, the die adapting itself to the surface to be printed on. A very convenient article for all business men.

v4-12 1y M. B. BIGELOW, Agent, Boston.

TO FARMERS.

For the destruction of Caukor Worms, Borers, Grubs, &c., &c., &c.

THE MURIATE OF LIME.

A SUPERIOR fertilizer, and certain destroyer of the Canker Worm, and other destructive insects. It has been composted to take the place of more costly manures, guano, &c., to which it has been pronounced fully equal, and in some respects superior, by those who have tested it during the two past seasons.

As a certain and sure destroyer of the Canker Worm, which has committed such ravages among the fruit trees the past season; of Grubs, Borers and other Worms, which oftentimes render the labor of the farmer of no avail, its qualities have been fully and successfully proved. For this purpose its success (in New England) has been such as to warrant the belief that it will be a sure preventive to the ravages of the Grasshopper, which have been so great the past season in California.

A couple and testimonials from Agriculturists of the first respectability may be seen at the Office of the CALIFORNIA FARMER, and orders sent through Messrs. WARREN & SON will be faithfully fulfilled.

This article is put up in bags of 150 and 200 lbs. each, or in barrels of 250 lbs. JAMES GOULD,

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 224 bushels, of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both kinds of Power, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. If the crops be extraordinarily heavy or light, greater or less results will follow.

These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by this Circulars, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and full purchase money refunded if not found acceptable to purchasers.

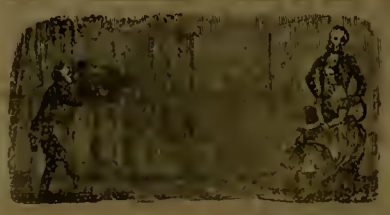
The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, they hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.

They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery, Implements and Seeds, which are all new and of the most approved and complete kinds extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.



The attention of a discerning public is solicited to our present stock of goods, before selecting and purchasing the coming season.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishes PERFECT LIKENESSES? Because he has now the most splendid Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instrument containing lenses [illegible] perfect, and with greater power than any one before in this country.

2d. Because he has the *largest light* in the [illegible] which he can form through a [illegible] side, and [illegible] light—that now enables [illegible] the great [illegible] ty we have in this city [illegible] to enter [illegible] rooms [illegible] great [illegible] arrangements [illegible] lights.

3d. Having the largest light [illegible] enabled to make [illegible] of the [illegible] ty [illegible] in the city; [illegible] pictures [illegible] be seen, [illegible] we [illegible] the [illegible] pictures taken [illegible] ion.

4th. Being very [illegible] ly supplied with a [illegible] silver [illegible] and [illegible] the [illegible] ion, as we now [illegible] other artists.

So [illegible] ex- [illegible] brought [illegible] and [illegible] from [illegible] Also, [illegible] Frames [illegible] Lockets, [illegible] Pins, [illegible] Rings, [illegible] Cases, [illegible] Velvets, [illegible] Plates, [illegible] Chemicals, [illegible] Mats, [illegible] Glasses, [illegible] Mats, [illegible] Mats, [illegible] Glasses, [illegible] Mats, [illegible] Glasses, [illegible] Mats, [illegible] Glasses

Varieties.

AN INCIDENT FROM EXPERIENCES IN SCHOOL TEACHING.—One day, I saw a little fellow with a little witch of a girl, endeavoring, if I interpreted the manifestations right, to kiss her. "Tommy," said I, "what are you doing there?" "He wath tryin' to kith me, that he wath, thur," and she eyed him keenly. "Why, Lucy, what prompted him to act so ungentlemanly right here in school?" I asked, anticipating some fun. "Oh! he hitched up here and thed he wanted me to kith *him*, and I told him I wouldn't kith thuch a thumthy boy as he ith: then he thed he'd kith me, and I told him he *dathn't;* but he thed he *would* do it, and I told him I would tell the mathter if he did; but he thed he didn't care a thnap for the mathter, and then tried to kith me *tho* hard—" and here the little thing sighed "Why didn't you tell *me*, as you said you would?" I asked in a pleasant manner. "Oh!" she replied with a *nairete* I did not often see, "I didn't care much if he did kith me, and tho I let 'im." Here the whole school, who had been listening intently, broke out in an uproarious laugh, while our little hero and heroine blushed deeply.—*Cincinnati Times.*

"COMMON PEOPLE," said Johnson, "do not accurately adapt their words to their thoughts, nor their thoughts to the objects;"—that is to say, they neither see truly nor speak truly, and in this respect children, half-educated women, and ill educated men, are the "common people." It is one of the serious mistakes in education that we are not sufficiently careful to habituate children to the accurate use of words. Accuracy of language is one of the bulwarks of truth. If we looked into the matter we should probably find that all varieties and modifications of conscious and unconscious lying—as exaggeration, equivocation, evasion, misrepresentation—might be traced to the early misuse of words; therefore the contemptuous, careless tone in which people say sometimes:—"words—words—mere words!" is unthinking and unwise.

HOW TO DRIVE A NAIL.—In driving a cut nail into hard wood, its entrance will be much facilitated by dipping it into oil, or what will answer nearly as well, wet it with water or saliva. Experienced carpenters are in the habit of putting a nail into the mouth to wet it, before attempting to drive it into hard wood. When a nail is to remain permantly, salt water or salvia is preferable to oil, as the former will rust the nail and cause it to take a firmer hold. In all cases it is better to insert a nail so that its widest diameter shall stand parallel with the grain of the wood. This is generally done in thin boards where there is danger of splitting, but it should always be done, even if nailing into a solid piece of timber; for when a rupture does not take place by setting the wide part of the nail across the grain, yet a slight opening is produced near the nail, which admits air and moisture and hastens decay around it.—*Boston Post.*

WHEN Everett was entertained at a public dinner before leaving Boston, Judge Story gave as a sentiment—"Genius is sure to be welcome where Ever-ett goes." Everett responded—"Law, equity and jurisprudence: no efforts can raise them above one Story."

PERUVIAN FEBRIFUGE,

FOR THE PREVENTION AND CURE OF

FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THIS preparation is intended especially as a remedy for the prevention and cure of Fever and Ague, but it is equally adapted to other forms of disease, such as bilious, intermittent and remittent fevers, dumb ague, &c. Its combination being entirely new, it differs widely in its therapeutic effects and operation on the system, from other preparations designed to remove the disease; and such has been the uniform success in its administration, that no case is known where it has failed to cure when timely taken. A single teaspoonful will often prevent an attack of chills and fever; and while operating so effectually as a palliative, its permanency is equally reliable, and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians with the most signal success. In all climates where bilious and remittent fevers prevail, this remedy will be found invaluable, and no person traveling through, or residing in infected districts, should be without it.

Read the following Testimony.

BROOKLYN, N. Y., Aug. 25, 1853.

Messrs. A. B. & D. SANDS—Gentlemen: Having been the past year severely afflicted with Fever and Ague, and living in a district where I have been constantly exposed to repeated attacks, I tried the most approved remedies for the cure of the complaint, and among them took four bottles of Indian Cholagogue, without producing anything but a partial relief. By the advice of a friend, I was induced to try the Peruvian Febrifuge and am happy to say the very first dose did me much good, and less than one bottle entirely broke up the chills, restored my appetite, regulated my bowels, and effected an entire cure. It also cured one of my children, afflicted the same as myself, and I have enough left to cure two or three more. A desire to relieve those suffering, as I have done, alone induces me to make the above statement. Yours, very truly,

EDWARD MEHER.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-5 3m.

Cooper's Eye, Ear and Orthopædic Infirmary,

San Francisco.

No. 14 Sansome street, near the Russette House.

PATIENTS laboring under Disease of the Eye, the Ear, and those afflicted with all varieties of deformities, resorting to this Institution, will find at once a home, where Misers as well as others can be accommodated with board and comfortable rooms, in plain or costly style, according to their taste.

Dr. Cooper has visited all the important hospitals in Europe, for the purpose of extending his knowledge of medicine and surgery, and will give the Infirmary his immediate supervision.

N. B.—All Surgical Operations free to patients who present themselves at the clinic on Wednesdays and Saturdays.

For particulars apply to DR. E. S. COOPER, at the Infirmary. v4-10 3m.

HOTELS.

MURRAY'S WESTERN HOUSE,

AND

General Office of the California Stage Company.

Corner of Second and D streets,.....MARYSVILLE.

☞ Open all Night. ☜

THIS superb first-class Hotel is by far the most capacious and elegant one in California, out of San Francisco, and is excelled by none in that city. It is of brick, perfectly fire-proof, four stories high, and fronts 103 feet on Second street, and 80 feet on D street. Two hundred persons can be accommodated with entire ease, and in the most comfortable style. Particular attention is paid to the wants and comforts of Families.

Its location is central, and is the General Depot of Staging and Steamboating.

Travelers can rely upon being *called in time* for any boat or stage leaving the city.

Those who desire, can entrust their TREASURE and BAGGAGE to the proprietor in person, who is the sole manager of the establishment, and who will be responsible for the same.

Rates of Charges.

Board without lodging, per week	$12 00
do with lodging, per week	$15 to $20 00
do without lodging, per day	$2 50
do with lodging, per day	$3 25 to $4 00

Lodging, 75 cts., $1 and $2 per night.

v4-6 R. J. MURRAY, Sole Proprietor.

Beaty's Hotel,

(Formerly the Mansion House,)

SAN JOSE.

A. S. BEATY, Proprietor of the above Hotel, begs to inform his old friends and the public, that he has removed from the "Wood Lawn Hotel," Pelgas Ranch, to the above premises, and is now prepared for their reception under more favorable circumstances than heretofore.

He begs to assure all who may favor him with a visit, that no pains will be spared to merit the patronage of the public, and make "Beaty's Hotel," San Jose, second to none in the State.

Gentlemen with their Families visiting San Jose, the Quicksilver Mines, &c., &c., will find at this House suitable accommodations. A. S. BEATY, Proprietor.

☞ HORSES KEPT AT LIVERY.—Stabling, Hay and Grain, and "Turn Outs" provided for Pleasure Parties.

Dillon, Hedge & Co.'s Line of Stages for San Jose, Santa Cruz, Monterey, and the Quicksilver Mines put up at this Establishment. v 4-12 tf

American Hotel, Benicia.

THIS HOUSE has been established *Five Years*, without interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.

3v-16 1st C. M. DAVIS, Proprietor.

International Hotel.

THE extensive addition to this Hotel is now finished and ready for occupation, making altogether *one hundred and fifty rooms*. Suites of rooms for families, furnished or unfurnished; also, single rooms to let on reasonable terms.

Day Board—Ten Dollars per week.

This spacious Hall—85 by 35 feet—is elegantly furnished and lighted with gas, with Supper Room that will seat two hundred and fifty, will be let on reasonable terms for Balls, Concerts, Dinner Parties, &c. PECK & FISHER.

San Francisco, Jan. 9, 1855. v4-7

Rassette House.

SAN FRANCISCO,.....CAL.

THIS HOTEL offers inducements to persons visiting San Francisco, unequalled by any on the Pacific Coast.

Gentlemen can be accommodated with single rooms, or families with suites of rooms.

The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. v4-1

Something New and Wonderful in the CALIFORNIA ARTS.

JAMES W. JOHNSTON, Daguerrean Artist, southeast corner of the Plaza, has the pleasure of announcing to the public, from whom he has received many substantial favors, that he has just completed the *enlargement of his Gallery*, and combined with it several magnificent features of the Arts heretofore entirely unknown on the Pacific Coast. He is now prepared to execute in superior style—

1st. Daguerreotypes, as heretofore, on metallic plates, with or without coloring.

2d. Stereoscope Likenesses and Views from Nature.

3d. Daguerreotypes on *Glass* and *Paper*—the most splendid and remarkable discovery of the age. These Miniatures are susceptible of being worked up by the brush of the Painter, to embody all the freshness and naturalness of life, at about one-half the cost ordinarily attending miniatures on Ivory, which they far surpass in correctness of delineation. The business has now been commenced at Johnson's Gallery, for the first time in California, where Ladies and Gentlemen are invited to call and examine specimens.

Connected with Johnston's Rooms is a Portrait Gallery, also, where Mr. THOMAS S. OFFICER, late of New York, is prepared to execute Portraits on Canvass in elegant and life-like style.

☞ Call and behold the latest triumphs of Art. v4-15

GOLDEN GATE CLOTHING WAREHOUSE.

☞ CLOSED ON SUNDAY. ☜

MEDICAL.

DR. GUYSOTT'S IMPROVED

Extract of Yellow Dock and Sarsaparilla

Is acknowledged to be the best Sarsaparilla made, as is Certified by the Wonderful Cures it has performed.

☞ Remember this is the only True Original Article.

This Medicine, when used according to the directions,

Will Cure Without Fail,

Scrofula, or King's Evil, Cancers, Tumors, Eruptions of the Skin, Erysipelas, Chronic Sore Eyes, Ringworm, or Tetter; Scald Head, Rheumatism, Pains in the Bones and Joints, Old Sores and Ulcers, Swelling of the Glands, Syphilis, Dyspepsia, Salt Rheum, Disease of the Kidneys, Loss of Appetite, Disease arising from the use of Mercury, Pain in the Side and the Shoulders, General Debility, Jaundice, and Costiveness.

The Best Female Medicine Known.

The Yellow Dock and Sarsaparilla is peculiarly adapted for females of delicate health, resulting from irregularity of menstrual discharges, and other diseases peculiar to their sex. We assure the afflicted, that a bottle or two of DR. GUYSOTT'S EXTRACT OF YELLOW DOCK AND SARSAPARILLA will at once regulate those difficulties and renew the natural energies.

Syphilis, Scrofula, and Diseased Blood.

DR. GUYSOTT'S IMPROVED EXTRACT OF YELLOW DOCK AND SARSAPARILLA is a true specific. The proprietors have in their possession over one hundred certificates of the most extraordinary cures effected by it. We can safely say—TRY IT. It revives the drooping constitution, eradicates all bad humors from the Blood, and by its tonic properties restores the invalid to life and vigor. As a spring and summer medicine it has no equal. Its singularly efficacious action on the blood, its strengthening and vivifying action on the system, stands pre-eminent above all other Sarsaparillas. If you would have the rose brought back to your cheek, a clear, healthy and transparent skin, and life and vigor infused through the system, take Guysott's Extract of Yellow Dock and Sarsaparilla. It contains more of the pure Honduras Sarsaparilla than any other preparation extant, which is chemically combined with the Extract of Yellow Dock and the Extract of Wild Cherry, thus making the remedy more thoroughly efficient than any other Sarsaparilla before the public. At the same time it is perfectly free from all mineral poisons, which cannot be said of any other Sarsaparilla compounds.

Sold by all the Druggists in California and Oregon.

DR. R. H. McDONALD, Sacramento.

v4-15 RICE & COFFIN, Agents, Marysville.

SANDS' SARSAPARILLA.

IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of *Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt Rheum, Fever Sores, Erysipelas, Pimples, Blits, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.*

IN this preparation all the restorative properties of the root are concentrated in their utmost strength and efficacy; but while Sarsaparilla Root forms an important part of its combination, it is, at the same time, compounded with other vegetable remedies of great power, and it is in the peculiar combination and scientific manner of its preparation, that its remarkable success in the cure of disease depends. It acts simultaneously upon the *stomach*, the *circulation* and the *bowels*; and thus three processes, which are ordinarily the result of the three different kinds of medicine, are carried on at the same time, through the instrumentality of *this one* remedial agent which gently stimulates while it disinfects and expels from the stomach and bowels all that is irritating, and at the same time restores their vigor and tone. Many other preparations imitate it in bearing the name of Sarsaparilla, and in that their resemblance ends, being often prepared from worthless and inert roots, and of course possess no healing or curative properties, and patients in making choice of which they will use should take no other, but that one entitled to their confidence, from the first list of cures it has effected on living witnesses, whose testimonials and residence have been published, and who are still bearing daily testimony to its worth.

Astonishing Cure.

PATTERSON, N. Y., July 20, 1851.

Messrs. A. B. & D. SANDS: Gentlemen,—Having witnessed the most beneficial effects from the use of your Sarsaparilla, it gives me pleasure to send you the following statement in regard to my son. In the spring of 1848 he took a severe cold, and after eight weeks of severe suffering, the disease settled in his leg and foot, which soon swelled to the utmost. The swelling was lanced by his physician, and discharged most profusely; after that no less than eleven ulcers formed on the leg and foot at one time. We had five different physicians, but none relieved him much; and the last winter found him so emaciated and low that he was unable to leave his bed, suffering the most excruciating pain. During this time the bone had become so much affected that piece after piece came out, of which he has now more than twenty-five preserved in a bottle, varying from one-half to one and a-half inches in length. We had given up all hopes of his recovery, but at this time we were induced to try your Sarsaparilla, and with its use his health and appetite began immediately to improve, and so rapid was the change that less than a dozen bottles effected a perfect cure,

With gratitude, I remain truly yours,

DARIUS BALLARD.

We the undersigned, neighbors of Mr. Ballard, cheerfully subscribe to the facts of the above statement.

IT IS A FIXED FACT,

CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It Is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

DR. ROYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "SIR—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

Subsoil Plowing.

THIS all-important subject is so ably and thoroughly reported upon by the Secretary of the Mass. Board of Agriculture, C. L. Flint, Esq., that we feel it highly necessary to present it to our readers. Subsoil plowing, we consider, in this State the most important subject of discussion that can be laid before our cultivators, and while it has been urged upon their attention so often, it is so little understood and so little practiced, that thousands of dollars have been expended in *irrigation*, which would have been saved by *subsoiling*, and *what a subsoil plow is*, to be the recipient of its benefits. We have met with many who claim to be farmers, yet do not know *how a subsoil plow looks;* nor could they understand how it is to be used. We hope they will be known, understood and appreciated better the coming year.

We here copy the report referred to:

Another mode of avoiding the bad effects of our droughts is by deep plowing and frequent stirring of the soil in dry weather. This will probably be found the most efficient and practicable mode to be pursued in upland cultivation. Deep plowing and frequent stirring of the soil, is the answer made, in nine cases out of ten, to the question as to what is the best mode of guarding against the drought. "Spreading and plowing in manure, hoeing often, exterminating every variety of weeds, irrigation where it is practicable, and keeping the ground light by deep plowing," says one. "For corn and potatoes, plow deep, and use the cultivator and hoe frequently, and keep the surface nearly level," says another. Another practical farmer answers, "Deep plowing and good hoeing. Crops that have been hoed the most have stood the drought the best." Another successful farmer says, "Plant on swamp, or moist land well drained, if you have such; if not, *plow deep* on high land. If the uncultivated swamp and bog lands were cleared and appropriated to agricultural purposes, droughts like the one of the present season might not be feared. Massachusetts farmers have yet to learn that the most valuable lands are now neglected."

"I should say, first of all, deep and thorough plowing, well manuring, by spreading and plowing in, as a general rule, and frequently stirring the soil," says a Berkshire farmer of great experience. And the return of a farmer's club of Middlesex says, in answer to the second question of the circular, "It is now a practice with us to plow deeper than heretofore. Mr. C. plows three or four inches deep. F. plows on precisely the same kind of land a stone wall only separating the fields, nine inches deep. F.'s oats weighed thirty pounds per bushel, while C.'s weighed but sixteen pounds; [illegible] C.'s corn drooped while F.'s was green and luxuriant."

[illegible] the same opinion of the advantages of deep and thorough plowing, and few extravagant would be given to conclude that the crops of deeply plowed lands have yielded more than on shallow plowed. One farmer of great observation in Essex county says: "The injury to shallow plowed lands has been much greater than to those deeply plowed, especially where the soil was well pulverized, as it always is by the Michigan sod and subsoil plow; we look upon this as one of the most valuable implements in the field. No farmer should be without one. It will more than pay for itself the first season."

The same testimony is given by a farmer of Worcester county in the following words: "My experience and observation are confined to light soils, plains, so called; and I find, whenever the plowing has been increased in depth from year to year, has *always* proved successful. I have had a fine field of corn this year, on light soil, plowed as deep as I could well plough, with a double or Michigan plow."

From Berkshire we have the following: "It is, we are sure, an established fact, and one which must have fallen under the notice of every farmer, that deep plowed and finely pulverized lands are less liable to the injuries of long continued droughts than lands plowed shallow and left half tilled. The observations, not only of last year, but of former years of excessive dryness, have shown this to be the case most conclusively. Reason teaches the same fact. The more open or porous any substance is the more readily it will absorb moisture."

A farmer of Plymouth county says, "Deep plowing is favorable to retention of moisture in the soil, and shallow plowed and scantily tilled fields are the first to suffer by droughts."

Another practical farmer in Worcester county writes, "The drought has affected *deep* plowed lands but very little; on those that have been faithfully *subsoiled*, the corn leaves did not roll at all; while on those that were shallow plowed, the crop suffered much; other crops have been seriously affected."

Another successful farmer says, "The effects of the drought on lands plowed one foot deep are about the same as on those plowed eight inches deep. Land plowed five inches deep is more affected than that plowed eight inches; so that less than eight inches is too shallow, and more than that of but little use."

Another farmer of Worcester county says, "Thorough plowing, high manuring, and clean and frequent hoeing, and stirring the land so as to keep it light and free from weeds in all tillage land. On mowing land, spread compost and plaster freely; and on orcharding, plow among and dig around trees."

One more extract will suffice to show the general impression on this subject. An intelligent farmer of Bristol county says, "Plow deep, and thoroughly pulverize the soil, and in the after cultivation keep the soil well stirred with the hoe, cultivator, plow, or any other tool best adapted to the nature of the crop."

Official County Statistics.

EL DORADO COUNTY.

BROWNSVILLE, Oct. 15th, 1855.

To S. H. Marietta, Esq., Surveyor General, Sacramento:

SIR—I have the honor to transmit herewith my statistical report for El Doardo county for 1855. It is not as full as I could wish it, but it is as complete as circumstances will admit.

If it is the desire of our Legislature to obtain correct statistical information, I would suggest the passage of an act authorizing the officers whose duty it may be to collect the statistical data, to obtain the same under oath or affirmation—if this is not done, no reliance can be placed in the statistics obtained, nor will they be complete unless so obtained.

The following is as nearly correct as could be expected under the circumstances, viz.:

Land inclosed for agricultural and grazing purposes, about 8 000 acres.

No. of acres in wheat, 450—yield per acre, 20
" " barley, 340— " " 28
" " oats, 387— " " 25
" " hay, 1750—per acre, 1 1-4 tons

Fruit Trees.—Apple, 1 608; peach, 1,159; pear, 34; plum, 33; cherry, 40; fig, 12; apricot, 15; quince, 25; grape vines, 3,000.

Animals.—Horses, 907; mules, 334; asses, 65; neat cattle, 1 281; work oxen, 600; milch cows, 769; calves, 51[illegible]; sheep, 654; swine 4[illegible].

I think the number of swine might be put down at 8,000. The number above is the number actually reported to me. There are a great many running at large, of which no correct account can be given.

About [illegible] slaughtered per annum to the value of $[illegible].

The above statistics is based upon [illegible] of farmers, and cattle dealers, and is not far from correct—and, if [illegible] it is rather below the mark.

Value of property [illegible]

Canals.—There are [illegible] principal ones in the county, [illegible] of which have a never failing supply of water throughout the year. Total length of main trunks of canals, 475 miles. Lateral branches of same, 325 miles in length. Of the capacity I could not obtain any correct information. This I regret, inasmuch as canals are the principal property in the county, and, consequently, the source of a large amount of revenue, both to the State and to the county. I would like to see something done by our next Legislature in ward obtaining correct statistics in relation to the cost, capacity, &c, of canals within tho State. Such information would be a source of satisfaction to the people, as well as of information and usefulness.

Saw Mills.—Water mills, 16; steam power, 24. In all, 40 mills. Many of these are not in operation, owing to the fact that those mills which were erected in the years 1851, '52, low down among the foot-hills, have cut up all the timber in their immediate neighborhood. Many of them are being removed higher up the spurs of the mountains, where an abundant supply of the finest timber is to be had, consisting of sugar, pitch, yellow and spruce pines. Fir and cedar also abound; and ash, nutmeg, birch, yew and live oak, are to be met with along the water courses and mountain canons. A good quality of black oak grows on the spurs of the Sierras, which is well adapted for wagon building. The market value of lumber varies from $20 to $40 per M.

Quartz Mills.—There are 7 in all, in active operation, and some 6 or 8 being built, besides a number of arastras, used in prospecting. This species of mining has lain dormant since '52, until recently. It has, however, received a new impulse, owing to the means of saving the gold being better understood now than formerly; and also to the fact of several rich leads having been recently discovered. I think quartz mining will increase one hundred per cent. in El Dorado county within the next year. The county is traversed by numerous quartz lodes or veins, which are not yet prospected, many of them, no doubt, gold bearing. Marble also abounds in the western and [illegible] eastern portions of the county, varying in color from pure white to coal black. Some of it is of a beautiful grey or clouded color, and all is susceptible of a high polish. Tons of quartz rock crushed, about 50 daily; yield per ton, from $20 to $80; some of the mills have made as high as $3000 in a single week.

Placer mining is not confined to any particular portion of the county, but is co-extensive with its limits; and though some portions are fenced for agricultural purposes, yet it is liable to be dug up any day by the hardy miner, in search of the yellow treasure. At no period since the possession of the country by Uncle Sam were the prospects of the placer miners better than at present in El Dorado if I except *the want* of that indispensable called water!

1 flouring mill, not in operation; 8 lime kilns; 2 brick kilns; 15 toll bridges; 16 miles of toll road in construction, with toll bridges; 3 breweries; 2 soda factories; and 2 tanneries.

Telegraphs.—The Alta line enters the county on the west via Mormon Island, in Sacramento county, thence to Diamond Springs, Placerville, Coloma and Georgetown; thence to Auburn, &c., in Placer county. Length of wire in El Dorado county, 75 miles.

County Boundaries.—The southern boundary of this county was changed by an act of the last Legislature, which does no credit to the geographical talent of that body. They were either sadly misinformed or totally ignorant of the geography of the county. They constituted an air line, commencing at the eastern boundary of Sacramento county, running thence to the South Fork of the Cosumnes river, the boundary line between the counties of El Dorado and Amador, the said air line upon being applied to *terra firma* by our County Surveyor, was found to cross the Cosumnes river four times within the distance of eight miles, and below all the forks of the stream, thereby rendering it almost impossible for the collecting officers of either county to ascertain when they are within their respective counties. That it would have been better to have substituted the natural [illegible] for the artificial boundary no one will deny, but our [illegible] Senator [illegible] The boundary as it now exists is very objectionable to a large portion of the county [illegible] the temporary [illegible] by personal observation, the people down there many of them, no doubt, would [illegible] the people of the county [illegible] they would [illegible] Placerville, [illegible] Coloma, [illegible] Mountain [illegible] [illegible] [illegible]

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, NOVEMBER 9, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

Exchanges.—Will our cotemporaries that exchange with us, have the kindness to direct our papers to *Sacramento*.

Shade Trees.

THERE is no one subject of more moment to the citizens of California, none so intimately connected with the physical comforts of Home and the embellishments of that spot, where earth's greatest happiness is sought, than the subject which stands at the head of this paragraph. Contrast the comfort and pleasure enjoyed by any two families, whose homes shall be as we shall now describe.

The first shall be a neat and pretty cottage, surrounded with its inclosed garden in high cultivation, this surrounded with fins *Shade Trees* of numerous kinds, of every form of beauty and variety of foliage, offering a pleasant shelter from summer's sultry heat. Enter this garden of flowers, inhale the fragrance of its thousand blossoms, each in its freshness; these bright gems also sheltered beneath the waving branches of the pleasing shade of which we have spoken—go within, and there too, behold neatness and taste; no gaudy show, but all in keeping with the beauty and taste without. See beside the open lattice your friends sitting with books or work—no heated air, no dusty furnitura, no flushed countenances or fevered passion, bewailing the sultry clime—but all is peace, and quiet happiness; this is a Home, and here one lives to dwell; all is in keeping—the place, the season, the pecuniary means, taste, intellect, comfort, peace, nature, all bespeak a rural happy Home. Now go with me to yonder mansion—it is a stately massive pile—its noble portico, its granite columns, are evidences of architectural beauty; inclosed with its lofty walls of brick with open lawn, shows strength and wealth, and tasts; the noon-day sun pours down its burning rays upon you as you [illegible] to enter; like some great prison house, its doors and windows are closed to bar the light and heat—you enter. The gorgeous furniture may dazzle by its beauty, but while you tarry you feel the cold reception of formality, you breathe the stifled air, the oppressive heat, the dark and gloomy apartments act upon your feelings, and you wish to breathe once more the open air—but as you leave this gorgeous pile you wonder that a portion of the useless show within was not expended to give this costly structure a shelter and a shade,—and plant sweet flowers where bees and birds would come, far better than to make a mere parade, without the peace and comforts of a Home.

Which, dear reader, of these pictures would you choose? We think that simple, beautiful quiet cottage home will be your choice; you have the flowers around the cottage, you love those trees, and you love to sit beneath their cooling shade, and feel you are at home; and would you plant around your home those trees that shall even be more beautiful than that imaginary one. Let me say, as I hear you ask, what trees shall I plant? There is always a beautiful harmony in all Nature's works, and those who seek the beautiful, must obey her laws. The kind of trees for that home of thine, dear reader, we will tell you in another place.

NEW ENGLAND NURSERY—SHEPHARD & BEACH, MARYSVILLE.—We have received a Circular from this celebrated Nursery and Garden, descriptivs of their manner of cultivating, their experience as nurserymen, with carefully revised notes from other sources and an array of facts which was prepared for the county of Yuba. As we have read the Circular, and are so much pleased with it, we have deferred publishing a curtailed summary, as we should be obliged to do so this number, but reserve for our next this valuable document, that it may be published in extenso.

A NEIGHBORLY CALL.—Our kind friend E. D. Colman, Esq., of the Humboldt Times, made, us a pleasant call. Our friend was in fine health and spirits, and made us a promise of some of the curiosities of that beautiful spot Humboldt Bay, where nature has been lavish of her gifts.

CALIFORNIA FUR.—A fine specimen of the California Otter, of some species, was left at the rooms, by Rev. I. S. Diehl, taken at the base of Shasta Mount, Oct. 17, '55.

What Shade Trees are Best.

ALLUSION having been made to this subject in another column, we shall now present our views relative to the kind of trees that should demand the attention of all who love Arboriculture.

Sacramento is undoubtedly in advance of any other city on the Pacific Coast in the planting of shade and ornamental trees. Many of our genteel residences are now finely shaded by the Cottonwood, which is *the* tree that has been almost universally adopted. This tree has been planted extensively because it was the only one that could be had in any quantity, and on account of its ready growth and its abundant shade. Had it not been for the abundant supply of this tree which has always been piled upon our levee, our city would even now have been like other cities, barren of the beauty which such shade affords. But the question now arises, what trees shall we plant? what trees are best? *Shall we plant Cottonwoods?* We answer emphatically, no! Shall we plant Ailanthus? No! By this we mean as principal shade trees around our dwellings, or in our garden grounds. These are our reasons:

The Cottonwoods are an unclean tree, even at two or three years old, as can be seen now wherever you find them. In the summer and autumn they cast their leaves easily. They are the nursery of various worms that after a little time become unbearable. They impoverish the earth around them; and soon as they are old enough to blossom and shed their "bolls," they are a perfect nuisance, scattering their fine furze or *cotton lint* over the ground, into your dwellings, until you are compelled to keep closed doors and windows. For these reasons we condemn the tree and say "cut it down, why cumbereth it the ground."

The Ailanthus! this too is a noxious tree; the gas that exhales from it is very offensive, if not poisonous. This also impoverishes the soil, and besides, throws up from its roots myriads of suckers that deface the beauty of a lawn and the symmetry of a garden. Both the Cottonwood and Ailanthus will answer for outside purposes, here and there one, to complete a variety, but that is all—they only are worth cultivating on this account. But we have a stronger reason for rejecting them—*there are better trees.*

By the enterprise of our egeregtic nurserymen we have trees of the rarest and best kinds, such as will not only thrive and grow as fast as those we condemn, but are vastly more beautiful, and some that are largely profitable. We feel that it is our duty now to present these views to our fellow citizens, in order that we may add comfort, pleasure and profit to the *homes* of our adopted State. Some may ask why we did not condemn those trees ere this, and thus save the trouble and cost of planting? Our answer is, there was no other tree to take their place, and thus far their cooling shade has amply paid for cost and trouble until the time came when a change could be made for the better.

That time has come, and we now proceed to place before our readers what we esteem the best trees for shade and ornament, for street, lawn, dwelling and garden, for there is much to be considered as to the place as there is to the kind of trees, if the object is harmony and beauty.

FOR THE STREET.

For this we recommend our native trees, in part. The Acer (maple), the Fagus (beech), the Aeschulus (horse chestnut, or the buckeye), the Juglans (walnut), the Quercus (oak), this last for corner trees; our native Evergreen Oaks, and to these we add the Tillia (Linden,) the Ulmus (elm), the Maclura Aurantica (osage orange), the last for the entrance gate. We might add others, but here is sufficient for any ordinary grounds. Where large mansions or parks are built, others can be added.

FOR THE DWELLING.

Immediately around the house to shelter from the summer sun should be placed the most beautiful fragrant trees, that while they shelter and shade, their beauty may be subject of contemplation and delight, and their fragrance a source of enjoyment. For this purpose we place most prominent at the front door, upon each side of the entrance walk, the gorgeous Magnolia, whose glossy leaves and fragrant flowers remind us of paradise. Next to these, the Cytisus (laburnum, or golden chain), whose long racemes of yellow blossoms arrest the eye of the beholder; to these add Chionanthus Americana (white fringe tree); the Chionanthus Fragrans (Pride of China), whose purple and white spikes of flowers send a fragrance like perfumed air; the Liriodendron (tulip tree), may group here with honor, for its proud trumpet flower breathes fragrance also. Here, with such trees need we want for shelter? now—

THE GARDEN.

In a climate like ours, where every variety of trees of quick growth, and every tree springs as it were into bearing so quickly, we would urge that for borders contiguous to the streets, instead of common trees, there should be planted trees that shall be useful as well as ornamental. We recommend for this purpose the Cerassier (cherry.) No tree has a finer form, and no tree more beauteous than the cherry tree, both in flower and in fruit—beautiful, ornamental, fruitful and useful; these declare it as the *best* for the borders of a garden. Within, at intervals, plant the Fig, Orange and Lemon, as ornamental trees, and when the climate is not suitable for the Orange and Lemon, substitute Peach, Nectarine and Apricot. Amid these ornamental fruit trees we would recommend, interspersing, first, the beautiful Crategus (hawthorn), with their varied colored umbells of flowers, the Ilex (holly), the Laurus (bay), the Kalmia (laurel), Euonymus (strawberry), and the Chiocoea (snowberry). These four last are our native trees, and highly ornamental. Such a collection, carefully planted and arranged in proper order, will make a residence fit for any citizen, which in our free and happy land is equivalent to saying, "fit for a king."

Having made this article already too long, we shall in immediate numbers give a description of the several trees, in full, with "Trees for a Lawn."

Treadwell's Clipper Plow.

IT is important that farmers should always have the very best implements—"economy is wealth." In each and every department it should be the aim of the farmer to have only the best: the best working oxen and horses, the best plows, waggons and harness. For his family or dairy use, the best cows, and domestic animals of all the best breeds. His houses should have the best conveniences, and his barns and granaries built upon the most approved plans, his corrals strong and high for his stock, to guard them from escape or depredation. The farmer's fences should be in the best order; his seed should be the purest and the best, and in order that his seed may do well, his ground should be plowed deep and fine, and cultivated in the best manner.

The plow is the "great weapon of the farmer." If he uses a poor plow—if his lands are shallow plowed, they cannot be well cultivated, and the consequence will be his seed may spring up, but, *having no depth of earth*, it perisheth; and thus he will fail at the harvest season—his teams will have no employment, his granaries will be empty, and his family suffer, and he himself penniless; and this will be the result of the "first false step"—poor plowing!

We have never seen a deep plowed and well cultivated field fail of a crop, nor a neglected field or poor tillage reward the laborer. We repeat, the most important weapon in the hands of the cultivator is *a first rate plow*, and we rejoice to know that this truth is being understood. In the importations made the present year, and in the manufactures of our States, there is a determination to excel.

Among the finest specimens of plows we have ever seen in any country, the plow named at the head of this article should receive particular notice—Treadwell's Clipper Plow. The clipper is a Boston plow, manufactured of polished steel by Ruggles, Nourse & Mason, the manufacturers of the world-renowned Eagle Plows. This beautiful implement was exhibited at the State Fair, and had it been of California manufacture it would have received the highest award. The plow was examined by the committees and reported on, but being of foreign make, by the rules, no prize could be awarded to it.

We feel confident that it will be the leading plow on the Pacific. We have examined them at the warehouse in San Francisco, and can most cheerfully recommend them to all who wish the *best plow made.* Messrs. Treadwell, of San Francisco, are the principal importers of them. They are also found at their house in Marysville, and at Baker & Hamilton's, Sacramento. We would advise all who are about to purchase to examine them, as the surest way to have good plowing is to buy only the best plow.

THE banking houses of Sacramento are the depositories of large treasures and doing a very successful business. Messrs. Drexel, Sather & Church, a newly located branch of their San Francisco house, are doing a fine business. We noticed a pile of $41,000 in dust, prepared for shipment, the gathering of a day's work. Messrs. D. O. Mills & Co. are doing a large and prosperous business, and all the other legitimate houses having passed every ordeal, stand high in our community.

Correction.

THE elegant "Bitting Harness," exhibited at the late State Fair by A. T. Nelson, of this city, and *reported* by the committee of award as of foreign manufacture, and therefore not entitled to a premium, was manufactured by Mr. Nelson at his place on K street, Sacramento. It is not only a beautiful, but a very valuable improvement on the ordinary fixtures for such purposes, and is every way worthy of a high reward.

Having just learned of the above mistake I hasten to correct it by the first issue of the Society's organ, without waiting for a meeting of the Executive Committee, at the next session of which, I have no doubt, a suitable award will be made. O. C. WHEELER, Rec. Sec.

Sacramento, Nov. 8, 1855.

The Diseaae in Poultry—Reply.

WE publish the following letter from Dr. W. W. Chapman, the proprietor of the remedy for diseases in fowls, in answer to the inquiry of "Colfon," from Stockton. This is an important subject, and worthy the immediate attention of poultry raisers. The facts stated by Dr. Chapman we know can be relied on, and as many new and valuable varieties of fowls are being introduced from China, the disease should be arrested ere its effects are too fatal:

VALLEJO, Nov. 5, 1855.

EDITORS FARMER: I notice in your paper of Nov. 2d an inquiry from "Colfon," of Stockton, desiring information in relation to the diseases of domestic fowls and a remedy for the same.

I have taken some pains to inform myself on the subject; have watched the symptoms closely, and made quite a number of dissections.

Symptoms.—Change of color in the *comb*, the upper part turns *dark*, and as the disease advances, it increases in extent and darkness of color; drooping the tail mostly to the ground; drawing the head back and settling it upon the feathers of the breast; appetite unchanged; food undigested, the crop remaining full.

Appearances on dissection.—The heart and liver generally enlarged, but not always. The *gall-bladder in all cases* enlarged and distended, if not ruptured, which was frequently the case. The crop frequently found mortified. In a majority of cases, the heart, lungs and liver coated with a white substance, the nature of which I have not chemically examined.

The remedy which I advertise for sale has been tested here and in Napa, and found effectual.

If "Colfon" will send name and address, I will forward him a package, and he can try its merit.

W. W. CHAPMAN.

A Modeat Man.

WE have found a wonder! and reader what do you think it is? A very modest man, and that man an editor, a political editor too, a gentleman and a scholar, an amateur in the finest works of art; the embellisher of nature's beautiful landscapes; the cultivator of all the *pets* which the goddess Flora commits only to her worshippers—such a man we have found. And how can we account for this strange phenomena in a political editor? Simply by the influences of a rural life, held up in contrast before the boisterous unhappy toil of a politician. Such must ever be the result, and we were happy to note this influence over the whole man. All those genial influences that shine out divinely in man's nature while holding converse with nature, are crushed by the hardening influence of political strife, and only return to him when he returns to nature. Thus it was with our friend amid the din and strife of the "ins and outs," the "loaves and fishes;" that better and diviner nature had been shrouded, his name had been highest upon the roll of favorites, and loudest applauded, until it became a watchword. But now how changed—sick of politics, and sick of the many associations connected therewith, poor man, he is almost sick of his own name, and begs of his friends, "if he ever does a good-natured action," (as we saw him do yesterday,) not to call his name, for he was tired of hearing it. The very thought that we should speak his praise caused him to blush so that he actually looked *Red-in* the face.

A GENEROUS ACT.—We feel it a pleasant duty to acknowledge the generous act of another. We acknowledge a generous act on the part of Messrs. Wells, Fargo & Co. in transmitting *three large packages* of the products of California, through to the States, free of charge. These cases were specimens which we had carefully packed and donated to various societies, to make known the resources of our noble State; and were it not for the courtesy and kindness of this act and many of like kind, we could not thus make the resources of the State known. We desire our friends and the friends of Home Industry, to appreciate such a manifestation of public spirit on the part of the Express Company. We hope when these products shall be exhibited on the other side, the friends there will appreciate the act also.

"Woodman, Spare that Tree."

We have take the annexed most interesting article from the Boston Advertiser:

REMARKABLE OAK TREE AT BRIGHTON, MASS.

"The Commissioners appointed by the Legislature in 1837, under the administration of Gov. Everett, to make a zoological and botanical survey of Massachusetts found the largest and oldest white oak tree of their survey at Brighton. The survey was completed in nine years; the result published in a thick octavo volume, drawn up with great care and fidelity by George B. Emerson, Esq., the Chairman, and a copy of the same was sent to every town in the Commonwealth for preservation. As the great tree referred to has just been cut down, having decayed beyond the hope of recovery, we give here the description of its enormous size and great age, from the pen of Mr. Emerson, one of the Commissioners:

"'The picturesque ruin of a white oak is standing in Brighton, where Nonantum street crosses Washington street. At the surface of the ground it measures, this first of October, 1845, twenty-five feet and nine inches in circumference; at three feet, it is twenty-two feet four inches; at six feet, fifteen feet two inches. It tapers gradually to the hight of about twenty-five feet, where the stump of its ancient top is visible, below which point four or five pretty large branches are thrown out, which rise twenty or thirty feet higher. Below, the places of many former limbs are covered over by immense gnarled and bossed protuberances. The trunk is hollow at the base, with a large opening on the southwest, through which boys and men may easily enter. It had probably passed its prime centuries before the first English voice was heard on the shores of Massachusetts Bay. It is still clad with abundant foliage; and, if respected as its venerable age deserves, it may stand an object of admiration for centuries to come.'"

"Lives there a man with soul so dead, who never to himself hath said, *this is my own, my native land.*" As we read the notice of this tree our heart beat the quicker and the tear came unbidden from its hidden fountain, for the mention of this famed tree recalled the days of our earliest and sweetest recollections. That "old tree!" we can *see* it now, with those knotty protuberances, and the branches at its top, where many a day we have sat, as we clambered into its shady boughs with our school mates. "O I would I were a boy again;" I would I could go back once more to that very spot where we have so often played; we would we could once more go up into that well remembered "maintop" of that giant oak, and sit there encircled by the branches overhead, and there crunch the cheese and apples, like as in days past, when let out of school.

We would we could go back again, even in the cold bleak days of a New England winter, and there draw our sled up the long hill just beyond, and coast down that half mile stretch, and be again covered with snow flakes as we sprung from our steel-shod "mountain runner," even at the very foot of this noble old oak.

"Yes, kind reader, we know that tree well. It stood at the foot of a hill on whose top was our boyhood's home.. And by that tree for many years wa toted on to "school," with our green satchel over our shoulder. This tree stood upon the common at the foot of that hill, and this was the play-ground of the neighborhood, and these old oaks (for there were two trees then) were the rallying points upon Saturday afternoons and moonlight nights. Oh, those were happy days. The joyous shout, the ringing laugh, and the loud whoop that called us out—we can hear them still, and we can live over again in memory scenes that will ever be dear to us. How many interesting thoughts crowd upon the mind at the mention of that dear old tree How many hearts will ever beat at the mention of its history. What interesting events have been enacted around its broad trunk. Oh how many youthful hearts that have sported in its branches and have rested beneath its shade have been long since stilled in death. How many of our own school fellows can we call to mind that have passed away. And that other tree, its mate, of which no word is spoken—that too was a *memorable tree;* much larger, wider its trunk, loftier its branches, and deeper its roots. But oh, how ingloriously it fell. We remember the cause of its fall. Into its deep recess a favorite puss had stolen away to hide, and when no coaxing or cunning device to draw her from her hiding place availed.

> The bands of straw and lighted torch
> Within that tree they hide;
> They [illegible] dreamed the noble oak
> Would fall to all its pride.
>
> For [illegible] days did wreathing flame
> [illegible] old oak tree
> The [illegible] all without appeared the same,
> It fell incendiarily

More than a quarter of a century before this noted tree of whose brief record we have been speaking, this other tree fell a prey to the same. These were two goodly trees, and for New England we never shall look upon their like again."

And here at the foot of these trees have played boys that in after years by their genius and talent have thrilled the hearts of thousands and tens of thousands; for it was here that pupils of an institution were wont to play, pupils that in later days have made themselves a name and fame that can never die. And from the pages of memory we will draw a sketch for our readers that shall seem more like romance than reality; yet it shall be a record of "days lang syne," yet strange as this may seem, shall be no more strange than true, and these sketches will be recognized far and near by the well known cognomen of "Lime Grove Academy," and its pupils.

LANGTON & Co.'s PIONEER MOUNTAIN EXPRESS.—Langton & Co.'s Mountain Messenger shouts the herald as the fleet horseman with his foaming steed rushes past with news from the mountain placers. Who does not remember in bye-gone days when such a messenger as "Sam" created a sensation through every street, and who has not felt under obligations to this early and faithful expressman? How many a heart has throbbed with gratitude for those messages from home, that were borne from the Bay City, up river and over mountain, to those pent-up places where men were toiling amid privation and suffering. And who was this herald of good news from a far country? Who, but "Sam Langton." And will not these things be remembered? Aye, long! for the brave mountain boys can never forget. But see! Sam is everywhere—in the mountains! at the head of navigation (Marysville), and here in the Queen City of the Pacific. Yes, reader, Langton & Co.'s Express holds one of its head quarters in our fair and goodly city, and without any disparagements to the efficiency and promptness of our other able express houses we say to our friends, the world is wide, there is room for all. "Live and let live;" and in the bestowment of your favors remember the early pioneer mountain messenger—remember Sam!

MOUNT SHASTA.—This magnificent mount, now lying in the northern portion of our State, one hundred miles north of Shasta, and forty south of Yreka, rising from a base of from one hundred to one hundred and fifty miles in circumference to the height of 16,500 feet, and perhaps the most magnificent object of scenery and curiosity on the northern continent, was ascended recently to its very summit by Rev. I. S. Diehl, who has furnished us with samples of sulphur and other rare minerals. A description of which, together with the ascent upon the mount, will appear in our next issue.

We return our thanks to Messrs. James French & Co., Boston, for their new publications—Rambles in Eastern Asia, by B. L. Ball, M. D. The incidents of his voyage into China, Manila, Hong Kong, Shanghai and other places are full of interest. The work should be extensively read by Californians. The Sure Anchor, an interesting religious work from the same house. The Dream Fulfilled, a very interesting volume dedicated to Mrs. Abbot Lawrence by the author.

Thanks to Messrs. Livermore, of New York, who have kindly sent us "Doesticks," a very humorous work, and an excellent antidote for ennui.

From Messrs. Burnam & Co. of Boston, we have received that singularly queer work the "Ilen Fever," a perusal of which would greatly enlighten one in *Henology.*

GREAT AGRICULTURAL WORK.

The Farmer's Guide to Scientific and Practical Agriculture, by Henry Stevens, F. R. S. E., author of the "Book of the Farm," Editor of the "Quarterly Journal of Agriculture," &c., &c., assisted by John P. Norton, A. M., Professor of Scientific Agriculture in Yale College, New Haven, Author of Agricultural Prize Essays, &c. &c:

This highly valuable work comprises two large royal octavo volumes, containing over 1400 pages, with 14 splendid steel engravings, and more than 600 engravings on wood, in the highest style of the art—illustrating almost every implement of husbandry now in use by the best farmers, the best methods of plowing, planting, haying, harvesting, &c. &c., the various domestic animals in their highest perfection; in short, the *pictorial* feature of the book is unique, and will render it of incalculable value to the student of Agriculture. This great work is the joint production of two of the most talented agricultural scholars of the day: the one eminent as an author and editor in Great Britain, and the other as a *Professor* in *Yale College.* Both are eminently practical as well as scientific men, and all they say, may be relied on as the result of profound research, tested and sustained by practical experiment. The contributions of Professor Norton are chiefly designed to adapt the British portion of the work to this country and thus make it an American work, giving to its readers the really useful agricultural knowledge at present attainable in either country. The work is divided into four [illegible] corresponding with the four seasons of the year. [illegible] with [illegible] Prof. Norton's notes are [illegible] as an appendix to each part.

We design a future number to give a general review of the [illegible] our California Agriculture, or a more [illegible]

[illegible]

Published by Leonard Scott & Co., 54 Gold street, New York.

[From our Boston Correspondent.]

Twenty-seventh Annual Exhibition of the Massachusetts Horticultural Society.

THE Exhibition commenced on the 18th of Sept., at the Boston Musical Hall, one of the best places in the city for the display, and the committee were very wise in choosing this spacious temple, as it is very central, and fully answers the purpose. The display was the finest for many years, and the attendance of visitors very large. The passage way to the Hall, from Winter street, was canopied with a long arch of streamers and flags, and lined with evergreens, tastefully arranged, presenting quite an attractive entrance.

The designs were superior to any before shown and attracted much attention. A beautiful Floral Temple from Messrs. Evers & Bock, Brighton, was very conspicuous; a model of Bunker Hill Monument, composed entirely of globe amaranths, purple and white, was quite a showy affair; a model of the Lexington Monument, made of marble paper, with a sword on one side and a plowshare on the other, contributed by Mr. Brewer Harrington, of Lexington, was very attractive.

On the eastern gallery over the stage, were six frames of moss work, very beautiful, executed by Mrs. Flinders, Boston; the mosses were arranged with prepared flowers, and will last for years. This display was quite artistic. Upon the whole the floral decorations were of quite a novel construction; elegant in design, and well finished. The pot plants were rare, and well grown, and showed the skill of the cultivators; some very fine German Asters were exhibited by W. J. Underwood, of Wellington Hill, Watertown. The fruits were all arranged in glass dishes, and have never been excelled for variety and perfection. The flower stands were loaded with gorgeous specimens of autumnal flowers in profuse variety, filling the hall with sweet perfumes. The vegetable department must not be overlooked, for here were exhibited some of the largest and finest specimens ever shown at one exhibition.

The famous Victoria Regia, from J. F. Allen, Salem, was exhibited in the upper hall, and attracted much attention. The Society has presented copies of the magnificent work on the Victoria Regia, among their premiums.

It would be impossible to give a lengthy account of this great Exhibition—suffice it to say, that every thing passed off well, and has earned much praise for the Society. The Brigade Band added much to the enjoyment by their excellent music. The receipts were larger than any former year, and will enable them to [illegible] to promote the cause of Horticulture and Floriculture.

Female Equestriane.

THE papers from the States by the last mail, contain numerous reports of the performances by ladies, and all such reports are highly creditable to the performers. The following is from the New York Herald, of October 2d:

The Albany County Fair closed last week, with a riding match. The attendance was large—the receipts over $3,000. But two ladies presented themselves as contestants: Miss Elizabeth Morey, of Brunswick, and Mrs. Hallet, of Albany. The Argus describes Miss Morey as a dashing, easy rider, who manages her steed skillfully. Another Albany paper says she sits on a horse like a trooper, and possesses a degree of coolness that peculiarly fits her for the wants of a saddle. The competitors passed three times round the course; once on a walk, once on a trot, and once on the gallop. Miss Morey was mounted on a glorious animal, and doing her mile inside of two minutes, when her girt broke, casting a degree of alarm for the instant. She retained the reins, however, and sprang to the ground, without losing her balance or sustaining any serious injury. The coolness and courage displayed by Miss Morey at this time were highly praised. The contest terminated with the accident. The first premium, $25, was awarded to Miss Morey; the second prize, $10 was awarded to Mrs. Hallet. Miss Morey is the same young lady who took the first prize at the Lansingburg Fair.

The following is a list of the premiums awarded to the female equestrians of the Washington county, (New York) Fair:

First premium, consisting of a silver cup, valued at $10, to Miss M. Hanna, of White Creek.

Second premium, a cake basket, valued at $8, to Miss P. A. Nixon, White Creek.

Third premium, a set of [illegible] valued at $4 to Miss Sarah M. Crowell, of Cambridge.

Fourth premium, a pair of [illegible] valued at $4 to Miss Helen Bardwell, of Greenwich.

Fifth premium, [illegible] Cemetery, to Miss Josephine Briggs, of White Creek.

In the account of the State Fair, by the editor of the Cultivator he says:

The equestrian [illegible] was [illegible] by [illegible] which [illegible] the [illegible] of the track [illegible] horses, in [illegible] these classes had to use their [illegible] Thursday and Friday, giving [illegible] to 1 o'clock on Friday. As it was we are [illegible] of all who seek a remedy for [illegible]

And we think proved to the eager crowd that our *Fairy Light Guard* can do up some [illegible] and even fast riding, without getting into a muss and smashing up things, as the sulkey gentlemen did. Some fifteen ladies entered the lists, and the whole passed off without the least accident to mar the pleasure of the party or the vast audience which surrounded the arena. The whole was closed by a smart gallop of our pony boys, whose little rigs showed the people that some things can be done as well as others, even by boys and ponies.

RASSETTE HOUSE.—Calling at this hotel to find a friend we could not but be surprised at the immense run that this house is favored with. We noticed *seventy* new comers Nov. 3d, and forty or fifty for several days. We rejoice at this, for surely few men in California have so bravely withstood the calamities incidental to California as Mr. Rassette, and we feel sure he is now prospering. A full house with a large number of families as permanent boarders, give to the parlors a pleasant coteric of an evening; and the arrangement of the dining hall is peculiarly attractive—it differs from most hotels, being a series of side tables for six or eight persons or a family, with center tables for the gentlemen and strangers. To this house can be accorded great praise in every department, and the indefatigable industry of the proprietor gives a warranty of success. The gentlemanly and courteous superintendent, Mr. French, secures the ready approbation of the patrons of the hotel. We wish them long and continued prosperity.

COME AND SEE.—Seeing is believing! and all who have thus long remained skeptics will be no longer unbelievers if they will call at the State Society's Rooms and see two potatoes raised by Hooker & Fern, Sacramento River. There are two varieties; one the red, the other the white. The red weighs 11 1-4 lbs., the white 12 1-2 lbs. The largest grew several feet from the center of the hill upon a small taper root. Both are superior specimens, of course, the best ever grown or shown, except some that lay quietly in the earth, swelling and swelling, until they reach "a score" in weight, as we understand from the proprietors that *Fern leaves* them there for that purpose.

AN INGENIOUS MECHANIC.—We have seen some specimens of pruning knives, made by Mr. Wm. Allison, at the ranch of J. C. Davis, Esq., on the Puto river, that are most highly creditable to him; they indicate talent and genius of high order. Pruning knives, dirks, pen knifes, and in fact, any species of cutlery are made in the most [illegible] manner. [illegible] with [illegible] silver sheath of elegant workmanship, and we are glad to learn that Mr. Allison is now preparing to manufacture knives and cutlery to order. Any orders addressed to him at Davis's Ranch, will be promptly attended to.

GRAND ISLAND PRODUCTIONS.—We have received from E. Covington, Esq., some very fine specimens of the English Walnut. They are indigenous to our own country, and resemble the English nut, but they are the *true black walnut.* They were brought to our office by an amateur of this city, who will ere long "make his mark upon the age" as a successful cultivator. These nuts can be had by a little search, or by the permission of the proprietor—and young trees can be had from the same source. This will prove a valuable ornamental tree, being a fruit-bearing as well as an ornamental tree, and as such we particularly recommend it.

HORACE WATERS, Esq., the great music publisher, manufacturer and dealer in pianofortes—published by him 338 Broadway, New York has sent us a collection of new and choice music, with the following pleasing news: Any person remitting him $1 by mail will receive four pieces of new music, postpaid. This is a chance worth improving, as he is publisher of all the latest music, and his price is less than one-fourth usually paid.

A SPLENDID SPECIMEN.—We saw at the banking house of W. W. Gift & Co. a specimen from the assay office of Harris Marchand & Co., said to be the finest yet assayed in California. The gold came from Iowa Hill, weighing 58 ounces, valued at $1177 [illegible] and rated at 17 [illegible]00 fine. It was a perfectly [illegible] mass of gold.

GLEN QUARTZ—A [illegible] specimen of [illegible] quartz was [illegible] this week, by Messrs. [illegible]s. Fay & Co. [illegible] style of paper and good [illegible] and the [illegible] Rose Flowers. [illegible] & Brown's [illegible] dear [illegible] town.

THE [illegible] [illegible] [illegible] the [illegible] [illegible] world [illegible] [illegible] [illegible]

Hindrancea to Immigration.

We have often reverted to the effect made upon the minds of people in the old States by local newspapers, in the publication of the *dark side only* of California. The terrible array of murders, assassinations, lynchings, street brawls, duels (only another name for murder), embezzlements, frauds, forgeries, bank failures, &c; these, with sheriff sales, foreclosures of mortgages, and backed up by adding the reports from *Recorders' courts*, painted in fancy colors; and to these add divorcements, elopements, &c., with a grand finale of Indian atrocities, these are the pictures held up before those whom we would invite to the Pacific shores.

We refer to this subject now, having received the annexed letter from the East by last steamer, which clearly points out this effect, more strongly than we have stated it. There is one feature we notice in the letter of our correspondent that demands attention—the unwillingness of our Atlantic editors to present the favorable features to their readers, lest another exodus should begin and they lose a population that we gain.

We commend the letter of Mr. S. and we are happy to say to our friend that the CALIFORNIA FARMER can be found both in New York and Boston, at our agencies, and at the principal booksellers, who are, we are happy to say, with many others at the East, subscribers and advertisers to our paper, a journal that endeavors to present the bright side of California—a State second to none in the Union for every blessing needed to make life happy, churches, schools and academies, of the very best, with a social circle of the highest order, and resources in mineral and agricultural wealth never yet vouchsafed to any people, with a climate unsurpassed for salubrity and health by any spot of earth:

—

SWAMPSCOTT, Mass., Sept. 29, 1855.

EDITORS FARMER: It is now more than a year since I left San Francisco, which time has been spent traveling through some of the best and loveliest portions of the Eastern States—but all their beauty, advantages and facilities have not weaned me from allegience to my adopted State, destined ere long to be the brightest star in our glorious constellation. I hardly think it possible for any one blessed with the faculty to appreciate the bounties of nature, to spend three or four years in any of the farming districts of California, and ever after feel satisfied anywhere else. The beauty of the scenery, the salubrity of the climate, the enlarged views of freedom, which enter into all the transactions of business and mingle in every act of social life—all, all are constantly brought in comparison, with what one sees and feels every day here, deepening and strengthening a feeling that this is not home, giving one an indescribable longing to be again enjoying the beautiful scenes and delicious climate of California, together with all the inconveniences which of a necessity are incidental to the settlement of any new country.

The society of our State is represented by a large portion of the people here as semi-barbarous—consequently in a social scale not entitled to any kind of consideration. How far this feeling may influence the action of the General Government in regard to California matters, I cannot say, but their acts tell us plainly that they like our gold better than our interests.

For these unfriendly sentiments the papers of San Francisco and Sacramento are in a great measure responsible, every one of which, brought here by the semi-monthly steamers, are filled with all the horrible news that could possibly be crowded into their columns, mostly without comment, leaving the people here, who are entirely ignorant of all the local circumstances, to draw the most erroneous conclusions. The papers here frequently render the news in their republications in a still more objectionable form than that in which they receive it; sometimes by merely mentioning the arrival of the steamer, with a million or so of gold; then follows—"The news is unimportant, the *usual* number of murders and lynchings have taken place," &c. It seems almost incredible, but I have been asked repeatedly if there are any churches or schools in California—by people too claiming a large share of intelligence and refinement.

If some good friend of California would write a series of truthful letters to some of the leading journals here, without pandering at all to the taste for the marvelous, but describing the very things which it seems that every one should be familiar with, they would do more to correct the erroneous impressions in the minds of the people, than could be done in any other way.

The Exhibition of the Mass. Horticultural Society came off last week. I visited it on the second day, was told that the display was never finer in any previous year. The collection of pears was very large and fine, some specimens of the Seckel exceeded Downing's description, and judging from the specimens, the delicious old Bartlett shows no symptoms of decay. The collection of peaches and plums was confined to a few varieties only. The Martin Plum, a new variety, is worthy the attention of every cultivator, not only for large size and fine appearance, but in flavor it equals the green gage, and is larger than the Jefferson. The finest specimen of the grape on the tables, was exhibited by W. C. Strong of Newton—the bunches large, well shouldered, and the berries very large—marked "Zinfendel." Among the vegetables, one squash weighing 122 pounds, and a beet 33 1-4, were the only remarkable specimens which I saw. The floral department was ample and tastefully arranged. Among the curiosities, the Victoria Regia, exhibited by Mr. Allen, of Salem, attracted a good deal of attention.

Let our Horticulturists do their duty to the State and themselves, and no many years are to elapse, when for variety and quality our Exhibitions will be inferior to none in the Union.

It has not been my good fortune, friend Warren, to see a single number of your valuable paper since I left San Francisco, but hoping that you are still pressing on in your good work, I subscribe myself, Yours truly, S. W.

Reaping Machines.

THE following description from the Paris Constitutionel, is translated into the English papers, from one of which it is taken:

PARIS, August 7, 1855.

The second day of August having been appointed for the final trial of all the reaping and mowing machines in the Exhibition, the trial accordingly came off on that day. There were ten machines in the Exhibition; nine of them were sent out by the Imperial Commissioner to the place of trial, about forty miles distant. It may be here remarked that the machines were sent out and returned free of cost to the exhibitors. On the ground of the trial there were thousands of people assembled to witness the novelty of the day; large tents had been previously erected, and a large supply of refreshments procured for the occasion. The day was pleasant and the excitement of the immense concourse of people intense. The police were in attendance on horseback. The militia were in requisition with guns and bayonets, to keep the crowd of eager spectators from off the grain. Stakes were driven into the ground and ropes drawn from stake to stake, until the entire field of about fifteen acres was surrounded. The was a field of an ordinary growth of oats, and standing up well, and which was divided into lots or pieces of about an acre each, by swaths being cut through at a given distance, parallel with each other—each piece being numbered, and one machine allotted to each piece.

At the beat of the drum three machines started off together. J. S. Wright's, of Chicago, Illinois, managed by his agent, Mr. Jewell; Patrick Bell's machine, by Mr. Fourent, and a native of Algiers. These machines being calculated to do their own raking, by machinery. Wright's machine cut its piece in twenty-four minutes; Bell's in sixty-six minutes, and the Algier machine in seventy-two minutes. The raking or discharging of the grain from all of the three machines was badly done. the grain being much scattered in its delivery upon the ground—Wright's doing much the best. The cutting, however, was well done. The mechanical movement of the automaton raker of Wright's machine was truly wonderful. The operation of the machine was highly successful. Bell's machine, by Fourent, did the cutting and gathering of the grain in a very neat manner; the grain was delivered freely to one side of the machine, for the binders. After the jurors had carefully noted the trial thus far, the signal was again given, and off started three other machines—J. H. Manny's, of Rockford, Ill., managed by his agent, Mr. Mabie; Bell's machine, by Croskill, and a French one-horse reaper. Manny's cut its pieces in twenty-two minutes; Bell's by Croskill, and the one-horse French reaper, both failed to cut their pieces; while Manny's did its work in the most exquisite manner, not leaving a single stalk ungathered; and it discharged the grain in the most perfect shape, as if placed by the hand for the binders. It finished its pieces most gloriously; the jurors themselves could not restrain their admiration, but cried out "good," "well done." The people applauded, and hurrahed for Manny's American Reaper—'that's the machine.'

Again, after the jury had taken further notes of trial, the signal was given, and three other machines started off on the contest—Hussey's Reaper, by Dray; McCormick's, by McKenzie; and Bell's, by Perry. Hussy's machine cut its piece in 30 minutes, McCormick's in 20 minutes, and Bell's failed to finish its piece. Hussy's machine did its work remarkably well, cutting clean and smoothly, and leaving the grain in the track of the machine in good condition for the binders. This machine was conceded to be too heavy and laborious for the team, and leaving the grain in the track of the machine was found to be an objection, as it necessarily needed to be bound and removed as fast as the machine did its work, in order that the machine could pass around a succeeding time; yet this reaper is unquestionably a good one and may be used to great advantage, as it would likely prove durable, being very strongly made. McCormick's machine performed its task very well, cutting a close and even swath, but the raker or attendant, who performed the labor of discharging the grain, seemed to be very much strained, being obliged to ride backward upon the machine at one end of the reel, having to reach fully across the entire width of the machine with a long-handled rake to gather the grain and lay it off the machine. The horses on this machine were much troubled by a strong lateral pressure against their shoulders, occasioned by the tongue of the machine. This reaper, on the whole, is much too cumbersome and heavy for two horses. However, it has proven itself vastly superior to any of the inventions of the Old World, and from the fact of its great success heretofore, particularly at the London Exhibition in 1851, it elicited a good deal of admiration and curiosity.

The contest was now fairly narrowed down to three machines, Manny's, Wright's and McCormick's. But, on starting, Wright's again broke down, and left the struggle exclusively to the two machines, Manny's and McCormick's. The two machines were then to be changed in presence of the jurors, from the capacity of reaping to that of mowing. Manny's made the change in one minute. McCormick's in twenty minutes, with three men. Each machine made one cut through the field of grass and back. Manny's machine doing the best of the two. Then the change was made again for reaping and in the same time respectively as before. Then both machines were taken into a wheat field. Manny's machine cut three swaths and with an ease of action and perfection of work, which fairly placed it far beyond any further competition; though McCormick's reaper cut two swaths and in a workmanlike manner. Even if the two machines were equal as to the quality of the work, yet it was observed Manny's would have the advantage of being the most compact, less cumbersome, and of much less weight than McCormick's, and in Manny's there is no lateral pressure against the horses as by McCormick's; also of being much the lightest draft, and more easily adjustable to different hights of cutting, and most easily convertible for the two purposes of reaping and mowing.

This seemed to be the only machine against which their could be no objection urged. We could give no better evidence of the facts above, than the fact that Mr. Mabie had, upon the conclusion of the trial, several very large offers for the patents of the machine, two of which we heard: for France, one offer was one hundred thousand francs, and one of one hundred and twenty-five thousands francs. We have since learned that arrangements have been made for the manufacture of one thousand of these machines in this city for next harvest.

The decision and report of the jury will not be published until the latter part of October, yet all the laurels, we are free to confess, have been glowingly won by Americans; and this achievement cannot be looked upon with indifference, as it but plainly foreshadows the ultimate destiny of the New World.

Remarkable Sport of Phlox Drummondii.

IT is one of the peculiar features in vegetable physiology, that the progeny of many plants, more or less depart from the original types, and which is understood in botanical and floricultural phraseology, as "sporting." In other words, that the seed sown, will not produce precisely the same type as its parents; in some the difference is very marked, while in others it is scarcely if at all perceptible.

It is to this principle we are indebted for much of the luscious fruit that supplies our tables, and many of the choicest flowers that deck our gardens. It is sometimes apparent in nature's own sowings, in the woods and the bye-ways, but more especially so in the members of the cultivated garden. The Phlox Drummondii, well known to everybody who knows what annuals are, is one of the cases in point, and perhaps without exception the finest annual grown for decorative purposes.

When first introduced from this continent to Europe, not many years since, the color and shape of its flower was far inferior to the best of the present day, and usually, though there were shades of difference in the color, they presented a monotonous appearance in the mass. Very good dark scarlets have long been obtained, but the white was generally wanting.

In a very large bed in the garden of Mr. Dingwall, of this city, one pure white has shown itself. It is seeding freely, and well surrounded by other colors, so that there is hope of its becoming more permanent. No doubt this is far from an isolated instance, as it is a plant of wide-spread cultivation; but we don't remember of having seen one before, and it is certainly far from as common as would be desirable. We have a notice of one in the English periodicals for 1847, and recommended for planting out to produce masses of white. It is certainly in advance, in the color and shape of the flowers, in England, to what it is in this country, where it was introduced, at least into this locality, by the late Mr. James Wilson, of this city. Marked differences in color, as the white, should be saved a few years from cuttings, till better established, when it will probably be as common as other colors. Perhaps the most beautiful of all is the new variegated kind, Criterion, seeding though but indifferently, while it evidently has more of the perennial character.—*E. S., in Country Gentleman.*

HAY.—A bale of hay is 300 lbs.; 100 cubic feet in a solid mow of hay, will weigh a ton.

Ashes in Agriculture.

WOOD ashes is one of the most important fertilizers. It is easily obtained in any quantity, and at little expense. Take them carefully from your hearths, and save them till your corn and potatoes have risen two or three inches from the ground, and then take a basket on your arm, and from it take a small handful of ashes and cast it at the root of your plants, and hoe them soon, so as to cover the ashes.

Ashes contain all the inorganic substance of the wood or plants which are consumed; part of these are soluble and part insoluble. But the soluble substance fixed with water will dissolve the insoluble. Thus, dissolved potash will dissolve silica, and, prepare it for glazing the stalks of cane, corn, wheat, &c.

Not a particle of ashes should go to waste. Leached ashes has parted with most of its potash, but it still retains its phosphoric acid and most of its lime.

Ashes neutralize acids in the soil; they warm cold, mossy, wet places; they are very destructive to insects; they assist to break down and dissolve the coarse fibers and stalks in compost heaps; render hard, clayey soils open, loamy and fertile.

The potash, so material to most crops, can be obtained here only from ashes. In granite regions, potash is obtained from the dissolution of the feldspar, but we have none in this region of country.

Wheat contains a large proportion of potash. Fifty-nine per cent. of the ash of corn is carbonate of potash, one-half the earthy part of Irish potatoes is pure potash.

Save your ashes, therefore, as carefully as you do your five and ten cent pieces, apply them to your crops with care, and you will find them of a rich deep green color, while growing, and heavy with nutriment at harvest.—*Ancient City.*

How to Prevent and Cure Kicking Cows.

A correspondent, "Old Farmer," writes thus to Fowler & Wells' Life Illustrated:

In most cases the habit of kicking is contracted during the first month after the cow has had her first calf. If, as is often the case with well-fed heifers, the udder is a little feverish at the time, it often becomes so sore that it is impossible for the poor creature to stand still while the necessary milking is being done. Following the instinct of nature, she kicks; and finding she is thus for the moment freed from pain, continues to do it till the *anger of the milker* is aroused, and then a bad matter is made much worse.

It is better in the first place to tie the heifer by the head, then set your left shoulder gently but firmly against her, just back of her right shoulder, grasp firmly her right fore leg below the knee, turning her foot up backward till it touches the leg, then slip on over the knee a strap, or hoop, or cord that will confine it fast in that position. While standing on three legs, she will find it difficult to kick so as to hurt you. Now take a convenient sized cloth, and wet and wash the udder thoroughly with tepid or cold water, after which milk her carefully and tenderly as possible, using at the same time such gentle and soothing language as is calculated to show her that you do not wish to hurt her—but let her struggles be ever so violent or provoking, mind you keep control of your own temper. An outbreak on your part will as certainly be productive of a bad effect upon the cow, as an echo will answer your own voice, or as your image will be reflected in a mirror. Kindness, combined with the perfect control you have over her in this situation, I consider much the best way of breaking them; and after a few times she will lift her foot to be tied as readily as a horse will be shod. Continue to milk her in this way until the soreness is gone, and she will find it a gratification to be milked, will often meet you as she sees you coming with the pail, and you will ever after find it easier to get along with her should her teats by chance get sore afterward.

BREAD FROM GROWN WHEAT.—A correspondent of the Country Gentleman gives the following recipe for making bread from flour of grown wheat: "Mix with the dough of three or four large loaves, about half a gill of whiskey, and the bread will be light. Let those who dislike to use whiskey, mix a small lump of butter or lard with the dough. My wife, who is an enemy of whiskey, uses the latter remedy, and we generally have light bread, although our wheat was grown in common with our neighbors'."

Important to Subscribers of Newspapers.

WE publish the following law relating to newspaper subscribers, as it may not be familiar to all; but as it is important both to publishers and subscribers that the subject should be understood by *both parties*, we lay it before our readers and trust that every candid mind will reflect upon the justice of such a law and do all they can to sustain it by a ready compliance with all its provisions:

THE LAW OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.

3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.

4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facia evidence of intentional fraud.

☞ Postmasters would oblige, by a strict fulfillment of the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.

Miscellany.

HORSE POETRY.

It is seldom we find so much genuine Horse Poetry as is contained in this Lyric by Robert Browning. Every line is a distinct picture of wonderful truth and power.

HOW THEY BROUGHT THE GOOD NEWS FROM GHENT TO AIX.

I sprang to the stirrup, and Joris and he;
I galloped, Dirck galloped, we galloped all three;
"Good speed!" cried the watch as the gate-bolts undrew,
"Speed!" echoed the wall to us galloping through;
Behind shut the postern, the lights sank to rest,
And into the midnight we galloped abreast.

Not a word to each other, we kept the great pace
Neck by neck, stride by stride, never changing our place,
I turned in my saddle and made its girths tight,
Then shortened each stirrup and set the pique right,
Rebuckled the check-strap, chained slacker the bit,
Nor galloped less steadily Roland a whit.

'Twas moonset at starting, but while we drew near
Lokeren, the cocks crew and twilight dawned clear;
At Boom a great yellow star came out to see,
At Duffeld 'twas morning as plain as could be;
And from Mecheln church-steeple we heard the half chime,
So Joris broke silence with "Yet there is time!"

At Aerschot up leaped of a sudden the sun
And against him the cattle stood black every one,
To stare through the mist at us galloping past,
And I saw my stout galloper Roland at last
With resolute shoulders, each butting away
The haze as some bluff river headland its spray.

And his low head and crest, just one sharp ear bent back
For my voice, and the other pricked out on his track;
And one eye's black intelligence,—ever that glance
O'er its white edge at me, its own master, askance!
And the thick heavy spume-flakes which aye and anon
His fierce lips shook upward in galloping on.

By Hasselt, Dirck groaned; and cried Joris, "Stay spur!
Your Roos galloped bravely, the fault's not in her,
We'll remember at Aix"—for one heard the quick wheeze
Of her chest, saw the stretched neck and staggering knees,
And sunk tail, and horrible heave of the flank,
As down on her haunches she shuddered and sank.

So we were left galloping, Joris and I,
Past Loos and past Tongres, no cloud in the sky;
The broad sun above laughed a pitiless laugh,
'Neath our feet broke the brittle bright stubble like chaff;
Till over by Dalhem a dome-spire sprang white,
And "Gallop," gasped Joris, "for Aix is in sight!

"How they'll greet us!"—and all in a moment his roan
Rolled neck and crop over, lay dead as a stone;
And there was my Roland to bear the whole weight
Of the news, which alone could save Aix from her fate,
With his nostrils like pits full of blood to the brim,
And with circles of red for his eye-sockets' rim.

Then I cast loose my buff-coat, each holster let fall,
Shook off both my jack-boots, let go belt and all,
Stood up in the stirrup, leaned, patted his ear,
Called my Roland his pet-name, my horse without peer;
Clapped my hands, laughed and sang, any noise bad or good,
Till at length into Aix Roland galloped and stood.

And all I remember is friends flocking round,
As I sate with his head 'twixt my knees on the ground,
And no voice but was praising this Roland of mine,
As I poured down his throat one last measure of wine,
Which (the burgesses voted by common consent)
Was no more than his due who brought good news from Ghent.

Practical Education.

THE SCHOOLS OF SWITZERLAND.

A CORRESPONDENT of the N. Y. Tribune, furnishes for that paper a very interesting letter on the schools of Geneva, in Switzerland, to which place very considerable number of boys are sent from this country. From this letter, we make the following extracts:

The price of tuition, *per annum*, at each, falls little short of $350, including washing and all necessaries. Every branch of study is variously prosecuted in these establishments under accomplished masters, while *the physical education of the pupils is made a matter of unceasing and systematic obligation*. For example, at Mr. Roediger's school, where I have placed my boys, the pupils have a play-ground as large very nearly as Washington Square, with all sorts of gymnastic apparatus, nine-pin alley, etc.; and here they play to their heart's content, not apart from but in company with their teachers, who lay aside the pedagogue and convert themselves into boys for the time with a good will which would be surprising to one who did not know how much of limber and elastic boyhood survives in these ripe European constitutions.

The sport of the pupils is not only amply fostered and directed, their health is also carefully promoted by the general discipline of the school. They go down every day to the Rhone to bathe, of course under watchful care; they go twice a week to a swimming school upon the lake to practice swimming; they ramble all about the delicious neighborhood, in short excursions with their teachers; they make long pedestrian tours in the summer vacation across the Alps; they sometimes visit Italy, sometimes some German city; they invade the fastnesses of the Jura; they ride on mules and donkeys; they pluck the wild strawberries; they drink at the way-side fountains; they eat the bread and honey of the mountaineers as they pause to avoid the noon-day sun; they inhale all day the untainted air of those grand solitudes; and they sleep at night in barns or chalet à deux sous, I am told, that every angel who waits on heaven and innocence unquestionably [illegible] it. At home they are subject to the [illegible]. The teachers are [illegible]. They have games and exercises and plays to amuse themselves with [illegible] things they have charming concerts in which all voices are taught to join, and lift up to God the incense of grateful hearts for all the goodness he showers upon them. Music, I think, is one of the necessaries in Mr. R.'s school. However, all the schools provide the best instruction in this respect.

Another point of interest is the extreme good manners nourished by these institutions. All the pupils are made gentlemen in deportment. Instead of the tyranny and oppression which is complained in the English schools, and to some degree in our own, the most rigid and exact courtesy from each to all and all to each is here insisted on. A son of Judge Vanderpool, of New York, who is at Dr. Haccius' school, told me that on his joining the school, he was startled to find himself the object of so many deferential attentions on the part of the older pupils. He could hardly believe such amenity compatible with the boyish bosom, and half expected to see the beautiful illusion suddenly dissipated by a sly punch in the ribs, or the compulsory descent of his hat over his eyes, all in the way of prospective good fellowship. Certainly it is very lovely to see youth preserving its ingenuousness—to see boy hood wholly unused to the coarse and brutal commerce of the great world; and from all I can learn I really think these schools do every thing possible to secure that advantage. The whole tone of society around them, too, strikes me as highly auspicious in this regard.

The N. Y. Life Illustrated, in commenting on the above, asks—"Is there any reason why *we* can not have such schools? Should the state of educational science among us be such that thoughtful, wise parents shrink from placing their sons at an American school, and traverse wide seas to find an institution where something else is inculcated besides indigestion, where obedience and freedom are *not* found irreconcilable, where as much is done for heart, taste and manners, as for the poor faculty of calculation? Year by year the practice of sending children abroad for education increases, and it will continue to increase until our higher schools are *radically* reformed.

Adventure with Rattlesnakes.

A CORRESPONDENT of the St. Louis Democrat, writing from Paoli, (Kansas Territory,) relates the following thrilling adventure:

On Saturday evening the air was so bewitchingly balmy, and the sky so softly veiled by shadowy clouds, that I was seduced into a lengthened stroll along the bluffs, which proudly aspire to overlook the umbrageous woodlands on the one side, and the sun-lit plains on the other, until I reached an elevated pinnacle, so tall as to command a panoramic view, whose picturesque and varied beauties ravished all my senses and lost me in most dreamy reveries.

I reclined upon the summit of the rock, with my head upon my hand, until, presently, it rolled away upon the cushion of springy moss, which grew there like an emerald diadem, and I was locked in that strange slumber which leaves you semi-conscious, and yet restrains volition. I had lain thus several minutes, with my left arm stretched to its extent, when at the extremities of the fingers of that hand there was a sensation new and peculiar, that sent a thrill of pleasure to the mind and heart; it was soothing, drawing, and generally titilating, as if the fingers were dissolving away in a delightful self-absorption.

Just then, from this sort of blissful abandon, I was startled by the report of a gun-shot within a few paces of me. I sprang to my feet, and with astonishment saw my friend Mitchell standing near and gazing at me with a fixed look of ghastly horror. Before I could inquire what be meant, my attention was caught by the sound of the most shrill, keen, ringing rattle that ever penetrated human ear; and on looking down I discovered a huge rattlesnake with gory head, quivering and writhing in the agonies of death, and sending forth from his erect tail the terrible tocsin that I heard. From his fearful propinquity I began to realize my position, but not until I heard an explanation from M. could I fully understand and appreciate its horrors.

He told me that my resting place was the top of a rattlesnake's den, and pointed out the orifices through which they passed; that he was in the habit of coming there on Sunday evenings to shoot rattlesnakes; that when he approached and saw me lying upon the den, he supposed I had been bitten and was dead; that he crept nearer and saw my respiration and knew I was alive, but discovered a monstrous snake licking my hand and covering it with a slimy coating, preparatory to deglutition; that he made a slight, involuntary shuddering exclamation of 'my God!' which drew the snake's attention and caused him to turn his head, when he discharged a load of buckshot into his face and neck, mangling and tearing them to pieces, and thus saved my life.

He had scarcely told me this, which took but a moment, when rattles all around brought us to a recollection that we were not yet free from danger. We saw ten or fifteen large rattlesnakes approaching us from every quarter, with eyes glaring revengefully, barbed tongues thrusting threateningly and rattles sounding alarmingly. They are brave and can not be intimidated, and will die over the dead body of their companion sooner than desert it. We knew the implacable character of our enemy, and Mitchell and I with his [illegible] barrelled, and my stick and stones fought our way out as best we could. You may imagine that my nerves were not by any means that evening, and that I dreamed of snakes that night. Mitchell has killed one hundred and seven of them—the largest of which had twenty-six rattles. He says that the Indians, who have been in the habit of hunting them for years, have killed much older ones, and slain thousands.

How to be Beautiful.

THE following passage is from one of Prof. Upham's letters to the N. Y. Congregationalist. He is speaking of the Captain of the steamer in which he sailed from New York:

"As we were about to start, I saw him move to an elevated position above the wheel; and it was interesting to see how quickly and completely the inward thought or purpose alters the outward man. He gave a quick glance to every part of the ship. He cast his eye over the multitude coming on board the ship, among whom was the American ambassador to England, who, if the captain may be said to embody the ship, may be said with equal truth to embody in his official person a nation's right and honor. He saw the husbands and wives, the mothers and children entrusted to his care; and his slender form, as he gave the orders for our departure, seemed at once to grow more erect and firm; the muscles of his face swelled; his dark eye glowed with a new fire; and his whole person expanded and beautified itself by the power of inward emotion.

"I have often noticed this interesting phenomenon; and have come to the conclusion if man or woman either, wishes to realize the full power of personal beauty, it must be by cherishing noble hopes and purposes—by having something to live for, which is worthy of humanity—and which by expanding the capacities of the soul, gives expansion and symmetry to the body which contains it."

MILK AS A MANUFACTURING INGREDIENT.—Milk now performs other offices besides the production of butter and cheese and the flavoring of tea. It has made its way into the textile factories, and has become a valuable adjunct in the hands of the calico printer and woolen manufacturer. In the class of pigment printing work, which is, indeed, a species of painting, the colors are laid on the face of the goods in an insoluble position, so as to give it a full brilliant appearance. As a vehicle for effecting this process of decoration, the insoluble albumen obtained from eggs was always used, until Mr. Pattison, of Glasgow, found a more economical substitute in milk. For this purpose, Buttermilk, is now bought up in large quantities from the farmers, and the desired indissoluble matter is obtained from it at a price far below that of egg albumen. This matter the patentee has called "lactarin." A second application of the same article—milk—has just been developed by causes arising out of the recent high price of olive oil, which, having risen from £40 to £70 a ton, the woolen manufacturers are now using the high-priced article mixed with milk. This compound is said to answer much better than oil alone, the animal fat contained in the globules of the milk apparently furnishing an element of more powerful effect upon the fibres than the pure vegetable oil *per se*.

THE FRENCH LOAN.—The great financial transaction of the day is the new French loan for £30,000,000. The French Minister of Finance, F. Magne, in his account of the transaction, informs the Emperor that 310,000 persons subscribed 3,600,000,000 francs, five times the amount that was called for. Of the sum total 600,000 francs were from foreigners abroad. He says: "Sire, the financial operation which has just been accomplished, and which is probably the most surprising that has ever been effected at any period, or in any country, will enlighten those who still retained doubts of the power of France as to the extent of her riches and of her credit, and the popularity which is attached in Europe to the glorious enterprise which she is carrying on. This immense co-operation of capital, sent from all countries, furnished by people of every amount of fortune, will certainly be in the eyes of the whole world the most striking and the most undeniable testimony of the confidence which the policy of the Emperor inspires both in France and abroad."

THE DECREASE OF THE BRANDY TRADE AND ITS PROBABLE CAUSE.—Extract of a letter received at the State Department at Washington, dated La Rochelle, France, the 30th Sept.:

"You will remark what has never occurred here before—the absence of all American vessels from this port for the last six months. The last vessel that stopped here left in December last. The only ship that has been in this vicinity since the 1st of January, was the Trenton, of Maine, bringing lumber, and in consequence of the utter stagnation of the brandy trade with the United States at this [illegible] was obliged to leave in ballast. This may be accounted for, as I have already stated to you in a former communication, by the failure of the grape crops for the last two years, the consequent high price of Brandy, and lastly, the Temperance movement in the United States. These movements have created quite a panic here among the Brandy dealers. Without two successively good crops it is believed that the trade will not revive."

PRAISEWORTHY.—The Lowell News says that there are now in that city two young ladies who were born in New Orleans, [illegible] consequence of death and revolution [illegible] not only [illegible] to return to [illegible] they made their way to Lowell and [illegible] and are now [illegible] exemplary and intelligent [illegible] of the city who have in the midst

Ladies' Department.

Premature Matrimony.

MARRIAGE is a divine and beautiful arrangement. It was not designed by Providence solely as the means of keeping up population, or as a mere social and economical convenience, but as a blending of two spirits into one—the masculine representing wisdom, and the femine affection. When there is a true spiritual affinity between the two, then the design is accomplished.

Premature marriages are among the greatest evils of the times; and it would not be a bad idea in these days of reform if an anti-marrying-in-a-hurry society was instituted. Now-a-days, people leap into the life-circle with no more consideration than they would partake of a dinner, little thinking that when once in, they are there until their end comes. There is a little, sometimes of mutual analysis of disposition, and comparison of taste and affections. They seem to fancy that, if there are any discrepancies, the fatal Gordian knot, which can be seldom cut, and never united, will harmonize all.

The number who have felt this truth—the number still feeling it to their heart's core—are incalculable. They recognise it as the great mistake of their lives. The chain to them is not a silken one, but a ceble of iron that tightens around them more, crushing out all hope and energy, substituting hate for love, and eating out with its rust the very inner life of the soul.

Boys and girls now marry to a greater extent than ever before, instead of waiting till they become full grown matured men and women. The young dandy, as soon as he gets out of short jackets, and a little furze gathered on his upper lip—and the young miss, as soon as she emerges from the nursery and abbreviated frocks—think they are qualified to assume the most solemn responsibilities of life. And so if "Pa" and "Ma" wont consent, they post off to some Gretna Green, and there take obligations that, in ninety-nine cases out of a hundred they will never cease bitterly to repent.

Marriage should never be the result of fancy. The ball room and the evening party rarely develop real character. Under the exhilerating influence of the dance—the glare of the lights, and the merry squib and joke, the dissolute young man may appear amiable, and the slatternly scold loveable. Matchee made at such places, or under similar circumstances, are not of the class that originate in heaven. They are more generally conceived in the opposite place, and bring forth only iniquity. The true way to learn each other is to do it at home, in the parlor, in the kitchen and on occasions that test the temper. We see the result of these unions in the almost daily divorces that are taking place, in the running away of husbands, leaving their wives and children to starve, and in the elopement of wives. Not only this but we witness it in broken-spirited men, made old in the prime of life, struggling on for mere food and clothing and shelter; and in women, [illegible] and [illegible]

It would be quite impossible for us to depict faithfully the multitude of physical and moral evils that result from these sinful marriages—for sinful they are. They ruin the body, corrupt the morals, and stupify the mind. And the result does not stop with husband and wife. There are the children. They partake of the feebleness and vices of the parents, both physical and moral, and go out into the busy world stunted and gnarled. God pity them!

We would not be understood as speaking against the institution of marriage. It is holy, beautiful and beneficent. But let every one take his mate or none. Let not the brave eagle pair with the stupid owl, nor the gentle dove with the carrion crow. Like should have like. It is a glorious sight to see two old people who have weathered the storms and basked in the sunshine of life together, go hand in hand, lovingly and truthfully down the gentle declivity of time, with no angers, nor jealousies, nor hatred garnered up against each other, and looking with hope and joy to the everlasting youth of heaven where they shall be one forever. That is the true marriage—for it is the marriage of spirit with spirit. Their love is woven in a woof of gold, that neither time nor death, nor eternity can sever.

REAL NEW ENGLAND BROWN BREAD.—Take equal proportions of sifted rye and Indian meal, [illegible] well together; add half a tea-cupful of molasses, and two cakes of good yeast, to about three quarts of the mixed meal. Wet this with good new milk, sufficient to make a dough that can be easily be worked, even with one hand. For economy's sake, milk that has been twelve hours, and from which the cream has been taken, may be a substitute for the new milk; or water which has been poured from boiled potatoes or in which rice has been boiled is a better substitute than pure water. But warm water is [illegible]. The [illegible] should be thoroughly mixed and warm, to cold weather, for twelve hours, in warm weather [illegible] may be sufficient before baking. If baked in a [illegible] oven, a thorough [illegible] in the oven all night. The most [illegible] Brown [illegible] will [illegible] [illegible] [illegible]

LAW ABOUT NEWSPAPERS.—We call the attention of our readers to the law which relates to newspapers, to *subscribers* as well as to publishers, and which every one should fully understand.

THERE is a great deal of poetry about "dying for one's country," the glory of a "death bed on the battle field," and all that, but statistical returns show that the great majority of the soldiers die of the dysentery, which must be a very different affair. A supply of Mrs. Kidder's Cordial would prevent more than half the mortality in the Crimea.

OAK HALL.—We copy with pleasure, the following notice, with slight alterations, from the Boston Post, which we can endorse from personal observation and experience, and heartily concur in recommending to our friends and others who may be returning to the States, with the probability of visiting Boston, to be sure and replenish their wardrobe at this establishment.

We cheerfully and confidently invite our readers to visit Oak Hall, the pioneer clothing house, established in this city in 1841. This house, which fully sustains its envinle position, is daily receiving large supplies of recently manufactured reasonable clothing. Dealers, travelers, and resident citizens will find everything thing to meet their demands, either at wholesale or retail, at prices defying competition.

Large sales and small profits having ever been the ruling principle in this establishment, it is not the place for unfashionable and shopworn goods. Small profits, based upon the one-priced cash system, induce rapid sales, which create a corresponding drain upon the stock, and would ultimately exhaust the same, whatever its original magnitude, were it not regularly and systematically replenished. This fact is kept constantly in view by the sharp-eyed proprietor, and receives the consideration its importance demands; therefore, purchasers of ready-made clothing at Oak Hall always find fresh manufactured goods, conforming to the ever-varying changes of style and fashion.

While those who are eeger to adopt the latest fashions thus find their wishes fully anticipated, the wants of those who are disinclined to leap at once to the hight of the fashions are not overlooked, but a good variety of a medium line of style is kept ready at hand for their accommodation.

The custom department is abundantly supplid with rich cloths, doeskins, vestings, &c. Here, none but scientific and skillful artisans of long-tried experience, are allowed to handle the shears, and having every needful facility at their control, they are prepared to furnish clothing equal in all respects to any, and superior to most establishments of the kind, at prices corresponding to the principle of large sales and small profits.

SPECIAL NOTICES.

PRINCE'S PROTEAN FOUNTAIN PEN.

[PATENTED JAN. 23, 1855.]

T. G. STEARNS, General Agent,

No. 271 Broadway, Cor. Chambers Street, New York.

☞ ADVANTAGES.—An incorrodible and durable Ink Reservoir, made of Protean, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time.

A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material

Its structure is simple, and not liable to get out of order.

Opinions of the Press.

We must regard this Pen as one of the grand improvements of the age.—*Portland Transcript and Eclectic.*

As a Reporter's Pen, I have never seen or heard anything to equal it. It is just the facility wanted to this department, so that it may keep up with the age of electrity and steam.

GEO. KELLOG, Reporter, 625 Broadway, N. Y.

Eureka! Eureka!! We have found it at last: a Fountain Pen that will write for hours without once dipping in an inkstand.—*Knickerbocker Magazine.*

The ink flows from it so evenly and so easily, that the mechanical labor of writing becomes a pleasure.—*Knickerbocker Magazine.*

The Pen must have a great run. Any pen that runs for eight hours at a dip, may be said to have a great run—but this pen will become a tried and valued friend—will save the temper of the business man, and preserve the composure of the irritable poet.—*Hartford Courant.*

We are writing with one which does some six hours service without failure or stoppage, and have found it inexpressibly convenient, and comfortable.—*New York Evangelist.*

This Pen, among pens, is what Colt's Revolvers are among Pistols. One will fire a dozen shots, and the other write a dozen sheets, with a single charge or loading.—*Author of Major Jack Downing.*

A Clergyman who has written a whole sermon with one of these Pens, without once dipping in the ink, said to us that he would not dispose of it for twenty times its value.—*Boston Evening Traveller.*

If I could not procure another of similar merits, one hundred dollars would not purchase from me the one I have.—*A New York Clergyman.*

We continue to use our own with entire satisfaction.—*New York Independent, May 16, 1855.*

"Let those write now who never wrote before,
And those who always wrote, now write the more."

*** Rights for Towns and Counties to vende, will be granted on favorable terms.

☞ A sample of these Pens can be seen at the at the Office of this Paper on the arrival of next steamer. v4-19 3m,

☞ **Oxygenated Bitters.**—The annexed statement of Prof. A. A. HAYES, M. D. State assayor, is ample testimony of the scientific manner in which this medicine is compounded, and recommends it to Professional Men, as worthy a fair trial in their practice:

An opinion having been asked for of me, in consequence of the formula for preparing oxygenated bitters having been known to me, I express the following, in form:

The composition of these Bitters includes those medicinal substances which experienced physicians have long resorted to for special action on the system, when deranged by fevers, Dyspepsia, Ague, and General Debility, resulting from exposure or climate influence.

These are rendered permanent, and remain active, in this preparation, as a consequence of the scientific manner in which they are combined.

It was a well founded inference, that the preparation, used in larger or smaller doses, would prove a valuable *General Medicine*, which experience has demonstrated.

In this medicine, no metallic salts can be found, by the most delicate chemical trials. Respectfully,

A. A. HAYES, M. D.,
Assayer to the State of Massachusetts.

No. 1 Pine street, Boston, 16th Dec. 1850.

SETH W. FOWLE & CO., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agent for Sacramento—C. MORRILL. 12-2w

☞ **Clove Anodyne Toothache Drops.**—Those who have felt the painful throbbing and excruciating pangs of this disease shooting through their jaws with most tormenting perseverance, and, as is often the case, have received but little sympathy from friends on such occasions, will no doubt be much pleased to know of a remedy that will never fail to quiet forever the unmerciful offender. The comfort that should be sought for in the Clove Anodyne Toothache Drops, a remedy that, while it removes the pain, preserves the teeth, and thus blesses as well as benefits. These drops have been extensively used and thousands will bear grateful testimony to their value as a speedy and permanent cure for the toothache.

Agents—HENRY JOHNSON & CO.,

MISCELLANEOUS.

PERUVIAN FEBRIFUGE,

FOR THE PREVENTION AND CURE OF

FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THE usual method of administering tonics produces only temporary relief, merely breaking the chill without removing the disease; but it is necessary to relieve the liver and other organs of the unhealthy action, on which the illness of the patient depends. This can be safely, speedily, and effectually accomplished by this valuable preparation; and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians, with the most signal success. In all climates where bilious and remittent fevers prevail, this remedy will be found invaluable, and no persons traveling through, or residing in, infected and marshy districts, should be without it, as a few doses will effectually counteract the poisonous and miasmal influence arising from such location, by imparting activity and vigor to the biliary organs, and thus prove a sure *preventive* against an attack of Chills and Fever.

The following are selected from the numerous testimonials received, showing the superiority and efficacy of the Peruvian Febrifuge, not only in cases of long standing, but where other remedies had failed:

FLATBUSH, King's Co., N. Y., April 1, 1854.

Messrs. A. B. & D. SANDS: Gentlemen,—I have much pleasure in informing you that I have been entirely cured of the Fever and Ague by the use of your Peruvian Febrifuge, after suffering with it for over two years, and trying all the best known remedies without success. The Chills could not be broken by using any other medicine, and I almost despaired of a cure; but a neighbor who had been cured by your Febrifuge recommended me to try it, which I did, and was entirely restored by using less than one bottle, and have had no return of it since. Very respectfully, MICHAEL COX.

GOWANUS, Long Island, N. Y., April 4, 1854.

Messrs. A. B. & D. SANDS: Gentlemen,—My self and two of my children were afflicted with Fever and Ague, more or less, for about two years, and tried various medicines without any benefit. In October last we were persuaded to use your Peruvian Febrifuge, one bottle of which cured us; and we have not been troubled with it since. I can recommend it to others with the greatest confidence—having known of several cases which have been cured by it after every other medicine failed.

Respectfully yours, M. RAWL.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-19 3m.

SANDS' SARSAPARILLA.

IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of

Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Biles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.

THE value of this medicine is now widely known, and every day the field of its usefulness is extended. It is approved, and highly recommended by Physicians, and admitted to be the most powerful and searching preparation from the root, that has ever been employed in medical practice. Its operation extends to the remotest parts of the system, and consists in removing diseased action in the absorbing and secreting organs. In man, Nature seldom effects, unassisted, the cure of any virulent disease, but requires the aid of a stimulant, alterative, or antiseptic medicine. In diseases of the skin and flesh, a combination of these three classes of medical agents is highly desirable. All these properties are combined in this preparation; and instead of operating successively upon the system, as they must necessarily do when taken separately, they operate simultaneously, and in perfect harmony when administered in this form. Its tonic property strengthens the digestion, and improves the appetite. Its alterative tendency carries off the accumulations of morbid matter,—and its antiseptic influence neutralizes the virus, by which the disease is fostered. Its uniform success in curing and relieving the various diseases for which it is recommended, is established by a multitude of attested facts.

From the Army.

MONTEREY, Cal., Jan. 18, 1850.

Messrs. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, hoping it may lead some other unfortunate beings to try its effects, and that they may be benefitted as I have been. I arrived here by the overland route, about the first of October last. A few days after I was first attacked with a very disagreeable eruption of the skin, which my physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine at home, I purchased three bottles, which had the desired effect of removing my difficulty entirely. With high regards, yours, &c.,

J. H. MILLER, Lieut. U. S. A.

Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, 100 Fulton street, corner of William, New York. Sold also by Druggists generally throughout the United States and Canadas. Price $1 per bottle; six bottles for $5.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-18 3m

Notice for a Toll Bridge.

THE undersigned gives notice that he shall apply, according to law, to the Board of Supervisors, for a licence to keep a Toll Bridge at Dry Creek, on the Sacramento and Stockton Stage Route, within thirty days from date, or at the first sitting of the Board thereafter.

New Patent

Force and Lifting Pump and Fire Engine Combined

THE undersigned is now manufacturing and has for sale a NEW PATENT PUMP, which, for utility and power, surpasses anything of the kind ever offered to the public.

For Ships, Railroad Stations, Paper Mills, Factories, and all other places where a large quantity of water is required to be raised, they are peculiarly adapted.

Its construction is double acting, throwing a continuous stream of water, at the rate of from 200 to 400 gallons per minute, (according to size) and can be used as a LIFTING or FORCE PUMP, and by the application of Hose can be operated as a Fire Engine of the most efficient kind.

It is simple, not liable to get out of order, can be operated by hand, steam or water power, and need only be seen to be appreciated.

N. HUNT,
26 Devonshire street, Boston.

Also for sale—Best quality of LEATER BELTING and superior SHUTTLE SEWING MACHINES.

☞ Orders for the above received at this office. v4-3 3m.

S. P. Ruggles' Power Press Manufacturing Co.

(Incorporated February 8, 1854.)

THE above named company having purchased of the well known inventor, S. P. Ruggles, Esq., his Patents connected with the Printing Business, are now manufacturing under Mr. Ruggles' immediate superintendence, the following machines, viz.:

	Size of Form in Inches.
Half Sheet Combination Engine	18 by 12
Quarto Sheet Combination Engine	12½ by 9
Half Sheet Cap Job Rotary	10½ by 7¼
Card and Bill Head Rotary	7 by 4½
Diamond Rotary Card Press	4½ by 3
Circular and Dial-tip Hand Press	8 by 6
Embossing Press	18 by 10
Cast Iron Imposing Table	26 by 22
Shaving Machine, shaves	27 by 16
Paper Cutter	cuts 27
Card Cutter, improved	cuts 25
Bookbinders' Rotary Shears	cuts 25
" " larger size, in proportion.	

These presses are considered by the Job Printers as the best adapted to their wants of any machines ever manufactured. All orders addressed to their agent, M. B. BIGELOW, 152 Washington street, Boston, Mass., will be promptly attended to.

Mr. Ruggles has also sold to the CUTTING MACHINE MANUFACTURING CO., his Patent ROTATING SHEARS, for cutting sheet tin, iron, copper, brass, zinc, steel, and mill and boiler plates, and all other metallic sheets. This is entirely a new process for cutting metals, and is destined to supersede all other machines for that purpose.

ANSON HARDY, Agent,
152 Washington street, Boston.

And to a third company, called the BOSTON HAND STAMP CO., he has sold his patent for a very ingenious Flexible Hand Stamp, whereby perfect impressions may be made at the rate of sixty per minute, the die adapting itself to the surface to be printed on. A very convenient article for all business men.

v4-12 1y M. B. BIGELOW, Agent, Boston.

SMITH'S POMOLOGICAL GARDENS,

American River, 2½ Miles from Sacramento.

THE Proprietor of these extensive Nurseries and Gardens will be prepared to supply all the best varieties of Fruit Trees of the following kinds:

Apple, Pear, Peach, Plum, Cherry, Quince, Nectarine and Apricot; Grape Vines of every valuable variety; Gooseberry, Currant, and Raspberry Vines, &c.

ALSO.

Green House Plants of every rare and beautiful variety; Flowers, Shrubs, and Plants, Shade and Ornamental Trees, Bulbous Roots, &c., &c., &c.

These will be ready as soon as the season of transplanting shall commence. Orders will be received at any time, and delivered in the order in which they are booked.

Garden Seeds.

THE Proprietor will also offer a large variety of **Fresh Garden Seeds,** at Wholesale and Retail, of his own raising and putting up. Great care has been taken to select the very best varieties, and to keep them pure and unmixed. They are all of the present year's growth, the same varieties having been used by the Proprietor in his own grounds for the last three years. The produce which has been exhibited in our markets is the best proof of their quality.

The undersigned would be pleased to see purchasers at his grounds, where the produce can always be seen in every stage of growth. [v4-17] A. P. SMITH.

SAN JOSE NURSERY.

THE San Jose Nursery and Gardens, formerly known as L. Provost & Co., is now carried on in all its branches under the immediate eye of the present proprietor, who is sole director and owner of the same, having purchased the interest of his former partner.

L. Provost, the present owner, will now offer to his patrons and friends one of the largest and finest collections of Fruit Trees that can be found in any Nursery in the State, consisting of all the most desirable kinds of Apple, Pear, Plum, Cherry, Peach, Apricot, Nectarines and Quince, with a very extensive lot of Grapes and Figs, a beautiful lot of oboice Ornamental Trees of rarest kinds, and Green House Plants in great variety.

The collection of Roses in these Gardens cannot be equalled, for nearly *twenty thousand* of the most beautiful plants, large sizes and rare kinds, can be found here.

Purchasers will be sure to be satisfied if they will visit the Gardens, where they can find much to please them, which the Proprietor will show them with pleasure.

☞ The Nursery is situated in the city of San Jose, immediately above the City Mills. L. PROVOST,

ALBANY AGRICULTURAL WORKS,

ON HAMILTON, LIBERTY AND UNION STREETS;

WAREHOUSE AND SEED STORE,

No. 52 State Street, Albany, N. Y.

The Proprietors of the above-named establishment being the sole owners and manufacturers of

EMERY'S PATENT HORSE POWER, &c.,

☞ ALL ARRANGEMENTS WITH OTHER PARTIES FOR THEIR MANUFACTURE HAVING EXPIRED ☜

have formed a new Copartnership, under the firm name of

EMERY BROTHERS,

And will continue the manufacture and sale of AGRICULTURAL IMPLEMENTS and MACHINERY, as heretofore, at the old stands of EMERY & CO. By this arrangement the united efforts, and interest of the Brothers, long known to the public, are secured, and no exertions will be spared to meet the wishes of those dealing in and using the class of implements they manufacture—their leading branch being the manufacture of the justly celebrated

Emery's Patent Changeable Geered Railroad Horse Powers,

with the machines to be propelled by it, as Threshing Machines, Saw Mills, and Machinery generally.

These Powers having been submitted repeatedly to the most severe tests and trials to determine their relative merit and utility with those of every known manufacturer, have without exception been awarded the highest prizes for superiority—among which were the following:

N. Y. STATE AGRICL SOCIETY,	1854, 1853, 1852, 1851, 1850	MARYLAND STATE AGRICULTURAL SOCIETY,	1853
OHIO STATE BOARD OF AGRICUL.,	1854, 1853, 1852, 1851	MISSOURI STATE AGRICULTURAL SOCIETY,	1853
MICHIGAN STATE AGRICUL'L SOCIETY,	1853, 1852, 1851	AMERICAN INSTITUTE,	1852, 1851
INDIANA STATE AGRICULTURAL SOCIETY,	1853	NEW YORK CRYSTAL PALACE,	1853
ILLINOIS STATE AGRICULTURAL SOCIETY,	1853	CANADA PROVINCIAL SOCIETY,	1852, 1851
PENNSYLVANIA STATE AGRICULTURAL SOCIETY,	1853	CONNECTICUT STATE AGRICULTURAL FAIR,	1854

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 224 bushels of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both kinds of Powers, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. If the crops be extraordinarily heavy or light, greater or less results will follow.

These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by this Circulars, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and full purchase money refunded if not found acceptable to purchasers.

The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, they hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.

They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery, Implements and Seeds, which are all new and of the most approved and complete kinds extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.

The attention of a discerning public is solicited to our present stock of goods, before selecting and purchasing the coming season.

To Poultry Raisers.

A SURE remedy for the Disease, peculiar to Cattle, Fowls, &c., and which is fatal to Chickens, for cure see [illegible] for sale at [illegible] street, San Francisco; [illegible] & Co., [illegible] the [illegible] MAN, Inventor and [illegible] Vallejo.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerreian Gallery! Largest Light in the World. (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishes PERFECT LIKENESSES? Because he has now the most arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery next door to Austin's. v4-1

MISCELLANEOUS.

IT IS A FIXED FACT,

CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis. Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot Be Discredited.

DR. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIN, of Tarboro, North Carolina, writes me, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, of times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more than restored to perfect health, and can now breathe as free and full as ever, and can recommend it to all afflicted in the most unqualified manner, as the most invigorating and heartening remedy.

C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

California Stage Company.

HOTELS.

MURRAY'S WESTERN HOUSE,

AND

General Office of the California Stage Company.

Corner of Second and D streets, ... MARYSVILLE.

☞ Open all Night. ☜

THIS superb first-class Hotel is by far the most capacious and elegant one in California, out of San Francisco, and is excelled by none in that city. It is of brick, perfectly fire-proof, four stories high, and fronts 103 feet on Second street, and 80 feet on D street. Two hundred rooms can be accommodated with entire ease, and in the most comfortable style. Particular attention is paid to the wants and comforts of Families.

Its location is central, and is the General Depot of Staging and Steamboating.

Travelers can rely upon being *called in time* for any boat or stage leaving the city.

Those who desire, can entrust their TREASURE and BAGGAGE to the proprietor in person, who is the sole manager of the establishment, and who will be responsible for the same.

Rates of Charges.

Board without lodging, per week	$12 00
do with lodging, per week	$15 to $20 00
do without lodging, per day	$2 50
do with lodging, per day	$3 25 to $4 00

Lodging, 75 cts., $1 and $2 per night.

[illegible]

[illegible]

Varieties.

A cook, hearing the lady of the house at dinner ask her husband to bring home "Dombey & Son" with him, when he came to tea, laid two extra plates on the supper table for the supposed visitors.

Stick no Billa Here.—A waggish boarder in one of our principal hotels, where they are in the habit of putting every man's bill under the door weekly, has nailed a tin sign at the foot of his door on the ontside, with the noted inscription, "stick no bills here,"

An elephant at Tinnevelly that had been engaged all day in piling timber, but in the evening becoming angry at some promise bis keeper had neglected to fulfill, went of his own accord and undid every stroke of work he had completed during the day.

Beauties of Newspaper Publishing.—Col. Fitzgerald, senior of the Philadelphia City Item, thus relates his experience in newspaper publishing: "During the first three years, we have frequently gome home of a Saturday night without money enough in our pocket to buy bread for our little ones for the ensuing Sunday. Sixteen times we bave pawned our watch to get the money necessary to pay our hands. In the course of those sad and stern probationary eight years we have twice been blind from over reading and writing, and our eyes aro scriously and permanently injured."

Novel Precaution.—In consequence of the frequency of burglaries in jewelry stores, a very ingenious precaution has been devised by a jeweler in Cannon street, London. A panel is cut out of the middle shutter, and a piece of plate glass inserted, secured by iron bars inside. The valuables are placed in an iron safe in a frame on rollers, surrounded by gas, with the key-hole facing the window, so that any one passing can look through tho glass and see all that is going on inside the shop. If the gas is out, or the window darkened, the police, of course know that there is something wrong. This is certainly novel and ingenious, but London thieves will discover the means of defeating the operation before a long time.

How it was Done.—It has been ascertained that the beloved and respected Amos Lawrence gave away for charitable purposes, during his lifetime, *seven hundred thousand dollars*. He came to Boston in 1808, with only $20 in his pocket. In his diary it is said. "I have never smoked a cigar, never chewed but one quid of tobacco, and that was before I was fifteen, never took an ounce of snuff." During the first seven years of his mercantile life he never allowed a bill to stand unsettled over Sabbath. He kept an accurate account of the merchandise bought and sold each day, avoding excessive credits, and practised the most rigid economy, never, he says, "allowing himself to spend fourpence for unnecessary objects till be had acquired it." Hence bis great success.

L. P. FISHER'S
ADVERTISING AGENCY,

Iron Building, opposite the Pacific Express Office, (up stairs,)
San Francisco.

L. P. F., is sole agent for the following Newspapers, published in Californla, Oregon, and the Sandwich Islands: Sacramento Union; San Joaquin Republican, Stockton; Marysville Herald; Nevada Journal; Columbia Gazette; Grass Valley Telegraph; Shasta Courier; Empire Argus, Coloma; Mountain Democrat, Placerville; Amador Sentinel, Jackson; Yreka Union; Weaverville Democrat; Iowa Hill News; Petaluma Journal, Petaluma; San Jose Telegraph; California Farmer, Sacramento; Southern Californian, Los Angeles, San Diego Herald; Oregonian, Portland, O. v4-17 3m San Francisco.

Important to Millers and Farmers.

THE undersigned having discovered a remedy for the injury to wheat arising from Smut, and a plan of renovating the same, has secured by a "Patent Right," his title to the same.

From the experiments made by experienced millers, the most satisfactory results have been produced. From well attested trials and repeated experiments, the qualities of its power to clean the smut from wheat are ascertained that the most perfect process in the wheel, while at the same time a large saving of time and cost accrues to the miller, and the flour is as pure and white as from the finest wheat.

Farmers who have crops of wheat, now unharvested, may yet save them, for they can easily be assured that their grain can be restored and the value saved to them.

Licenses, with all particulars for the use of this Patent Right, can be obtained at the warehouse of the subscriber, on Clay street, between Drum and East, San Francisco.

v4-2 CHARLES CAMPBELL.

Beds, Mattresses, &c.

Something New and Wonderful in the CALIFORNIA ARTS.

JAMES W. JOHNSTON, Daguerrean Artist, southeast corner of the Plaza, has the pleasure of announcing to the public, from whom he has received many substantial favors, that he has just completed the *enlargement of his Gallery*, and combined with it several magnificent features of the Arts heretofore entirely unknown on the Pacific Coast. He is now prepared to execute in superior style—

1st. Daguerreotypes, as heretofore, on metallic plates, with or without coloring.

2d. Stereoscope Likenesses and Views from Nature.

3d. Daguerreotypes on *Glass* and *Paper*—the most splendid and remarkable discovery of the age. These Miniatures are susceptible of being worked up by the brush of the Painter, to embody all the freshness and naturalness of life, at about one-half the cost ordinarily attending miniatures on Ivory, which they far surpass in correctness of delineation. The business has now been commenced at Johnson's Gallery, for the first time in California, where Ladies and Gentlemen are invited to call and examine specimens.

Connected with Johnston's Rooms is a Portrait Gallery, also, where Mr. THOMAS S. OFFICER, late of New York, is prepared to execute Portraits on Canvass in elegant and life-like style.

☞ Call and behold the latest triumphs of Art. v4-15

corner Leidesdorff and Sacramento streets, San Francisco;
or to CHARLES FRENCH,
v3-c8 Resident Engineer, Benicia Works

New Invention!

Now, Count Your Chickens!!

THE undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls.

After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from *four to five hundred eggs* can be converted daily into young Chickens, Ducks, Goslings or Turkeys. After the first brood, i. e., nineteen or twenty days, this is the certain result; and it requires but little attention—once every twenty-four hours—the cost of fuel and preparation being only some $2 50 to $3 every twenty days.

This Invention will be in full operation at the State Fair in the city of Sacramento, in September next, when all information will be presented. They will soon be offered for sale. In the meantime information can be obtained at the office of the CALIFORNIA FARMER; or letters can be addressed to mont San Francisco. JOHN J. FULTON,
v3 26 Third street, South Beach, near South Park.

MEDICAL.

DR. GUYSOTT'S IMPROVED
Extract of Yellow Dock and Sarsaparilla

Is acknowledged to be the best Sarsaparilla made, as is Certified by the Wonderful Cures it has performed.

☞ Remember this is the only True Original Article.

This Medicine, when used according to the directions,

Will Cure Without Fail,

Scrofula, or King's Evil, Cancers, Tumors, Eruptions of the Skin, Erysipelas, Chronic Sore Eyes, Ringworm, or Tetter; Scald Head, Rheumatism, Pains in the Bones and Joints, Old Sores and Ulcers, Swelling of the Glands, Syphilis, Dyspepsia, Salt Rheum, Disease of the Kidneys, Loss of Appetite, Disease arising from the use of Mercury, Pain in the Side and the Shoulders, General Debility, Jaundice, and Costiveness.

The Best Female Medicine Known.

The Yellow Dock and Sarsaparilla is peculiarly adapted for females of delicate health, resulting from irregularity of menstrual discharges, and other diseases peculiar to their sex. We assure the afflicted, that a bottle or two of DR. GUYSOTT'S EXTRACT OF YELLOW DOCK AND SARSAPARILLA will at once regulate those difficulties and renew the natural energies.

Syphilis, Scrofula, and Diseased Blood.

DR. GUYSOTT'S IMPROVED EXTRACT OF YELLOW DOCK AND SARSAPARILLA is a true specific. The proprietors have in their possession over one hundred certificates of the most extraordinary cures effected by it. We can safely say—TRY IT. It revives the drooping constitution, eradicates all bad humors from the Blood, and by its tonic properties restores the invalid to life and vigor. As a spring and summer medicine it has no equal. Its singularly efficacious action on the blood, its strengthening and vivifying action on the system, stands pre-eminent above all other Sarsaparillas. If you would have the rose brought back to your cheek, a clear, healthy and transparent skin, and life and vigor infused through the system, take Guysott's Extract of Yellow Dock and Sarsaparilla. It contains more of the pure Honduras Sarsaparilla than any other preparation extant, which is chemically combined with the Extract of Yellow Dock and the Extract of Wild Cherry, thus making the remedy more thoroughly efficient than any other Sarsaparilla before the public. At the same time it is perfectly free from all mineral poisons, which cannot be said of any other Sarsaparilla compounds.

Sold by all the Druggists in California and Oregon.

OXYGENATED BITTERS,
CONTAINING NO ALCOHOL,
A CURE FOR

Dyspepsia, in all its various forms; Heartburn, Habitual Costiveness, Acid Stomach, Loss of Appetite, Nervousness, Coldness of the Extremities, General Debility and Asthma.

THESE Bitters are approved by some of the best physicians, who use them in their practice. Scientific men have more difficulty in overcoming and controlling the various symptoms of Dyspepsia than almost any disease in the world. They are so various, in different individuals and cases, that it has seemed impossible sometimes to obtain even temporary relief from suffering. But a medicine has been discovered which proves, beyond a doubt, that in most cases a permanent cure can be effected. By avoiding stimulants, and using the *Oxygenated Bitters* strictly according to directions, a healthy tone is imparted to the digestive system, and strength to perform its natural functions.

Ample testimony to the truth of this can be had by reference to numerous certificates in possession of the general agents. We have no hesitation in pronouncing the Bitters a sure cure for

DYSPEPSIA.

From J. C. Dunn, Esq., City Treasurer.

BOSTON, June 6, 1852.

Gentlemen: I have been for some years troubled occasionally with severe attacks of Indigestion; have consulted many physicians, tried Allopathy and Homeopathy, and can truly say, I have received more speedy and effectual relief from the use of *Oxygenated Bitters*, procured from you, than from all other remedies, and most cheerfully recommend them to all who suffer from a similar affliction. Yours truly,

JAMES C. DUNN.

DR. HENRY E. MORRILL, a skillful Physician of New York city, in his remarks on Dyspepsia, says: "The most effectual medicine to improve the tone and energy of the stomach, is that prepared by Dr. George B. Greene, and called the Oxygenated Bitters. I would publish the receipt for preparing this valuable medicine, if I knew what it was, but as I do not, I can only recommend its use. It seems to me to be improperly called 'Bitters,' at least in the popular acceptation of that term, for it contains no Alcohol or other Spirit, and is rather sour than bitter. Though here, by the way, I cannot too earnestly caution the dyspeptic sufferer against using the thousand and one advertised 'Bitters,' the basis of which is alcohol, or other ardent spirits. They impart no real energy to the stomach.

The stimulation which they excite is only temporary, and sure to be followed by a reaction which at length will inevitably wear out the stomach. This medicine obviates these objections. It has been analyzed by that distinguished chemist, Prof. Hayes, M. D., *State Assayer of Massachusetts*, who declares that 'the medicinal articles used are those prescribed by the most eminent physicians, for the diseases for which these Bitters have been so eminently successful.' I have employed them in a multitude of cases, and have uniformly found that when used according to the directions, they gradually, but surely, remove, one by one, the various distressing symptoms which cluster around the confirmed dyspeptic, restore to the stomach its lost energies, and thus lead the patient back to the enjoyment of permanent health and strength."

It has also been used by the following persons, and received their unqualified approbation:

Prof. Edward E. Phelps, M. D., Dartmouth College.
Hon. Myron Lawrence, Ex-President Mass. Senate.
" Samuel S. Phelps, U. S. Senator from Vermont.
" J. F. Simmons, U. S. Senator from Rhode Island.
" L. H. Arnold, formerly Governor of Rhode Island.
" H. D. Foster, Member of Congress from Pennsylvania.
" Solomon Foot, U. S. Senator from Vermont.

Many other individuals of the highest respectability can be referred to, who will confirm all that has been said in favor of the Oxygenated Bitters

PROPRIETORS AND GENERAL AGENTS.

Agent for Sacramento.....C. MORRILL.

Sold by Druggists generally, and by appointed Agents throughout the States and Canada. v4-18 3m

Cooper's Eye, Ear and Orthopædic Infirmary,
San Francisco.

No. 14 Sansome street, near the Rassette House.

PATIENTS laboring under Disease of the Eye, the Ear, and those afflicted with all varieties of deformities, resorting to this Institution, will find at once a home, where Misers as well as others can be accommodated with board and comfortable rooms, in plain or costly style, according to their taste.

Dr. Cooper has visited all the important hospitals in Europe, for the purpose of extending his knowledge of medicine and surgery, and will give the Infirmary his immediate supervision.

N. B.—All Surgical Operations free to patients who procure themselves at the clinic on Wednesdays and Saturdays.

For particulars apply to DR. E. S. COOPER, at the Infirmary. v4 10 3m.

Important to Farmers.

Stockton, Nov. 7, 1855.

Mr. Warren: Dear Sir—Allow me to call the attention of your readers to the circular of Lieut. Maury, calling on the farmers and others throughout the United States, to keep correct metereological tables of the weather, and return them to the Central Committee at Washington City, at the end of the year—say commencing on the 15th of Nov., which I think would be a good time to commence this year,—as far as regards our climate and State. Now some one should take it upon himself, in each county; as the climate differs materially, even in the same latitude of our country [illegible] the Pacific Coast. Let us have [illegible] some one will volunteer in the cause, in Humboldt, Los Angeles, Mariposa, Calaveras, San Francisco, Santa Clara, Shasta, El Dorado and Sonoma counties. About 9 A. M. and P. M., would be a good time to take note of. It would also be useful to add the quantity of rain (the depth of course) that has fallen each twenty-four hours; and the course and apparent velocity of the winds, and of frost, snow, thunder and lightening, and any other phenomena which may occur. The time of the semi-annual change of the monsoons should be, I think, particularly noted in each locality, and also whether each locality is within reach of the diurnal sea breezes, or not.

I will pledge myself to answer for the county of San Joaquin, on Nov. 15, 1856, to the best of my ability.

Colton.

Steam for Agricultural Purposes.

The Royal Agricultural Society of England have offered a premium of two hundred pounds for the best steam-cultivator or substitute for the plow. The competition was to take place at the annual exhibition of the Royal Agricultural Society at Carlisle, July 19th. As the subject has excited very considerable attention in England, we copy from the English Agricultural Gazette, a letter addressed to the committee having control of the awards, in which are set forth the alleged advantages of the steam cultivator or digger, over the plow and spade. The inventive genius of the two countries, heretofore chiefly directed to other branches of industry, has now fairly turned toward Agriculture. But a few years ago Reaping and Mowing Machines were thought impracticable, and seeing what has been done in them and other implements, it will hardly do to be startled now even at the idea of the introduction of *steam* for Agricultural purposes. The article is as follows:

"Two hundred pounds for the steam-cultivator that shall in the most efficient manner turn the soil, and be an economical substitute for the plow or the spade."—*Pa. Farm Journal.*

"Turn the soil." Mark this expression; for the whole character and efficiency of the machine depends on this point. Breaking up [illegible] and consolidating the soil by a plough is a process [illegible] a spade, by any implement, will work a grass or [illegible] seed upon the surface of the seed [illegible] favorable exposure to the [illegible] and feeding down your [illegible] by sheep, [illegible] the former case, the ground [illegible] as [illegible] the latter, [illegible] urgently must you inter every blade and plant that might spring up amongst your intended crop. In the fundamental operation of tillage, the destruction of all remnants of old crops, and the loosening-up of the staple for a succeeding one you must "turn the soil." Was it not for this very sole purpose of burying obnoxious vegetation and [illegible] a fresh surface of earth, that plows with mould boards superseded the imperfect scratching instruments of yore? Is not the chief fault of the plow itself that it does not completely hide all surface vegetation, but too often (especially when the plowman is blameable,) leaves grass or other living growth to shoot up among the seams of its furrows, and defy the weeder of the coming crop? For many tillage purposes—such as autumn cleansing or spring grubbing—no such inversion is needed; but in the first and foundation work of breaking up after a crop, and to the full depth of the intended staple, you *must* "turn the soil." Perhaps an instrument able to stir and mix every portion of a deep staple, might be made to bring up repeated instalments of earth long buried, and thrust down the long exposed surface to take its place, at the same time forking out root weeds and rubbish. As far as fertilization is concerned, perhaps a frequent *commingling* of soil and subsoil might suffice, instead of alternate exposure of each upon the surface; but the consideration of weeds alone inculcates the necessity of "turning the soil" Therefore we maintain that the first condition of the Society's offer is well chosen, and that the premium will be misappropriated in the opinion of practical men, if given to a machine (no matter how expert at comminution) that cannot entirely bury the surface.

Then it must be also "an economical substitute for the plow or the spade." If there shall be an engine that turns over furrows effectively at less cost than the plow—(first expense included) although it may be incapable of any other labor—give it the prize. And should there be a machine unable to plow at all, but able to dig in as perfect a manner as men can with spades—if it will perform this work alone more cheaply than men, it is entitled to the prize. Plowing ought to be accomplished for less money than by horses, and digging (though this of course is a more expensive operation) at less cost than by men.

The judges have not to determine whether digging *a la* spade will be too expensive for the farmer although indispensable to the market gardener; whether or not a cheap digging engine would not inaugurate miracles upon the clays; but (useful or not) *according to the terms of the offer* they must award the premium either to an engine that digs more economically than the spade, or that plows more economically than our present horse-plow. Should a machine be produced of versatile powers to execute both shallow work like a plow and deep work like a spade, such a doubly clever contrivance will of course merit the palm.

Before awarding the prize and so pronouncing some invention to be an "economical substitute" for the implements with which we break up and invert whole ground—not merely fur the grubbers and harrows with which we stir and pulverize soil already broken—let the judges well weigh this point of "economy." They must not sanction with the authority of the Society, any machine that they dare not recommend to farmers or gardeners in place of the plow or spade. Besides the working expenses, they must calculate the wear and tear and the interest of the first outlay in purchasing the machine; and on the other side of the account they must be prepared with similar estimations of the charges for fuel, attendance, depreciations, etc., attaching to horses and common implements. On the credit side they will have to compare the excellence or superiority of the respective operations; and particularly they should fix a money value upon the time saved in the performance of the work, inasmuch as there is a great advantage in having a breadth of land prepared for sowing in less time than usual, though the acreage expense may be the same as by means (without incurring any neutralizing disadvantage) which gives the husbandman greater command over the soil and more [illegible] of the weather, is certainly to be valued as a pecuniary gain.

Perhaps it may be unwise in the judges to trammel themselves with any further specifications [illegible] the [illegible] of a [illegible] the [illegible] of [illegible] farmer's [illegible] [illegible] [illegible]

be required to open a passage through this mountain for the commerce of tha two hemispheres.

When I looked upon the mighty body of water in Lake Bigler, and considered the scarcity, yet increasing demand for water to run quartz mills, and for various other mining purposes, a suggestion came into my mind, that beneath the tunnel for the railway a channel could be formed to carry the now useless water of this great lake through by Slippery Ford, and over into the vast mining regions between Placerville and Volcano, now neglected much of the season for tho want of water. After an examination of the springs on the west side of the Sierra, below the altitude of Lake Bigler, I am of the opinion that they are fed from that Lake by subterrnnean passages, as the course sand or decomposed granite running out with the water, is the same as found on the lake shore, and in tha springs at Carson Valley.

Very respectfully, yours,
—*Tribune.* WILSON FLINT.

The Exportations of Gold—Effect of the European War.

WE were turning our thoughts to the subject of the continual drain of specie from our *State*, and the consequences upon our industrial interests, when we noticed the following artiele, which we copy from the N. Y. Herald of Oct. 2d, as fully expressive of the subject. We commend it to our mercantile community at the present time, for the day is not very distant when the influence of this continual drain will be felt in our own country with a violence that shall be of terrific power.

The impression that we shall continue to export specie without regard to the condition of our foreign trade, is gradually gaining ground. The continuance of the war upon a scale more extensive than has yet been realized, will make it necessary for the governments of Great Britain and France to obtain supplies of gold at any cost, and their financial agents will naturally look to our receeipts from California to meet that demand. It has been our belief for some time that the outward movement of gold has not been entirely regulated by the laws of trade. The Bank of England is being steadily and rapidly drained of gold, and has been compelled to raise the rate of interest to preserve its present supply. The Bank of France has also had its specie balance largely reduced and but for the importations from this side of the Atlantic, both of these institutions would have exhibited a very small amount of gold in their vaults. The Crimea is the mnelstrom that is swallowing up the precious metals of the three great commercial nations of the world; and so long as such an immense army has to be sustained in that region, so long must gold be drawn from the natural channels of commerce, and serve to derange to a greater or less extent the financial and commercial operations of the three maritime Powers. Within our own limits all the elements of prosperity are in a sound and healthy condition. We have added hundreds of millions to our national wealth by the crops which have just been secured, and we are able to supply any foreign demand with the raw material for food or raiment. So far as this goes all is well, and we may for the time benefit considerably by the abundance of food here and the scarcity in Europe; but it is a question whether ultimately the position and necessities of our best customers will not re-act upon us, and bring about derangement and distress within our own limits.

With all our resources, with the richness of our harvests, with the enormous surplus we possess of all the necessaries of life, with California at our back, yielding its three and four millions of gold per month, it remains to be seen whether we shall escape the general depression and prostration which sooner or later must grow out of the present European war. We are certainly in a position to feel it less than either of the commercial nations engaged, but we may be sensibly affected by the absorption of our specie and the withdrawal of the basis upon which rests the prosperity of all our great interests. We do not apprehend any immediate difficulty in our local finances, for the reason that our affairs are in such a contracted and healthy condition. The universal liquidation of 1854 and the early part of 1855 has been our salvation. Coming as it did at the commencement of the European war, it placed us in a position of security as that war progressed. We are now comparatively safe, and may escape with little loss; but had the present position of things in Europe found us expanded and in the midst of enormous speculations, the effect would have been most disastrous. The only way to prevent or mitigate the evils which are now visiting our European customers, is to confine our commercial operations, as much as possible, to the legitimate wants for consumption, and leave all transactions partaking of a speculative character, to some future and more propitious period.

This is not the time to launch out into extravagant expenditures in any enterprise. The future is too uncertain and too much burdened with great events to give much encouragement to speculation. It is the time for every one to keep himself snug and easy, and strive to do a safe and moderately profitable business, instead of a large and dangerous one, even if attended with the prospect of great returns. Our security and the permanency of our present prosperity depend entirely upon steering clear of all irregular and unusual entanglements, and keeping ourselves prepared to meet any contingency. It must be borne in mind that hundreds of millions of our [illegible] ties are held in Europe, and we know not [illegible] soon the necessities of foreign holders may [illegible]e our markats with them. A large amount [illegible] American stocks has already been returned, and more must soon follow.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, NOVEMBER 16, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

Exchanges.—Will our cotemporaries that exchange with us, have the kindness to direct our papers to *Sacramento.*

WHERE'S YOUR EXCUSE NOW?

IN looking over our books, we see several names among our subscribers, *who were to pay at harvest.* We ask them in all kindness if it is not a poor show of thanks to those who have labored to secure an increase to the value of their very products, thus to be forgotten? We think it due to ourselves to make out a list of such names and publish them, to see how they will look. There are some we assuredly shall, if not paid before January—perhaps earlier. Our real supporters shall ever be remembered and revered in our heart's table.

The Capital.
"WE ARE AT HOME."

As the period is approaching when the Legislature again convenes for the transaction of the State's business, Sacramento will become a very attractive spot. Duty, business, pleasure, each will summon men to the capital, and the city will be the theatre of many a busy and active scene, as well as gay and festive ones.

Among the masses that shall congregate in our city from time to time, there will be many that take an interest in the science of Agriculture and Horticulture, and we feel it a duty to lay before our readers all the information in our power upon this subject, by which they may be interested while at the capital. We believe that the citizens of Sacramento will do all in their power to tender to those who reside with us the coming winter the courtesies and hospitalities of the city and to make the season a source of the most interesting and valuable intellectual social visitings that can be found in the whole year.

Visitors from abroad will find much to interest them, aside from the legislation at the capitol. There is much to see at Sacramento, in her public improvements and rapid advancement—the Levee around the city; the Water Works, Gas Works; the State Agricultural Society's Rooms—these last should not be omitted by any one that feels an interest in the productions of our State. Agriculturists who may visit the capital should make known their arrival and record their names at the Society's Rooms, and thus give their friends an opportunity to meet them and confer with them upon the common interest. This communion of mind and interchange of practical knowledge are what is needed. A great amount of good will result from such a measure; a free utterance of all the advanced knowledge of the past years thus made known from citizen to citizen, and from county to county, would accomplish wonders.

Visitors that may come up to the capital should not fail to make that visit one of practical good. For this reason Cultivators should not only visit the Society's Hall and examine the products raised, but they should become personally acquainted with every practical operator who has made new and valuable discoveries, or exhibited evidences of skill and improvement in any of the departments of the industry of our country.

We hope our friends from abroad will not think us locally prejudiced if we should at this particular time ask them to visit the suburbs of our beautiful city, and examine those cultivated spots most attractive, for we hold it the duty of every practical worker to seize every moment of time to gain knowledge, and although other duties may claim the time of visitors to the capital at this time of the year, yet an early riser can enjoy much and grow wiser by such enjoyments. We would point out as places worthy of a visit—

The "Pomological Gardens and Nurseries" of A. P. Smith, Esq., on the banks of the American river. We urge the reader to go by all means, see the gardens, conservatories and nursery, become acquainted with the proprietor, and you cannot fail of enjoying the visit and gaining knowledge in the science.

Visit the Gardens of Messrs. Kuhlau & Co., near the Fort; there is much to interest there.

The fine Garden and Nursery of Rev. O. C. Wheelar should by all means receive a visit from every one that wishes to see how easy it is to have a good garden and fine trees.

There are several fine residences and fine gardens of our private citizens scattered over the city, that can be viewed by a morning ride, That of Gen. Hutchinson, President of the Society; Capt. Herwin, and many others, from Eighth to Twelfth street and near the American river.

There are many beautiful residences and cultivated spots from K to P streets and from Second to Eighth streets, all of which could be embraced in a morning's ride in the saddle or a carriage; and when can such a ride be more joyous or beneficial than at the early morning, when the sun is peeping from his early bed. Our mornings are glorious and our evenings too, and we feel confident that our friends from abroad will find Sacramento all fame has bespoken her.

The Garden of Mr. Jackson on L street, and several private gardens in that vicinity are worthy of notice.

The merchant, manufacturer, mechanic, or the true artist will each find, in our mills, foundries, manufacturing establishments and workshops much to commend, much to admire; and in our artists' studios hours can be spent with profit and pleasure—therefore husband your time and improve it, for there is much to see.

Compare our city streets with those of San Francisco, and who gains? And visitors should not forget the railroad—a ride in the cars also; there's time enough for all, to an early riser. Go to the stables of Stevens & Co. on Third street, and to those on Fourth street, get their fine horses and easy carriages, enjoy our clear mornings, fine roads and beautiful scenery, and you will return to an early breakfast at the Orleans, Mrs. Clarks, the Antelope, or many of our first-rate Hotels, and be in a good state of mind to enjoy it. All our neighbors and friends wherever you call will be happy to receive you; they will show you hospitality, and you will see, know, and realize that Sacramento citizens are "at home."

Smut in Wheat.

THIS subject is one of vital importance to the Grain growers in California, and as the evil which has caused so much loss, and so loud complaint, is one that can be easily remedied, if those who are much interested will take the necessary steps to accomplish it, we call their attention to the following as matters of moment, and ask the kindly co-operation of all our grain growers to the subject. The frequent inquiries that are made of us upon the subject of Smutty Wheat, induces us to lay before our readers the following article, which we published in March last. We re-publish it, as the season approaches for the planting of grain—the remedy is simple and easy, and we have faith in it, and coming from a reliable source, is worthy the confidence of the public. The letter from which we now make the extract, was published in Vol. 3, No. 10,—and from E. S. Jarvis, Esq., of Vine Springs Ranch, Columbia:

"In the Atlantic States in 1806, I sowed wheat (spring wheat, for at that time we raised no other.) The seed was obtained from a neighbor. It was soaked in beef pickle, made of salt and water, with a certain portion of saltpetre (nitre) twenty-four hours. It was then drained dry and afterwards finished drying with slaked lime. The quantity soaked was not sufficient to sow the piece of ground, and being pressed for time, a part of it was sowed with unsoaked and unlimed wheat from the same lot. The whole of the wheat raised from that soaked with pickle and dried with lime was perfectly free from smut, whilst that sown dry or without pickling and liming was nearly worthless from smut, and our neighbors raised from the same seed, also sowed without soaking or liming, wheat not fit to eat. This was, I think, before the publication of Sinclair's work, and was done from the belief that soaking in pickle prevented smut. The lime was used merely to render the grain dry enough to sow. If Sinclair's work had been published, it had not at least made its appearance in that part of our country. The next year our seed wheat was prepared in the same manner, and with the same success. In 1808, not having lime, we dried our wheat (after soaking it as usual) in ashes, and the crop proved to be a little smutty, which led us to suppose that it might be the lime that prevented smut, and we continued preparing our wheat by soaking in pickle and drying with lime till 1818, always having a perfectly clean crop. In that year I soaked the seed as usual, but wet weather coming on directly after the pickle had been turned off, and fearing the seed might be spoiled if left in this condition, I partially dried it with ground gypsum (plaster of Paris) and when the ground was dry enough to sow, my grain had become too dry to use lime, and a portion of it was sowed without liming. The plastered grain produced a very large crop, (the largest I ever knew in that part of the country,) but it was slightly smutty. That dried with lime had no smut. From 1818 to 1850 I continued to raise wheat, and always picked and died with lime, and never had any more smut.

"So much for smut. In 1852 I saw on the edge of my barley field a plant of wheat that was a come-by-chance. It was so very fine that I secured it, by putting stakes round it, in order to ascertain what it might prove. In the fall, when ripe, I pulled it up, and found it proceeded from only one kernel. The produce was half a pint, or a little less, and weighed a little short of half a pound. I sowed it in 1851, in drills, and its yield was sixty pounds, although I lost some by the fowls. I have now sowed the sixty pounds broadcast, and what the yield may be I will let you know in the fall. The quality of the wheat, judging from appearance, is the finest I have ever seen; the berry is large, full, and very light colored. In glancing over what I have written, I perceive that I have omitted to mention that we soaked some of our wheat in simple water, and then dried it in lime, and it destroyed the smut equally as well as when pickle was used.

Yours, truly, EU. S. JARVIS."

In addition to the above, we present the annexed remedy, which has been approved by thousands that have successfully tried it:

For every four bushels of wheat dissolve one pound blue vitriol in water sufficient to cover the wheat, and properly soak it; let it remain twenty or twenty-four hours in the liquid, and plant when taken out immediately. The same process should be adopted annually, and the result of each year will secure faith to continue the same process perpetually.

We hope our farmers will adopt this plan, or the first named, or try both—and give their results to the public. It is to be hoped, that in connection with the subject of *smut*, our farmers will adopt some method of recording their experiments of every kind, and also their time and manner of planting; also their systems of plowing and planting, the depth of the soil turned, quantity of seed per acre, kind of seed, when planted, etc., and make the results known. We shall be glad to be the medium of communication to the public.

Shipping Wheat.

WE believe our farmers are growing wise relative to the various plans adopted to affect the Grain Market, by a class of speculators that are scattered over the State. We have often met them and have been amused at the strategy employed to affect the price of grain in localities where they were desirous of operating. They make considerable use of the Assessors' reports of the quantity of grain raised in the State, and by figures make a large surplus.

With a full report of all the counties, and a recapitulation, there will be seen at a glance that our State comes short of a supply, to say nothing of *the grain that has been exported;* and from this amount is still to be taken the *seed grain that will be retained.*

The last dodge we have noticed was the publication of the arrival of the clipper ship Charmer at New York, with a cargo of wheat in *bad condition*, selling at $1 50 per bushel. Remember the speculators got this news. When the owners got their letters, *not a bag was injured*, and at that date no price was named.

The cargo of wheat shipped to England sold at a large profit, and this will be the result of every cargo already sent. We wish our farmers would wait for *results*, with an eye to see the game that is now playing to reduce the value of wheat. Let them use their eyes for their own purposes, and their own ears to hear for themselves; and let them carefully look at the quantity raised in California, and deduct from it the amount shipped, and they can see that the deficit is larger than has yet been announced, and all that Oregon can furnish will not supply what will be wanted for *seed.*

The Grain Market.

WE present our readers in this issue with a valuable report of the Grain Market and its particular features on the first of the month, as furnished us by the house of G. G. Pope & Co., produce dealers, San Francisco, in their circular of that date. We publish this report in detail, as it contains many features relative to grain that we had urged in past months, and which are now fully verified by the present markets.

We call particular attention to the remarks relative to the estimates of farmers made by themselves previous to harvesting, and to the estimates of the assessors; to the facts relative to the condition of the wheat, and to the demands from Europe. These are points that we have repeatedly urged, and which will now result beneficially to the farmer if he has regarded them.

We have published the detailed report of flour, potatoes and beans, as being articles of large trade and affecting the farming interest. If such reports be saved on file for reference they will be found beneficial:

SAN FRANCISCO, Nov. 1st, 1855.

The valuable statistics which we present in our issue of this month, with the very recent information at hand per steamer "Sonora," from the Atlantic States, South America and Europe, and per clipper bark "What Cheer" from Australia, will amply suffice to enable our friends to form a correct estimate of the future of our grain and flour markets.

It will not be forgotten by those farmers who shall read this circular, that in estimating the yield of their fields previous to threshing, they were greatly deceived; and that in most cases, even where the appearance of the straw and head indicated an average or abundant crop, the grain

was not forthcoming at all in proportion to their expectations. For this reason, we are of opinion that a liberal deduction should be made from the estimates of the assessors most of which were made up before this fact was generally understood.

A large per centage of the year's product is unfit for milling and will be consumed for distilling and other purposes.

The fact is now determined, that France, England and Germany will require very large supplies of breadstuffs from the United States, as their own crops are not only largely deficient, but the sources from whence they have heretofore derived considerable supplies are not to be depended upon this year. Already have very extensive orders reached New York from these countries. In France alone, the deficiency is about 24,000,000 bushels, which must be supplied by the United States.

Our dates from Australia are to 20th August, and as they advise the simultaneous arrival of several cargoes of flour and wheat, prices had of course much depreciated, though the shipments from this port, had been sold at rates handsomely remunerative. The quotations of flour were £27 to £30 at Sydney, and at Melbourne £37 to £40 per ton.

As large orders heretofore sent from Australia to Chili were not filled, it is maintained by many who are well advised, that the present depression will only exist until this fact is known; when, it is said that the market, which already showed some signs of improvement, would rally.

Our own market, which during the month has been quite inactive, is not improved by these advices, and while the majority of holders show no disposition to realize at any reduction from the rates ruling through the past week, there are no purchasers at those figures, and some small lots of wheat have changed hands at 1-8 *a* 1-4 c less. The transactions reported during the month, do not represent the amount of purchases, as the principal operators have bought largely in the country, and the production of nearly all our city mills, has been taken for exportation, without appearing at all in the current reports of the day.

The large orders received here early in the month for foreign account, being limited to rates below the views of parties holding stocks, have been filled to a very limited extent,

Flour —The arrangements referred to in our last by which the product of all our city mills was secured, and the purchase of nearly all sound lots from store, left little room for activity in this article during the month, and we have to report an apparently quiet market, notwithstanding that orders were here for the purchase of very large quantities for exportation. To the actual want of stock of suitable quality, and not a lack of demand, is to be attributed the comparatively small amount of transactions. We are cognizant of a contract by one of our principal mills for 1,000 barrels at full rates, deliverable within thirty days at sellers option, and to the amount of sales reported below, must also be added the yield of our own mills, little of which is there included. It is generally supposed that the recent news from Australia, will check the shipments at least for a time, though there are those who consider the news as most favorable, and as warranting farther shipments. It is now well settled that we shall receive but small supplies from Oregon before spring, and that the amount to come will fall much short of first estimates, which we have noticed heretofore. For good superfine flour the price has been steadily maintained through the month at $10 while at the close the news per "Sonora" has entirely checked all transactions, and though there are rumors of some lots having been offered as low as $8, those are again contradicted, and we know of no sales effected at reduced rates. Sales, domestic, as reported, 42,600 bbls.; Gallego and Haxall, 4500; total sales, 47,100 bbls.; exports, 21,541 bbls.

Wheat.—The most noticeable feature in this grain, is the marked improvement in the quality of the receipts of the present month, as compared with those of the last. A good demand has existed during the month, and choice parcels have been readily taken on arrival at 3c to 3 1-8, and early in the month as high as 3 3-8 was obtained for some lots of superior quality. The counties bordering on the bay have been thoroughly canvassed by agents of several large houses in this city, and extensive purchases made at 2 3-4 to 3 1-8 cts. deliverable at the various landings, and it may be safely said that much the larger portion of the present year's yield, is either at hand in this city, or awaiting transportation hither, having been purchased as above, while the small stock remaining in first hands is held by farmers who are not under the necessity of realizing, and will hold on for a material advance in rates. The small margin between wheat and barley has induced the taking by distillers of considerable amounts of the former, which the high rates ruling for domestic liquors, will enable them to do, at even an advance. We are pleased to be able to state that the shipments to New York last summer resulted most favorably, arriving there in good condition and commanding remunerative prices, the wheat having realized $1 86 to $2 05 per bushel. Receipts as reported since our last 136,054 sacks; sales, 71,367 sacks; exports, 26 sacks.

Barley—Commencing at 2 cents with a very active demand, continued to advance till about the 15th, when prices were quoted at $2 40 to $2 5[illegible] at which latter rates good samples were readily taken, up to the close when the up-river demand fell off. While the receipts became a part of the time [illegible] of wheat or flour at lower [illegible] the market left to brewers [illegible] which [illegible] to be [illegible] rates, [illegible] choice parcels, which at the close may be quoted at about $2 45, though this may be considered nominal, small sales only being effected. An effort is making to depress the market for the purpose of concentrating the stock, and as we write an auction sale of 1000 sacks Chile has been made at $1 95, with that view. How far this attempt may succeed is doubtful, but we are confident of the disposition and ability on the part of the principal holders, to await better rates in the future. Though the entire production of the State sums up to a large figure, the yield of those counties finding a market in our city is comparatively small, and after deducting the amount required for seed, leaves a small supply for the numerous distilleries and malting establishments, even though the up-river demand should not again revive. The parcels of this grain shipped to New York found much favor in that market, proving of far superior quality to the product of the Atlantic States, and realized prices quite satisfactory to shippers. Receipts since our last, 67,271 sks; sales, 56,782; exports, 980.

Oats—Have been influenced to a great degree by the activity in barley, and have been in good demand until near the close, when they share with other grain the dullness consequent upon a tight money market, and cessation of foreign demand. Prices, which at the opening were 2 to 2 1-8c, advanced steadily to 2 1-2c till the 20th ult., when a reaction took place; and they may be quoted at the close at 2 1-4 to 2 3-8c. with little demand. Receipts, as reported, 30,591 sks; sales, 20,764 sks.

Potatoes—Which were in excess, and dull at 1 7-8c at the opening, have continued to arrive in large quantities, and being almost without exception of inferior quality, requiring immediate disposition, have continued to droop; and at the close may be quoted at 1 1-4 to 1 3 4c. Without exception, this esculent seems this year a prey to the worm. Receipts, as reported, 42,917 sacks; sales, 31,501 sks.

Beans — With the single exception of the small white variety, have come forward in excess of the demand, and in much greater abundance than was anticipated, causing a material decline. Advices per "Sonora" of the shipment from Chili of two cargoes, which may shortly be expected, have tended to still further depress Bayos. We quote, white, 7 1-2 to 8c; large Bayos, 7 to 7 1-2c; reds, 4 to 5c. Receipts, as reported since our last, 8,007 sks; sales, 5,484 sks.

We have received the assessor's returns from twenty-nine counties, representing the agricultural portion of the State, in which they estimate the entire yield of wheat and barley at about 2,500,000 bushels each. We have already assigned our reasons for the opinion that a large deduction should be made from these figures.

Valuable Donation.—J. V. Jones, Esq., of Birdsville, Georgia, has forwarded to the State Agricultural Society, through J. Q. A. Warren, the following list of new and valuable Peas:

No. 1.—"Rice Pea," from its similarity when well cooked, to rice—best table pea known.

2.—"Shinney."—This is the celebrated Pea for all purposes in this State, prolific and early maturity; two crops in a season.

3.—"Jones Hay,"—great runner, and produces large crops of straw or vine.

4.—"Jones Little Claret,"—early as No. 2, and as prolific—valuable table variety.

5.—"Jones Spotted Claret,"—a valuable grain for feeding stock.

6.—"Jones Brown Pod,"—equal to No. 5.

7.—"Large Flesh Colored,"—a great runner, and stock pea, good also as a table variety.

8.—"Goat Pea," so called (I presume) from its black and white spots, a large and vigorous grower—valuable for stock.

9.—"Chickasaw."—This famous little Pea or "Vetch," is known in the planting states, by some *half dozen names.*

10.—"Jones Improved Gourd Seed Corn."—I have given it every attention, and nursed it into fruitfulness for 10 years. It is a *deep plump grain*, upon a uniform "red cob.

These nine varieties of Peas and one of Corn, were received and will be carefully distributed Mr. Jones has directed more attention to the Pea than any other man in America, and has in consequence the largest and most valuable collection known, being over fifty varieties, all distinct. Other varieties are promised the Society, and we know every friend of Agriculture will be grateful to Mr. Jones for the interest he has shown to California and its State Society.

A Remedy against the Evils of a Dilatory Post Office.—We hear all manner of complaints against the post office department, and we know there is great cause of complaint; but where the evil lies or who is most to blame it is hard to tell. We believe postmaster Weller labors hard to remedy the evil, and we have met Col. Fry all over the State, hard at work, and yet there is still complaining. We think we have found out a *remedy*. There is an old adage, tis a true one—"When woman will, she will, you may depend on't; and when she won't, she WON'T, and there's the end on't." Now among our *lady subscribers*, and we have many, God bless them for it, we have one who, for a long time, failed to receive the FARMER and we were not. We had mailed the paper regularly. And we were [illegible]. We knew the paper was [illegible] but no paper came to hand. After a long [illegible] and repeated [illegible] by a [illegible] or the paper would [illegible] lady [illegible] in this place and that place, lo! behind the box there were found *eleven papers*. They had all been duly received, but carelessly thrown over and *it was too much trouble for the clerk* to pick up a paper. Now our remedy is, when letters and papers are missing, send a lady, and there is no such thing as resisting her demands—she wills, and it is done. We hope the clerk who found those missing papers will read this paragraph and remember his duty in future.

The Solano County Herald.—This neat and well printed sheet was laid before us, and we are pleased to see a paper of this kind in that county. It is needed, and will induce an interest in the minds of many in that vicinity for their own *county interests*, and thus result in good. Messrs. McGeorge & Cellers are the publishers; and we hope they will receive ample encouragement to continue it prosperously. We extract the following from its columns:

Marble Quarry at Suisun.—A fine quarry of marble has been discovered in the hills north of Suisun City. A company is being formed, and the quarrying will be commenced early next spring. We are pleased to chronicle this addition to the business of our country, and we believe that it will prove a very important branch of trade. The shipping point will be at Suisun City, and it is hard to see how much more business can be accommodated there than is already done. It is the point of embarkation of the produce of the county, and has for the past few months been by far the busiest place in the county. Three stores are located there, and a steam flour mill is in full blast. If any person desires to inform himself as to the wealth of our county, he can do so at Suisun City.

Cheap Fare—Good Living on Steamers.—It cannot be denied that there is some good growing out of all the noise and clamor of this opposition of steam companies. Thousands go, because, the prices are lower—and thousands *eat*, that never eat before. On a trip up river a few nights since upon the fleet "Antelope," Capt. Poole, we could not but notice the many good things and luxuries upon the table—there were five varieties of fish, flesh, and fowl, and all the *good things*—and as the Captain with his usual politeness saw due attention paid to his guests, we noticed the activity of the *steward*, who, like a skillful general, went from post to post; we could not but approve such order. And by the way, reader, as you have often traveled on this fine steamer, let us ask: Why is the steward of the *Antelope* as great a man as the General of the Allied armies? Because he has taken *Sea Bass* to *Poole*.

Wheat Shipped to England.—The Chronicle has advice of the arrival of the bark Greenfield, from San Francisco, in the remarkably short space of 113 days.—a passage which is the more remarkable, that off Cape Horn she lost the foremast with all the yards upon it; but nevertheless delivered her cargo of Flour and Wheat in excellent order. We understand that the Wheat, which was the pioneer shipment from here to England, paid a profit of about 55 per cent. on cost and charges, and was considered the best lot that had ever been imported into that market.

The Governor has appointed and set apart Thursday, 29th inst., as a day of Thanksgiving.

The fare on the California Steam Navigation Co.'s steamers has been reduced, for the present, to two dollars in the cabin, and fifty cents on deck.

Worthy of Note.—The fact that diseased lungs, even in the middle and latter stages of consumption, have been cured, in repeated instances, by Wistar's Balsam of Wild Cherry, can be substantiated by the strongest proof.

A Successful Medicine.

Dyspepsia.—What a world of misery is contained in this single word. What disease so utterly dispiriting, so hopeless, so harrowing, so fraught with wretchedness as this! Let the confirmed Dyspeptic answer. It is estimated that more than half the suicides that occur, could be traced to the state of mind induced by this disease. A thousand and one remedies have been offered for its cure, but nearly all have been "found wanting." We know of but one reliable remedy, and that has proved itself in scores of well attested cases a cure for dyspepsia in its worst forms. We allude to Hostetter's Stomach Bitters—the production of an eminent physician. They contain no alcohol, and operate rather than other tonics. Of their efficacy none who try them can doubt. Many of the most respectable persons in this city have certified to their curative powers, and they are daily adding to the number—having, as a remedy for nearly all the ills that flesh is heir to, no equal. Persons who are slow to acknowledge the merits of Patent Medicines, even of prepared by physicians of the highest standing, have been induced to make an exception in favor of Dr. Hostetter's Stomach Bitters, which is known and used throughout the United States, California, Mexico, the West Indies, and South America. Its sales are unprecedented, and every year it is more and more in demand. Its virtues are known to all who have used it, and by its timely use many a life has been saved, and many a case of confirmed dyspepsia cured, where every other means of relief had been tried in vain. Its effects are truly wonderful in the cure of Dyspepsia, Liver Complaint, Fever and Ague, Rheumatism, Nervousness, Debility, Costiveness, Kidney Complaints, and all diseases arising from a disordered stomach or impure blood. Its proprietors have the most unbounded confidence in its virtues, and will guarantee that a single trial will prove to the most skeptical that it is the best remedy ever offered to the public. Sold by druggists and dealers generally throughout the world. Principal depot, 60 Wall street, New York. Sold in San Francisco by Wells, Fargo & Co., Adams & Co., and Kelly & Co.

From the East.

The P. M. steamship John L. Stephens, which arrived at San Francisco Wednesday morning, brought 994 passengers—652 males, 219 females, and 129 children.

Dr. Kane and his party, which started in the spring of 1853, to search for Sir John Franklin, arrived in New York on the 11th October, in the vessel sent out to search for them under the command of Lieut. Hartstein. Kane left his brig frozen up in the Arctic Sea on the 24th May last, went three hundred miles to the sea, and then in open boats 1300 miles to Uppor Naviek in Greenland, where after waiting for a month they were taken by a Danish trading ship, which subsequently fell in with and transferred them to the searching expedition under Hartstein. The results of Kane's Expedition are quite important. He went up to 82° north, within 500 miles of the North Pole, and found an open sea, beyond an eternal barrier of ice, which extends from Greenland to the Continent. The party endured much suffering.

It is stated that no final decree will be entered in the Fremont Land case till the receipt of the papers from the U. S. Circuit Court, wherein objection was made by the District Attorney to entering a final decree, objecting that it was not in accordance with the opinion of the U. S. Supreme Court.

The San Antonio Texan reports that the survey of the Mesilla Valley secures to the United States both passes to the Pacific, and that the new territory is rich in gold and silver. Major Emory and the other members of the Boundary surveying party arrived at San Antonio on the 24th Sept.

The War.

The latest official dispatches report the south side of Sebastopol to be occupied by detachments of French and English troops, who have had distinct quarters of the town assigned to them.

The Russians concentrated their forces in the northern forts, and were occasionally firing upon the town, to which the allies replied from the two forts which remained intact (Nicholas and Quarantine), and from the ruins of the other forts. Prince Gortschakoff, in his reports, describes the fire of the allies as heavy.

Preparations were making by the British and French engineers, by the sinking of immense mines, to destroy the splendid docks, arsenals, and shipbuilding yards of Sebastopol, and thus uproot the place as a naval stronghold. Though there is no official information on the subject—the allied generals, for obvious reasons, being silent as to their future operations—there are various premonitions of a vigorous campaign in the open field.

The Times correspondent, writing on the 21st, is not at all sanguine that the Russians will be forced to abandon their position on the approach of winter. Various Russian and Prussian accounts state that the war is to be carred on with the greatest determination, and that the Crimea is to be defended to the last extremity.

Le Nord, of Brussels, takes a hopeful view of Russian affairs in the Crimea. A writer in that journal says: "The situation is not entirely to our disadvantage, and the honor of our arms has been in no way compromised. Our men will no longer be obliged to offer themselves up as a holocaust, but will now be able to defend themselves in a close fight, and sell their lives at a high cost."

The same paper states, that out of the ten thousand seamen who had undertaken, with their officers, the defense of Sebastopol, only a fourth survive, and six or seven officers.

The semi-official Austrian correspondent publishes news from Constantinople, of the 27th September, to the effect that the Russians before Kars had captured a Turkish convoy of provisions, destined for the garrison, together with 1,000 horses and 300 men.

A brief telegraph from Hamburg states that on the 27th September, six English vessels appeared before Riga and bombarded for several hours, the batteries of Danamunde and Virage Donellen.

France.—La Presse says that corn has at length reached its maximum price, and that the high quotations have brought offers of supply from all quarters. Large arrivals of foreign flour were shortly expected. The very day on which the articles about flour appeared in the Moniteur, a house at Havre sent a large order to New York.

The price of butcher's meat is to be fixed by the authorities (by decree of the Prefect) every fortnight. Measures are being taken by the authorities of the various departments for the relief of the poorer classes.

The old firm of De Lisle Jarvis & De Lisle, Merchant Bankers of London, has stopped payment. Liabilities £[illegible]. The house of the house have been made in Canada.

Railway to Stockton and Marysville.—In urging the construction of a railroad from the Bay opposite San Francisco to Stockton and Marysville, the Sacramento Argus says the distance is [illegible] from the San Francisco Bay, at Benicia to Stockton via Martinez's Ferry (on the head of Livermore's Valley [illegible] 1[illegible] to Stockton to [illegible] 4[illegible] to Marysville [illegible] 1[illegible] 40 [illegible]

Our Literary Department.

"The Life of Curran," by his son Wm. Henry Curran, with additions and notes by R Shelton Mackenzie. Published by J. S. Redfield, Beekman street, New York:

This work purports to be the Life of the Right Honorable John Philpot Curran, late Master of the Rolls in Ireland. We quote the following from the preface: "John Philpot Curran, one of the truest patriots and greatest men, ever native of Irish soil, was the center of the sparkling wits, the renowned orators, the brilliant advocates, and the honored statesman who flashed upon the darkness of his country's latest hours of freedom, and vainly endeavored to maintain the national independence which they had achieved for her. His life is identified with the latest years of Ireland's nationality." Much new matter, principally relating to his personal life has been added to this volume, which is not contained in any other edition, and will make the memoir more interesting than any before presented to the public. In the appendix are a few specimens of the wit with which Curran and his friends were wont "to set the table in a roar." The work is a valuable one and contains a portrait, which is a most characteristic likeness of the subject of the work. It is engraved for the first time in this country, and is little known, even in Ireland.

"Richard Hurdis," a Tale of Alabama, by W. Gilmore Simms, Esq., author of the Yemassee, the Partisan, &c. Published by J. S. Redfield, New York:

This is the second work of the new and revised edition of Border Novels, now being issued by the above enterprising publisher. The first one issued, Guy Rivers, we had occasion to review in a previous number, and the work now before us has a still more interesting feature in the annals of Alabama History. The author says in his preface: "The story is a genuine chronicle of the border region where the scene is laid, and of the period when the date is fixed. Its action throughout is founded on well known facts; its personages *were* real living men. Doubts have been expressed of the actual existence of the wild and savage confederacy here described; but no one at all familiar with the region and period of the story can entertain a question of the history. There are hundreds of persons now living who knew and well remember all the parties, and the general history of the outlawry, prevailing in the Mississippi valley twenty years ago, cannot have escaped the knowledge, in some degree, of every inhabitant of the Southwest during that period." The work is very exciting, and will be deeply interesting to every lover of Simm's works. There are two other stories, "Border Beagles," and "Beauchampe," which belonged originally to this unnamed family. These are to succeed Richard Hurdis, and will soon be published, uniform with the others. Now is a good opportunity to obtain a complete and correct set of the most popular romances of the day.

"Little Nell," from the Old Curiosity Shop of Charles Dickens. Published by J. S. Redfield, New York:

This is the first of a series of volumes for the young, which was announced in our columns a short time since as being in press. It is designed to supply a want much felt at the present day—a class of books for the young, of a higher grade than is usually furnished. The writings of Chas. Dickens have been selected as a basis of the scheme, on account of the well known excellence of his portrayal of children, and the interests connected with children, qualities which have given his volumes their strongest hold on the hearts of parents. Little Nell is a happy selection, and will be eagerly sought for. The remaining volumes will doubtless prove very attractive. We will gives the series in our next. In the meantime, get a copy of "Little Nell."

"Cora and the Doctor," or Revelations of a Physician's Wife. Published by John P. Jewett & Co., Boston, and dedicated to Dr. John Jeffries, of the same city:

It is a work which must be seen and studied, to be appreciated, and those who have read it once will read it a second time, as it is worthy a place in any library. The author remains incognito, and much curiosity is evinced to learn her name. The object of the work is to make known the duties and responsibilities is a good family physician, and his claims to the gratitude and respect of society, and shows what he may do to alleviate spiritual as well as bodily maladies. The book is a deeply interesting one, and its deep usefulness will secure it a large and rapid sale. We shall allude to it again in a future number.

"Amy Lee," by the authoress of Our Parish, is the title of a new work of great merit and interest, shortly to be published by Brown, Barzia & Co., Boston.

We have received a number of new public-

tions which press of matter obliges us to defer till our next. Also, new and valuable magazines, all of which will receive our earliest attention.

One of the Oldest Farmers in the World. Mr. Baggers Bagley has purchased one hundred and sixty acres of land in Minnesota Territory, which he intends settling upon and improving. Mr. Bagley is *one hundred and seven years old*, and is still an active and industrious pioneer, in the enjoyment of excellent health. A patent will shortly be issued to him from the General Land Office.

Importation of Cattle.—Some forty head, mostly Short Horns, arrived from England at Philadelphia, lately. They were principally for Mr. Alexander, of Kentucky, and Messrs. Bear, Morris, Spencer, and Brooks, of New York. Several of them were purchased at high prices, at the late sale of Mr. Tanqueray, of Hendon England. They are very fine animals as a lot. A few Alderneys and Ayrshires came over at the same time.—*Am. Agriculturist.*

At Ore Day's Work.—We learn from the Miner's Journal, that on the 18th day of April last, *eight thousand four hundred and five tons* of coal, in 1,716 cars, were weighed on one of Fairbank's track scales in use by the Mine Hill (Pa.) Railroad Company,—which is about 1,000 tons more than was ever weighed in a single day before. About one-third of the time was not occupied, which would give the capacity of the scales for a constant day's work at about twelve thousand tons. This scale is the longest ever made by the Messrs. Fairbanks, and probably the longest in the world, it being one hundred and twelve feet longer than an ordinary *city lot*, and capable of receiving and weighing at once, and with a single weigh-beam, a train of eleven cars loaded with coal.—*N. Y. Tribune.*

Duty on Tobacco.—No article of commerce pays a duty so enormous, compared with its home price, as American tobacco. From it is derived an important part of the revenue, of almost every European Government. In Great Britain, the import duty is three shillings sterling (seventy-five cents, per pound—about twelve hundred per cent upon the original cost—and two dollars per pound on manufactured tobacco, thus for what her people give us less than two millions of dollars, they pay to their own Government, for the privilege of using it, twenty-two million of dollars, which is twice the sum realized by the American producer for all the tobacco exported to every part of the world! As might be supposed, the most stringent laws govern its introduction into that country; and a large fleet of vessels and a heavy marine are supported to detect smugglers, who alone traffic in this article.

A Cheap Disinfector.—Prof. Nash, of Amherst College, gives the following formula for making what may be termed Home-made Chloride of Lime: Take one barrel of lime and one bushel of salt, dissolve in as little water as will dissolve the whole; slack the lime with the water, putting on more water than will slack it, so much that it form a very thick paste; this will not take all the water; put on, therefore, a little of the remainder daily until the lime has taken the whole. The result will be a sort of impure chloride of lime, but a very powerful deodorizer, equally good for all out-door purposes with the article bought at the apothecaries, and costing not one-twentieth part as much. This should be kept under a shed or some out-building. It should be kept moist, and it may be applied whenever offensive odors are generated with the assurance that it will be effective to purify the air, and will add to the value of the manure much more than it costs. It would be well for every farmer to prepare a quantity of this and have it always on hand.

Wild Fruits in Nebraska.—Never in our life did we see the prospect for such an abundance of wild delicious fruits as are at present indicated. Already the fragrant strawberry begins to exhibit its scarlet hues as it luxuriates amid the luxurious vegetation. The most desirable and delicious fruit is found every where in wild abundance, amid the woody lawns, valleys, and on the skirts of the prairies.

The gooseberry, amid the brushwood and in the dell, are abundant this season, and are nearly fit for use; they are of an excellent, large, smooth variety, nearly equal to the English gooseberry so much admired. In the copsewood and thicket, the plum tree every where abounds, and is now laden with fruit in miniature, which, when ripe, is quite as large, rich and delicious as many tame or cultivated varieties. They may when grown, be gathered by the wagon load, and easily preserved without a pound of sugar—merely requiring scalding and being put away in the same liquid. Raspberries abound in great profusion, and never miss a crop of berries, which are wholesome and most excellent. They may generally be found among open timber in the valleys.

This soil and climate appear to be especially adapted to grape growing; through the timber in the bottom lands and valleys of upland, there are thousands of natural vineyards; in the season, the vines are loaded with a medium sized, juicy, black grape, which has an excellent flavor, and is rich and sweet. There are also black currants, hawberries, thornapples, together with several other varieties of fruit. Hickory nuts, hazle nuts, and black walnuts, generally grow in abundance. There is no doubt but that nearly all the varieties of tame fruit will grow here, and meantime there is wild fruit in abundance, if properly saved, to make our citizens comfortable.—*Council Bluffs Bugle.*

Miscellany.

"THERE CAME AN ANGEL TO MY HOME."

BY MRS. H. E. O. AREY.

The frost had spoiled the flowers that wove
Their wreaths about my cot,
But could not chill the bloom of love,
The flower that fadeth not.
And though the autumn winds had reft
The clustering vines apart,
The birds that nested there had left
Their songs within my heart.
But ere the flowers returned to bloom,
Know ye the blessing given?
There came an angel to my home;
The fairest out of Heaven.

A blessed sprite, with wings concealed,
And name forgotten name;
And eyes whose holy depths revealed,
The Eden whence she came.
Ah me! the birds have never tried
Such songs as charmed my ear;
The common sunshine dimmed beside
This sunshine, doubly dear.
What cared I then that wealth should come,
Or fame or friends be given?
There dwelt an angel in my home;
The fairest out of Heaven.

A lisp, d'mpled form of grace,
A football here and there,
And kisses gushing o'er my face,
And through the glowing air.
And now, when o'er the cottage floor
The common sunshine streams,
The form she wore, is there once more,
She dwelleth in my dreams.
For ere the second summer's bloom
Its fragrant freight had given,
There went an angel from my home,
An angel, back to Heaven.

Ah me! she was an angel blest,
Too bright for earth to claim;
A tomb of love is in my breast,
O'er written with her name;
A memory of exceeding bliss,
A yearning, crushing pain;
A searching thought of happiness,
That will not come again.
Methinks those hearts are nearer home,
That have such lessons given;
She sees no shadows in the tomb
Who hath a child in Heaven.

Cutting an old Friend.

Many years ago, the good ship "Cleopatra" arrived in Baltimore, with a hundred steerage passengers from the Emerald Isle. Among the number were two young men from Tyrone, who had married just on the eve of sailing, and had come with their buxome brides to seek their fortunes in America. The latter had grown up side by side from girlhood, and were intimate as sisters. The former were no less intimate and attached to each other.

The names of these adventurers were Terence Leary and his wife Margaret, and Andy O'Shane and his wife Biddy, or Bridget. The first idea of coming to America had been suggested by Leary, who was a quick, intelligent young man, and had conceived the notion that a fortune was to be made in the new country across the Atlantic, from which ever and anon were coming the most inspiring intelligence to the enterprising and ambitious. He had been during two or three years gardener for an Irish gentlemen, in whose family Maggy, his wife, had for some time acted as waiting maid. O'Shane was a draper's clerk; he had been better educated than Leary, both as regards school and home education; and the same could be said of Bridget in comparing her with Margaret. Notwithstanding this, the young men and their wives, as has been said, were intimate friends, and when the matter of going to America was decided upon by Leary and Maggy, O'Shane and Biddy were not long in making up their minds to go with them.

After settling for their passage and entering the vessel in which they wished to sail, their joint wealth consisted of but twenty sovereigns. This was to be the basis of their fortunes in the New World. Leary, who was a great deal more talkative than his friend, had a great deal to say about what they should do in America. He proposed that they should unite their interests and stand by each other in good or evil fortune.

"Heaven knows, Andy," he would sometimes say, "that I'd divide me last crust with yees, any day. And Maggy has the same feelin' for Biddy, bless her sweet soul!"

To expressions of this kind the more thoughtful and reserved, but equally warm hearted Andy would reply, that while he could lift a hand or earn a penny the friends of his early years should be as the members of his own household.

With such feelings, and in mutual confidence, the young emigrants landed in Baltimore, where they soon made the acquaintance of some of their own countrymen, and gained a little information in regard to business and the prospect before them. Neither of these were found to be very encouraging. Leary was the first who obtained employment; it was in the capacity of laborer in digging out cellars and foundations for houses about being erected. This was several weeks after their arrival, and when their few sovereigns had become much fewer than when they set their foot in a land of strangers. It was some time after this before O'Shane got anything to do, and this was not until he had seen nearly his last farthing. During the discouraging period that elapsed between the finding of work by Leary and the getting of employment by O'Shane, not a word was said by the former, who had become very reserved towards O'Shane, about dividing his last crust with him and Biddy.

A single sovereign remained of the ten which made up the entire wealth of O'Shane when he landed in the United States, and his chances of getting something to do seemed no better than at first. This sovereign he determined to invest in sundry small wares, and try what he could do in peddling them about from house to house. In this he was more successful than he expected; his profits were, from the first, enough to meet his small expenses, and afterwards to gradually increase his stock in trade, which, from being only the value of a sovereign at first, was in the course of a few months, worth many sovereigns.

The digging of cellars was hard work, much harder than attending to a gentleman's garden, and Leary, as soon as he saw that O'Shane was doing so well at peddling, became so much dissatisfied with his employment that he determined to give it up and try what he could do with the "pack." He had nearly five sovereigns laid by, and was about investing these, under the advice of his friend O'Shane, in goods suitable for the trade of a peripatetic dealer, when he was taken sick, and lay ill for some weeks. His expenses and doctor's bill, during this time, took away all of his little capital, and he was about returning with soured spirit to his spade and mattock, when O'Shane generously offered to loan him enough to make a fair start as a peddler. With grateful feelings this kind leader was accepted.

The interests of the two young men being now more really united than they had yet been, and as both were required to be much from home, a small house was taken between them, and their families united in order to lessen expense. This arrangement continued for about a year and a half, during which period both Leary and O'Shane reaped a very fair harvest on their labors. At the end of this time, the former, having saved about three hundred dollars, laid by his pack and opened a "grocery and liquor store." About the same time a situation at the South, with a very fair salary, was offered to O'Shane, and accepted by him. At this point, the ways by which the two friends were to travel in the world, diverged. They parted with many sincere expressions of friendship, and mutual pledges to aid each other in any future extremeties, if the power to do so remained.

With three hundred dollars, shrewdness, industry, and economy in personal and family expenses, success in the "grocery and liquor" business was a thing certain. Six years from the day Leary put up his sign, he sold out his shop and commenced the business of a wholesale dealer in groceries in general, but rum and whiskey in particular, on Bowley's wharf. He was then worth some ten or fifteen thousand dollars, and deemed it but due to his increased importance as a merchant, to assume a style of living rather more imposing than the back rooms and second stories of a grog-shop. But even in gratifying his pride, Leary was cautious not to put the main chance in jeopardy. A house at four hundred dollars rent, and five or six hundred dollars laid out in parlor and some additional chamber furniture, covered the length and breadth of his extravagance at this era of his history. During the whole of this period, he had heard nothing from O'Shane, except that on his arrival at Charleston, the place of his destination, he had found all as had been represented to him, and that the situation he had accepted would enable him, if he kept his health, to lay up something.

The change that had passed over Terence Leary in ten years was quite remarkable. When he landed from the "Cleopatra," he was a fair specimen of a rough, healthy, coarse, young Irishman, and retained this appearance until he got behind his own counter, at which time a gradual process of transformation commenced. The corduroy trousers gave way to cassinet pants, the coarse roundabout to a long-tailed coat, and the seal-skin cap to black beaver with a shining surface; the stout, well greased brogans that had carried him many a mile, over rough roads as well as smooth ones, were thrown aside, and boots, well blacked, worn in their stead; they were the first blacked boots that had ever covered his feet. In this new dress, Leary, at first, scarcely knew himself but he was not long in forgetting that he had ever worn any garments of inferior quality. The constant attendance upon customers, with the necessity of handling himself all the various commodities which he had to sell, prevented Leary from making any further material alterations in his every-day external appearance, until he ceased to be a retail dealer, and wrote himself "a merchant." At this period, the change in the man was very apparent. He stood at least two inches higher; the reason was, his chin had become elevated precisely that much further above the point where the collar bones rest against the sternum. He shaved, or was shaved every morning; there was a time when once or twice a week was deemed sufficient. His linen was faultless, and changed every morning; his black coat and pants guiltless of every sign of hard service.

A few years more, and Terence Leary, Esq., was a man of wealth, standing and importance—one of "the first merchants" in the city. A porter, laboring man, or clerk, was now treated by him more like a dog than a human being. He had no sympathies whatever with the poorer classes—actually despising everything not possessed of golden attractions.

One day, it was twenty years from the time the ways of the young Irishmen became divergent, Leary was sitting in his counting-room, when two natives of the Emerald Isle, a man and a woman, entered the store. They were plainly, but not roughly dressed. Leary recognized them in an instant; they were Andy and Biddy O'Shane. The sight of them did not give him much pleasure, especially as there were present

in his counting-room two or three merchants of the "first standing."

"Go and see what these people want," he said abruptly, and in a tone of command to one of his clerks. "If they ask for me, tell them I am engaged, and can't see them now."

The clerk met Andy and Biddy half way down the store.

"Is Mr. Leary in?" asked O'Shana.

"He is engaged at present."

"No matter, he will see us," replied O'Shane, pushing on past the clerk who tried, but in vain, to keep him back.

To the consternation of the merchant, O'Shane and Biddy entered boldly into his counting-room, the former extending his hand as he advanced to him, and saying, with a voice of pleasure,—

"Terence, mon, how are yees?"

But Leary fixed a cold, repulsive look upon his old, warm-hearted friend, and declined taking his hand.

"Don't ye know me, mon? Don't ye know Andy O'Shane? Didn't we come from old Tyrone? bless the dear soil! and wasn't you a gardener's man there, and I a draper's clerk? And wasn't Biddy, here, and your own wife, Maggy, as intimate as born sisters? Terence Leary, mon, don't ye know me now?"

The Irishman spoke with enthusiasm.

"Go 'way, man; go 'way," said Leary, turning his head and waving his hand for O'Shane and his wife to retire; there is a time for all things, and a place for all things."

The whole manner of the Irishman instantly changed, and he drew himself up with dignity—

"Go 'way, d'ye say, Terence Leary?" he replied;" go 'way, is it now? It wasn't so Teddy, when ye got the fever from hard work, in the hot sun, diggin' cellars, and spent all y'r money with the doctors. Oh no, it wasn't go 'way then, Teddy. It wasn't go 'way when I loaned ye two sovereigns to fit ye out for a tramp with the pack, and helped ye on till y'r feet after the sickness! Oh, no, it wasn't go 'way then, Teddy. But never mind; the world is wide, and so, good-bye till yees. Come, Biddy."

And O'Shane turned and walked slowly away with his wife.

Leary was angry and mortified beyond measure at this interview, by which former low associates and former low occupations were exposed to two or three dignified merchants, who, pitying his embarrassed position, soon withdrew and left him to his no very pleasant reflections.

Mrs. Margaret Leary was no less outraged by the assurance of their old acquaintances, when her husband related what had happened, than had been Mr. Terence Leary himself.

"We'll have 'em thrusting themselves upon us, I suppose, next thing." Biddy was always bold and forward, and never had any sense of propriety; but she will not want to come here twice, if she comes once, I can tell her."

A few hours after this remark was made, Mrs. Leary was informed that there was a woman in the parlor that wished to see her.

"Who is it?" was asked.

"She says her name is O'Shane."

The color instantly mounted to the lady's face.

"Tell her I am not at home."

The servant went back to the parlor.

"Mrs. Leary is not at home."

"But you told me," returned Mrs. O'Shane, "that she was at home."

"I know," said the waiter, rudely, "but I find that she is not at home to *you*."

"You told her my name?"

"Yes."

"What did you say it was?"

"Mrs. O'Shane."

"You are certain?"

"Yes, sure of it."

The visitor retired slowly, with her eyes cast down. There were bitter feelings at her heart. The friend of her early years, the companion of her early trials, the partner of her early hopes and fears, to meet with whom, and to find affection unchanged, had been the dear hope of many years, had turned coldly from her.

"Not at home to *me*. Tried and found wanting. Ah, well! better to know this than take by the hand a false-hearted friend."

Leary and his wife were no little disturbed by the occurrence just related. The assurance of O'Shane and Biddy in supposing that they could now have association with them, was surprising; and their presumption in thrusting themselves forward, an unpardonable offence.

Days and weeks passed by, but O'Shane and his wife came not again near the old friends of other days who wished to forget them. This was a relief to the Learys, who for some time after lived in dread of another visitation.

In the western part of the city, among a number of elegant houses in the process of erection, one larger and more indicative of the substantiality of its owner, went steadily up from basement to cornice, and stood forth to the eye an object of admiration, and a proof of wealth in the builder.

"That will be a splendid residence," said Leary to a mercantile friend, with whom he happened to be walking one Sunday afternoon. "I wonder who it is for!"

"It is said to be for a New Orleans merchant of great wealth, who has retired from business, and intends residing here for the purpose of educating his younger children."

"Ah! do you know his name?"

"I heard it, but do not remember it now."

"I like to see these men of wealth coming to our city. It is one of the most important in the country. He must be a man of considerable property to build a house like that."

"They say he is worth half a million!"

"Indeed!"

"Yes. Like yourself, he started, I am told, with nothing, and made his own fortune."

The allusion to himself, as having started with nothing, was not entirely agreeable to Mr. Leary. He did not want people to know that he had come up from the lower classes in society, and fondly imagined that this was a secret known to but few. A reference to the fact, therefore, was like throwing cold water upon him.

"Have you met him?" asked he, because it was necessary to say something.

"Yes. He is a plain, but very gentlemanly man. There is nothing ostentatious about him; nothing that marks the purse-proud rich man—no upstart arrogance in his character. I wish I could remember his name, but no matter. It is O' something. O', O', O'—no, I cannot get it. By the way, Mr. Leary, I believe he is a countryman of yours, and that reminds me of a first-rate story I heard of him. It is capital! One of the best things that has occurred for some time. Have you heard it?" "No."

"Well, it is first rate. Some twenty or thirty years ago, this gentleman arrived in our country with his wife, green from Ireland. They came in company with another young couple of the same grade in society; one I believe was a gardener, and the other had been in a draper's store, and came to seek their fortunes. A few sovereigns each were all they possessed. Both the men and their wives had been friends from early years, and had been much attached to each other. In coming to this country, they pledged a lasting friendship, and a lasting interest in each other's welfare. For a time their way in life lay side by side; but there was some things in the conduct of the friend of this O' O'—what's his name? O'Shane! Yes, now I have it. O'Shane is his name, Mr. Leary."

The merchant, who was so full of the good story, did not observe the marked effect the announcement of this name had upon his auditor. He went on—

"O'Shane noticed some things in the conduct of his friend that he did not much like; as, for instance, when fortune smiled a little upon him, he was distant toward O'Shane, and said nothing about dividing his last penny with him as before; but when things looked dark with him and bright with O'Shane, he was exceedingly glad to bask in his friend's sunshine. Still, notwithstanding this, O'Shane was attached to him, and their wives were like sisters. They started in the world as peddlers, O'Shane loaning his friend, who had spent all his money in sickness, enough to get a well-filled pack. In order to lessen expenses, they rented a small house, and their wives lived together while they were away.

"At length, the friend saved enough to set up a grog-shop, and O'Shane accepted a situation at the South. They parted, and never met again until six months ago—twenty years having elapsed since they separated. The friend made enough money in a few years, by selling grog, to get into a more decent and respectable business. He became a wholesale dealer, and is now, I am told, one of our wealthy merchants. But he is represented as being exceedingly proud of his position in society, at the same time that he is haughty and overbearing to those in humbler circumstances. With him, I suppose, as with too many others, money, not worth, makes the man.

"O'Shane, who was a far worthier man, pushed ahead at the South; not by selling rum, however—he was above that—but by fair and honorable trade. Two years ago he went to New Orleans, having amassed about fifty thousand dollars in Charleston, and entered into the cotton brokerage business, from which he retires with half a million honestly made. But now for the gist of the story. O'Shane had not seen or heard direct from his friend for fifteen years; but he understood how he was getting along, and ascertained on his arrival in Baltimore that he knew nothing of his altered fortunes. So what do you think he does? He know that if he came as the possessor of half a million, he would be received with open arms, and he would never know whether a spark of old and true regard remained. He therefore determined to test his friend. In order to do this, a few days after his arrival in the city, he called, in company with Biddy, his wife, both plainly but not meanly dressed, at the store of the merchant, and claimed acquaintance. Two or three persons happened to be present at the time, and, I am told, they described the scene as rich beyond anything they had ever seen. The merchant did not know them, and O'Shane, to refresh his memory, reminded him, in an assumed brogue, of old Ireland, and what they had been there, and of their early struggles in this country. It is said he spoke with much feeling. But the outraged merchant bid him begone in a towering passion.

"After that, O'Shane's wife called to see the friend of her early years, hoping that she might not be as badly changed as her husband. She sent up her name, and received for an answer that the lady wasn't at home; or, as the servant said, not at home to *her*.

"It was enough. O'Shane saw that his old friend was unworthy of his regard, and will treat him hereafter as a stranger."

Leary and his communicative companion were walking along, the former with his head bent down and his eyes upon the pavement, in order to conceal the expression of his face. After the narrative was closed, and while smarting comments were being made thereon, Leary looked pale and [illegible] almost face to face with O'Shane and his wife, both with the appearance and bearing of people who moved in and were used to good society. They looked at him with the look of strangers, and his eyes drooped beneath their gaze. "That's the very man," said Leary's companion, as they passed on.

Leary knew it too well. And he also knew very soon after, that his conduct was notorious, and that people despised him for his purse proud arrogance; while O'Shane was respected for his sterling qualities as a man—his true heart and sound head, as much as for his wealth. He never forgave O'Shane in his heart for what he had done; but his anger was impotent. He sometimes met him in society, but O'Shane's bearing was that of a perfect stranger. Every now and then people would introduce them, when they would bow with cold politeness, as if they had never seen each other before. Mrs. Leary and Mrs. O'Shane also met occasionally. But it was Biddy and Maggy no more.

FRUITS OF TEMPERANCE.—We now allude to the fruits of the earth, as they appear from year to year, more and more abundant in our markets, as among the most powerful auxiliaries to the temperance cause. It cannot be denied but that the increased consumption of fruits in the mining districts, is actually lessening the consumption of alcoholic drinks. The citizen, the miner, the traveler, who but a few years since could see but little else than drinks in some shape, to gratify his appetite between regular meals, now sees at almost every step along our sidewalks, a variety of most tempting fruits; apples, pears, grapes, and peaches, and the odd bit or two that formerly found its way into the pocket of the vender of drinds, now goes to the fruit dealer; and we are constrained to believe with the most beneficial results, not only to the morals of the consumer, but to his physical health. There is not a doubt that ripe fruit in reasonable quantities, is eminently conducive to health, and consequently long life, as it never excites the evil passions of our nature. The philanthropist, therefore, who is ready to devote his time to the well being of his fellow-men in California, cannot do a better act, or one that will be productive of more good to the consumer of a bit's worth of "suthin," and at the same time add weight to the contents of his own pocket, than to become the producer of fruits for the consumption of the thousands of non-producing occupants of the mining districts. —*Placerville American.*

THE HAPPIEST SEASON.—At a festal party of old and young, the question was asked—"Which season of life is the most happy?" After being deeply discussed by the guests, it was referred for answer to the host, upon whom was the burden of fourscore years. He asked if they had noticed a grove of trees before the dwelling, and said: "When the Spring comes, and in the soft air the buds are breaking on the trees, and they are covered with blossoms, I think, *How beautiful is Spring!* And when the Summer comes, and covers the trees with its heavy foliage, and singing birds are among the branches, I think, *How beautiful is Summer!* When Autumn loads them with golden fruit, and their leaves bear the gorgeous tints of frost, I think, *How beautiful is Autumn!* And when it is sere winter, and there is neither foliage nor fruit, than I look through the leafless branches, as I never could till now, and see the stars shine."

Ladies' Department.

[For the California Farmer.]

SONNET TO THE OLD OAK.

Majestic Oak, when first I saw
Thy stately form, and spreading bough,
My soul inspired a gentle awe,
Impassioned love for thee I vow'd.

For centuries thou hast stood, old tree,
And smiled to brave each raging storm,
Then spread thy branches over me,
While I admired they stately form.

Our humble cot was quickly reared
Beneath thy spreading shade;
A princely dome it soon appeared,
As thy safe pinions o'er it swayed.

Upon thy limbs the children swing,
Like fairies dancing in the air;
I heard their happy voices ring—
Ah, yes! like fairies, they were fair.

I saw a traveler faint and sick.
Beneath thy grateful shade, old tree;
I bathed his brow, I gave him drink,
As blessings he invoked for me.

There the sweet robin reared her young;
The martin sang her mates song;
The couch my dying sister swung
On thy paternal arms so strong.

"Sister," she said, and smiled on me,
"Why don't my Saviour take me now?"
And when I cast a glance at thee,
I still can view her marble brow.

The tyrant Lumbre burned my cot:
Its maddening flames enveloped me—
I fled; but thou wert not forgot,
Nor thy sweet charms that lured me.

Thou art dying now, old friend,
And sad and lonely I shall be;
But where so e'er my footsteps bend,
A grateful tear I'll shed for thee.

HELEN.

[For the California Farmer.]

Who are Our Friends?

Who shall we call our friends? Are those our friends who flatter much, praising with enthusiasm all our acts, charmed with beauty where the truthful heart would acknowledge no beauty? ever blowing a [illegible] trumpet in our ears, using all their powers to find for us but one look or word of [illegible] fooling hearts? Are they wise lovely and fortunate; offering friendship [illegible] confidence, unsought? one that leads you to some new and pleasing theme, because they envy your prosperity in your good old well known, well beaten track, seeking to lure you on, crying safety! when they see you upon the brink of ruin? Such will come quizzing and peering into your past life, smiling and clinging about your pathway in a manner that you cannot condemn; still your feel a chill freezing the warm blood that would burst from your heart.

No, dear reader, they seek but to know the pearl you prize the most; and, if found, they will bind you hand and foot, bearing off your prize, then place you upon the mildew shelf of cold neglect, and count you the saddest relic there. Rather give me a friend that chides and rebukes with the severity of a faithful father; sympathizes with the tenderness and kindness of a fond mother; one that pities and cheers like an affectionate sister, and counsels and condoles with the safety of a noble hearted brother.

Doubtless there are few of us now in this bright and sunny clime who do not sometimes think of those good old tested friends, that clustered round our childhood's home, of the kind hand that in sickness smoothed and turned our heated pillow; and however rude the exterior of that friend, they touched an Eolian chord that vibrated a tender response and wove a golden web. How strong we felt with all those chords of friendship twining around our hearts. When sickness assailed us we did not despond, for very soon we would hear at our door the well known tap of a brother or neighbor that had come with anxious hearts to know each untold wish and to cheer us with their presence and kind words, making us forget half our anguish and suffering by their angel visits.

But hark! I hear some strong, unthinking man respond: "I never knew the want of such childish petting!" But if that man falls sick and does not feel grateful for the hand that smoothes his pillow, bathes his brow, and obeys each hasty summons; then that man has no human heart for me, for I would crown such a friend with memories ever dear, and the true heart would ask no greater boon.

Fair reader, look about you and see where you can make yourself useful. Not always with your gold; but in ways that will call forth memories more lasting, and love and friendship more durable than could be bought with all the gold the placers hold. Thus you will have performed a noble mission, and will weave for your brow a laurel wreath more fair than the maid of mammon ever wore. And in your declining years, when you shall take a retrospective view of your life, your reward will be greater than to possess the golden mines of the Sierras.

And if some faithful friend is hovering near,
When our darkest, saddest hours appear,
They seem to us like angels sent from God,
To shield us from affliction's heavy rod.

But if our hearts forget the magic wand,
In kindness wielded by some lovely hand,
So sure no crystal fount of love is there,
And love's divine reward we may not share.

HELEN.

THE SINGLE WOMAN.—The single woman is as important an element of private and sociable happiness as the married one. The utilities of each are different, but both are necessary. The single lady is, in some points of view, placed in a position of advantage. The wife resigns, or ought to resign, her claims to general attention, and to concentrate and confine her regards, wishes and objects to her chosen companion, and to domestic claims and scenes. She has quitted the public stage; and seeks no more the general gaze; she has become part of a domestic set and so-rate proprietary. But the unmarried lady remains still the candidate for every honorable [illegible] and injures no one by receiving it. Those of the male sex who are in the same condition, are at full liberty to pay their proper attentions as she is to receive them. Being in this position as to society at large, she is always interesting wherever she goes, if she preserve gentle temper and private feminine qualities.—*Turner.*

BEAUTIFUL SENTIMENT.—A late poem by Alice Carey contains the [illegible] sentiment, which [illegible] to any heart that has [illegible] of treasured [illegible] which [illegible] the other's"

SPECIAL NOTICES.

PRINCE'S PROTEAN FOUNTAIN PEN.

[PATENTED JAN. 23, 1855.]

T. G. STEARNS, General Agent,

No. 271 Broadway, Cor. Chambers Street, New York.

☞ ADVANTAGES.—An incorrodible and durable Ink Reservoir, made of Protean, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time.

A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material

Its structure is simple, and not liable to get out of order.

Opinions of the Press.

We must regard this Pen as one of the grand improvements of the age.—*Portland Transcript and Eclectic.*

As a Reporter's Pen, I have never seen or heard anything to equal it. It is just the facility wanted in this department, so that it may keep up with the age of electrity and steam.

GEO. KELLOG, Reporter, 625 Broadway, N. Y.

Eureka! Eureka!! We have found it at last; a Fountain Pen that will write for hours without once dipping in an ink-stand.—*Knickerbocker Magazine.*

The ink flows from it so evenly and so easily, that the mechanical labor of writing becomes in itself a pleasure.—*Mother's Magazine.*

The Pen must have a great run. Any pen that runs for eight hours at a dip, may be said to have a great run—but this pen will become a tried and valued friend—will save the temper of the business man, and preserve the composure of the irritable poet.—*Hartford Courant.*

We are writing with one which does some six hours service without failure or stoppage, and have found it inexpressibly convenient, and comfortable.—*New York Evangelist.*

This Pen, among pens, is what Colt's Revolvers are among Pistols. One will fire a dozen shots, and the other write a dozen sheets, with a single charge or loading.—*Author of Major Jack Downing.*

A Clergyman who has written a whole sermon with one of these Pens, without once dipping in the ink, said to us that he would not dispose of it for twenty times its value.—*Boston Evening Traveller.*

If I could not procure another of similar merits, one hundred dollars would not purchase from me the one I have.—*A New York Clergyman.*

We continue to use our own with entire satisfaction.—*New York Independent, May* 16, 1855.

"Let those write now who never wrote before,
And those who always wrote, now write the more."

*** Rights for Towns and Counties to vend, will be granted on favorable terms.

☞ As ample of these Pens can be seen at the at the Office of this Paper on the arrival of next steamer. v4-19 3m.

☞ **Oxygenated Bitters.**—The annexed statement of Prof. A. A. HAYES, M. D. State assayer, is ample testimony of the scientific manner in which this medicine is compounded, and recommends it to Professional Men, as worthy a fair trial in their practice:

An opinion having been asked for of me, in consequence of the formula for preparing oxygenated bitters having been known to me, I express the following, in form:

The composition of these Bitters includes those medicinal substances which experienced physicians have long resorted to for special action on the system, when deranged by fevers, Dyspepsia, Agues, and General Debility, resulting from exposure or climate influence.

These are rendered permanent, and remain active, in this preparation, as a consequence of the scientific manner in which they are combined.

It was a well founded inference, that the preparation, used in larger or smaller doses, would prove a valuable *General Medicine*, which experience has demonstrated.

In this medicine, no metallic salts can be found, by the most delicate chemical trials. Respectfully,

A. A. HAYES, M. D.,
Assayer to the State of Massachusetts.

No. 1 Pine street, Boston, 16th Dec. 1850.

SETH W. FOWLE & CO., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agent for Sacramento—C. MORRILL. 18-2w

☞ **Clove Anodyne Toothache Drops.**—Those who have felt the painful throbbing and excruciating pangs of this disease shooting through their jaws with most tormenting perseverance, and, as is often the case, have received but little sympathy from friends on such occasions, will no doubt be much pleased to know of a remedy that will never fail to quiet forever the unmerciful offender. The comfort that should be sought for is the Clove Anodyne Toothache Drops, a remedy that, while it removes the pain, preserves the teeth, and thus blesses as well as benefits. These drops have been extensively used, and thousands will bear grateful testimony to their value as a speedy and permanent cure for the toothache.

Agents—HENRY JOHNSON & CO.,
v4-19 1m 146 Washington street, San Francisco.

☞ **Bronchitis and Cough Cured.**

BOSTON, August 15.

Dr. S. W. Fowle—Dear Sir: Having been troubled for a considerable time with a bad Cough and Bronchial affection, I was induced to try a bottle of DR. WISTAR'S BALSAM OF WILD CHERRY, which I am happy to say entirely removed the difficulty. I deem it but justice to say thus much for the benefit of those who may be similarly afflicted.

GEORGE H. DAVIS, (Firm of Hallett & Davis,)
Piano-Forte Manufacturers, Boston.

I hereby certify that I am personally acquainted with George H. Davis, Esq., and have the fullest confidence in the above statement. H. G. BARRUS, Practising Physician.

Boston, Aug. 15.

Such testimony can be relied on.

*** Be sure it is signed I. BUTTS on the wrapper.

Agent for Sacramento, C. MORRILL, corner K and Third streets.

Sold by all Druggists. v4-15 2w

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with Agriculture.

By order of the Executive Committee.

HOTELS.

MURRAY'S WESTERN HOUSE,

AND

General Office of the California Stage Company.

Corner of Second and D streets,.....MARYSVILLE.

☞ **Open all Night.** ☜

THIS superb first-class Hotel is by far the most capacious and elegant one in California, out of San Francisco, and is excelled by none in that city. It is of brick, perfectly fire-proof, four stories high, and fronts 105 feet on Second street, and 80 feet on D street. Two hundred persons can be accommodated with entire ease, and in the most comfortable style. Particular attention is paid to the wants and comforts of Families.

Its location is central, and is the General Depot of Staging and Steamboating.

Travelers can rely upon being *called in time* for any boat or stage leaving the city.

Those who desire, can entrust their TREASURE and BAGGAGE to the proprietor in person, who is the sole manager of the establishment, and who will be responsible for the same.

Rates of Charges.

Board without lodging, per week.....$12 00
do with lodging, per week.....$15 to $20 00
do without lodging, per day.....$2 50
do with lodging, per day.....$3 25 to $4 00
Lodging, 75 cts., $1 and $2 per night.
v4-6 R. J. MURRAY, Sole Proprietor.

Beaty's Hotel,

(Formerly the Monsion House,)

SAN JOSE.

A. S. BEATY, Proprietor of the above Hotel, begs to inform his old friends and the public, that he has removed from the "Wood Lawn Hotel," Pulgas Ranch, to the above premises, and is now prepared for their reception under more favorable circumstances than heretofore.

He begs to assure all who may favor him with a visit, that no pains will be spared to merit the patronage of the public, and make "Beaty's Hotel," San Jose, second to none in the State.

Gentlemen with their Families visiting San Jose, the Quicksilver Mines, &c., &c., will find at this House suitable accommodations. A. S. BEATY, Proprietor.

☞ HORSES KEPT AT LIVERY.—Stabling, Hay and Grain, and "Turn Outs" provided for Pleasure Parties.

Dillon, Hedge & Co.'s Line of Stages for San Jose, Santa Cruz, Monterey, and the Quicksilver Mines put up at this Establishment. v 412 tf

American Hotel, Benicia.

THIS HOUSE has been established *Five Years*, with out interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.

3v-16 1st C. M. DAVIS, Proprietor.

International Hotel.

THE extensive addition to this Hotel is now finished and ready for occupation, making altogether *one hundred and fifty rooms.* Suites of rooms for families, furnished or unfurnished; also, single rooms to let on reasonable terms.

Day Board—Ten Dollars per week.

This spacious Hall—85 by 35 feet—is elegantly furnished and lighted with gas, with Supper Room that will seat two hundred and fifty, will be let on reasonable terms for Balls, Concerts, Dinner Parties, &c. PECK & FISHER.

San Francisco, Jan. 9, 1855. v4-7

Rassette House.

SAN FRANCISCO,.....CAL.

THIS HOTEL offers inducements to persons visiting San Francisco, unequalled by any on the Pacific Coast.

Gentlemen can be accommodated with single rooms, or families with suites of rooms.

The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. v4-1

ST. MARY'S HALL, Sonoma.

REV. DR. VER MEHR AND WIFE.....PRINCIPALS.

The Winter Session Begins on the 1st November.

TERMS PER SESSION OF FIVE MONTHS.

Entrance fee, payable only once.....$15
Board and Tuition.....150
Washing, if done at the Institution.....30
Mending, do do do.....15

EXTRA CHARGES.

Music, with the use of Instrument.....$40
Drawing.....20

Payments are to be made by half sessions of ten weeks in advance. It is unavoidable, in future, to adhere in all cases to this rule. Pupils will be entered at any time, and charged accordingly; but, in ordinary cases, not for less than one session.

The instruction is thorough, because few but competent teachers devote all their time and energy to the same end. There is taught nothing but what is really and practically useful, and even this with due regard to the wants of each pupil.

For further particulars, address REV. J. L. VER MEHR, Sonoma. v4-16 1m

Benicia Female Seminary.

THE Fourth year of this institution opens July 23, 1855. This is one of the oldest Female Seminaries in the State, and therefore well known. There is now a full corps of teachers, and those who are well qualified to fill their respective departments. A German lady, and an artist in her profession, is teacher of Music; and a French lady, as skilled in Drawing, is teacher of French and Drawing.

The School and Boarding Department are entirely under the supervision of the Principal.

Terms.—(Payable quarterly, invariably *in advance,*)

For Board and Tuition in English branches, per week...$7 50
Washing, per dozen.....1 50

Extra Charges.

French, Spanish and Drawing, per month.....$3 00
Music, with use of Piano, per month.....10 00

For further particulars, address
v3-26 MARY ATKINS, Principal.

New Invention!

Now, Count Your Chickens!!

THE undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls.

After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from *four to five hundred eggs* can be converted daily into young Chickens, Ducks, Goslings or Turkeys. After the first brood, i. e., nineteen or twenty days, this is the certain result; and it requires but little attention—once every twenty-four hours—the cost of fuel and preparation being only some $2 50 to $3 every twenty days.

This invention will be in full operation at the State Fair in the city of Sacramento, in September next, when all information will be presented. They will soon be offered for sale. In the meantime information can be obtained at the office of the CALIFORNIA FARMER; or letters can be addressed to me at San Francisco. JOHN J. FULTON,
v3-26 Third street, South Beach, near South Park.

Beds, Mattresses, &c.

THE undersigned, manufacturer and dealer in the above line, has constantly on hand a large assortment of very superior Bedding, such as Hair Mattresses; Moss, Wool and Straw do.; Feather Beds, Bolsters and Pillows; Comforters, Blankets, Sheets, &c.

ALSO,

A Variety of Cheap Furniture.

N. B.—My Bedding is all manufactured of the very best material, and warranted, and for sale very low for cash only.

Particular attention is paid to making to order every description of Bedding. C. SCRIBER,

HORTICULTURAL, &c.

SMITH'S POMOLOGICAL GARDENS,

American River, 2½ Miles from Sacramento.

THE Proprietor of these extensive Nurseries and Gardens will be prepared to supply all the best varieties of Fruit Trees of the following kinds:

Apple, Pear, Peach, Plum, Cherry, Quince, Nectarine and Apricot; Grape Vines of every valuable variety; Gooseberry, Currant, and Raspberry Vines, &c.

ALSO,

Green House Plants of every rare and beautiful variety; Flowers, Shrubs, and Plants, Shade and Ornamental Trees, Bulbous Roots, &c., &c., &c.

These will be ready as soon as the season of transplanting shall commence. Orders will be received at any time, and delivered in the order in which they are booked.

Garden Seeds.

THE Proprietor will also offer a large variety of **Fresh Garden Seeds,** at Wholesale and Retail, of his own raising and putting up. Great care has been taken to select the very best varieties, and to keep them pure and unmixed. They are all of the present year's growth, the same varieties having been used by the Proprietor in his own grounds for the last three years. The produce which has been exhibited in our markets is the best proof of their quality.

The undersigned would be pleased to see purchasers at his grounds, where the produce can always be seen in every stage of growth. [v4-17] A. P. SMITH.

SAN JOSE NURSERY.

THE San Jose Nursery and Gardens, formerly known as L. Provost & Co., is now carried on in all its branches under the immediate eye of the present proprietor, who is sole director and owner of the same, having purchased the interest of his former partner.

L. Provost, the present owner, will now offer to his patrons and friends one of the largest and finest collections of Fruit Trees that can be found in any Nursery in the State, consisting of all the most desirable kinds of Apple, Pear, Plum, Cherry, Peach, Apricot, Nectarines and Quince, with a very extensive lot of Grapes and Figs, a beautiful lot of choice Ornamental Trees of rarest kinds, and Green House Plants in great variety.

The collection of Roses in these Gardens cannot be equalled, for nearly *twenty thousand* of the most beautiful plants, large sizes and rare kinds, can be found here.

Purchasers will be sure to be satisfied if they will visit the Gardens, where they can find much to please them, which the Proprietor will show them with pleasure.

☞ The Nursery is situated in the city of San Jose, immediately above the City Mills. L. PROVOST,
v4-17 Nurseryman and Florist.

PIONEER NURSERY, ALAMEDA.

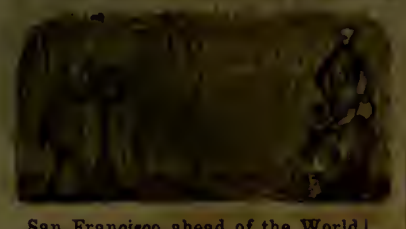
H. MYERS, at the Pioneer Nursery, Alameda, has on hand, for the market this season, at reduced prices, every description of Budded and Grafted Fruit Trees, Vines, etc.,

EMBRACING

Apples—50 best varieties, from one to three years old.
Peach—20 best varieties, from one to two years old.
Pear—10 best varieties, from one to two years old.
Cherry—10 best varieties, from one to two years old.

Also—Almond, Nectarine, Plum, Apricot, Fig Trees, Grape Vines, Currant, Gooseberry and Raspberry Bushes. Four best varieties of Strawberry Plants.

Also—Green-house Plants and Ornamental Shrubbery.



Terms, Cash.....*Orders promptly executed to.*

A. H. MYERS, Proprietor.

☞ Alameda is Eight miles from San Francisco, and Four Miles South of Oakland.

September 9, 1855. v4-11

MISCELLANEOUS.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

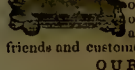
WHY should every one go to VANCE'S who wishe PERFECT LIKENESSES? Because he has now the most arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.



All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

Axle Grease! Axle Grease!!

THE subscribers are manufacturing and have for sale a superior article of Axle Grease, manufactured by Messrs. Leonard and Cumming, and considered by them superior to any now in use. It is recommended by many of the principal teamsters, coachmen and others who have used it, as the best article for the axle, preventing the wheels from heating, and requiring less grease than any other. Also, for sale, a superior article of Tar Grease, for ships' bottoms. Orders from the country promptly attended to. Goods delivered in any part of San Francisco free of charge.

Office and Depot, No. 9 Battery street, between Clay and Commercial.

T. & W. [illegible] Marysville. v4-19

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK Physician to Queen Victoria, and one of the most learned and skilful men of the age, in his "Treatise on Consumption, says: "That Pulmonary Consumption admits of a cure, I look upon as a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CANSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

DR. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]
Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary effect, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

SETH W. FOWLE,
Proprietor, Boston, Mass.

☞ Agents for Sacramento,

SANDS' SARSAPARILLA.
IN QUART BOTTLES

For Purifying the Blood, and for the Cure of *Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Boils, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.*

THE value of this medicine is now widely known, and every day the field of its usefulness is extended. It is approved, and highly recommended by Physicians, and admitted to be the most powerful and searching preparation from the root, that has ever been employed in medical practice. Its operation extends to the remotest parts of the system, and consists in removing diseased action in the absorbing and secreting organs. In man, Nature seldom effects, unassisted, the cure of any virulent disease, but requires the aid of a stimulant, alterative, or antiseptic medicine. In diseases of the skin and flesh, a combination of these three classes of medical agents is highly desirable. All these properties are combined in this preparation: and instead of operating successively upon the system, as they must necessarily do when taken separately, they operate simultaneously, and in perfect harmony when administered in this form. Its tonic property strengthens the digestion, and improves the appetite. Its alterative tendency carries off the accumulations of morbid matter,—and its antiseptic influence neutralizes the virus, by which the disease is fostered. Its uniform success in curing and relieving the various diseases for which it is recommended, is established by a multitude of attested facts.

From the Army

MONTEREY, Cal Jan. 18, 1850.

MESSRS A. B. & D. SANDS: [illegible] add my testimony to the value of your [illegible] having in many cases of [illegible] to try its effects, and that [illegible] as I have done, I am [illegible] here by the way, and route, a number of [illegible] days after I was first attacked with a very [illegible] of the skin, which [illegible] cure. I [illegible] to you [illegible]

New Patent
Force and Lifting Pump and Fire Engine Combined

THE undersigned is now manufacturing and has for sale a NEW PATENT PUMP, which, for utility and power, surpasses anything of the kind ever offered to the public.

For Ships, Railroad Stations, Paper Mills, Factories, and all other places where a large quantity of water is required to be raised, they are peculiarly adapted.

Its construction is double acting, throwing a continuous stream of water, at the rate of from 200 to 400 gallons per minute, (according to size) and can be used as a LIFTING or FORCE PUMP, and by the application of Hose can be operated as a FireEngine of the most efficient kind.

It is simple, not liable to get out of order, can be operated by hand, steam or water power, and need only be seen to be appreciated.

N. HUNT,
26 Devonshire street, Boston.

Also for sale—Best quality of LEATHER BELTING and superior SHUTTLE SEWING MACHINES.

☞ Orders for the above received at this office. v4-33m.

S. P. Ruggles' Power Press Manufacturing Co.

[Incorporated February 8, 1854.]

THE above named company having purchased of the well known inventor, S. P. Ruggles, Esq., his Patents connected with the Printing Business, are now manufacturing under Mr. Ruggles' immediate superintendence, the following machines, viz.:

	Size of Form in Inches.
Half Sheet Combination Engine	13 by 12
Quarto Sheet Combination Engine	12½ by 9
Half Sheet Cap Job Rotary	10½ by 7¼
Card and Bill Head Rotary	7 by 4½
Diamond Rotary Card Press	4½ by 3
Circular and Hand-up Hand Press	8 by 6
Embossing Press	18 by 10
Cast Iron Imposing Table	26 by 22
Shaving Machine, shaves	27 by 16
Paper Cutter	cuts 27
Card Cutter, improved	cuts 25
Bookbinders' Rotary Shears	cuts 25
" " larger size, in proportion.	

Those presses are considered by the Job Printers as the best adapted to their wants of any machines ever manufactured.

All orders addressed to their agent, M. B. BIGELOW, 152 Washington street, Boston, Mass., will be promptly attended to.

Mr. Ruggles has also sold to the CUTTING MACHINE MANUFACTURING CO., his Patent ROTATING SHEARS, for cutting sheet tin, iron, copper, brass, zinc, steel, nail and boiler plates, and all other metallic sheets. This is entirely a new process for cutting metals, and is destined to supersede all other machines for that purpose.

ANSON HARDY, Agent,
152 Washington street, Boston.

And to a third company, called the BOSTON HAND STAMP CO., he has sold his patent for a very ingenious Flexible Hand Stamp, whereby perfect impressions may be made at the rate of sixty per minute, the die adapting itself to the surface to be printed on. A very convenient article for all business men.

v4 12 1y M. B. BIGELOW, Agent, Boston.

TO FARMERS.

For the destruction of Canker Worms, Borers, Grubs, &c., &c., &c.

THE MURIATE OF LIME.

A SUPERIOR fertilizer, and certain destroyer of the Canker Worm, and other destructive insects. It has been composted to take the place of more costly manures, guano, &c., to which it has been pronounced fully equal, and in some respects superior, by those who have tested it during the two past seasons.

As a certain and sure destroyer of the Canker Worm, which has committed such ravages among the fruit trees the past two seasons, Borers and other Worms, which oftentimes render the labor of the farmer of no avail, its qualities have been fully and successfully proved. For this purpose its success (in New England) has been such as to warrant the belief that it will be a sure preventive to the ravages of the Grasshopper, which have been so great the past season in California.

A sample and testimonials from Agriculturists of the first respectability may be seen at the Office of the CALIFORNIA FARMER; and orders sent through Messrs. WARREN & SON will be faithfully fulfilled.

This article is put up in bags of 150 and 200 lbs. each, or in barrels of 220 lbs. JAMES GOLLD,

Something New and Wonderful in the CALIFORNIA ARTS.

JAMES W. JOHNSTON, Daguerrean Artist, southeast corner of the Plaza, has the pleasure of announcing to the public, from whom he has received many substantial favors, that he has just completed the *enlargement of his Gallery*, and combined with it several magnificent features of the Arts heretofore entirely unknown on the Pacific Coast. He is now prepared to execute in superior style—

1st. Daguerreotypes, as heretofore, on metallic plates, with or without coloring.

2d. Stereoscopic Likenesses and Views from Nature.

3d. Daguerreotypes on *Glass* and *Paper*—the most splendid and remarkable discovery of the age. These Miniatures are susceptible of being worked up by the brush of the Painter, to embody a truthfulness and naturalness of life, at about one-half the cost formerly attending miniatures on ivory, which they far surpass in correctness of delineation. The public are now [illegible] at Johnston's Gallery, for the first time in California, where Ladies and Gentlemen are invited to call and examine specimens.

Connected with Johnston's Rooms is a Picture Gallery, where Mr. THOMAS S. OFFLEY, late of New York, is prepared to execute Portraits on Canvas in superior [illegible] style.

THE GREAT SOLAR ECLIPSE OF SEPTEMBER 29, 1875.—Twenty years from this morning, says the Boston Traveler of the 29th Sept., there will occur a solar eclipse, which will be annular in this city, and central in part of Vermont, New Hampshire, Maine and Nova Scotia. In Boston the sun will rise about twenty-five minutes before the ring forms, and the eclipse will end about half past seven. This will be the last central eclipse in any part of New England or the Middle States during the remainder of the nineteenth century. Indeed, in the course of the next forty-five years there will be here but eight eclipses of the sun in which the obscuration will exceed six digits, viz:

1860, July 18—(Probably) total in British Oregon.

1865, Oct. 19—Annular and central in North and South Carolina.

1869, Aug. 7—Total and Central in Virginia.

1875, Sept. 29—Annular and central in Massachusetts, Maine, &c.

1878, July 29—(Probably) total in Texas, Louisiana, and Cuba.

1885, March 16—(Probably) annular in Oregon.

1892, Oct. 29—(Probably) annular in East Canada and Labrador.

1900, May 20—Total and central in Virginia.

"CLEANLINESS is next godliness," appears to be the motto in Wisconsin. The Niles Enquirer records the good luck of a citizen of that village, who, while bathing in the river, discovered, after an industrious "scrub" of his person of about five minutes, a pair of drawers which he had lost two years previous.

"WILL you take something?" said a teetotaller to his friend, while standing near a tavern. "I don't care if I do," was the reply. "Well," said Frank, "let's *take a walk*."

SNOOKS wonders where all the pillow cases go to. He says he never asked a girl what she was making, while engaged in white sewing, without being told it was a pillow case.

WHEN Haddix's wife kicked him out of bed, says he: "See here, neow! you'd better not do that again! If you do it might cause a coolness!"

"WIFE," said a henpecked husband, "go to bed." "I won't." "Well, then, sit up—I *will* be minded."

PERUVIAN FEBRIFUGE,

FOR THE PREVENTION AND CURE OF

FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THE usual method of administering tonics produces only temporary relief, merely breaking the chill without removing the disease; but it is necessary to relieve the liver and other organs of the unhealthy action, on which the illness of the patient depends. This can be safely, speedily, and effectually accomplished by this valuable preparation; and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians, with the most signal success. In all climates where bilious and remittent fevers prevail, this remedy will be found invaluable, and no person traveling through, or residing in, infected and marshy districts, should be without it, as a few doses will effectually counteract the poisonous and miasmal influence arising from such location, by imparting activity and vigor to the biliary organs, and thus proven a sure *preventive* against an attack of Chills and Fever.

The following are selected from the numerous testimonials received, showing the superiority and efficacy of the Peruvian Febrifuge, not only in cases of long standing, but where other remedies had failed:

FLATBUSH, King's Co., N. Y., April 1, 1854.

Messrs. A. B. & D. SANDS: Gentlemen,—I have much pleasure in informing you that I have been entirely cured of the Fever and Ague by the use of your Peruvian Febrifuge, after suffering with it for over two years, and trying all the best known remedies without success. The Chills could not be broken by using any other medicine, and I almost despaired of a cure; but a neighbor who had been cured by your Febrifuge recommended me to try it, which I did, and was entirely restored by using less than one bottle, and have had no return of it since. Very respectfully, MICHAEL COX.

GOWANUS, Long Island, N. Y., April 4, 1854

Messrs. A. B. & D. SANDS: Gentlemen,—Myself and two of my children were afflicted with Fever and Ague, more or less, for about two years, and tried various medicines without any benefit. In October last we were persuaded to use your Peruvian Febrifuge, one bottle of which cured us; and we have not been troubled with it since. I can recommend it to others with the greatest confidence—having known of several cases which have been cured by it after every other medicine failed.

Respectfully yours, M. RAWL.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

MEDICAL.

DR. GUYSOTT'S IMPROVED

Extract of Yellow Dock and Sarsaparilla

Is acknowledged to be the best Sarsaparilla made, as is Certified by the Wonderful Cures it has performed.

☞ **Remember this is the only True Original Article.**

This Medicine, when used according to the directions,

Will Cure Without Fail,

Scrofula, or King's Evil, Cancers, Tumors, Eruptions of the Skin, Erysipelas, Chronic Sore Eyes, Ringworm, or Tetter; Scald Head, Rheumatism, Pains in the Bones and Joints, Old Sores and Ulcers, Swelling of the Glands, Syphilis, Dyspepsia, Salt Rheum, Disease of the Kidneys, Loss of Appetite, Disease arising from the use of Mercury, Pain in the Side and the Shoulders, General Debility, Jaundice, and Costiveness.

The Best Female Medicine Known.

The Yellow Dock and Sarsaparilla is peculiarly adapted for females of delicate health, resulting from irregularity of menstrual discharges, and other diseases peculiar to their sex. We assure the afflicted, that a bottle or two of DR. GUYSOTT'S EXTRACT OF YELLOW DOCK AND SARSAPARILLA will at once regulate those difficulties and renew the natural energies.

Syphilis, Scrofula, and Diseased Blood.

DR. GUYSOTT'S IMPROVED EXTRACT OF YELLOW DOCK AND SARSAPARILLA is a true specific. The proprietors have in their possession over one hundred certificates of the most extraordinary cures effected by it. We can safely say—TRY IT. It revives the drooping constitution, eradicates all bad humors from the Blood, and by its tonic properties restores the invalid to life and vigor. As a spring and summer medicine it has no equal. Its singularly efficacious action on the blood, its strengthening and vivifying action on the system, stands pre-eminent above all other Sarsaparillas. If you would have the rose brought back to your cheek, a clear, healthy and transparent skin, and life and vigor infused through the system, take Guysott's Extract of Yellow Dock and Sarsaparilla. It contains more of the pure Honduras Sarsaparilla than any other preparation extant, which is chemically combined with the Extract of Yellow Dock and the Extract of Wild Cherry, thus making the remedy more thoroughly efficient than any other Sarsaparilla before the public. At the same time it is perfectly free from all mineral poisons, which cannot be said of any other Sarsaparilla compounds.

Sold by all the Druggists in California and Oregon.

OXYGENATED BITTERS,

CONTAINING NO ALCOHOL,

A CURE FOR

Dyspepsia, in all its various forms; Heartburn, Habitual Costiveness, Acid Stomach, Loss of Appetite, Nervousness, Coldness of the Extremities, General Debility and Asthma.

THESE Bitters are approved by some of the best physicians, who use them in their practice. Scientific men have more difficulty in overcoming and controlling the various symptoms of Dyspepsia than almost any disease in the world. They are so various, in different individuals and cases, that it has seemed impossible sometimes to obtain even temporary relief from suffering. But a medicine has been discovered which proves, beyond a doubt, that in most cases a permanent cure can be effected. By avoiding stimulants, and using the *Oxygenated Bitters* strictly according to directions, a healthy tone is imparted to the digestive system, and strength to perform its natural functions.

Ample testimony to the truth of this can be had by reference to numerous certificates in possession of the general agents. We have no hesitation in pronouncing the Bitters a sure cure for DYSPEPSIA.

From J. C. Dunn, Esq., City Treasurer.

BOSTON, June 6, 1852.

Gentlemen: I have been for some years troubled occasionally with severe attacks of Indigestion; have consulted many physicians, tried Allopathy and Homeopathy, and can truly say, I have received more speedy and effectual relief from the use of *Oxygenated Bitters*, procured from you, than from all other remedies, and most cheerfully recommend them to all who suffer from a similar affliction. Yours truly,

JAMES C. DUNN.

DR. HENRY E. MORRILL, a skillful Physician of New York city, in his remarks on Dyspepsia, says: "The most effectual medicine to improve the tone and energy of the stomach, is that prepared by Dr. George B. Greene, and called the Oxygenated Bitters. I would publish the receipt for preparing this valuable medicine, if I knew what it was, but as I do not, I can only recommend its use. It seems to me to be improperly called 'Bitters,' at least in the popular acceptation of that term, for it contains no Alcohol or other Spirit, and is rather sour than bitter. Though here, by the way, I cannot too earnestly caution the dyspeptic sufferer against using the thousand and one advertised 'Bitters,' the basis of which is alcohol, or other ardent spirits. They impart no real energy to the stomach.

The stimulation which they excite is only temporary, and sure to be followed by a reaction which at length will inevitably wear out the stomach. This medicine obviates these objections. It has been analyzed by that distinguished chemist, Prof. Hayes, M. D., *State Assayer of Massachusetts*, who declares that 'the medicinal articles used are those prescribed by the most eminent physicians, for the diseases for which these Bitters have been so eminently successful.' I have employed them in a multitude of cases, and have uniformly found that when used according to the directions, they gradually, but surely, remove, one by one, the various distressing symptoms which cluster around the confirmed dyspeptic, restore to the stomach its lost energies, and thus lead the patient back to the enjoyment of permanent health and strength."

It has also been used by the following persons, and received their unqualified approbation:

Prof. EDWARD E. PHELPS, M. D., Dartmouth College.
Hon. MYRON LAWRENCE, Ex-President Mass. Senate.
" SAMUEL S. PHELPS, U. S. Senator from Vermont.
" J. F. SIMMONS, U. S. Senator from Rhode Island.
" L. H. ARNOLD, formerly Governor of Rhode Island.
" H. D. FOSTER, Member of Congress from Pennsylvania
" SOLOMON FOOT, U. S. Senator from Vermont.

Many other individuals of the highest respectability can be referred to, who will confirm all that has been said in favor of the Oxygenated Bitters

Prepared by Dr. GEORGE B. GREEN.

Seth W. Fowle & Co.,

128 Washington street, Boston.

ALBANY AGRICULTURAL WORKS,

ON HAMILTON, LIBERTY AND UNION STREETS;

WAREHOUSE AND SEED STORE,

No. 52 State Street, Albany, N. Y.

The Proprietors of the above-named establishment being the sole owners and manufacturers of

EMERY'S PATENT HORSE POWER, &c.,

☞ ALL ARRANGEMENTS WITH OTHER PARTIES FOR THEIR MANUFACTURE HAVING EXPIRED ☜

have formed a new Copartnership, under the firm name of

EMERY BROTHERS,

And will continue the manufacture and sale of AGRICULTURAL IMPLEMENTS and MACHINERY, as heretofore, at the old stands of EMERY & CO. By this arrangement the united efforts, and interest of the Brothers, long known to the public, are secured, and no exertions will be spared to meet the wishes of those dealing in and using the class of implements they manufacture—their leading branch being the manufacture of the justly celebrated

Emery's Patent Changeable Geered Railroad Horse Powers,

with the machines to be propelled by it, as Threshing Machines, Saw Mills, and Machinery generally.

These Powers having been submitted repeatedly to the most severe tests and trials to determine their relative merit and utility with those of every known manufacturer, have without exception been awarded the highest prizes for superiority—among which were the following:

N. Y. STATE AGRICL. SOCIETY, 1851, 1853, 1852, 1851, 1850	MARYLAND STATE AGRICULTURAL SOCIETY, 1853
OHIO STATE BOARD OF AGRICUL., 1854, 1853, 1852, 1851	MISSOURI STATE AGRICULTURAL SOCIETY, 1853
MICHIGAN STATE AGRICULT. SOCIETY, 1853, 1852, 1851	AMERICAN INSTITUTE, 1852, 1851
INDIANA STATE AGRICULTURAL SOCIETY, 1853	NEW YORK CRYSTAL PALACE, 1853
ILLINOIS STATE AGRICULTURAL SOCIETY, 1853	CANADA PROVINCIAL SOCIETY, 1852, 1851
PENNSYLVANIA STATE AGRICULTURAL SOCIETY, 1853	CONNECTICUT STATE AGRICULTURAL FAIR, 1854

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 224 bushels, of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both kinds of Powers, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. If the crops be extraordinarily heavy or light, greater or less results will follow.

These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by this Circular, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and full purchase money refunded if not found acceptable to purchasers.

The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, they hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.

They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery, Implements and Seeds, which are all new and of the most approved and complete kinds extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.

The attention of a discerning public is solicited to our present stock of goods, before selecting and purchasing the coming season.

[Special Report from our own Correspondent.]

New York State Agricultural Fair.

ELMIRA, N. Y., Oct., 3. 1855.

I ARRIVED here this morning about five o'clock in tha midst of a pelting rain, having left New York in the express train at six o'clock last evening. We had about twelve cars, and some 600 passengers, making a very heavy load, and were two hours behind time. Not one half were able to get any supper on the way, and when we arrived at Elmira many could not get lodgings, making a most agreeable commencement. Tha hotels are all full to overflowing, the private houses fast filling up, and trains arriving every hour filled with hungry and tired passengers. It does seem as if all the world and his wife are crowding the streets, not knowing where to go to; while hundreds of vehicles of all sizes and descriptions are plodding along through the mud, on their way to the Fair grounds, filled with passengers bespattered with mud. Through the kindness and attention of the worthy secretary, B. P. Johnson, Esq., and tha committee in general, your humble servant was amply provided with good and comfortable accommodations.

After breakfast I started for the Fair grounds, and made a brief survey of each department; and after a good soaking, concluded to go back to my room and rest, being quite fatigued. It has rained all day, and no signs of fair weather, which makes things look rather dull.

On Thursday, October 4, the morning dawned clear, auspicious of a brilliant day, and it has indeed turned out so. The grounds are in good order, and crowds are beginning to come in. The space chosen for the exhibition contains about twenty-five acres, and the inclosure is overlooked on the north by a ridge of sloping hills, from which a sight upon the multitude assembled in the grounds is a scene of beauty not to be equaled.

The entries in the various departments are very numerous, and equal, if not excel, any former Fair, especially in the value of new improvements in agricultural machines. The building erected for the machinery covers a large space of ground, and attracts general attention. This department is, I think, the best in the Fair. The plows are very superior, and some are finished to a remarkable degree of finaness. There are reapers and mowers of different patterns; threshing machines, corn shellers of new and various patterns, rakes, hoes, spades and shovels, with a general assortment of farmer's tools. The display is excellent, and seems to be the centre of attraction for the male population. Messrs. Emery Brothers, of Albany, have a very fine display of implements, and their patent horse power is in full operation.

The Fine Art Department is well filled, and the pictures are very fine, though they are not placed in a proper light. The embroideries are very fine as well as the [illegible] name not to mention.

In the Domestic Hall are seen some magnificent designs. A silk quilt, worked by Miss Hunt, is a very splendid piece of work. The Papier Mache work is very creditable to the fair artist, and is handsomely executed. In fact the whole department showed evidence that the ladies were not wanting in taste and skill, and the entries were all extremely beautiful.

In the Fruit Department are some fine specimens of pears and apples. The fruit is handsomely decorated with evergreen, and presents a tasteful appearance.

The Exhibition of Cattle is very good. The stalls are nearly all full, and present some of the finest specimens ever seen. C. S. Wainwright, Esq., of Rhinebeck, has a good display of Devon stock, and has taken quite a list of prizes.

The Horse Department is well represented, and the trotting course is occupied by the different rivals, each anxious to show off the respective merits of their horses, &c.

The display of Sheep, Swine, &c., is very fair, though the rainy weather of yesterday has somewhat ruffled their appearance.

The Plowing and Spading Matches took place to-day, and as the affair comes off some distance from the grounds, I shall defer the result till another time, as the reports will not come in until night. The different judges of the departments are very busy on their respective routes, and the prizes will be announced as fast as they are decided.

On Friday Gov. Wright, of Indiana, gives the annual address, which will close the proceedings of the Fair. A grand Floral Ball is to take place in the evening at Floral Hall, which has been handsomely decorated. It is given in honor of [illegible] calls me away this evening, I shall not have the pleasure of witnessing the scene.

The town is fast filling up, and the churches are thrown open as lodging houses to accommodate the crowds who have no other place to sleep. Large numbers of entries continue to be made at the Fair, and the exhibition will be the most successful ever held under the auspices of the New York State Agricultural Society. Large numbers of reporters for the press from New York and other parts of the State are here, and are still arriving. The officers of the Society are well pleased at the prospects, and the receipts for the day are over $5,000. Should the weather continue pleasant the receipts will exceed those of any former exhibition. DE QUINCEY.

Meteorology for the Farmers.

THE following important and most interesting letter from Lieut. Maury, of the U. S. Navy, addressed to the editor of tha American Farmer, we present to our readers. The subject of Meteorology should interest them. It is of the highest importance to the science in which they are engaged, and great honor is due to Lieut. Maury for the untiring zeal he displays to elucidate the important science of the atmosphere. Every scientific mind must and will rejoice to see the interest that is being manifested to unfold these vast fields of hidden knowledge that so intimately affects the vegetable kingdom. We ask a careful attention to the accompanying letter, and we are happy in knowing that there are those among us that are alive to the subject already. "Colfon," in our last issue, stands pledged to commence the work here, and we are confident the influence of such a mind as our valuable correspondent, will not let the matter rest. We shall look with interest to his observations which we undoubtedly will have the pleasure to lay before our readers, from his ready action on the subject:

GENTLEMEN: I am much [illegible] your favor of the 9th inst. You are right. I did not intend to [illegible] the appeal to [illegible] any [illegible] I intended to make it as broad as the [illegible].

You ask for the plan of co-operation. It is very simple and [illegible] the farmer [illegible] more than [illegible].

I first want authority to take the preliminary steps, and to confer with other meteorologists and men of science at home and abroad, with the view of establishing a uniform system of meteorological observations for tha land, as we have done for the sea.

If any officer of the government were authorized to say to the farmers, as I have to the sailors, Here is the form of a meteorological journal; it shows you the observations that are wanted, the hours at which they are to be made, tells what instruments are required, and how they are to be used; take it, furnish tha government with observations, and in return the government will discuss them, and give you a copy of the results when published—he would have at once, and without cost, a volunteer corps of observers that would furnish him all the data requisite for a complete study of both agricultural and sanitary meteorology.

Such an offer to the sailors has enlisted a corps of observers for the sea, by whose co-operation results the most important and valuable, and as unexpected as valuable, have been obtained.

Could not at least one farmer be found on the average for every county in every State that would gladly undertake the observations? I don't think there would be any difficulty on that score. Sailors have been found to do as much for every part of the sea—on the average ten observers for a State would be sufficient.

Now if we could get the English Government, and the French Government, and the Russian Government, and the other Christian States, both of the Old World and the New, to do the same by our farmers, we shall have tha whole surface of our planet covered by meteorological observers, acting in concert, and eliciting from nature, under all varieties of climate and circumstances, answers to the same questions, and that, too, at no other expense than what each government should choose to incur for the discussion and publication of the observations that are made by its own citizens or subjects.

What is wanted in a system of observation like this is uniformity. Hence, co-operation—an agreement to observe the same things at the same times—is essential to anything like success. We want not only corresponding observations as to the time, but we want them made with instruments that are alike, or that can be compared; and then we may expect to find out something certain and valuable, concerning the movements of this grand and beautiful machine called the atmosphere.

If you ask me to state beforehand what particular discoveries or special results of value I expect to make, I answer, If I could tell, I would not ask your assistance to make them. The fields meteorological are large—there are many of them, and all that I know about them is, that there is in them *mighty* harvests of many sorts.

I make the appeal to the farming interest especially, because that is the great interest to be subserved by tha schema; and if the farmers do not really care enough about it to use their influence with their representatives in Congress to to procure the trifling appropriation that is required to get it under way, I do not see why I should give myself any further trouble in the matter.

Will you not bring tha subject in some tangible shape before tha agricultural societies of the country? A simple memorial from them to Congress would not fail to procure all the legislative aid necessary.

Some of tha leading scientific men of Europe are ready to join us in such a plan; and with authority to confer with them *officially* as to details, I have no doubt that most of the governments of tha world would undertake, each for itself, and within its own territories a corresponding series of observations, so that we should then be able to study the movements of this great atmospherical machinery of our planet as a whole, and not as hitherto in isolated detached parts.

Respectfully, etc.,

M. F. MAURY, Lt. U. S. N.

California Chalk.

EDITORS FARMER: Herewith I beg to hand you a specimen of native Chalk, from the [illegible] river, and found about [illegible] from your city, in the low foothills of the Sierras. It occurs in a strata traceable to a considerable extent, and showing an outcrop of [illegible] —to what [illegible] I am [illegible].

This discovery is becoming to a practical [illegible] as Connecticut and other Eastern States that [illegible] are [illegible] [illegible] [illegible]

struction of this canal, and the expense would not exceed $75,000. I am not prepared to make an estimate of the construction of the locks, but at all events the water power will pay for them.

Please excuse my delay in making this report. It is as early as I could obtain the information necessary. Yours, &c., H. PATTON,
Surveyor Solano county.

Statistics of Marin County.

SAN RAFAEL, Marin County, Nov. 10th, 1855.

To the Hon. S. H. Marlette, Surveyor General, Sacramento:

SIR: In compliance with your circular of July 16, I send you the following report of this county:

This county is supposed to contain about 700 square miles, and is bounded by natural boundaries, with the exception of the distance from the Esterro Americano to St. Antonio Creek; that portion of it is bounded by a road which is about twelve miles in length.

I am unable to furnish you with a map of this county without a survey of the county lines; this I am unable to do at my own expense. About two-thirds of this is suitable for cultivation and grazing. There has not been any school land warrants located in this county the past year, on any swamp or overflowed lands belonging to the State. There is but little swamp land in this county; there are some thousands of acres of salt marsh in the northern part of the county, on the margin of creeks and of the bays, this is supposed to belong to the State, but to reclaim them it would cost more than the land is worth. These lands have been surveyed by the United States. The principal timber in this county consists of redwood, pine and oak; there are some 4000 acres of land covered with redwood timber; most of this land is supposed to belong to the United States, and is situated near Tamel Piso mountain, and about Daniel's creek, in the township of Bolinas. There are four steam saw mills in this county; three of them are in Bolinas, where the greater portion of lumber is sawed and shipped from. There is a large bay in Bolinas, where vessels of a light draft of water, say from six to seven feet, can come in and be safe from all winds. This place is in the southern part of the county, and is not laid down on the State map, although this bay is about three miles in width and three and a half in length.

There have been no public improvements made in this county since it has had the name of a county, although there are $15,000 raised in taxes yearly; no roads made or bridges built. In the winter season the roads, if you can call them by that name, are dangerous both to man and beast to travel, on account of the many arroyas which run across the road; all these places could be made passable by bridging, at a very small expense. The county is now about $5,000 in debt, and is unable to do anything towards improvements. Some parts of this county has been township, but no part of it is sectionized.

I would estimate the number of horses, 3,000; the number of cattle, 8,000; sheep, 4,000.

Fruit trees, 2,300, from three to four years old; the most of them are apple and pear trees. This year they have borne about ten bushels of the very best quality of apples and pears. The wheat crops have all been destroyed by rust and smut; barley has done very well; the number of bushels I am unable to state. Vegetables are cultivated to a considerable extent, sufficient for domestic consumption. There have been three roads surveyed in this county; the field notes and plats I have sent to your office. I have received your annual report, and have also examined your proposed system, and think it ought to be adopted.

Very respectfully, your obedient serv't,
ALFRED D. EASKOOT, County Surveyor.

Statistics of Merced County.

MERCED RIVER, Nov. 1st, 1855.

To S. H. Marlette, Esq., Surveyor General, Sacramento:

SIR: According to the instructions received by me from you, requesting information, I beg leave to submit the following:

Merced is an agricultural and grazing county, there being very little mining land in the county. The surface is generally level with very little timber, which is principally oak and willow.

Of the amount of swamp and overflowed lands, I have no means of ascertaining.

The crops in this county have been very light this season, owing to the want of rain. A large portion of wheat was injured by smut, which will cause many to abandon its culture.

There is no fruit raised in this county—there is no use of planting fruit trees or any others, unless the land is irrigated, the grasshoppers would destroy them; they do very little damage on land that is well irrigated.

The line between Merced and Mariposa counties I think is not satisfactory to both parties, it being the main road leading to the San Joaquin river, which is very crooked, and changes perhaps every three months. I would suggest a line, to commence at the south-west corner of Tuolumne and the south-east corner of Stanislaus counties, running in a straight line to Phillips' ferry, on the Merced river; from thence in a straight line to Convers' ferry, on the San Joaquin river; from thence south in a straight line to the line of Tulare county. This line would run diagonally across the lines of the United States surveys the greater portion of the way. I have made no surveys as yet.

Respectfully, your obedient servant,
ERASTUS KELSEY, County Surveyor.

The above Statistical Reports are copied from the Democratic State Journal.

To Langton's Pioneer Express we are indebted for the prompt delivery of San Francisco papers. This popular express is gaining in public favor.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, NOVEMBER 23, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

Exchanges.—Will our colemporaries that exchange with us, have the kindness to direct our papers to *Sacramento*.

SUBSCRIBERS.

Our subscribers who have not paid will receive bills in next number, and we trust every one to whom we send our bills will need no other notice from us. We shall regret to stop any one's paper or publish any names of delinquents; but the necessity of so doing is apparent from the careless neglect of them who have received our labors for a period of time, which offers no excuse.

TO READERS.—We have much matter on file, and among the rest a visit to Kellogg's famous Ranch, Napa Valley, with descriptions of water works, dairy rooms, machinery, &c.; and also a letter received from Mr. Kellogg, of an interesting, though private, nature, which we shall present in whole or part in our next.

WE have on hand from our Eastern Correspondent many valuable and interesting sketches, concerning the importation of stock to California, and also descriptive of a tour through the State of New York, with visits to several of the principal Stock Farms—all of which will appear in regular order, in our paper, and will be found to be quite interesting.

WE would call attention to our Literary Department, as containing all the current literature of the day, with lists of new works in press, by all the principal publishers throughout the Union. The only correct intelligence published here.

Mechanics' Institute of San Francisco.

WE have received from the Government of this most valuable institution their circular, together with a copy of their Constitution, By-laws, Rules, and Regulations. We have also received their highly complimentary letter, conferring upon us the privileges of honorary membership.

For this testimony of their appreciation of our efforts to advance the industrial wealth of California, we are most truly thankful, and we can only attest our esteem of the value of the honor conferred by ever keeping before the minds of the community, as far as our influence extends, the value of the Mechanical Skill of California, which we believe we can say, and we feel proud in the assertion, is equal to that of any State of our glorious Union.

We have often referred to the rapid advance of this State in all branches of manufactures and mechanic arts, and we look forward to the time, near at hand we believe, when a Public Exhibition of the Mechanical Skill of California shall most favorably compare with any part of the world. Does any one ask for a *proof* of this assertion, let them examine the noble structures that adorn the cities of San Francisco, Sacramento and Marysville; see those splendid warehouses that adorn the public streets, squares and wharves; examine the Merchants' Exchange, Custom House, Montgomery Block, Armory Hall, and many splendid blocks upon Montgomery and and other streets, at San Francisco. Visit the Levee City, and cast your eye up J street, and let it rest upon Latham's Block, that gem of mechanical skill; upon the New Theatre; upon Hillier & Andrews' new block; upon that stately pile the Orleans Hotel; then the Capitol. Trip it to Marysville, and see how proudly she speaks of the industry, skill and taste of her working genius. Then back again to the Pacific Iron Works at Benicia; see there skill and genius that indeed outshine and outstrip all other foundries and workshops of the United States. Cross over to the Navy Yard and examine the foundations of a world of labor in an embryo state, as it were the foundation of what shall herald the *just fame* of the *mechanics* of California.

We love to speak thus of the foundation of this goodly structure, Mechanic Art, that tells us of the future wealth and fame, of the future prosperity and happiness of our adopted State, California has been called, and most justly so, the "Golden State." From the loftiest summits of the Sierras, where the very rocks burst open with their golden edges, to the lowliest valleys, where the glorious grain fields bow their golden heads, our State bespeaks its shining wealth; and it is not in *matter* only. California is as rich in *mind* as in matter. Back can we go to the lofty mountains and pass into the very depths of their upheaved masses, and there, hundreds of feet below the surface, we shall see displayed the Mechanical Skill of that class of citizens without whose aid and genius this hidden treasure would never have been revealed.

Every implement that has yet been used to bring forth this treasure was the work of the mechanic! The pick, the shovel, the cradle, the pan, aye the barrow that brought the golden dirt was the work of the mechanic, and what can the miner do without the mechanic? The miner is dependent upon the mechanic for his tools, but the mechanic is dependent upon the industry of the miner to dig the gold that shall pay him for his tools—thus the one is dependent upon the other. How could the hills be leveled, the mountains tunneled, the rivers stopped in their courses or turned whithersoever man wills, without the skill and labor of the mechanic?

Had there been no mechanics to have built Sutter's mill, no *race* would have been made to convey the water, and the fame of Sutter's mill and Sutters's Fort, aye, the discovery of that metal whose talismanic word has caused a world to vibrate in all its relations, might have remained till the present generation should have passed from earth. Some miner might say, for argument sake, or in his unwillingness to be considered dependent upon the mechanic, that he had dug and could dig with his *hands*, but these instruments are also the work of a mechanic! The Master Mechanic—whose builder and master was God; and on him we are all dependent for life, and breath, and all things.

It is this dependence of the creature upon the Creator, and this mutual dependence of one class of men upon the other, in these just relations which men hold to one another, that alone can make society mutually prosperous; and it is with this view that we take of the Mechanical Skill of California, that has and always will induce us to do all in our power to present them before the world in their true light as great co-workers in Human Progress.

We shall again refer to this subject, and hope to show to our Agricultural brethren how dependent we all are upon the Mechanics of California for our success, and how dependent the Mechanics are upon the Agriculturists for their bread—and thus hope we may induce such a feeling of mutual dependence as shall produce a love of one another, and a resolution to aid one another. As we have opportunity we shall speak more fully of this institution in particular.

The Navy Yard, Mare Island.

OUR citizens generally have but a faint idea of the magnitude of the enterprises that are being carried on in our State; either those of a private nature, or those under the patronage of the general government. Many of the enterprises of private individuals and companies in our cities, or in the mines, would seem gigantic to our Eastern friends, for they have but a glimmering idea of the enterprise of Californians.

It would be truly interesting for our citizens who seek pleasure, if they would but visit the mines and see the operations there. The "old prophets" foretold these enterprises when they said, "The hills shall be laid low and, the valleys shall be filled;" for this is literally true, and more is true that the prophets said. "The wilderness shall become the highway of our God," and it is so, for the church is built in the wilderness in the mountains, and the hearts of men are *turned to them*, as the "rivers of waters are turned."

But to our purpose. We know the enterprises in every part of our State are gigantic, but those upon Mare Island, the site of the Navy Yard of California, are on such a scale of grandeur and beauty as we are desirous of seeing perfected, and it is the interest of every Californian to aid in carrying out these plans. The scene at the Navy Yard, which we witnessed the last week while on a visit there, was indeed enlivening. The island is the theatre of mechanical industry, and that is the "school of art." Hundreds, and we might almost say thousands, were busily employed in *digging down the hills and filling the valleys*, and in laying the foundations of these mighty structures, wherein shall be constructed the material of which shall compose the future "Navy of the Pacific Coast;" and it may be that here shall be built the very ships that shall in future years be the defenders of the city of San Francisco from an invading foe.

At this island also is the famous Dry Dock, now complete and in active use. We saw the steamer Columbia, that had been raised, repaired and ready for duty again. She was sent from her *dry excursion* to her native element again, the afternoon we were there, and gracefully did she make her new plunge. Like a duck tired of the shore, she dipped into the waters and gracefully steamed on her way, rejoicing to be at home again.

The Navy Yard at Mare Island will be an honor to the Pacific Coast and to our country, and we hope our government will expend from her surplus treasure liberally. No better use could be made of money than to give it to our mechanics and laborers.

We were most courteously treated by the commandant of the Yard, Commodore Farragut, who kindly explained the designs and plans now in progress. The residences of the commandant and other officers standing in a line upon a broad avenue, being twenty-three in number, will, when finished, present a noble appearance. That portion of the island devoted to this purpose is being graded and laid out in squares, and will be ornamented with trees and otherwise beautified. The buildings are all spacious, elegant and in keeping with the general plan, which is most creditable to our government.

The great iron machine shop, with its wings, is to be a splendid brick building *twelve hundred feet in extent*, and two stories high. The wooden machine shop is, if we remember correctly, about eight hundred feet, with its wings, and two stories; and all other buildings in proportion. All to be erected with care, of the best materials, and by the best mechanics.

We saw hundreds of men busily excavating, laying out streets, building foundations, and in all other departments of work requiring rapid progress. We were pleased to see the Artesian Well Borer, Messrs. Myers & Co., at work. We learned from them that they had reached 137 feet. They struck blue clay at 130 feet, then a small strata of rock, next soft strata, then sandstone, and were working then at 137 feet depth upon shale rock, and had 115 feet water. They informed us they had sanguine expectations of finding an abundance of pure water; but probably by the course of the dip of rocks observed thus far, it would require boring to the depth of about 500 feet. Messrs. Myers & Co. are the contractors for the Artesian at Hock Farm, for Gen. Sutter, and we hope soon to hear that they are at work on it, for we learn from the General that many weeks since he had advanced $1,000 upon it, and it was not yet begun.

Among the important improvements at this grand naval depot, with public squares and broad avenues, we trust we shall see a wise, judicious display of the trees of California—we mean the indigenous mountain glories of California. Heretofore our squares and streets have been planted with imitation trees, or bean poles, (as around the Plaza at San Francisco;) but we hope a better taste will hereafter prevail, and our evergreen oaks and other stately trees in all their beautiful varieties will be selected to adorn our cities and public thoroughfares. We have seen no place where the science of arboriculture could be better displayed that at the new grounds at Mare Island; where to make it beautiful it should be mapped and designed with full reference to the trees to be planted, and their appearance in future years when matured. From the taste already displayed, from the order and dispatch we noticed, and from the reputation of the present commander, Commodore Farragut, we can in faith look forward and anticipate that the Navy Yard of California shall occupy a proud position in the annals of the future of our country.

Shipping Potatoes.

IT will be easily recollected how abundant were the crops of Potatoes in 1853 and '54; millions of bushels were raised, and many millions perished by frost and rot; and so low in price had they become by reason of their abundance, that thousands and tens of thousands of bags were given away for the carting, and thousands of bags lay and rotted on the wharves and in warehouses. We remember well of urging the attention of those interested to the subject of the manufacturing of starch for printers' use, (calico printers); it would have made a profitable thing, for the Potatoes could have been had for the hauling.

We call attention again to the Potatoes, because they can be raised here so abundantly as to be exported with great profit. In New York at the present time the price is high, and as flour and grain advances, potatoes will rise, and therefore it would be well to study how to *keep Potatoes*, after they are ready for shipping.

Potatoes can be shipped with safety to the Islands; can be prepared to keep well on long voyages, upon our whalers, and even shipped to the *States*—and a large profit can be realized. But to do this they must be prepared for this

purposes and this can be done safely by the *kiln drying* process, to which we have often alluded. By this process Potatoes could be shipped to New York or China, safely, and without such a preparation it is reckless and folly to attempt it. The annexed attempt shows the fallacy, and is quoted from an exchange:

Potato Shipments to Sidney.—We have been favored with a copy of advices and sales of a shipment of potatoes made from this port to Sydney, from which it will be seen that this branch of business must inevitably result in a loss to all who undertake it. The following is an extract from the letter advising of the sale:

SYDNEY, August 14, 1855.

Sirs: I am sorry to give you the miserable account of sales and heavy loss on the potatoes.

"The cargo per M. A. Jones, arrived here a few days before yours; her potatoes were a total loss, and put a complete damper on the market. Your potatoes turned out as bad as can be imagined; they were sold at auction in lots to suit purchasers, and as you will see, are nearly a dead loss. I am aware it will never do to send potatoes from San Francisco to this Colony. The same potatoes I have seen resold at two shillings per box, and the purchaser informed me that information was lodged against him at the police office for a nuisance."

The shipment referred to was 150 tons, well packed in boxes and bags, and shipped between decks on a clipper ship, and arrived in Sydney in 63 days. They cost, delivered on board here, two cents a pound.

The sales were, 1,150 boxes and 110 bags:—

Gross salo, - - - - - -	$421
Deduct charges for selling, - -	132
Net sales, - - - - - -	$289

The freight on the above, 170 tons, was $20 per ton, the ship looking to the proceeds only for the pay, by which arrangement our friends escape any loss beyond the total cost of the potatoes.

It should be noted that the shipment per M. A. Jones, referred to, was in bulk, and all perished; while the lot given above, were well packed and shipped between decks.

Had these exporters made use of the *kiln dryer* the potatoes would have gone fresh and fair, and a splendid and profitable thing would have been the result. If those who are interested in such shipments would call on us, we could show them facts to convince them of what we assert.

The Artesian Well at Grenelle, in France.

THE interest which is now being evinced in the subject of Artesian Wells, induces us to present a brief sketch of the famous Artesian at Grenelle, in France, as described in 1846, by Galignani's Guide to Paris, from which work we select our data. This splendid achievement at that date may be looked upon as the pioneer effort, and at the present time and within a very few years, the most astonishing results may be expected:

It was toward the end of 1833, that the contract for boring to the depth of 1200 feet in search of water was made with M. Mulot, sen., of Epinay sur Seine, and on the 1st January, 1834, the work began. On December 31, 1836, the boring instrument had penetrated 383 metres, through strata of alluvial earth, sand, and successive beds of flint and chalk. In June, 1840, the borer had reached 466 metres, and was still in the chalk. For some days before the 26th February, 1841, a greenish sand had been drawn up, and this gave rise to the supposition that the boring instrument was near the water. At length, about two o'clock on that day, the tube gave passage to a little thread of water; but soon after, the fluid, bursting out with force, broke through the machinery which surrounded the top of the tube. Thus had M. Mulot the happiness, after seven years and two months' operations, to see his efforts crowned with success. The sand which came up was for a few days greenish; to that succeeded some of a yellowish color. The temperature of the water was 28 degrees of the centigrade scale, or 83 3-4 Fahrenheit. Several times did the boring instrument break and fall in during these arduous operations: once, in May, 1837, when the length of the bar united was 407 metres, or 1335 feet. It required incessant labor from that time till August of the following year, a period of 14 months, to recover it. The immensity of the labor in forming this well may be conceived, when we consider that the boring-instrument had to penetrate to a depth of 1,8[illegible] feet, the whole of which is now lined with galvanized iron. The water rises 112 feet above the surface of the ground in a pipe supported by a wooden scaffolding which is accessible by steps. At the mouth of the well it yields 2,500 litres, 660 gallons, per minute; at an elevation of 112 feet it gives 1,200 litres. Water from the well of Grenelle will rise to the highest story of any house in Paris. The orifice of the well is 5 centimetres (about 21 inches) in diameter, and 18 centimetres at the bottom. Its depth is 5 1-2 times as great as the altitude of the highest [illegible] of the dome of the Invalides. It has now been [illegible] that throughout the basin of the Seine and [illegible] artesian wells [illegible] be [illegible] wherever the excavation of the soil [illegible] not exceed [illegible] feet, that of the Abattoir de Grenelle.

Thanksgiving.

WHOSE heart does not throb quicken, as the eye or ear catches this holy word? Linked as it is with our Pilgrim Fathers, and with their struggles, their trials, and their victories—linked as it is with dear New England, yet it is a word that now belongs to all who claim to be descendants of the Pilgrims, or who love our history, our country, or our firesides and our Homes. The return of this day to us Californians, must recall scenes of by-gone years, where are is linked the brightest visions of life and happiness; and it is to be hoped that although many may be separated from kindred and friends, yet by the keeping alive this day, all will join in making it a day sacred to the memory of the past, and joyous in its associations of the present; thus laying a foundation for its continuance through all future years. The Proclamation of the Chief Magistrate will be found in our present issue, and is as brief as need be for such a document.

WE have received from Robert T. Young, 109 Nassau street, New York, a new and ingenious contrivance for preserving letters, invoices, &c., called the "*Improved Letter and Invoice File.*" Having used the article, we can speak fully of it. It is indispensable to the merchant, possessing every requisite for filing letters, invoices, &c., in proper date, with alphabetical Arrangements, &c. The letters never become loose, each one being fastened by adhesion, distinct from the others. The file is made like a scrap book—save that the leaves are short, and have a gum substance upon them. The letter is attached by moisture to the short leaf, which forms a complete page in itself. The books will hold from 250 to 500 letters, arranged in the order of dates, and as convenient for reference as a ledger account. No counting house should be without them, for they will prove invaluable after once using. They are of different sizes, from the letter size to the large government form, and orders can be addressed to the manufacturer, 109 Nassau street, New York, who will fill orders for *any size*, or any style of binding.

BRITISH PERIODICAL LITERATURE.—We have received from Leonard Scott & Co., New York, the following British periodicals: "London Quarterly," "Edinburgh Review," "North British Review," and "Blackwood's Edinburgh Magazine." These reprints are now becoming more valuable on account of the present critical state of European affairs. They are also the critical censors of the British scholastic and literary world. They fill a place which American Magazines cannot supply, for they discuss topics relating more strictly to the affairs, political, religious, scientific and literary of the Continent of Europe. These periodicals are conducted by the best talent of Great Britain; and are engaged with the most important question which interests the civilized world. It is to these periodicals that readers must look for the only reliable history of current events, and we would urge them upon the consideration of the reading public. We would call the attention of our readers to the advertisement in our columns, where all particulars may be found. Now is the time to send in your names, to Messrs. Leonard Scott & Co. 54 Gold street, New York. W.

IMPROVEMENT IN BORING ARTESIAN WELLS. The editor of the Stockton Argus states that a new method for boring Artesian wells has been discovered, and from a conversation with the agent, William J. Corcoran, has no doubt that it is fully competent for the work intended, to bore to a great depth expeditiously and effectively. This new machine is for Artesian well boring and rock drilling, by steam or horse power. The bore is from six to twelve inches in diameter and capable of boring through earth or any kind of rock or granite at the rate of twenty feet per day, and any other rock in proportion to the hardness of it. The machine discharges itself, rendering it unnecessary to withdraw the drill. There is also a machine that can be added to it for the purpose of excavating a chamber, or shoulder, at the extremity of the bore, three feet in diameter being allowed for power. As much as a hundred tons of granite have been thrown up by one bit in three days with the labor of two men.

The Argus says it will be of great advantage to the farmer to have the experiment tried, and as soon as [illegible] what depth [illegible] can be put down at an outlay of [illegible]. The [illegible] work to [illegible] is of [illegible] six hundred [illegible] The farmers of Yolo Co[illegible] [illegible] [illegible] [

Horticultural Department.

Country Residences—Trees for a Lawn.

The beautiful valleys that lie spread out over this State, and the thousand and tens of thousand charming spots that seem by nature designed for *homes*, should secure a more particular interest and attention from our citizens than has yet been given to the subject.

These scenes in nature will always strike the mind of a person of cultivated taste as far more beautiful than anything that man can design, and so they are, for here everything is planned and arranged in harmony.

The rocks, trees, grass, and flowers are all placed where they meet and please the eye, and the gushing spring of water from the mountain side is just where one would have it if he had desired it at the most appropriate spot. The winding path around the base of the hill is skirted with the small shrubs and flowers, and the broad avenue is shaded by the lofty oak and pine. Thus is it with every hill and mound, each is more or less covered with tree or shrub, to harmonize with the lofty trees upon the mountain near, or grooping forest of trees more distant. To a practiced eye it will in most cases be found that every group of trees planted by nature and every single tree are points in the landscape to make it more beautiful.

Look now at that beautiful lawn spread out before you—examine it well—see the broad open space, a carpet of living verdure, gemmed with the bright and beautiful flowers whose colors vary as the eye passes over them, like as the tints of the rainbow change with the varying colors of light upon it.

See yon clump of trees on the right; the tall pine, its towering point rising above all others like the spire of a church, heavenward. And see the changeable yet beautiful foliage of the other trees around it, varying in their form as well as color. See in what perfect order they are grouped, from the lofty pine in the centre, to those of broad foliage around it, till you see the low bending branches of the smaller trees upon the *outside of the group*, whose branches touch the ground—thus forming a *dome*. How *perfect* this group of trees appears in the lawn.

Look again at those two curious groups of trees and shrubs on the left, the one an oval, the other in the form of a crescent. These, as you see, are near the opening on the mountain side, the oval just below those overhanging rocks—see how they *break up* what would otherwise be an unsightly hollow. Now look again and see the light and shade play over these rocks upon these trees. This light and shade are the *agents of their growth*, to make them equal to the place they occupy. Were they in the *constant light*, they would *outgrow* the *design* and thus deface its beauty. Thus we see how perfect are the *laws of nature*. That *crescent* group—see how it winds around the brow of that hill and up the ravine from which comes pouring down the gurgling torrent, bathing the earth, the trees and flowers with its pure waters, and giving to the eye that picture of perpetual spring which yonder living green presents.

Now look once more—see you that *eminence* where here and there are placed the *choicest trees* of all the groups around? Mark how they stand, almost at equal distance, like a hollow square; within *that space* should be the *home of man*. Reader, have you this picture in your mind? if so, and you should wish to add *more groups of trees* to nature's glorious plans, first study *nature's laws*—the *trees* you plant, the *soil* whereto they grow, the *place* that they would grace—then will you plant with *true design* and all your work will harmonize with nature, and with beauty.

Now from our fancy sketch, to sober *fact* we turn, and hope though poorly we may teach, some little all may learn.

Every tree planted upon a lawn should be placed with reference to the *form* it will present in after years, when fully grown. With this fact in view, those of broad spreading branches and the tall spiral trees will have their appropriate places. The distances planted should be apportioned to the tree when matured, rather than to the size of the lot, and trees appropriate in size of the lot must ever then be kept in view.

We have thus presented a sketch of a lawn as it should be, and if those who are about to aid nature in beautifying will but reflect, it will take a little time to select the varieties which we shall hereafter present.

New England Nursery.

The present our readers this week, the "Report of Messrs. Shepard & Beach, of the New England Nursery." In this Report will be found many valuable practical suggestions that we trust our readers will not let pass unheeded. Our own experience in this State, and our former experience during practical nursery work of many years, will corroborate their statements; there are one or two subjects, however, upon which the Report speaks, in which we may differ, and of these we shall speak in another column. We most heartily commend the Nursery of these gentlemen as worthy a visit; their sale Nursery is large and well filled with valuable products, and those who desire to plant orchards and gardens will do well to visit them:

New England Nursery, Marysville, Oct. 20, 1855.

Mix Smith, Esq., Assessor of Yuba County:

Dear Sir: At your earnest request, and as per promise, we will give you a statement of our orchard and nursery operations, as also of our observations of the adaptation of the soil and climate of this section of the State to the culture of fruit, and the general method of treatment necessary to insure success. To go into every minutiæ it would require a book, but we will in a condensed form endeavor to meet your wishes.

Our *orchards and nursery grounds* are situated on the east bank of the Feather river, four miles southerly from the city of Marysville, on the stage road to Sacramento. Our orchard was set in December, 1853, being less than two years. The trees are three years from the bud and graft, and were grown by one of the partners, Mr. Shepard, who is a practical nurseryman from New England. The buds and grafts were selected from bearing trees which he had tested, and knew to be all true to their name—a result of the most vital importance to nurserymen who are propagating trees for sale, for it is no uncommon thing for those who have set trees, purchased at random, to find themselves sadly disappointed when their trees come into bearing. And every State should pass stringent laws against such bogus sales, for there is not the loss of money only, but loss of time, which cannot be redeemed. It costs no more to grow trees of the most choice varieties, than it does the meanest scrub, while the fruit of the one is always in ready demand, and the other is a drug in market.

We have in nursery a general variety of fruit and ornamental trees, shrubs and vines, the numbers it will be impossible to give. The number of fruit and ornamental trees, may be near 20,000.

We are cultivating the Osage Orange for hedging, and the experiment is of the most satisfactory nature so far as the growth of the plant, and the barrier it offers, is concerned. There has been great difficulty in obtaining good seed, which, when fully corrected, will give an impetus to the business, and the Osage fence is sure to supersede all other through this valley.

We are cultivating the Chimisol, or by some called the Escalonia, a beautiful evergreen, thrifty and very tenacious of life in high or low lands. This shrub is indigenous to California, and when well cultivated is unsurpassed in beauty. Also some 2,000 of the evergreen oak of California. A few English walnut, Spanish chestnut, and the New England horse-chestnut tree. Our experience and general observation has fully convinced us that the Sacramento valley climate and soil along the river bottoms, can hardly be matched in other portions of the State for the growth of all stone fruit, viz: the peach, apricot, nectarin, and plum; and we will add the cherry, and if not matched in California we challenge the world. The pear does well here with care, and probably as well as in any locality in the State. The fig really excels here, yielding one heavy crop on the wood of the previous years growth, and blooming and ripening without intermission, until the winter season, on the shoots of the present seasons growth. This cannot be the result where the summer season is short, or where the chilling winds prevail in the fruiting seasons. Properly trained, the fig is the most beautiful shade tree in the world.

The apple, with us, seems to have its enemies; the borer, and sunblight. The pear has some hindrance by the same cause, but very much less so. The fig has no destroyer with us, and we hear of none in the valley, and for the reason that the milk or sap of the tree is offensive if not poisonous to insects. Even grasshoppers will avoid them, while there is a green thing left beside. The quince is somewhat a sufferer by the borer and sunblight, but less so than the apple. Of the remedy for these evils we will speak before closing. We find it universally the case that imported trees suffer from these causes vastly more than those grown in the State. The transfer through an extreme climate evaporates a vast quantity of the sap, and one or two seasons is required for its recovery, and it probably never will make so fine a tree as those grown here.

This fact, all nurserymen in the State agree on, that a tree in the bud grown in California, is worth more than one imported, even if it be two years growth. Pomegranates do well here, and some even favor them for hedging, but one Osage fence is worth a dozen of them.

For grapes of all the varieties, our climate will equal any in the world, and soon, we will give ample proof of the assertion. Gen. Sutter's grapes are not quite as large as those from Los Angeles, but are sweeter; and the cause is, that his vineyard is on very high and dry soil, and what we term the upland; which does not yield to the vine the moisture necessary to fill out the fruit. Manures are the gardener's stay, but no medium can substitute for water, heat and light.

The strawberry does very finely here, when they can be constantly supplied with water, and this they must have. This is a natural climate for the raspberry. Gooseberries and currants in our climate, require moist land or irrigation; the bay or mountain atmosphere is rather more kindred. Roses and flowers generally, will excel with liquid manure and liberal moisture, systematically applied. We believe, in this valley, we can beat the world in the growth of trees and vines, with a full supply of water in the soil, or by means of irrigation. Give us water and you make us an Eden, which we hope to obtain by artesian wells or otherwise.

We sunk an artesian well last winter to the depth of 300 feet, and secured it well with galvanized iron. We obtained no flow, but shall prosecute the work at some future time; had contracted so to do this summer, but the loss of our entire crop of fruit by grasshoppers, caused us to defer.

This season, we have had the aid of water pumped by steam, and although our works were not completed until very late in the season, we were enabled to arrive at this conclusion, that one month's sun with water, is worth three without. With these elements combined, nature seems full of her pranks.

For two years we have been selling small lots of trees and vines to be set out in the mountains, and we have the most satisfactory reports of them. The experiments prove fruit-raising in the hills no longer a venture, but more sure than the substance, (gold) which, in part, forms those hills. In Downieville, Grass Valley, Nevada, and other situations of equal altitude, it has been fully substantiated that the mountain winters are a benefit rather than an injury to the tree, while the spring frosts have proved of no injury to the blossoms or fruit. We recently visited a majority of the farms and gardens contiguous to Grass Valley and Nevada, as also those on the way up. Mr. Montgomery raised this season, some ten bushels of peaches, at his farm in Penn Valley, near Rough and Ready, and obtained for them more than enough to pay him back the original cost, labor and interest. The trees we saw at Mr. McCarty's, as also at the farm of Mr. Collier, both near Grass Valley, and those of Mr. Turner near Nevada, and at Mr. Moody's (Empire ranch), all without exception, prove fully the success of the little mountain orchards. Vines seem to do surpassingly well.

Apples have proved themselves well at ease in the mountain atmosphere. The test by Mr. Shearer, at Park's Bar, as also by others higher in the hills, has been a very good one; for no fairer or finer ones have been grown in the State. In time, we shall look to our mountain neighbors for a portion of the apples which we eat. And when the *iron horse* speeds his way through the mountains and over the plains, to our eastern cities, then will these elevated neighbors come into competition with us in sending to our eastern friends, our delicious fruits one month ahead of their own raising. And then, will they look to California for their choice wines and grapes.

Remedies for Diseases and Pruning of Fruit Trees.—If the apple, pear and quince trees, in this valley, can be carried on to a successful growth, until they have attained the age of three years, but little fear need then be entertained for their future progress, even in the absence of that especial care previously bestowed on them—but that which is worth doing at all, is worth doing well. The best and surest remedy against the blight and borers, is an abundance of water, so as to keep the sap in a continuous flow, thereby keeping the tree in a constant growing state in summer. These are not the trees the borers are most pleased with; the fly chooses to deposit her eggs in trees rather dormant, and these are the kind of trees which become infected with the sun blight. In these trees, subject to the blight, the sap is thinner than in trees of stone fruit, and when flowing in a dormant state, the scorching sun on the bark evaporates the little sap in motion, which adheres the bark to the wood, when all circulation is checked, and as there is no medium of conveying to the root the gasses received by the leaves, which is necessary to neutralize the gasses received at the root, death to the tree ensues. Shading the trunk of the trees, the side which receive the most sun, by clapboards, will be found beneficial, but a better remedy is to hoe back the soil from the tree, some two or three inches deep, and wind the trunk of the tree with cloth, loosely, for 18 inches in hight, or cover the tree to the hight named, or even to the limbs, with tar. Then put ashes around the trunk for three or four inches in depth. Do this about the middle of March or first of April, and keep the trees well watered, unless the soil is really very moist, and the remedy will be found quite sure. Before doing this, the tree should be thoroughly examined, near the ground, to learn if the borer has been wintering in the bark or heart of the tree, where they are more often found than under the bark. If their trace is noticeable, follow them up cutting carefully with a knife, until he is dragged out and destroyed—cover the wound with grafting wax, or with a tenacious clay and fresh stable manure of equal parts. Before these remedies are applied, it will be well to wash the trunk of the tree with a solution of potash, say one pound of potash to two gallons of water. And, in fact, every tree in an orchard should have this wash applied with a brush, about four times a year. This wash is very beneficial in loosening and enlivening the bark. In foggy or long damp warm spells, in the latter part of winter, trees are apt to bleed, and sometimes badly, and no remedy is so good and rapid as the potash wash applied to the trunk of the tree, as also on any portion of the limbs which bleed. It is unusual, when the peach, as also other trees, come into blossom, at a time when there is a very dry warm spell, for the blossom-louse to make its appearance, and unless checked will destroy much of the fruit in embryo, as well as to check the tree in its growth. This is indicated by the curling of the blossom, as well as the leaves of the tree. The insect is of a maroon or dark brown color, and about the size of the head of a small pin. The remedy is soap suds of medium strength, applied with a syringe, or dashed on with a small clothes broom. This is used with impunity to the blossom, while it destroys the insects. Cold rains have nearly as good effect. Stone fruit set in bottom lands, do not need water of necessity, unless it is desired to force a very rapid growth, and excepting trees set very late in the season, in sandy soil, then the stimulus is rather necessary, until they appear to have a healthy start, and if continued through the season for the first year, the tree of course becomes larger. When trees, by cattle or insects, lose their leaves, watering aids to resuscitate them. The trees of all stone fruit, and others of a very rapid growth, generally, should be headed in, every winter, one-sixth or one-eighth. Trees in this climate, grown to limb within one to two feet of the ground, will prove the best bearers. In setting trees, set them no deeper than when grown in nursery, except when set in sandy soil, then two to three inches deeper will be well. Mulching trees and vines with old straw or chips in the spring, is of the greatest service imaginable. The cultivation of vegetables (but not grain) among the trees, is very beneficial.

We have devoted more paper to this subject than we intended, but with the view of fully meeting your expectations. We remain, dear sir, very truly, &c., Beach & Shepard.

Our Literary Department.

"Olis," or the Old West Room.—The weary at work and the weary at rest. By L. M. M. Published by Mason Brothers, Park Row, New York:

This is a very charming story, delicate in its sentiment, and well calculated to please the most refined. The author shows a fine vein of pathos, and the reader's sympathies will be at once enlisted in the fortunes of little "Olie," the heroine. The work bears sufficient evidence of being from a female pen, and will be read with deep interest.

"The Hidden Path," a novel, by Marion Harland of Richmond, Va., author of "*Alone*." Published by J. C. Derby, New York:

This a new novel by the favorite authoress of the South. All who have read it say it is far superior to *Alone*, her first work, which had a great sale in this country and England. It is a finished production, and the author is a lady of talent and promise, who bids fair to take her rank among the first female authors of the day. She is a Poetess of rare ability, and the present work surpasses in brilliancy all her former efforts. A great variety of characters are introduced, most of which are very beautifully sketched. The real name of the fair authoress, is Virginia Hawes, only about twenty-two years of age, a resident of Richmond, Va., and the daughter of a prominent merchant there. She writes good healthy stories descriptive of domestic life. We shall refer to the work again, want of time compelling us to be brief.

Henry VIII. and his Six Wives—a new and interesting work by Henry William Herbert, after the best authorities. Published by Miller, Orton & Mulligan, New York and Auburn:

Mr. Herbert is well known as as an author. His former works, "Oliver Cromwell," "Marmaduke Wyvil," "The Brothers," &c., are widely known, and add to his already brilliant fame. "The style of the present work exceeds all others, and the language is glowing and eloquent." The The memoir of Henry is political, private and domestic. His title to the throne is traced to the War of the Roses. The marked events of his life, were his marriage with Cathorine of Arragon; his adultery with Anne Boleyn, and the cause of her bloody death; his marriage with Jane Seymour, and her decease, &c., The book is embellished with seven portraits, and the engravings of his six wives form a collection of beauty seldom surpassed. The work exciting, and will command attention from all who take it up.

"Kate Stanton," a page from Real Life; published by James French & Co., Boston:

This is the title of a new work just issued by the above well known firm, and is said to be unparalleled in interest to any yet offered. It is a narrative of Life, and the scenes are laid in Boston and vicinity. The author is as yet unknown, and has spared no pains to make a finished production. The work is a tale of truth, and will be appreciated by all who love a good domestic tale.

"Carrie Emerson," or Life at Cliftonville, by Mrs. C. A. Hayden—published by James French & Co., Boston:

This work, as having been announced in our list of books in press, a week or two since, is now offered to the public, and the author is well known to the public as a talented writer. Any one who has read her poems, may form some idea of what her prose must be. It is a work of much ability, full of wit and humor, and is somewhat devoted to the subject of scandal, touching up some characters who are too willing to listen to

this vice. It will undoubtedly have an extensive sale.

"For You Know Whom," or our school at Pineville, by Caroline Ellen Hartshorn—published by James French & Co., Boston:

An amusing book for the young, finely illustrated and will be found quite attractive. Much need is felt of books for the young, which will convey good moral lessons, and we can commend the above work to *parents*, who would bestow a gift of some real worth to their children.

"Isadras Child,"—author unknown—published by J. C. Derby, Nassau street, New York:

We may say with truth that the above work will richly repay the most critical reader, for a perusal. It is full of the necessary requirements for a pure romance, and the style and plot are deeply interesting. It must have an unqualified success, being profuse in incident, passionate in tone, romantic in its nature, and a very pleasant play of contrasts in the scenes, &c., which give the reader a deep interest. There is material enough in Isora's Child to make a dozen of the novels of the day, and the book cannot fail to fascinate and please. Received through Philipps, Sampson & Co., Boston.

"The Rag Picker," or Bond and Free—published by Mason Brothers, Park Row, New York:

The work appears to be somewhat of an abolition story, and a temperance tale, bringing up some localities, &c. introduced in Mrs. Stowe's work, and also abolition scenes and riots at the Boston court house. It proclaims to be, as the preface indicates, a work of truth, and several of the personages alluded to in the work have lived among us. "The object of the work is to aid in keeping alive the march of progress that is now current at the North, the South, the East and the West, and to point a moral (in passing) through the history of those herein named, who have suffered from the abuses portrayed." The work is said to be the effort of a Boston abolitionist, and is quite attractive in romantic interest. Received through Messrs. John P. Jewett & Co., Boston.

"The Private Life of an Eastern King," by a member of the Household of his late Majesty, Nussir-U. Deen, King of Oude—12mo.—published by J. S. Redfield, New York:

This work contains interesting particulars of the common, every day life of the people of the country, and abounds in Oriental anecdote, luxury, &c., written in a very pleasing style, and well printed and bound. The author in his preface says, the narrative is a record of facts, and is compiled from events in his own experience, having been domesticated for some years in the palace of the Sovereign. He has given the truth of what he saw, and describes the palace, &c., as he found it, and no exaggeration is given whatever. The work is an interesting one, and will be found well worthy a perusal. Received through John P. Jewett & Co., Boston.

"The Japan Expedition," by J. W. Spalding, of the U. S. steam frigate Mississippi—published by J. S. Redfield, New York:

The above volume contains an account of three visits to the Japanese Empire, with sketches of Madeira, St. Helena, Cape of Good Hope, China, and Loo Coo, &c., &c., with eight illustrations in Tint; also observations of what came under notice in a cruise of nearly two years and a half. His description of Life aboard a "Man of War" is extremely interesting; while in addition, the whole description of incidents, experiences, &c., from the time of leaving the United States, to the arrival at China, and thence to Japan, is vivid with incident and excitement, giving a description of China and Japan, manners and customs of the inhabitants, the style of living, &c., and the late troubles—making one of the most interesting works of the *kind* ever published—and is one of the many standard publications issued by the above enterprising publisher this summer. From his well known taste in this field of literature, the public may well be satisfied with a perusal of "*The Japan Expedition.*"

Wm. V. Spencer, Boston, has just published the "*Merry Wives of Windsor*," a comedy in five acts, with editorial remarks, original casts, costumes, scenery and plots. Also—

"*Michael Erle*," the Maniac Lover—a romantic original Drama in two acts, by Thomas E. Wilks, Esq., author of State Secrets, Sudden Thoughts, &c.,—with all the stage business, &c. These form the latest numbers of Spencer's Boston Theatre, and can be had at C. P. Kimball's, San Francisco.

Pudney & Russell, No. 79 John street, New York, have sent us the following work:

"Na [illegible], or Three Years in the South Seas—being a narrative of adventures at the Hawaiian Group, the Society Islands—with maps, and twelve original illustrations—by Edward T. Perkins:

This a deeply interesting works, and describes the whole experience, advanturea, ludicrous and serious of the author, among the "Islands." The engravings are well executed, and the maps are correct, making the work worthy the inspection of every reader. "At no period of our national existence have American interests been so prominently manifest in the great Western Ocean. Laws, literature and commerce are results of an enterprise that has established States and successfully combatted a national antipathy." The incidents related in this work occurred in the years '48 to '53—and the words "Na Motu," signify in the Hawaiian dialects "The Islands." We would commend the work, and hope it will meet with the success it merits.

Putnam's Magazine for October is before us, with an unusual variety of valuable reading. The first article, "Original Portraits of Washington," in prose, is very interesting. Sketches upon the Drama in France, the Kansas question, with the usual Editorial matter, make the present number a most agreeable one. Published by Dix & Edwards, New York.

Harper's Magazine for October, is at hand, full of fine engravings and illustrations—a very interesting article upon Nicaragua—an exploration from ocean to ocean, by E. G. Squier—a most exciting description of Bear Hunting, with illustrations—a trip on the Panama Railroad—editorial notes, and an excellent comic department.

Harper's *Story Book*, for October, contains the Life of Franklin, a very useful number, for the the young reader. These books are now extensively circulated over the whole Union. The above received through Messrs. Burnham Brothers, Cornhill, Boston.

"Panorama of Life and Literature,"—published by Littell, Son & Co., Boston.—The October number is before us, and seems to be an improvement upon all the others. The reading matter is now and decidedly interesting. There is a most able article, and a lengthy one, entitled "the Queen and the Emperor," from the Paris correspondent, which would interest every one, at the present stirring times in Europe. We hope the Magazine will have a large circulation in California.

"Hunts' Merchants' Magazine," for October, contains an article upon the Denmark Sound Dues, which has been the subject of so much discussion in the papers—the usual agricultural department, with statistics of the crops, &c. No merchant should be without this valuable magazine.

The Inventor, for October, No. 2, published by Quimby, Haskell & Co., New York, with a great variety of matter, upon new patents, machines, &c. It can be seen at our office in Sacramento.

The Horticulturist, for October, published by J. Jay Smith, Philadelphia—a very handsome number, with colored plates, &c., and numerous engravings.

"The Florist and Horticultural Journal," edited by H. C. Hanson, Esq., Philadelphia.—This is one of the best and truly valuable magazines published—having for its contributors the first writers of the day, Professors, and others, interested in Agriculture, &c. The plates are highly colored, and are very handsomely executed, and form the principal feature of attraction.

Through the politeness of the editor, Mr. Hanson, we have received a complete set of the back numbers, making a very handsome volume, and fit to grace any library. We shall speak at length of these matters in other numbers.

Our literary correspondent desires us to apologize for the *brief reviews*, of the present number, but absence on a tour to the State Fairs, &c., have caused an accumulation of books and other matter, which it is impossible to give credit for at this time. Many valuable and interesting publications are on file, and will now be taken up and noticed, in regular order.

Banquet of the Publishers at the Crystal Palace, New York.

A Grand Fruit Banquet tendered by the Book Publishers' Association of New York, to Authors, took place on the 27th Sept., at the Crystal Palace, and it was indeed a splendid affair, everything being upon a scale of great variety and elegance. I regret not to be able to give you an entire report, as it would occupy too much room, but will give you a brief description of the arrangements, &c, with a few of the speeches and toasts. Ladies were admitted among the guests, and greatly added to the brilliancy of the occasion. Six long tables were spread at the north nave of the Palace, and covers were laid for six hundred persons, though the number at table exceeded that sum. Messrs. Coleman & Stetson, of the Astor House, catered for the occasion and one hundred and fifty waiters were employed from the Astor House. The finest music was discoursed by Nolls' Band, and every face wore smiles of satisfaction and pleasure.

The principal feature of attraction among the many decorations, was an illuminated motto in gas work, reading as follows: "*Complimentary Fruit and Floral Festival to Authors, by the Association of New York Publishers, Sept. 27, 1855.*" Another illumination suspended below this read—"*Honor to Genius.*" In fact the hall was brilliantly illuminated at every point, and was indeed a beautiful sight. The galleries were crowded with spectators, giving to the scene an elegant effect. A strong force of police were present in uniform, and excellent order was preserved. At six o'clock the guests took seats. Wm. Appleton, Esq., President of the Association, presiding. After the repast, or rather feast (for every variety of the choicest fruits were bountifully supplied) speaking and toasts followed.

Many distinguished men honored the table by their presence. Washington Irving was the observed of all observers. Next to him sat Wm. Cullen Bryant, our distinguished poet, with his long white beard reaching almost to his breast. Mayor Wood, of New York; Hon J. V. C. Smith, Mayor of Boston; Rev. Henry Ward Beecher, Rev. E. H. Chapin, Rev. Dr. Osgood, Wm. C. Bryant, and Prof. S. B. Morse, were among the many distinguished guests who sat at the President's table.

Among the ladies were noticed Mrs. Sigourney, Minnie Myrtle, Mrs. Botta, Alice Carey, Fanny Fern, and the Misses Warner. Among the Publishers, Authors, and other well known faces, were Ex-Mayor Harper, Rev. Mr. Milburn, and N. P. Willis.

It was a most brilliant assemblage, and will long be remembered by those who participated in it. Very seldom, if ever, were so many distinguished men gathered together. Speeches and toasts were made by Mr. G. P. Putnam, W. C. Bryant, Wm Young, of the Albion; Rev. Dr. Osgood, Rev. Mr. Chapin and others; but want of space compels me to be brief. Rev. Wm. H. Milburn, the blind preacher, made a most pathetic speech, which was listened to with the most profound attention, and in which he alluded in the the most touching terms to his affliction.

Mr. Fields, of Boston, responded to a toast in a very humorous poem, which was most heartily applauded.

Rev. E. H. Chapin responded to the following toast: "The Printing Press of the age of Steam and Electricity." He dwelt upon the beauty and power of the press, that with long slim fingers picks up its messages of thought, scatters them quietly as snow flakes, though they fall like thunderbolts on the ears of the people. He described in a sort of charcoal sketch the great establishments of the Harpers' and Appletons', from whence the old fire-eater puffs night and day in the dark cellars, and the catacombs of types, and vaults of plates, up through the large airy rooms, where happy girls and men performed the scores of processes that intervene between the handling of the much loved MSS. and the well bound book. The rattle of the steam press was more powerful than the rumbling of artillery. Each type as it clicks into place hits a mark, though it be a thousand years ahead. Each new advance of the Press makes the *Malakoff* and *Redan* of Error tremble. His remarks were made in the happiest style, drawing down torrents of applause, and at the conclusion the audience cheered, making the Palace ring with the echo.

Mayor Smith, of Boston, responded to the following toast in a very happy off-hand style, which produced a lively impression: "The Sister Cities of Boston, New York, and Philadelphia, whose chief magistrates honor us to-night—while each aims to produce the best books of the best authors, and best regulated homes for them; the more rivalry, the better."

The following toast, intended as a compliment to the Misses Warner, was heartily applauded: "*Our Lady Guests and their Writings. The New England Tale* is re echoed from the *New Home* of the West; and from a *Cabin* on the banks of the Ohio a touch of Nature vibrates among *The Lofty and the Lowly*, through the *Wide, Wide World.*"

The following was the last regular toast: "*The Booksellers of the Union;* so long as they are the mediums for diffusing sound intelligence and the pure products of true genius, they deserve an honorable position in the community; for in the ordinary business of their lives they become benefactors to their country."

Volunteer toasts being called for, the following were presented. By Dr. Gardner—"*Woman:* the type of loveliness a lettered angel.—she is an acknowledged standard work."

By John Keese, Esq.—"*Woman:* the rarest and most exquisite work of the Great Author; illustrated by the Graces, and published in Paradise."

By Mr. Mason—"*Our [illegible]:* The *Authors of America*, whom we are proud to call friends; united we stand, divided we fall."

The exercises closed with a musical medley by the band and an address in pronouncing it a splendid affair and very successful.

Dr. [illegible].

Ladies' Department.

Love is Blind, they Say!

We have received the following epistle, and as we wish to gratify all our friends, we present it to our readers, as one of the variety which we from time to time lay before them, as variety is the "spice of life."

We do hope our dear friend "Betty" will respond to "Chispa," and prove to him that he has not entirely lost his journey to California.

Shaw's Flat, Tuolumne Co., Nov. 11, 1855.

Messrs. Editors: You will confer a great favor on me if you will please to inform "Betty Martin" that I am a young farmer, not bad looking, and fresh from one of the beautiful valleys of Pensylvannia, and have a great love for rural scenery. My age is a little over twenty-two years, have about the same amount she is happy to call her own, and my father has one of the most handsome country seats in the consolidated county of Philadelphia; but the society becoming too aristocratic for a gentleman of my rural habits, I've come out here to seek out a young and confiding wife, and live for love instead of gold and fashion.

Respectfully yours, Chispa de Ora.

[For the California Farmer.]

Marriage.

Messrs. Editors: If you think the following of importance enough to insert in your paper you may do it. If not, throw it under the table:

Is a Married Life to be Desired?

I answer that I believe marriage to have been instituted by the great Creator of all mankind for their especial benefit, and also as a source of the greatest happiness to be desired here upon earth; but in the manner in which it is more generally entered into, I acknowledge that it is far from being desirable. I look upon it as being wholy within the power of the parties concerned. But should we listen to a great portion, I am sorry to say the greatest portion of married people, they would tell us never to marry. Would they speak the true sentiments of the heart? How often do we hear mothers giving this advice to their children: never marry—you are much happier single than married. And why? Because they really wish to keep them from ever experiencing the sad disappointments ever expectant from the too fond anticipations of a married life. I have many times myself concluded from these facts and my own observations that single blessedness was far to be chosen. But God forbid that it should ever be my lot, or that I should ever fall into the sad dilemma of finding a married life irksome, dull and dreary; for my fondest anticipations are still in the future, which, should they fail to be realized, life would be of but little use, and the future full of dark forbodings. It is my opinion, however, as previously expressed, that it is quite within the power of every young unmarried gentleman or lady, to make themselves happy by entering into the marriage state, and the secret is no secret. It is simply this, be sure that both have the right regard. In that short sentence is contained the whole substance of the matter. If this be the case the prize is yours. Let what will come you are the same to each other. Let all the troubles and trials, afflictions and deprivations of this vain world come upon you, and still your love is rather augmented than diminished. As age advances the river of love runs smother, and is more unfathomable, and the kiss of affection is as sweet as in earlier years.

Am I wrong in my conclusions, I ask ye lucky few who chance to know and enjoy the full and unbounded happiness of reciprocal love, in a married state? I already conceive your answer, and thank you for your pity, which I know you feel from the bottom of your heart, for a poor old bachelor, who also deeply feels the darkness in which he is groping, and fain would emerge from those darkened walks into the glorious sunshine and elysian fields of matrimony. But I have become so distrustful of the world that I fear to make the endeavor lest I should be deceived. Like thousands of other, honest, unsuspecting old bachelors by some heartless coquette; and after all the endurances, disappointments, frights and [illegible] of getting a wife, at last find [illegible]

[illegible] I am, [illegible] some day, to make the attempt, and if I fail in the realization of my fond anticipations, may my life be short that my troubles may soon cease. My house of hope is too large to [illegible]. I have [illegible] yet in the [illegible], and I say it is full low is [illegible] enough to keep them [illegible]

[illegible]

Take [illegible] so [illegible] as [illegible]

SPECIAL NOTICES.

PRINCE'S PROTEAN FOUNTAIN PEN.

[PATENTED JAN. 23, 1855.]

T. G. STEARNS, General Agent,

No. 271 Broadway, Cor. Chambers Street, New York.

☞ ADVANTAGES.—An Incorrodible and durable Ink Reservoir, made of Protean, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time.

A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material

Its structure is simple, and not liable to get out of order.

Opinions of the Press.

We must regard this Pen as one of the grand improvements of the age.—*Portland Transcript and Eclectic.*

As a Reporter's Pen, I have never seen or heard anything to equal it. It is just the facility wanted in this department, so that it may keep up with the age of electrity and steam.

GEO. KELLOG, Reporter, 625 Broadway, N. Y.

Eureka! Eureka!! We have found it at last! a Fountain Pen that will write for hours without once dipping in an inkstand.—*Knickerbocker Magazine.*

The ink flows from it so evenly and so easily, that the mechanical labor of writing becomes in itself a pleasure.—*Mother's Magazine.*

The Pen must have a great run. Any pen that runs for eight hours at a dip, may be said to have a great run—but this pen will become a tried and valued friend—will save the temper of the business man, and preserve the composure of the irritable poet.—*Hartford Courant.*

We are writing with one which does some six hours service without failure or stoppage, and have found it inexpressibly convenient, and comfortable.—*New York Evangelist.*

This Pen, among pens, is what Colt's Revolvers are among Pistols. One will fire a dozen shots, and the other write a dozen sheets, with a single charge or fondling.—*Author of Major Jack Downing.*

A Clergyman who has written a whole sermon with one of these Pens, without once dipping in the ink, said to us that he would not dispose of it for twenty times its value.—*Boston Evening Traveller.*

If I could not procure another of similar merits, one hundred dollars would not purchase from me the one I have.—*A New York Clergyman.*

We continue to use our own with entire satisfaction.—*New York Independent, May* 16, 1855.

"Let those write now who never wrote before,
And those who always wrote, now write the more."

*** Rights for Towns and Counties to vend, will be granted on favorable terms.

☞ As simple of these Pens can be seen at the at the Office of this Paper on the arrival of next steamer. v4-19 3m.

☞ Clnvo Anodyne Tootbachn Dropa.—Those who have felt the painful throbbing and excruciating pangs of this disease shooting through their jaws with most tormenting perseverance, and, as is often the case, have received but little sympathy from friends on such occasions, will no doubt be much pleased to know of a remedy that will never fail to quiet forever the unmerciful offender. The comfort that should be sought for is the Clove Anodyne Toothache Drops, a remedy that, while it removes the pain, preserves the teeth, and thus blesses as well as benefits. These drops have been extensively used, and thousands will bear grateful testimony to their value as a speedy and permanent cure for the toothache.

Agents—HENRY JOHNSON & CO.,
v4-19 1m 146 Washington street, San Francisco.

☞ Bronchitis and Cough Onred.

BOSTON, August 15.

Dr. S. W. Fowle—Dear Sir: Having been troubled for a considerable time with a bad Cough and Bronchial affection, I was induced to try a bottle of DR. WISTAR'S BALSAM OF WILD CHERRY, which I am happy to say entirely removed the difficulty. I deem it but justice to say thus much for the benefit of those who may be similarly afflicted.

GEORGE H. DAVIS, (Firm of Hallett & Davis,)
Piano-Forte Manufacturers, Boston.

I hereby certify that I am personally acquainted with George H. Davis, Esq., and have the fullest confidence in the above statement. H. G. BARRUS, Practising Physician.

Boston, Aug. 15.

Such testimony can be relied on.

*** Be sure it is signed I. BUTTS on the wrapper.

Agent for Sacramento, C. MORRILL, corner K and Third streets.

Sold by all Druggists. v4-15 2w

☞ California State Agricultural Society's Rooms.—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the Executive Committee.

v3-26 C. I. HUTCHINSON, President.

NEW VOLUMES

Seeds the Growth of 1855.

J. R. RAY, 70 J street, Sacramento, has purchased from Mr. A. P. Smith his entire crop of Seeds, which, together with nine choice foreign importations, constitute the most extensive and desirable stock of seeds on the Pacific Coast.

Fruit and Shade Trees, Flowering Shrubs; Strawberry, Asparagus and Rhubarb Plants, &c., always on hand or for sale daily from the Nursery. v4-21

MISCELLANEOUS.

Thanksgiving Proclamation.

WHEREAS, The People of the State of California have during the past year, been signally blessed with health, abundant harvests, and all the elements of true happiness and substantial prosperity;

And Whereas, It is the duty of a people thus blessed with the protecting care of the Almighty God, in an appropriate manner to address devout gratitude, thanksgiving, and prayer to the Great Ruler of the Universe, for the manifold blessings He has during the year been pleased to bestow;

Now, therefore, I, JOHN BIGLER, Governor of the State of California, do hereby appoint and set apart Thursday, the **29th day of Nov., A.D. 1855,** as a day of thanksgiving and prayer to Almighty God; and all good citizens of the State are hereby requested to observe the same as such.

{ L. S. } Witness my hand and the Great Seal of the State, at the City of Sacramento, this the 5th day of November, A.D. 1855. JOHN BIGLER.

Attest—CHARLES H. HEMPSTEAD,
Secretary of State. v4-21 td

NAPA NURSERIES.

THE underaigned would call the attention of purchasers of Fruit Trees to their fine collection now in fine state for planting out. We would offer the present season as follows: 5,000 Apple Trees, 5 000, Pear Trees, 1,000 Quince Trees; with a fine collection of Ornamental Trees, all of which we will sell at a very low rate.

Our Nursery is situated 11 miles from Napa City. All orders addressed to us there, will be promptly attended to, and Trees will be delivered at Napa City *free of charge for freight*, from thence they can be forwarded to any part of the State, agreeable to instructions given us.

We hope to receive a share of patronage.

v4-21 HAVEN & BAKER, Napa Nurseries.

Washington Hotel,

Georgia street, (Steamboat Landing,)

VALLEJO.

THE undersigned having taken the above Hotel, begs to call the attention of his friends and the public to the conveniences his house affords. As a Public Hotel and Stage House every needed comfort and convenience is provided, and full accommodations are offered for day and permanent boarders. Single and double rooms for permanent boarders on very reasonable terms.

The Proprietor is determined to keep a first-rate Hotel, and is confident he can please all that favor him with their patronage. [v4 21] JOHN McELROY.

To Poultry Raisers.

A SURE remedy for the Disease of Fowls, peculiar to California, put up in half pound packages, sufficient to cure from forty to fifty fowls.

Full description of the disease and directions for cure accompanying each package. Price $1.

Agricultural Warehouse.

193 *Front street, New York.*

THE subscriber offers for sale an assortment of Agricultural Implements of the latest and most approved kinds, among which are the celebrated Premium Plows, which were awarded the highest premium at the American Institute in 1846, 1848, 1849, 1850, 1851, 1852 and 1853. Also, Eagle, Centre Draught, Penin, and all other plows in general use.

Pitt's, Hall's and Smith's Horse Powers and Threshers, Burrall's, McCormick's, Hussey's, Seymour & Morgan's, and Ketchum's Mowing and Reaping Machines. Yankee self-sharpening Straw Cutters—the best article in use: Corn Shellers, Fanning Mills, Picks and Pick Handles, &c., &c.

v4-5 JOHN MOORE, 193 Front street.

Horse Powers, Threshers, Fan Mills.

HALL'S celebrated Horse Power Thresher and Winnower combined; Allen's Single and Double Endless Chain, or Railway Horse Power; Taplin's Circular Horse Power, 20, 22 and 24, full timnecter; Trimble's cast-iron Horse Power; Threshers, Overshot and Undershot, for one, two, and four Horse Power.

Fan Mills—the celebrated Eagle, with increased blast; the Excelsior, &c., at the

New York Agricultural Warehouse and Seed Store,
189 and 191 Water street, New York.
v4-18 3m R. L. ALLEN.

Reaping and Mowing Machines.

ALLEN'S celebrated Improved Mower; also, Mower and Reaper combined. This runs *much easier*, cuts faster, is lighter and more simple in its construction, and less liable to get out of order than any other machines yet made.

Hussey's, M'Cormick's, Manny's and Atkin's, with Self-raker attached.

New York Agricultural Warehouse and Seed Store,
189 and 191 Water street, New York.
v4-18 3m R. L. ALLEN.

Air-Tight Preserve Jars.

[MYER'S PATENT, 1855.]

An entire new article for preserving Fruits, Vegetables, &c.

THIS jar is the only one among the many presented to and approved of by the Committee of the American Institute at New York. For further information apply to WARREN & SON, CALIFORNIA FARMER OFFICE, where may be seen drawings and samples of the article.

Made and sold exclusively by the North American Gutta Percha Company, 102 Broadway, New York. v4-5 3m.

Atkin's Self-Raking Reaper and Mower.

1,100 OF those important labor-saving machines have been used in the Atlantic States this harvest, and with scarcely any trouble or mishaps. Especially in very heavy Grain was its labor-saving advantages most clearly shown. 300 were used in 1853, 40 in 1854, and 1 (one only) in 1855.

The price of the machines for the next harvest in California or Oregon, with all the necessary extra, delivered in Baltimore, is $300 cash. Send orders to

S. P. Ruggles' Power Press Manufacturing Co.

(Incorporated February 8, 1854.)

THE above named company having purchased of the well known inventor, S. P. Ruggles, Esq., his Patents connected with the Printing Business, are now manufacturing under Mr. Ruggles' immediate superintendence, the following machines, viz.:

	Size of Form in Inches.
Half Sheet Combination Engine	18 by 12
Quarto Sheet Combination Engine	12½ by 9
Half Sheet Cap Job Rotary	10½ by 7½
Card and Bill Head Rotary	7 by 4½
Diamond Rotary Card Press	4½ by 3
Circular and Hat-tip Hand Press	8 by 6
Embossing Press	18 by 10
Cast Iron Imposing Table	26 by 22
Shaving Machine, shaves	27 by 16
Paper Cutter	cuts 27
Card Cutter, improved	cuts 25
Bookbinders' Rotary Shears	cuts 25
" " " larger size, in proportion.	

These presses are considered by the Job Printers as the best adapted to their wants of any machines ever manufactured.

All orders addressed to their agent, M. B. BIGELOW, 152 Washington street, Boston, Mass., will be promptly attended to.

Mr. Ruggles has also sold to the CUTTING MACHINE MANUFACTURING CO., his Patent ROTATING SHEARS, for cutting sheet tin, iron, copper, brass, zinc, steel, mil and boiler plates, and all other metallic sheets. This is entirely a new process for cutting metals, and is destined to supersede all other machines for that purpose.

ANSON HARDY, Agent,
152 Washington street, Boston.

And to a third company, called the BOSTON HAND STAMP CO., he has sold his patent for a very ingenious FLEXIBLE Hand Stamp, whereby perfect impressions may be made at the rate of sixty per minute, the die adapting itself to the surface to be printed on. A very convenient article for all business men.

v4-12 1y M. B. BIGELOW, Agent, Boston.

TO FARMERS.

For the destruction of Canker Worms, Borers, Grubs, &c., &c., &c.

THE MURIATE OF LIME.

A SUPERIOR fertilizer, and certain destroyer of the Canker Worm, and other destructive insects. It has been computed to take the place of more costly manures, guano, &c., to which it has been pronounced fully equal, and in some respects superior, by those who have tested it during the two past seasons.

As a certain and sure destroyer of the Canker Worm, which has committed such ravages among the fruit trees the past season; of Grubs, Borers and other Worms, which oftentimes render the labor of the farmer of no avail, its qualities have been fully and successfully proved. For this purpose its success (in New England) has been such as to warrant the belief that it will be a sure preventive to the ravages of the Grasshopper, which have been so great the past season in California.

A sample and testimonials from Agriculturists of the first respectability may be seen at the Office of the CALIFORNIA FARMER; and orders sent through Messrs. WARREN & SON will be faithfully fulfilled.

This article is put up in bags of 150 and 200 lbs. each, or in barrels of 220 lbs.

HORTICULTURAL, &c.

SMITH'S POMOLOGICAL GARDENS,

American River, 2½ Miles from Sacramento.

THE Proprietor of these extensive Nurseries will be prepared to supply all the best varieties of Fruit Trees of the following kinds:

Apple, Pear, Peach, Plum, Cherry, Quince, Nectarine and Apricot; Grape Vines of every valuable variety; Gooseberry, Currant, and Raspberry Vines, &c.

ALSO,

Green House Plants of every rare and beautiful variety; Flowers, Shrubs, and Plants, Shade and Ornamental Trees, Bulbous Roots, &c., &c., &c.

These will be ready as soon as the season of transplanting shall commence. Orders will be received at any time, and delivered in the order in which they are booked.

Garden Seeds.

THE Proprietor will also offer a large variety of Fresh Garden Seeds, by Wholesale and Retail, of his own raising and putting up. Great care has been taken to select the very best varieties, and to keep them pure and unmixed. They are all of the present year's growth, the same varieties having been used by the Proprietor in his own grounds for the last three years. The produce which has been exhibited in our markets is the best proof of their quality.

The undersigned would be pleased to see purchasers at his grounds, where the produce can always be seen in every stage of growth. [v4-17] A. P. SMITH.

P. S.—I have disposed of my entire stock of Seeds to J. R. RAY, 70 J street, Sacramento, to whom orders for my seeds may be addressed.

SAN JOSE NURSERY.

THE San Jose Nursery and Gardens, formerly known as L. Provost & Co., is now carried on in all its branches under the immediate eye of the present proprietor, who is sole director and owner of the same, having purchased the interest of his former partner.

L. Provost, the present owner, will now offer to his patrons and friends one of the largest and finest collections of Fruit Trees that can be found in any Nursery in the State, consisting of all the most desirable kinds of Apple, Pear, Plum, Cherry, Peach, Apricot, Nectarines and Quince, with a very extensive lot of Grapes and Figs, a beautiful lot of choice Ornamental Trees of rarest kinds, and Green House Plants in great variety.

The collection of Roses in these Gardens cannot be equalled, for nearly *twenty thousand* of the most beautiful plants, large sizes and rare kinds, can be found here.

Purchasers will be sure to be satisfied if they will visit the Gardens, where they can find much to please them, which the Proprietor will show them with pleasure.

☞ The Nursery is situated in the city of San Jose, immediately above the City Mills. L. PROVOST,

A Gardener with Capital Wanted.

A GARDENER of Experience and Education is wanted: one who is ready to take a share in a valuable Nursery and Garden, now in full operation, and to which a large capital can be added, if desired. Such a one will find this a rare opportunity to secure a permanent interest, which, properly managed, will prove a satisfactory investment.

Address, with real name, and reference required to "CALIFORNIA FARMER OFFICE," which will be promptly attended to. v4 3 1m

MEDICAL.

DR. GUYSOTT'S IMPROVED

Extract of Yellow Dock and Sarsaparilla

Is acknowledged to be the best Sarsaparilla made, as is Certified by the Wonderful Cures it has performed.

☞ Remember this is the only True Original Article.

This Medicine, when used according to the directions,

Will Cure Without Fail,

Scrofula, or King's Evil, Cancers, Tumors, Eruptions of the Skin, Erysipelas, Chronic Sore Eyes, Ringworm, or Tetter; Scald Head, Rheumatism, Pains in the Bones and Joints, Old Sores and Ulcers, Swelling of the Glands, Syphilis, Dyspepsia, Salt Rheum, Disease of the Kidneys, Loss of Appetite, Disease arising from the use of Mercury, Pain in the Side and the Shoulders, General Debility, Jaundice, and Costiveness.

The Best Female Medicine Known.

The Yellow Dock and Sarsaparilla is peculiarly adapted for females of delicate health, resulting from irregularity of menstrual discharges, and other diseases peculiar to their sex. We assure the afflicted, that a bottle or two of DR. GUYSOTT'S EXTRACT OF YELLOW DOCK AND SARSAPARILLA will at once regulate those difficulties and renew the natural energies.

Syphilis, Scrofula, and Diseased Blood.

DR. GUYSOTT'S IMPROVED EXTRACT OF YELLOW DOCK AND SARSAPARILLA is a true specific. The proprietors have in their possession over one hundred certificates of the most extraordinary cures effected by it. We can safely say—TRY IT. It revives the drooping constitution, eradicates all bad humors from the Blood, and by its tonic properties restores the invalid to life and vigor. As a spring and summer medicine it has no equal. Its singularly efficacious action on the blood, its strengthening and vivifying action on the system, stands pre-eminent above all other Sarsaparillas. If you would have the rose brought back to your cheek, a clear, healthy and transparent skin, and life and vigor infused through the system, take Guysott's Extract of Yellow Dock and Sarsaparilla. It contains more of the pure Honduras Sarsaparilla than any other preparation extant, which is chemically combined with the Extract of Yellow Dock and the Extract of Wild Cherry, thus making the remedy more thoroughly efficient than any other Sarsaparilla before the public. At the same time it is perfectly free from all mineral poisons, which cannot be said of any other Sarsaparilla compounds.

Sold by all the Druggists in California and Oregon.

OXYGENATED BITTERS,

CONTAINING NO ALCOHOL,

A CURE FOR

Dyspepsia, in all its various forms; Heartburn, Habitual Costiveness, Acid Stomach, Loss of Appetite, Nervousness, Coldness of the Extremities, General Debility and Asthma.

THESE Bitters are approved by some of the best physicians, who use them in their practice. Scientific men have more difficulty in overcoming and controlling the various symptoms of Dyspepsia than almost any disease in the world. They are so various, in different individuals and cases, that it has seemed impossible sometimes to obtain even temporary relief from suffering. But a medicine has been discovered which proves, beyond a doubt, that in most cases a permanent cure can be effected. By avoiding stimulants, and using the *Oxygenated Bitters* strictly according to directions, a healthy tone is imparted to the digestive system, and strength to perform its natural functions.

Ample testimony to the truth of this can be had by reference to numerous certificates in possession of the general agents. We have no hesitation in pronouncing the Bitters a sure cure for **DYSPEPSIA.**

From J. C. Dunn, Esq., Ohio Treasurer.

BOSTON, June 6, 1852.

Gentlemen: I have been for some years troubled occasionally with severe attacks of Indigestion; have consulted many physicians, tried Allopathy and Homeopathy, and can truly say, I have received more speedy and effectual relief from the use of *Oxygenated Bitters*, procured from you, than from all other remedies, and most cheerfully recommend them to all who suffer from a similar affliction. Yours truly,

JAMES C. DUNN.

DR. HENRY E. MORRILL, a skilful Physician of New York city, in his remarks on Dyspepsia, says: "The most effectual medicine to improve the tone and energy of the stomach, is that prepared by Dr. George R. Greene, and called the Oxygenated Bitters. I would publish the receipt for preparing this valuable medicine, if I knew what it was, but as I do not, I can only recommend its use. It seems to me to be improperly called 'Bitters,' at least in the popular acceptation of the term, for it contains no Alcohol or other Spirit, and is rather sour than bitter. Though here, by the way, I cannot but earnestly caution the dyspeptic sufferer against nearly all the nostrums and one advertised 'Bitters,' the basis of which is alcohol, or other ardent spirits. They impart no real energy to the stomach.

The stimulation which they excite is only temporary, and sure to be followed by a reaction which at length will inevitably wear out the stomach. This medicine obviates these objections. It has been analyzed by Professor Augustus Hayes, M. D., *State Assayer of Massachusetts*, who declares that 'the medicinal agents used are those prescribed by the most eminent physicians, for the diseases for which these Bitters have been so eminently successful.' I have employed them in a multitude of cases, and have uniformly found that when used according to the directions, they gradually, but surely, restore, one by one, the various distressing symptoms which cluster around the confirmed dyspeptic restore to the stomach its lost energies, and thus lead the patient back to the enjoyment of permanent health and strength."

It has also been used by the following persons, and received their unqualified approbation:

Prof. EDWARD E. PHELPS, M. D., Dartmouth College.
Hon. MYRON LAWRENCE, Ex-President Mass. Senate.
" SAMUEL S. PHELPS, U. S. Senator from Vermont.
" J. F. SIMMONS, U. S. Senator from Rhode Island.
" L. H. ARNOLD, Formerly Governor of Rhode Island.
" H. D. FOSTER, Members of Congress from Pennsylvania
" SOLOMON FOOT, U. S. Senator from Vermont.

Many other individuals of the highest respectability can be referred to, who will confirm all that has been said in favor of the Oxygenated Bitters

Prepared by DR. GEORGE R. GREEN.

No. 52 State Street, Albany, N. Y.

The Proprietors of the above-named establishment being the sole owners and manufacturers of

EMERY'S PATENT HORSE POWER, &c.,

☞ ALL ARRANGEMENTS WITH OTHER PARTIES FOR THEIR MANUFACTURE HAVING EXPIRED

have formed a new Copartnership, under the firm name of

EMERY BROTHERS,

And will continue the manufacture and sale of AGRICULTURAL IMPLEMENTS and MACHINERY, as heretofore, at the old stands of EMERY & CO. By this arrangement the united efforts, and interest of the Brothers, long known to the public, are secured, and no exertions will be spared to meet the wishes of those dealing in and using the class of implements they manufacture—their leading branch being the manufacture of the justly celebrated

Emery's Patent Changeable Geered Railroad Horse Powers,

with the machines to be propelled by it, as Threshing Machines, Saw Mills, and Machinery generally.

These Powers having been submitted repeatedly to the most severe tests and trials to determine their relative merit and utility with those of every known manufacturer, have without exception been awarded the highest prizes for superiority—among which were the following:

N. Y. STATE AGRIC'L SOCIETY, 1854, 1853, 1852, 1851, 1850	MARYLAND STATE AGRICULTURAL SOCIETY, 1853
OHIO STATE BOARD OF AGRICUL., 1854, 1853, 1852, 1851	MISSOURI STATE AGRICULTURAL SOCIETY, 1853
MICHIGAN STATE AGRICUL'L SOCIETY, 1853, 1852, 1851	AMERICAN INSTITUTE, ... 1852, 1851
INDIANA STATE AGRICULTURAL SOCIETY, 1853	NEW YORK CRYSTAL PALACE, ... 1853
ILLINOIS STATE AGRICULTURAL SOCIETY, 1853	CANADA PROVINCIAL SOCIETY, ... 1852, 1851
PENNSYLVANIA STATE AGRICULTURAL SOCIETY, 1853	CONNECTICUT STATE AGRICULTURAL FAIR, 1854

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 224 bushels, of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both Kinds of Powers, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. If the crops be extraordinarily heavy or light, greater or less results will follow.

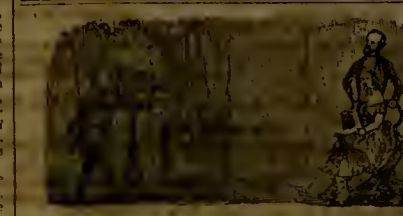
These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by the Circulars, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and full purchase money refunded if not found acceptable to purchasers.

The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, they hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.



They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery, Implements and Seeds, which are all new and of the most approved and complete kinds extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.

The attention of a discerning public is solicited to our present stock of goods, before selecting and purchasing the coming season.

Hurrah for Vance's new Daguerreian Gallery! Largest Light in the World, (over 500 feet Glass,)

No. 8 Montgomery, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishe PERFECT LIKENESSES? Because he has now the most arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form [illegible] and half sidelights—that [illegible] which every artist in the city has to [illegible]: In order to obtain [illegible] Daguerreotypes, [illegible] features [illegible] differently arranged lights.

3d. Having [illegible] he is enabled to make pictures in half the time of any other [illegible] in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver [illegible], bold and [illegible] picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has, of late after much experimenting, brought his chemical preparations to perfection, using compounds entirely different from any he ever before used in the art, which enables him to produce perfect [illegible], at every [illegible] that clear, soft and beautiful tone, so much admired in all pictures.

All those wishing perfect likenesses will do well to call before sitting [illegible] elsewhere. [illegible] for the

Send, send,
Flush to-day,
Short to-morrow;
Notes to pay,
Borrow, borrow.
So it goes,
No one knows:
Where it goeth,
No one showeth.

THE FIGURE NINE.—A correspondent, over the signature of "Ledger," sends a Cincinnati editor the following:—"I have just read in your paper what has often before been published, respecting the curious properties of the figure 9. One of these properties is of importance to all book keepers and accountants to know, and which I have never seen published. I accidentelly found it out, and the discovery to me (though it may have been well known to others before) has often been of essential service in settling complicated accounts. It is this:—The difference between any transposed number is always a multiple of 9. For instance, suppose an accountant or book-keeper cannot prove a balance in his accounts, there is a difference between his debits and credits which he cannot account for, after careful and repeated addings. Let him then see if this difference can be divided by 9 without any remainder. If it can, he may be assured that his error most probably lies in his having somewhere transposed figures; that is to say, he has put down 92 for 29, 83 for 38, &c., with any other transposition. The difference of any such transposition is always a multiple of 9. The knowledge of this will at once divert attention to the true source of error, and save the labor of adding up often long columns of figures. The difference between 92 and 29 is 63, or 7 times 9; between 83 and 38 is 45, or 5 times 9; and so on between any transposed numbers.

A GOOD TEMPER.—"Do you think," said Mrs. Pepper, rather sharply, "that a little temper is a bad thing in a woman?" "Certainly not, ma'am," replied the gallant philosopher; it is so good a thing that she ought never to lose it." Mrs. P. did not consider that this view of the subject exactly met her case, but she took the philosopher's arm and went down to supper with him quite graciously.

A GENIUS has invented a spy-glass of wonderful power. He says he looked through it at a third cousin, and it brought him relatively nearer than any of his brothers.

"DOES your razor take hold well?" inquired an agonized sufferer of the tonsorial operator. "Yes," was the consoling reply, "it takes hold first rate, but it don't let go worth a cent."

AN Irish gentleman having a small picture room, several persons desired to see it at the same time. "Faith, gentlemen," said he, "if you all go in, it will not hold half of you!"

New Invention!

Now, Count Your Chickens!!

THE undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls.

After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from *four to five hundred eggs* can be converted daily into young Chickens, Ducks, Goslings or Turkeys. After the first brood, i. e., nineteen or twenty days, this is the certain result; and it requires but little attention—once every twenty-four hours—the cost of fuel and preparation being only some $2 50 to $3 every twenty days.

This Invention will be in full operation at the State Fair in the city of Sacramento, in September next, when all information will be presented. They will soon be offered for sale. In the meantime information can be obtained at the office of the CALIFORNIA FARMER; or letters can be addressed to meat San Francisco. JOHN J. FULTON,

26 Third street, South Beach, near South Park.

Something New and Wonderful in the CALIFORNIA ARTS.

JAMES W. JOHNSTON, Daguerreian Artist, southeast corner of the Plaza, has the pleasure of announcing to the public, from whom he has received many substantial favors, that he has just completed the *enlargement of his Gallery*, and combined with it several magnificent features of the Arts heretofore entirely unknown on the Pacific Coast. He is now prepared to execute in superior style—

1st. Daguerreotypes, as heretofore, on metallic plates, with or without coloring.

2d. Stereoscope Likenesses and Views from Nature.

3d. Daguerreotypes on *Glass* and *Paper*—the most splendid and remarkable discovery of the age. These Miniatures are susceptible of being worked up by the brush of the Painter, to embody all the freshness and naturalness of life, at about one-half the cost ordinarily attending miniatures on ivory, which they far surpass in correctness of delineation. The business has now been commenced at Johnson's Gallery, for the first time in California, where Ladies and Gentlemen are invited to call and examine at ecinens.

Connected with Johnston's Rooms is a Portrait Gallery, also, where Mr. THOMAS S. OFFICER, late of New York, is prepared to execute Portraits on Canvass in elegant and life-like style.

☞ Call and behold the latest triumphs of Art. v4-15

PERUVIAN FEBRIFUGE,

FOR THE PREVENTION AND CURE OF

FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THE usual method of administering tonics produces only temporary relief, merely breaking the chill without removing the disease; but it is necessary to relieve the liver and other organs of the unhealthy action, on which the illness of the patient depends. This can be safely, speedily, and effectually accomplished by this valuable preparation; and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians, with the most signal success. In all climates where bilious and remittent fevers prevail, this remedy will be found invaluable, and no persons travelling through, or residing in, infected and marshy districts, should be without it, as a few doses will effectually counteract the poisonous and miasmal influence arising from such location, by imparting activity and vigor to the biliary organs, and thus prove a sure *preventive* against an attack of Chills and Fever.

The following are selected from the numerous testimonials received, showing the superiority and efficacy of the Peruvian Febrifuge, not only in cases of long standing, but where other remedies had failed:

FLATBUSH, King's Co., N. Y., April 1, 1854.

Messrs. A. B. & D. SANDS: Gentlemen,—I have much pleasure in informing you that I have been entirely cured of the Fever and Ague by the use of your Peruvian Febrifuge, after suffering with it for over two years, and trying all the best known remedies without success. The Chills could not be broken by using any other medicine, and I almost despaired of a cure; but a neighbor who had been cured by your Febrifuge recommended me to try it, which I did, and was entirely restored by using less than one bottle, and have had no return of it since. Very respectfully, MICHAEL COX.

GOWANUS, Long Island, N. Y., April 4, 1854.

Messrs. A. B. & D. SANDS: Gentlemen,—Myself and two of my children were afflicted with Fever and Ague, more or less, for about two years, and tried various medicines without any benefit. In October last we were persuaded to use your Peruvian Febrifuge, one bottle of which cured us; and we have not been troubled with it since. I can recommend it to others with the greatest confidence—having known of several cases which have been cured by it after every other medicine failed.

Respectfully yours, M. RAWL.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

All so disposed, are invited to call on him and leave their orders. v4-18

MEDICAL.

IT IS A FIXED FACT,

CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

DR. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the reasoning power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

SETH W. FOWLE,
Proprietor, Boston, Mass.

☞ Agents for Sacramento,

SANDS' SARSAPARILLA.

IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of *Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Piles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility,* &c., &c., &c.

THE value of this medicine is now widely known, and every day the field of its usefulness is extended. It is approved, and highly recommended by Physicians, and admitted to be the most powerful and searching preparation from the root, that has ever been employed in medical practice. Its operation extends to the remotest parts of the system, and coolsts in removing diseased action in the absorbing and secreting organs. In man, Nature seldom effects, unassisted, the cure of any virulent disease, but requires the aid of a stimulant, alterative, or antiseptic medicine. In diseases of the skin and flesh, a combination of these three classes of medical agents is highly desirable. All these properties are combined in this preparation; and instead of operating successively upon the system, as they must necessarily do when taken separately, they operate simultaneously, and in perfect harmony when administered in this form. Its tonic property strengthens the digestion, and improves the appetite. Its alterative tendency carries off the accumulations of morbid matter,—and its antiseptic influence neutralizes the virus, by which the disease is fostered. Its uniform success in curing and relieving the various diseases for which it is recommended, is established by a multitude of attested facts.

From the Army.

MONTEREY, Cal., Jan. 18, 1850.

Messrs. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, hoping it may lead some other unfortunate beings to try its effects, and that they may be benefitted as I have been. I arrived here by the overland route, about the first of October last. A few days after I was first attacked with a very disagreeable eruption of the skin, which my physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine at home, I purchased three bottles, which bid the desired effect of removing my difficulty entirely. With high regards, yours, &c.,

J. H. MILLER, Lieut. U. S. A.

Tree Planting.

For many years there have been periodical discussions in the East and West, relative to the *best time to transplant trees.* There have been advocates of spring planting, and advocates of fall planting, and there have been many good arguments presented for both seasons. We can well recollect some twenty years since, we then advanced the doctrine of autumn planting as the true system. But we found few supporters. It was then a new doctrine; few ever attempted tree planting in the fall. But we then believed it the only time for transplanting trees, shrubs and plants, and the laying out of garden grounds, and we then gave our reasons, and have never changed our opinion. All the work that can possibly be accomplished of this kind in the autumn should be done. The only exceptions to this rule are the evergreens. These we are satisfied should be moved only as the buds begin to swell and break; and then they can be moved with safety and success. All rules have their exceptions, and we do not say evergreens can never be removed at any other time—for undoubtedly, with care, they could be moved at any season of the year; but as a general rule, the spring is the best time for this tree.

We earnestly hope the cultivators of California will give particular attention to this subject, as of much importance at this time. If our readers will take note of all their experiments and practice, and give it publicity, great good will result from it.

We notice the interest manifested at the East at the present time upon this subject, and Hovey's Magazine comes to us this mail containing a leader and extended extracts from various sources, from which we make the following extracts, and give also from the best standard works authority for the same:

TRANSPLANTING EVERGREENS.

The most favorable period for transplanting deciduous trees is generally considered to be the autumn, unless in very unfavorable or exposed locations—and these are exceptions to the general rule. The best time, however, for transplanting evergreens is less satisfactorily decided upon. The spring—and rather late in the season—is usually considered the most successful period; indeed, so slight has been the real experience with this class of trees in our own country, that it is believed by many to be the only time for performing this operation, the autumn being of all others the most unfavorable season. We propose to examine this question, and see whether the current belief in reference to spring transplanting is correct or only the result of custom, without the weight experience on the subject.

We confess our own very limited experience in transplanting evergreens at any other season than the spring, but we know persons who have practiced extensively in the autumn, and with the best success. If these trees can be safely transplanted in the autumn, it would be known; if it were true that the period of growth, even if the spring months were the best,

[illegible]

of the evidence is that the early part of autumn is undoubtedly the most favorable season for transplanting evergreens in that country. In France too, where the climate is cooler in winter and warmer in summer, M. Carriere, a distinguished writer upon the Conifers, gives his opinion that the autumn is the best season, and fortifies it by that best of evidence, his own practice, with a view to arrive at satisfactory results. Dr. Lindley has, in his "Theory of Horticulture," given the reasons why the autumn is the proper season, and to strengthen his opinion quotes from the *Revue Horticole* the substance of a discussion upon transplanting evergreens, which has recently occupied the columns of that excellent journal. We quote from a translation in the Gardeners' Chronicle:

The best season for transplanting evergreens, although beginning to be more generally agreed upon than formerly, still remains a question on which opinions differ. Of late years the practice advocated by Mr. Glendinning, of selecting for this purpose the month of September, has been adopted in England with marked success. We need not here go into the reasons why this month should be selected; they are fully given in the "Theory and Practice of Horticulture," to which the reader, desirous of understanding all the bearings of the question, is referred. It is enough to say that the great fitness of the latter part of September, long since pointed out by Horace Walpole, himself a planter of no small experience, is shown by repeated experiments by Marrier de Bois-d'hiver, at Fontainebleau, and others, instituted for the express purpose of settling a matter so long in dispute, to be on the whole the best.

Our present object is to show the opinion of French gardeners upon this subject; an opportunity for doing which is afforded by a little discussion that has taken place in the Revue Horticole.

Last May, M. Labarre, gardener to the Baron de Poilly, at Folembray, a place, we believe, not far from the Belgian frontier, gave an account of the result of his practice in removing evergreens of considerable size. The substance of his report was as follows: 1. In the spring he removed a yew 13 feet high, with a head in proportion. It took so well that even an experienced gardener could not have known, in the course of the same year, that it had been transplanted. 2. In the following autumn he had to move eight spruces and two Scotch firs; all failed. 3. The next year, again in the spring, another yew was transplanted, as large as the first, and with the same success. At the same time he planted 170 other evergreens, of various kinds. On the 15th March he planted 20 spruces and six yews; the last were 15 feet high with heads in proportion, each required 10 people to move it, and all were expected to die. But all lived, although M. Labarree adds, "the soil into which they were put made their loss probable enough; for it was full of stones, and consisted of white sand mixed with a little vegetable mold." (Why this should have been unfavorable soil is not explained. Suppose it had been clay!) On the 7th April, 34 Norway spruces and 10 white spruces (Sapinettes) were planted, from 6 to 10 feet high. They had been raised in the nursery in gray sand, and M. Labarre was astonished at the beauty of their growth in such soil (why?) Only two of the Norway spruces died. In conclusion he explains how he watered these trees. Each yew planted in March received a pot-full of water when first planted, then four times as much, and this was repeated several times during the first month. In the April planting, there being at that time a drying wind, the holes were only three quarters filled, and each tree received two pots-full of water. Afterwards each hole was filled in so as to remain a basin, and watering was repeated during the continuance of the drought.

To this statement M. Carriere, whose work on Conifers was noticed the other day, opposes some counter experience. 1. He says that he was obliged last year to take up in the end of August, some Chinese arbor-vitæs more than 15 years old, and mostly above 6 feet high; they were removed carefully to a trench, the soil of which was well watered before it was filled in, and they suffered so little that no one could distinguish them from the others which had not been removed. 2. A similar operation was performed in the spring of 1854 with other Chinese arbor-vitæs of about the same size, and a great many [illegible] and again the same result was taken of them. 3. Last [illegible] years, with an earlier care that planting [illegible] and covering them with leaves and [illegible] exactly the same [illegible] was [illegible] exception of about [illegible]—a [illegible] which M. Carriere [illegible] to a [illegible] well known [illegible] to [illegible] when [illegible] cases [illegible] trees.

Upon this result M. Carriere remarks that it is sufficient to show what is the most economical and consequently the most advantageous when work has to be done on a large scale, from which point of view alone he thinks it necessary to look at the question. This is very different from the small operation of making an ornamental plantation. In the latter case expense is of little consequence in the former it is of the first importance. The consideration touches the root of the inquiry. Can, he inquires, anybody afford in extensive works the care, the cost, and the frequent watering which M. Labarre gave his trees? Are we then, he adds, to jump to the conclusion that autumn planting is *always* better than that of spring, or that, as M. Labarre contends, it is *always* best to plant in spring. "Both conclusions would be equally erroneous; for unless we take into account all the different circumstances which attend such an operation, and which may lead to the adoption of one season rather than other, we do nothing worth doing. To think of submitting all trees, however much they may resemble each other, to the same kind of cultivation, would be like a doctor's giving the same dose and the same drug to all his patients, without paying attention to their different temperaments." He, however, insists upon the general fact that *autumn planting*, or *that which takes place at the end of summer, is the most advisable.*

"In places near the sea, where the sky is often overcast and the air is almost always saturated with humidity, and the earth is consequently always damp, it is easy to understand that there may be some advantage in planting in March or April, or even in May, that is to say, at a time when the air has warmed the soil. The same may be conceded of countries where the winters are long, or where heavy autumnal rains are constant, for in such places the roots may rot before getting hold of the ground, and trees may perish from want of power to vegetate before the arrival of bad weather.

Such are the opinions of M. Carriere, who is therefore, likewise, a strenuous advocate of autumn planting in England, to which country none of the objections apply which are adverted to in the latter part of the foregoing extract. Of course it may for many reasons be inconvenient to plant in autumn; but that is a point not in discussion. It is often inconvenient to do what is right in other operations besides gardening; but principles must not give way to considerations of convenience.

There may be, as M. Carriere observes, "places near the sea," exposed localities and unfavorable soils, as with deciduous trees, in which no transplanting can be successfully done in the autumn, especially in "countries where the winters are long," like our own. But before we conclude that transplanting cannot be done in the autumn, even with us, it may be well to try the experiment carefully, and ascertain whether it has ever been adopted.

One instance only has come to our knowledge where transplanting evergreens has been practiced successfully in the autumn. This was at Mount Autumn Cemetery. Mr. Howe, the late superintendent, set out many thousands of arbor-vitæs at that season, and with invariable success. He informed us that when the work was done early, before the middle of October, he had full as good success as with spring transplanting; and with a dry summer following, better. On a smaller scale we can interpose our own evidence. Two years ago we had occasion to remove some large Norway spruces, eight feet high; it was early in September; every one lived, and each made as much or more growth the following year than any of the same size we ever removed in the spring.

Late transplanting we believe to be attended with more risk; but when the work can be done early, so that fibrous roots can be emitted before winter, the protection of the tree is materially changed; its vital forces are better, when called to resist the frost. But where the operation is performed late and the roots, deprived of all action, are placed in the cold ground, bound by constant rains and then frozen in the winter, the tree loses all its vitality and upon the return of spring, not [illegible] to push fresh roots [illegible].

[illegible] autumn [illegible] for transplanting evergreens, [illegible] it is nearly as [illegible] the spring. [illegible] set out at such a time [illegible] would [illegible] [illegible]

[illegible]

The above remarks by the editor of Hovey's Magazine, are intended for New England, or for the Middle and Western States, and will not do for California; consequently we should make use of their experience so far as it will apply relative to climate and season. California [illegible] the favorable [illegible] early rains prepare the ground for lifting and planting trees, and the genial climate gives the tree opportunity to make new roots as soon as it is set in the ground. In fact we know that trees planted in the autumn will make fine fibrous roots all the winter months, and for this reason would have faith in transplanting even the evergreens in the autumn, although we wish to be distinctly understood as advising another season for that purpose.

The principal cause of so great losses occurring in setting out trees, arises from the fact, that the work is not half done. There is too much haste in planting trees; in every step of the work there is a want of knowledge generally of what should be done. When this work is understood, and well and faithfully done, it would require three men to set a dozen trees per day, and yet we have seen fifty and seventy-five trees planted in a day. Such work can never be successful. There is one way to do work *quickly*, and another to do it *well*; and whatever is worth doing at all is worth doing well. Among those things *worth* doing, we esteem the work of *tree planting* the best.

Right Views of Agriculture.

A clergyman in Illinois, who has cultivated a plot of ground to lengthen out his scanty income, and who never fails to have the American Agriculturist as a helper, (says that paper) writes us, in a recent letter inclosing his subscription: "I look upon progress in Agriculture as one of the great and important means of developing, improving and elevating mankind in the scale of being; of promoting intelligence, which is the most efficient and important handmaid to religious improvement; and the science of cultivation should be fostered by every lover of his race."

Another clergyman, who was very active in getting his parishoners to a course of lectures we were once giving, was questioned as to the reason of his activity, as he was not a farmer: "Why," said he, "if I can get all my agricultural hearers to reason upon every-day work, they will do better Sunday reasoners; and if they can get better crops for the same labor, they will have more leisure for thinking and reading; they can educate their children better, and our whole community will be greatly improved if we can get one and a quarter spires of grass or wheat to grow where they get but one now. And more," said he: "if you cannot look beyond a selfish motive, I can give you even that: If you get more crops in this parish, by giving a little attention to the science of Agriculture, then you can increase my salary. So you see I am every way interested in making better farmers of my parishoners."

Maltese Goats.—A correspondent of the Soil of the South, who is now raising a flock of Maltese Goats thinks the subject eminently worthy the attention of stock raisers. He milks from 8 to 17 ewes; and his goats he says average as much milk as his cows. The milk is most delicate and delicious. The goats are not noisy, nor do they possess that strong musk flavor peculiar to the common goat. Among them is a seeking kid which has never had any thing that grew a part of milk every night. The Maltese goat is large and his long hair and a fine fleece. The writer is of opinion that a cross with a Cashmere goat would produce an animal that would [illegible] and [illegible].

Why Cotton is Dear.—[illegible] a few years ago over the country was [illegible] a pound. [illegible] [illegible] [illegible]

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, NOVEMBER 30, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

Exchanges.—Will our cotemporaries that exchange with us, have the kindness to direct our papers to *Sacramento*.

TO SUBSCRIBERS.

With this number those who are in arrears for the paper will receive their bills, and we sincerely hope that it will be sufficient to induce them to remit us that which we are confident they must admit is justly due us. Such subscribers should remember that *our terms* are *always in advance*, and those now indebted to us are instances where we have relied upon their promise of remittance.

We have adopted the invariable rule to send no papers without the terms are complied with: and we are now preparing our list of delinquents, which we shall be compelled to publish, unless this indebtedness is cancelled. We feel it due to our Farmers *who do* sustain us, and due to ourselves, that our readers should know how much of a load we have borne to sustain the enterprise.

Our aim is to make each new volume BETTER than the last, and as we are approaching the NEW VOLUME, we ask the generous co-operation and aid of all our friends. Those who subscribe *now* will have the *remainder of the year* and the *whole of the next*, for the *price of a year*.

We hope promptness now on the part of delinquents, will prevent the necessity of further action.

Napa City—Springs—Kellogg's.

Some little time since we paid a visit to Napa City and up the valley, and was pleased to notice the onward progress both in Napa and up the country. The fine brick building erecting by Messrs. James & Co., nearly opposite the Napa Hotel, is approaching completion, and is quite an honor to the owner, the builder, and an ornament to the city; we trust it will induce others to follow their example. Napa City is destined to become a famous resort the coming summer, of travelers on their way to the famed Springs of Napa, and it is to be hoped that before that time arrives a spacious hotel will be erected in Napa City. It is very much wanted, one of the first class, with suits of rooms.

Having opportunity we passed on up the valley with a friend. The Springs are now deserted; they have passed into new hands and a new hotel is being erected there, with all other suitable buildings to make it a fashionable watering place the coming summer. The weather was cold—sharp frost had driven the last bather away, for all the lame, sick and halt had been cured, and loneliness marked the former gay scene.

We passed on, in our course up, and stopped to make calls at a new village just sprung up near the famous mill of John Yount, Esq., called the Star of the Pacific—and most justly named, for it is a splendid building and an honor to the country; the flour it turns out is most superior. This new village has been temporarily called, in these exciting times, "Sebastopol," but we have a much better name and one which we think far more appropriate. Let this village be called *Maysville*, as a just tribute to the Rev. J. J. May, the highly esteemed pastor of that vicinity. Surely he who shall go and dwell there and labor for the upbuilding of a goodly place—he who shall labor for the temporal and spiritual welfare of a people, will make unto himself a name, and we believe our fellow citizens will upon reflection, promptly give their goodly town the name of *Maysville*.

We regretted we could not make a call upon the good pioneer of Yountville; but time hurried us on, and we had a strong desire to reach the "mountain home" of one who has made himself famous for one of the finest orchards in Napa county. The evening was growing very cold and night coming on as we ascended, and it was quite dark when, cold and hungry, we reached the residence of F. E. Kellogg, Esq., the end of our journey. We had never had the pleasure of visiting this place before, and our curiosity had been excited by the famous apples which were exhibited at the Fair of the last and the present year, grown as was said without much cultivation, and we felt we needed ocular demonstration.

We were a stranger to Mr. K., never having met him but once, but it took but a little time to feel at home. Our horse was promptly taken to the stable, and we were ushered into the house, where a lively fire and the sight of the good things of life soon made us feel it was a much more genial place than a cold mountain road. After being thoroughly warmed we were invited to a well spread table, where smoking venison just in from the mountains above us, and abundance of needed accompaniments soon took away all the appetite we supposed we had when we sat down. My friend and myself having done full justice to the repast of our host and hostess, we returned to the sitting room and before a blazing fire spent the evening in a pleasing social intercourse. The hour for retiring called us to our rest, where soon "nature's sweet restorer" sent us to the land of dreams, and even then we were gloriously cared for too.

Early in the morning we were on the alert for a view of this famous place. The mountain was spread with a fine coat of hoar frost; but the rising sun soon dispelled the sparling crust, and a merry walk prepared us to do full justice to a well spread table, full of all the needed luxuries of a farmer's home. After breakfast Mr. Kellogg accompanied us through his grounds to explain all the plans and uses of his well-arranged machinery. The entire farm consists of some five hundred acres of wood-land, pasturage, grain field and orchard; it is beautifully situated at the head of a fertile valley, well watered by living springs high up in the mountains. The house is situated above the road, on the west side of the mountain, and the springs being still above in the back ground beyond.

The water is first brought into a neat building erected for a bath house for the family; here it is brought into a basin about ten feet square, into which you descend by steps—the water can be raised to any depth from one to five feet, to suit the wants of the family, and when used is drawn off over the grass plot beyond. Another stream is carried into the house for domestic uses, pure and sparkling, and clear as crystal. Another and a larger stream is carried into an admirably arranged dairy room, where is the pride of Mrs. Kellogg, and it is a proud trophy of her skill and industry. Here the pans of milk and jars of fresh butter stand in the running streams of pure water, conveyed through the dairy room in troughs entirely around it. This same water falls into another trough, and passes along till it falls upon a water wheel; this turns a churn with double dashers, and passes into another room, where, moved by the same power (the water wheel) but attached by bands to other wheels, are moved a turning-lathe, a grist-mill, and a grindstone; thus by the simple but judicious use of one of nature's gifts, you see the milk cooling, the butter churning, the lathe going, the tools sharpening, and the grist grinding,—and what was particularly interesting was the fine *cog wheels* of all the machinery, made of composition, brass, copper, etc., melted in an old crucible, and the wheels all cast in moulds made by Mr. Kellogg. The moulds, castings, plans of the machinery, its putting together, all—carpenter, mould-maker, machine builder, founder, smith,—all the work of *one man*; and he a mountaineer, a pioneer of ten years, and one who never studied any trade.

Across the road we saw a wheelwright shop and a blacksmith's forge—at the one, wheels and cart bodies, and at the other, wagon-tires; while in another place was a well-made and handsomely finished wagon, made also by the same industrious and skillful hand, and that hand a farmer.

Another fine little room, and we saw a man at work making harness for the teams on the farm.

Thus we have briefly attempted to describe what we can only denominate a *hive of industry*; all the work not of queen bee, but a king bee,—for we really look upon Mr. Kellogg and his well-planned establishment as one of the most industrious men of the age; and his plans are all useful in the highest sense, useful not only as an example, but useful to his entire household and the community. Had we not have made this description so long, we would have described his orchards and gardens, and would have spoken of the letter we have from his hand, wherein he speaks of the wrong done him recently by a publication which appeared in the Chronicle, and which under the circumstances of his situation at the time, we deem most unjust—and we trust we shall be able to do him justice in our next issue.

We shall give a description of his orchards, gardens, etc., together with some *facts* relative to the case—for, standing as we do the editor of an Agricultural journal, no appeal can be made to us to redress a wrong under such circumstances by publication, and we refuse. This fact we have learned with pleasure, that no one citizen in Napa has done more to build roads, bridges, Sabbath schools and churches, and perform those public duties which build up a community, than Mr. Kellogg. With the facts recently sent to us, we desire to see so able and prominent a worker in the cause of Agriculture dealt fairly by. For ourselves, though almost a perfect stranger, we have the best of proof of kind courtesy and attention—and we believe had *all the facts of the case* been made known at the time, the publication would never have been made.

In our next we will continue the subject.

The City of Stockton.

The past week we had the pleasure to make a visit to the fair city of Stockton. It was our first visit to the city whose future wealth and fame are no idle story. We know not why we have not walked her fair streets and steamed it up her hundred-mile serpentine river before; but so it was. Nearly seven years a resident of the Eureka State, this past week we made our debut in the City of Squares.

We cheerfully acknowledge we are pleased with Stockton; not that it eclipses so many other cities, but because we see in it so much to admire. We admire the enterprise of her citizens. We admire the order and system apparent in her business relations. We admire the evident taste for improvement in the buildings and the sure mark there is of *permanent* improvement. We admire the cheerfulness that is apparent in all the citizens; there is a social, cheerful look, that speaks content; this we take as indicative of prosperity. We admire the interest we saw manifested in the cause of education, and particularly in the public schools. This is a bright future, when schoolhouses are neat and schools well attended, cared for by the citizens. They are like an insurance office, against crime and panperism. We like Stockton because we see an opportunity of greatly advancing her prosperity, through attention to means within her reach—we mean attention to the cause of Agriculture and Horticulture, to the laying out and improving the fine lots that nearly join the business part of the city.

Our first leisure moments we gave to a visit to that most prominent feature in the "View of Stockton," just published by Rosenbaum. We mean the beautiful residence and gardens of C. M. Webber, Esq. This is surely a delightful place and Mr. W. has done much for Stockton, in thus presenting so grand an example of what can be done in an apparently irrecoverable piece of marsh land. Mr. Webber's grounds are situated upon the point of a promontory opposite to the great business landings of the city. The mansion house is unique, and spacious, the grounds extensive and laid out with much taste, and the various sections of the gardens filled with the various gems in every department of Flora and Pomona. Several fine arbors of the grape will give their agreeable shade in the heat of summer, and offer a shelter to the thousands of rare roses that scatter their perfumed breath upon the air. A fine collection of choice pot plants under glass, and many frames of roses were coming forward finely. We were gratified to notice the wise system adopted here of *trench sapding* and the *sanding the soil*. This will secure a healthy tone to the soil, and always secure for it a malleable condition. The most magnificent Australian Accacia we have ever seen, and of the most rapid growth we ever knew, we saw in the centre of these grounds—(a notice of this tree will be found in another column).

There is one most admirable plan adopted by Mr. Weber, which the citizens of Stockton should duly esteem. We mean the fine Public Promenade, built at great cost, for the pleasure of others as well as himself. This walk surrounds the mansion, and runs upon the margin of the water or creek, and giving a delightful walk to the citizens. As this is a benefit that few cities can boast of, the people should ever feel it a pride to watch and guard such a place from injury and depredation.

We learned with pain that although Mr. W. had prepared this beautiful resort free to all, yet some thoughtless or reckless wretch or wretches had so forgotten propriety or decency, or even honesty, as to cut, ruin and break some of the finest trees in the walk. We noticed some of the Chineso Arbor Vitæ, a tree difficult to establish, entirely destroyed by having their leaders cut off. Such acts of vandalism should be scorned down in every community. Unless it can be done, these improvements will not be made, or, if made, the public will not be permitted to enjoy them.

We learn that Mr. W. is about to lay out and beautify lots near French Camp for residences, and also his other grounds around the city. Such improvements are of great public value, and it is to be greatly regretted that we have not more public men in every community that love to make these public improvements for the good of others.

Having enjoyed a pleasant promenade over the grounds of Mr. W., he showed us the designs of his new walks and plans; then we called at his office where he furnished us with several plans and sketches, among them the new plan of the city of Stockton, which can be seen at our office.

Returning thanks to Mr. W. for his kind courtesy, we strolled thence to the Asylum,

Subsoil Plowing—Good Fences.

The following letter from our valued correspondent "Colfon," should be carefully perused by every Farmer and Stock-raiser.

We rejoice to see the subject of subsoiling the land beginning to arouse the attention of those whose interests are at stake; and the best proof that the truth is at work and a reformation taking place, is before us. The writer acknowledges his own errors in times past and gives us proof of his own reform by a practical lesson and the results of his own labors. He does it with a good grace too, to show his neighbors and all others interested how important have been these results to him, on a small scale, and what they would have been to others, had all the grain lands of California been *subsoiled*.

We only differ from "Colfon," in one thing—in his *conclusions* at the *opening* of his letter, he says we may think him *presuming!* for thus troubling us and our readers; but we will not differ, for an after assertion is so much to the point, that it is a saving clause to all differences of opinion. Here we agree with all our heart; Colfon says: "But the duty which every tiller of the soil, whether it be in theory or in practice, owes to himself and to his country, and which we so often see grievously neglected—not from a desire to do wrong, but from negligence and lukewarmness, prompts me to say a few words to the readers of the CALIFORNIA FARMER, just on the eve of another planting season, which according to our *own* management, may yield us an usorious interest at harvest, or bring each man in debt to his neighbor."

The readers of our paper will bear us out in the assertion, that *subsoiling, thorough plowing, and good cultivation*, have been themes which we have been continually urging upon them, and we rejoice to see so able a pen as Colfon wields, enter the field. We do hope his most honorable example of patriotism and good will in the cause will be appreciated, and we hope our country Presses will copy this letter, and let it go out broad cast on the wings of the wind, like good seed, for it assuredly will bring forth "a harvest of good things."

"GOOD HUSBANDRY IS NOT BAD DIVINITY."

EDITOR'S FARMER: You may think me presumptuous, and you may think right, for thus troubling you and your readers; but the duty which every tiller of the soil, whether it be in theory or in practice, owes to himself and to his country—which we so often see grievously neglected, not from a desire to do wrong, but from negligence and lukewarmness—prompts me to say a few words to the readers of the CALIFORNIA FARMER, just on the eve of another planting season; which according to our *own* management, may yield us an usorious interest at harvest, or bring each man in debt to his neighbor.

Although the late crop of grain, (which is our staple, and which deserves the most notice,) was a short one, and the prices somewhat better than last year, it would certainly have been to the permanent interest of the farmer, if we should have made double the quantity of wheat. I know full well that I am opposed to some people in this—those who fear that when we produce more than will suffice for home consumption, that we will not be able to obtain a market for it abroad, at remunerative prices. If there had been a large crop this year, we would probably not had as much as now remains in our storehouses, and the figures full as high as they have been ranging of late. Every breeze that has blown since our harvest, would have wafted portions of it to the needy thousands of foreign lands. And what would more naturally induce our brethren to the eastward, to migrate hither, with their families than to see large exportations of breadstuffs; thus giving evidence of a settled and prosperous agricultural people—better sign than all the coin and bullion which is paraded in the papers semi-monthly? Then we should have had a foreign grain trade opened to us; but now it will take another year to effect this. This must be accomplished sooner or later. A market for our grain, and California can produce *food* for millions, as well as gold, profitable alike to both producer and consumer. We can moreover raise wheat cheaper than in any State in the Union. This, I can prove if necessary.

Let us lay down as an axiom then, that we *cannot* overrun the market, and act accordingly.

Farmers should be done with this loose way of seeding, plowing, and harrowing. Why scratch the ground, when you yourselves acknowledge the folly of such a course? and I fear that the old adage, that "folly is not long pleased with itself," is not true, or we should have turned a new leaf, ere this, with a brighter side. You know without reasoning for a moment, that one acre, well plowed and put in, as a rule, is worth two acres of a spontaneous or half-plowed and worse harrowed crop. These Boston or any similarly constructed cultivators, which were used to some extent last winter in breaking up land in this vicinity, we most unqualifiedly condemn, i. e. for this purpose—of supplanting the *plow*. It will answer for *the harrow*; but if the plow is to be supplanted at all, for the purpose of *cultivating* our land better, the *subsoil* plow should take its time-honored place, and not the cultivator. We should endeavor to plow our stubble-

land a little [illegible] this year than before and not be in so much hurry and scramble for rain; which is unavoidable before it is thoroughly wet. This is the cause of [illegible] crop—ground being dry. [illegible] partially softened in consequence of light rains in the early part of the season, it was not plowed well, because it required from 50 to 100 per cent. more team; which would more than repaid, had it been used. I fell into the same error, in common with my neighbors—with only one saving clause. I plowed ten acres with double team, by way of experiment, and found that it yielded more than 50 per cent. *better* than the other. Here is the fountain of success, into which investigation cannot go too far.

Fencing is certainly an *item* in the farmer's bill of expenses. Judge Bates, in a recent address before the Mo. Agricultural Society, made the startling assertion that the fences of the United States cost more money than all the buildings of every kind. And he said, as a rule the cost was $1 per rod (read the address in the Mo. Republican of Oct. 20). Believing that the farmer's is *the* interest of the valley counties at least, we should urge upon our legislators the passage of better laws for our protection. The present system is outrageous—our fences mere shams, for neat cattle and horses; and no laws to protect us from hogs, sheep and goats, so far as I know. It would be much cheaper to herd the stock, in the counties that choose it so by *vox populi*, than to build and keep in repair the necessary fences. This should receive the attention of all concerned, which it immediately demands—the agricultural counties, whose lasting interest it would be to adopt such a system, apparently unwise and injudicious; but it would assuredly work out its own salvation—"The greatest good to the greatest number." Very respectfully,

Yours, COLFON.

The Hide Trade in California.

THE value of this important part of our Export trade is but little known. We frequently notice the shipments of Hides from Sacramento, Marysville, and other places, yet the real value of this product, or the manner of collecting, preparing or shipping, and the data connected therewith, is not given or their total value made known. Attention is being given to the subject—the business is being concentrated and assuming a permaneney. We visited a large establishment for the curing, packing and shipping hides and horns, the past week, and was much interested in what we saw; we look upon such work as successful gleanings from the great fields of our industrial machinery, and adding large profits to the wealth of the State. It is indeed *home industry*, in the best sense of the word.

The establishment of which we speak is upon Rincon Point, beyond South Park, San Francisco, owned by Messrs. J. L. Fulton & Co.; here are collected hides and horns, sheep pelts, and when prepared are shipped to the East. Mr. Fulton, the proprietor, superintends the whole, and from him we learn that they receive one hundred and twenty sheep pelts and forty cattle hides per day, from San Francisco, and forty hides per day from the mines; formerly they received two hundred and fifty for the week. The sheep pelts are poisoned and dry salted; the poison protects them from worms, and the salt is for preservation from injury on the voyage. The hides are also poisoned and dry cured, from November to May, and pickled in the summer from May to November.

We saw them in all the various stages of preparation; the vats for pickling would hold about four hundred hides. Bales of pelts, hides and horns, were preparing for the vessel that lay at the wharf, near by. We look upon an enterprise of this kind as deserving the notice of all who wish the prosperity of our State and the permanency of our industrial pursuits.

We noticed large quantities of the *pith* from the horns of cattle, that we know are of great value to our gardeners in that vicinity; the land is low and cold, and these horns, burnt and broken, or even in their natural state, are of immense value; and we hope they will avail themselves of this opportunity to increase their orchards, gardens and vineyards. We shall explain their use in another column.

TO CORRESPONDENTS AND READERS.—Alice. V. G. P., M., Colfon, will appear next week. Other MSS. are on file and will have due attention. Our thanks we tender to our kind correspondents for their valuable aid. Our readers all will find interest in the perusal of Colfon, Tree Planting, and Valuable Trees; and we would ask their attention to our New Advert sements. Several [illegible] to this class we received too late for this issue and will appear next number. We have much matter on hand relative to "Preparation of Soils," the "Soil at [illegible]," "What is needed to make a Garden at Stockton," &c.

[illegible] MAGAZINE.—The [illegible] Dyspepsia [illegible] Congress [illegible]

To the Young Men of Stockton.

"Build yourselves a Monument."

IN our recent visit to the city of Stockton, we could not but be struck with the contrast it presented to our own city of Sacramento; and yet Stockton is laid out with the same design—in broad parallel streets and squares—and is capable, of becoming ere long a very beautiful city. The contrast between the two cities is strikingly visible to a Sacramentan, in the absence of all shade trees in their great business marts, or in their immediate vicinity.

Were the effort made and the streets to be thus beautified by rows of shade trees, Stockton would become one of the fairest cities on the Pacific coast. The activity of her merchants, the lively appearance of her business marts, and the rapid improvement she has made recently, bespeak her as a city that is most prosperous. Were the broad business avenues to be properly shielded by a variety of our beautiful native trees, and other streets by new and valuable varieties, the squares and public grounds also beautified, making them places of public resort, the natural effect would be to enhance the value of real estate as well as render the city more cheerful and beautiful.

But how shall this work be accomplished? Now, while politics rage so high, it is difficult to carry measures for public improvement: for it is said "corporations have no souls." But we believe we know a way that will not only be sure to accomplish the object, but which would secure its immediate completion, and besides it would reflect honor upon all engaged in it, and with but little cost or labor to each. Our plan is as follows: let the *Young Men of Stockton* resolve themselves into an association for beautifying the public streets and squares of their city; let them come together immediately and each pledge himself to *plant two or four trees each*, and the work is done, and the cost to each a mere trifle; and yet the aggregate of the benefit conferred upon the city of Stockton would be beyond price, it would be a monument that would ever be *green* to their memories, living or dead.

What a world wide fame has the city of New Haven won as the beautiful "City of Elms," and this was accomplished the same way.

While in Stockton we conversed with several young men upon this plan, and we found all ready, heart and hand, for the work. Now is the time to begin the work. Begin this very autumn, and the coming spring will see the waving branches of many a fair tree that shall offer you in coming years a shade from the sun and a shelter from the storm; and thousands of your fair friends shall ever bless you for so noble a work.

Who will start so noble an enterprise? We wait with hope.

The Value of Bones and Bone Dust.

WE have been surprised many times, as we have passed from place to place, in seeing the great quantities of bones lying about on our prairies and farms, and even among those whom we should think knew their value. Every cultivator of the *vine* should avail himself of this valuable fertilizer, and especially as it is the habit of our growers to plant the grape in the valley, instead of the *hill side*—certainly the most appropriate place for the vine. If any of our vine-growers will make some experiments with *bone manure*, we will venture the assertion that if they will favor us with a faithful result of a two years' experiment, so we can give it to the public,—it would not be long before bones will be scarce.

Heads and horns of cattle are abundant over the land, and should be gathered up. The pith of the horn should be placed below the roots of the young vines, and in the line of their growth, or they can be burned and broken to form a part of the enriching substance of the soil; the raw piths thus planted will be found completely riddled with the *roots of the vine* forming a complete basket work around the bone, easing in and through the horn, feeding upon the nutrition; and as the vine increases, will by eating up the horn, or leaving it like a honey-comb.

We earnestly hope our cultivators, the gardeners at and around the Mission of San Francisco, will go to Messrs. Fulton & Co., the bone and horn factors and buy some of these horn pieces, and try some experiment, faithfully. We would particularly hope that Mr Walker of the Golden Gate Nursery, Messrs. O'Donnell of the U. S. Nursery, Mr. Cooper and others, at the Mission, and many who are now owners of the garden [illegible] would try the [illegible] of the [illegible] of the [illegible] bone dust.

Honorable Example.

WOULD you eradicate crime? Educate the youth of our land in the path of virtue. Would you make them patriots and lovers of their country? Educate them in a knowledge of our institutions and laws. Would you make them lovers of law and order? Educate them in Temperance and Peace.

We rejoice to see the deep interest being manifested by our prominent citizens in the cause of Education, and we notice with pleasure and pride the noble instance of this interest as exhibited by F. W. Macondray, Esq., at San Mateo, in the gift of a lot of land for a School-house, and also a liberal donation in money to aid in erecting a building. Capt. Macondray is one of the pioneer merchants of San Francisco, and having a beautiful country residence at San Mateo, has most wisely taken measures to guard his interests—his property there—by his desire to educate the youth. There is no better safeguard to life and property than a well-educated community around us. A man who once had a large and valuable park and grounds, abounding with fruits of the rarest kinds, which were never stolen, was called upon by another person who lived in a reckless community, and whose garden was continually robbed; he inquired what he should do to protect his grounds from the bad thieving boys that surrounded him? The first gentleman answered promptly—*educate the boys*. We have ever said amen; and we have also said more, we say *educate the girls*. Give us educated *Mothers*, and the boys are *sure of an education*—and thus has Capt. Macondray wisely planned for his beautiful home at San Mateo. He says educate the boys, aye, and the girls, too. And who will not bless him for it. Reader, do you approve? If so, go and do likewise, according to your ability.

The Grain Market.

CALIFORNIA is beginning to be appreciated in the old States, in other places than Wall street, New York; Chesnut street, Philadelphia, and State street, Boston. The mint, the banks, and on 'change are the places where California character and worth were alone to be estimated in times past. How much gold did the steamer bring? was the main question. Now her character and influence are felt in another market.

The Genesee country is feeling her influence now. The Gallego and Haxall Mills take an interest in California. Any more ships with Grain and Flour to day? The corn exchange and the flour market feel the influence of the grain from the valleys of California as quickly as do the banks and money dealers the chime of the gold from our mountains, and it is well they should. The Agricultural interest is being felt there, and we rejoice to see. It will work wonders. The announcement of ship loads of grain and flour, daily or weekly, will tell more favorably for California, and tend more to build up our State with a permanent population, than all the shipments of treasure that can be sent. Gold is an article that *some live for*; bread is an article *that all must have* that live. Gold will draw men hither in search of it; but our grain fields and happy homes will keep them and make them happier than all the gold of Ophir.

But to the grain markets. Wheat is firm and its value steadily increasing. The demand for flour keeps all the mills in the State in full work night and day. The best wheat commands from three to three and a-half cents, and is firm. None too much in the market. Farmers are now receiving the benefit. Before thirty days the mills will have no wheat to grind. The markets abroad are quick. At Chili, Valparaiso, Australia, the East, and in Europe, prices are high and the demand great.

The Capital a market for grain and flour is now the *cheapest* [illegible] Look to this fact, farmers; your grain will all be wanted.

FAVORS RECEIVED.—We have been under many obligations of late to the obliging messengers of Wells Fargo & Co. and of Pacific Express, for papers from various sources, and many acts of courtesy. We have also received many river papers very promptly from Messrs. Langton & Co. From the ever-active [illegible] always know if there is any news [illegible] way. To the Messrs. [illegible] are [illegible] to Mr. M. S. Latour we are [illegible] for various favors and [illegible] bouquets.

METEOROLOGICAL [illegible]—[illegible] a short [illegible] we can [illegible] [illegible] [illegible]

Horticultural Department.

Trees for a Lawn.

We have presented to our readers in back numbers several sketches of plans for the planting of trees for ornamenting grounds, and promised to present those for open lawns, parks, &c.

Those who desire to lay out large open parks or lawns should first study in some measure the size of the tree when grown, so as to plant with reference to the future, and thus they would have a criterion for the space the trees require. We have in our mountains and hills beautiful native trees that would grace any park or lawn. Few trees can exceed the beauty of the *evergreen oak* of California, when carefully grown; and it can be formed to the eye. The beech, the maple, the black alder, and even the sycamore, (our old button-wood,) should grace every large park. To these we would add the redwood and the true arbor vitæ, and all the pines of our forest; and with those trees we have mentioned in former numbers for streets and dwellings added, a full variety can be had without adding these offensive cottonwoods and ailanthus, which should be discarded as a general tree.

Paulonia Imperiallis.

This beautiful ornamental tree is now being placed in California as one of a class of trees that will show to a very great advantage.

The tree is of very rapid growth. The body and form of the tree, and the wood, resemble the "Tree of Heaven," the Ailanthus; but the leaf of the Paulonia, single, is very large, nearly round or heart-shaped, and often measuring a yard in diameter. It is a stately tree, and should be in every collection.

The Catalpa.

The Catalpa tree, is a beautiful ornamental tree, and can now be had at several of our best nurseries. We have seen beautiful specimens at Messrs. Provost & Co.'s, at San Jose.

This tree is of very rapid growth, leaves very large, bright glossy green, and pretty clusters of blossoms. It seeds well, and the seeds form in pods sometimes a yard long.

This tree should be found in every fine collection.

Australian Acacia.

We have spoken of many beautiful ornamental trees that can now be had at our nurseries, such as should grace our dwellings, our streets and our lawns, we have named many varieties, all good, and all fully equal to what we have said of them. There were some few we did not name in the groups, because we wished to name them in a distinct manner, so as to call particular attention.

We have in this number named two, the Paulonia Imperiallis, and the Catalpa. We now name the third—the last named, but the first in character and beauty. There has no one tree yet been presented to the eye, that is more perfectly beautiful than the one we have described as the Australian Acacia.

This Accacia is of the most rapid growth of any we have yet known. We have seen trees the present year that have attained the hight of ten, twelve and even sixteen feet. Its broad pendant branches, its beautiful shining foliage, its delicate leaves so gracefully drooping from their waving branches—for the foliage is in constant motion like the trembling Aspen—and the tree being almost an evergreen—these characteristics make it *the* most beautiful tree in California.

We have seen four trees the present year, each of them perfect gems, and each worth a ride of thirty miles to see. The first was in the garden of Dr. Cobb, of San Jose city. We saw it in September, then in full growth and measuring twenty-five feet in circumference in the branches, and sixteen feet high.

The second we saw in the beautiful garden of Capt. Walsh, of Benicia. We had seen this tree in the spring, and again in the summer when it had its beautiful blossoms upon it, their golden tufts casting a fragrance, and the blossoms forming a pleasing contrast to the glossy foliage of the tree. The last time we saw this tree, it was about the size of that of Dr. Cobb.

The third we saw in the garden of E. L. Beard, Esq., of San Jose Mission. Here we saw two trees, each most glorious trees, of equal size to those we have described, and equally beautiful. In fact there seems to be a disposition of the tree to grow equally rapid everywhere.

The last and the most rapid grower, and the most beautiful we saw at the splendid garden of C. M. Webber, Stockton. This tree had attained a size equal to the others we have named, but this of only one year's growth, and we pronounce it the finest tree of one year, both in size, form and beauty, that we have ever seen, and we think we can challenge the world to beat it.

We have been copious in our remarks of this tree, because it will assuredly be the most desirable tree, for particular positions for open lawns and for "pet" trees, of any in our country, and as such we can heartily recommend it. Those who desire further proof can see the trees in a growing state; they will then believe.

Grafting Beets.

At the beginning of September, 1853, Dr. Allan Maclean, of Colchester, an ingenious experimentalist and good physiologist, grafted a young plant of the white Silesian Beet upon a root of Red Beet, and *vice versa*. At the time of the experiment the plants were each about as thick as a straw. A complete junction was effected. There was a slight contraction at the line of junction, much like that formed by "chocking" a rocket case; above the line of contraction the plant was absolutely white; below it was absolutely red. Not a trace of blending the two colors could be discovered. By similar experiments on other vegetables and plants, Dr. Maclean had so far assured himself of the perfect independence of scion and stock as to acquire the belief that neither the coloring nor any speific characters of one or the other would or could be altered by their union. The result of the trial wholly confirmed that view, and demonstrated that the White Beet adhered to the Red Beet by mere junction of cellular matter; that of the scion and stock holding together in the first instance, and each afterwards produced its own coloring matter in its own new cells as they formed superficially, the red cells adhering to the white while in the nascent state, but retaining each the peculiarity belonging to it, without any interchange of contents through the sides of the cells in contact.

This is entirely consistent with all that has been discovered by the modern physiologists who have applied themselves to a study of the nature of the individual cells of which plants consist. They have clearly shown that each cell has its own special inherent of secretion; as indeed may be seen by any one who examines thin sections of variegated leaves or other parts. It will then be seen that some cells are filled with a red coloring matter, others with yellow, others with green. In other words, one cell has the power of secreting red matter, another green, and so on. The colors do not run together, but are contained each within the cell that produces it. Why this is so no one knows; all that we are acquainted with is the fact that in the cells of the Red Beet resides a power of forming red matter, and in those of the White Silesian Beet that of forming yellow; and this peculiarity is not affected by the one growing to the other. Red-forming cells produce their like and yellow-forming theirs. Thus the limit between the scion and the stock is unmistakeably traceable, and notwithstanding the combination of the two sorts in one, each perseveringly retains that which is natural to it.

What is true of beets is true of all other plants, and we shall endeavor on an early day to apply to the practice of grafting the unquestionable facts above explained.—*Gardener's Chronicle.*

Sunflower, or Helianthus.

This is a highly ornamental and extensive genus of plants, and from their tall growth they are particularly well adapted for the back of flower gardens, or the front of shrubberies, in which situation they make a splendid appearance in autumn. They grow well in any common garden soil; the tender kinds being protected in winter. It appears to possess far more profitable qualities than were hitherto supposed, and besides forming a beautiful object in a bed of flowers, it may be cultivated with advantage, and applied to many useful purposes. An acre of land will contain 25,000 sunflower plants at 12 inches distant from each other. The produce will be according to the nature of the soil and mode of cultivating; but the average has been found to be 50 bushels per acre of the seed, which will yield 50 gallons of oil. The oil is excellent for table use, burning in lamps, and for the manufacture of soaps. The mash, or refuse of the seeds after the oil has been expressed, and made into cakes, will produce 1,500 lbs.; and the stalks, when burnt for alkali, will give out 10 per cent. of potass. The green leaves of the sunflower, when dried and burnt to powder, make excellent fodder for milch cows, mixed with bran. From the ease with which sunflowers are produced in our gardens, for they flourish in any soil and require no particular care, we may safely say that an acre of land will yield a very considerable return. Poultry are very fond of the seeds.

Vitality of Seeds.

The vitality of seeds, under favorable circumstances, according to Schenck's Gardener's Text Book, can be counted upon for the following periods:

Parsnip, Rhubard—and other thin scaly seeds—for one year.

Balm, Basil, Beans, Cardoon, Carrot, Cress, Indian Cress, Lavender, Leek, Okra, Onion, Peas, Pepper, Rampion, Sage, Salsify, Savory, Scorzonera, Thyme, Thomato, Wormwood—and small herbs generally—for two years.

Artichoke, Asparagus, Corn Salad, Egg-Plant, Endive, Indian Corn, Lettuce, Marigold, Marjoram, Mustard, Parsley, Rosemary, Rue, Skirret, Spinach and Tansey—for three years.

Borage, Borecole, Brocole, Brussels Sprout, Cabbage, Cauliflower, Radish, Sea Kale, Tarragon, and Turnip—for four years.

Beet, Burnet, Celery, Chervil, Cucumber, Dill, Fennel, Hyssop, Melon, Pumpkin, Sorrel and Squash—from five to eight or ten years.

New Grains Recently Introduced into the United States.

We present our readers with the report upon the new Grains recently introduced into the Patent Office from different countries, and as these various specimens have been kindly forwarded to the State Society here and been distributed by them, those who have received such Grains will here learn of their quality, character and culture. They are of great value to this country, and we hope care will be bestowed upon them.

CEREALS AND OTHER PLANTS, CULTIVATED FOR FARINACEOUS SEEDS, STRAW, OR HAULM.

Turkish Flint Wheat, from Mount Olympus, in Asia; a fall variety, with rather large, long, flinty berries not very dark-colored, and possessing remarkable properties for long keeping in a moist climate, or for transportation by sea without kiln drying. It has proved itself both hardy and prolific in the Middle States, and its culture deserves to be extended. The spikes are of good length and size, having only a light beard.

Algerian Flint Wheat, from the province of Oran. This variety has a remarkably large berry, rather dark-colored, and weighing 70 pounds to a bushel. From a sample sown in the valley of Virginia, in November last, it yielded at the rate of 35 bushels to the acre, a berry equal in size and weight to the original. The spikes are large, bearing an enormous beard.

Pithusian Flint Wheat, from the island of Ivica; another fall variety, resembling the Algerian, but having larger berries, varying in color from light to dark.

Syrian Spring Wheat, from the "Farm of Abraham," at the foot of Mount Carmel, in the Holy Land. The berry of this variety resembles that of the last preceding, and is reputed to have matured in sixty days after sowing.

Cape Wheat, from the Cape of Good Hope, procured by Commodore Perry, of the Japan Expedition. This is a beautiful light-colored wheat, slightly flinty in its character, and doubtless produces an excellent flour. It probably will do much better at the South than at the North, if sown in autumn, unless it should prove to be a spring wheat. If successful it will be liable to degenerate, unless the seed is often replenished or changed.

Spanish Spring Wheat, (Trigo candeal,) from Alicante; a beautiful variety, of unsurpassable whiteness, and is reputed to have ripened in less than ninety days after sowing. It will doubtless succeed well as a winter wheat at the South, and a March or spring variety at the North. The berry is rather long, plump, and slightly flinty in its character. The flour is of unrivalled whiteness, and is celebrated in Spain as entering into the composition of candeal bread (pan candeal.)

White Hungarian Wheat, (Ble blanc de Hongrie, of the French,) from the South of France. The spikes of this variety are white, of medium length, very compact, and square-like, terminating abruptly, or not tapering to the extremity; chaff, smooth and thin; spikelets, containing four grains, which are quite large, sharp and plump, or rounded, white, and slightly transparent. Weight, 66 pounds to the bushel. It is reputed to be about a week longer in ripening than other sorts, but from its superior qualities it well deserves a trial in this country, as a fall or winter wheat at the South, and as a March or spring variety at the North.

Red-chaff White Wheat, from England, having a very large, short, rounded berry, generally soft, but often transparent. It is rather tender, and probably would not succeed as a fall wheat north of Virginia.

White Neapolitan Wheat, (Richelle blanche de Naples,) from the south of France, where it is much cultivated. The spikes are long, but not very compact; terminal spikelets, having short awns from one-fourth of an inch to an inch in length; chaff, delicately tinged with a dull yellow or copper color; grains, large, considerably elongated, and generally of a yellowish-white color. It has the disadvantage of ripening late, and is believed to be too tender for the North. Possibly, it may prove to be a March or spring wheat, if sown early in the Middle States or at the South.

Girling's Prolific Wheat, from England; a very prolific fall variety, with a large, short, plump, brown berry, but inclined to be soft. Like the Red-chaff White, it is thought to be tender, and unsuited for the Northern States.

White Chilian Wheat, from Santiago de Chili; a beautiful variety, with large, rounded, plump, white grains, resembling those of the Red-chaff White from England, and, like which, it is believed to be too tender for the North.

Saumur Spring Wheat, (Ble de saumur de mars,) originally from the valleys of Anjou, a southeastern department of France, and is a very remarkable variety for fall or winter-sowing. The berry is rather soft, though full, of a reddish color, and much esteemed by farmers for its early maturity, which perfects itself some days before the ordinary sorts. As its name implies, it may also be sown in March, which will add to its value in this country as a spring wheat. If sown in autumn, it would probably succeed in the middle or central rauge of States.

Early Noe Wheat, (Ble de l'Ile de Noe), introduced into the central part of France by M. de Noe, and is commonly known there under the name of *Ble bleu*. From its hardy and productive nature, it is gradually superseding the Saumur wheat in the high latitudes of Paris, and is much sought after on account of its precocity. As this wheat and the preceding variety have the property of ripening some days before the common sorts, if they succeed in our climate in this respect, a great point will be attained. A single week thus gained in ripening would often secure the crop from injury by the fly or rust, aside from the advantages to be acquired from an early market. It would probably succeed well as a spring wheat if sown early.

Geja Wheat, from the south of Spain; with a large, moderately long, full berry, of a brown color, rather inclined to be flinty. It probably would be too tender to sow at the North as a fall wheat, although it might succeed if sown early in the spring.

Large Northern Pacific Rye, from Germany; with a large grain, and doubtless will be suited to the Middle, if not to the Northern States.

Spanish Barley, from the south of Spain; with a full, well-filled grain, which promises well.

Common Black Oat. (Avoine noire de Brie,) from France. In the length of the straw, and the form of the pinacle, this variety is similar to the Potato oat. The grain is rather large, well filled, and of a shining black color, lighter towards the point. It is very prolific, and about a week earlier than the Potato oat, weighing 42 pounds to the bushel.

Chenailles Oat. (Avoine noire de Chenailles,) from France; resembling the preceding in the character of the grain, but somewhat earlier and of taller growth.

Spanish Oat, from the south of Spain, with light colored grains, heavy, and well filled with farinaceous matter. It probably would succeed well in the Middle and Southern States, for late fall or winter sowing.

Silver Buckwheat, (Sarrazin argente), from France; an esteemed sort, with whitish grains, and employed for the same purposes as the common kind.

White Quinoa, (Chenopodium quinoa), from France, but originally from Peru, where it is a native. The grains are round, white, and about the size of mustard-seed. The leaves of this plant, before it attains full maturity, are eaten like spinach; but the seeds are the parts most generally used as food, being both nutritious and wholesome, as well as easy of digestion. They are prepared in a variety of ways, but most frequently are boiled in milk or soups, or cooked with sweet peppers and cheese.

This plant is very vigorous, quite insensible to cold, and produces an abundance of seed on a good, light, warm soil. Its culture is simple. If intended for its grain, it may be sown in a sheltered border early in the spring, in order that it can be transplanted before the return of summer heats; or it may be sown in open culture in drills, in the middle of the spring. When the plants become of sufficient size, they are removed and planted at the distance of twenty inches apart, well exposed to the sun. If desired for the leaves only, they may be set nearer to each other, and the stalks cut off at the first gathering, in order to cause them to branch out for a succession of crops. By watering during the summer, should their be no rain, the product of leaves will be incessantly renewed.

Forty Days Maize. (Mais quarantain), a dwarf variety from the south of Spain, reported once to have ripened high up in the Alps in forty days after planting. The object of introducing this grain into the United States was on account of its quick growth, early maturity, and sweet flavor in the green state, as well as the delicacy of the bread made from its meal. Besides, it appears to be well adapted to the high latitudes of elevated valleys in many parts of the country, where most other varieties of corn will not thrive, and with a chance of a successful result in crossing it with the larger sorts, to which it might impart, in a degree, its quality of early ripening, if not its taste.

Indian Millet, or Dourah Corn, (Holcus sorghum), from St. Martin, in the West Indies; described at length in another part of this volume.

The Value of a Garden.—But I hold, that any farmer, who is worthy of the name, will prepare a small plot of ground for his wife and daughters, and that he will, out of love to them, make it all they can wish or desire. It is these little things that make home pleasant and happy; and it has been the lack of these that has driven many a loving heart out into the world, and away from a sterile, barren home. Give the wife and daughters a place to plant, tend and rear their flowers; help them, if needs be, although it may take an hour sometimes that is hard to spare, and you will a thousand times bless God for so ordering your mind that you did it. What husband or father, rugged though his nature may be, does not fondly linger around a home made so bright and cheerful by the fairy hands of his wife or daughters, scattering, as it were, in his way, the beauties of their little plot? What son or brother ever forgets his home who has found his room daily perfumed with the flowers which have been raised by the hand of a fond mother or gentle, loving sisters, and placed there through the promptings of their own dear, affectionate heart? What daughter ever forgets the home where she has cultivated her little garden, and year after year been so happy in the blossoms which have been borne upon the plants she has watered and tended with such patient care? Parents, sisters, brothers, the dear old home, all—all come back to her, though years may have passed away—in the scent or bloom of every flower. The family is seldom unhappy, whose dwelling is surrounded with shady trees, and whose garden is gay with cultivated plants. Do not, then, I beseech you, forget the little flower garden.

There is said to be an oak tree near Raleigh, N. C., which, at the sun's meridian, covers with a shade a space of nine thousand feet. It would afford shelter to four thousand five hundred men.

Halle de Vins of Paris.

As the subject of vineyards and wine making is attracting so much attention in California, we present our readers with a sketch of the famed wine market or wine vaults of France, as presented previous to 1850. Since that date additions and improvements have marked the age by an extension of space and more skill in the arrangement.

We remember our visit to these famous halls or vaults, and no description we can give will so well describe them as the brief and comprehensive term of *boundless*. The long rows of casks, some of immense size, covered with a heavy coating of blue mold; the various grades of casks of the different wines, bearing the names of different provinces, were all attractive and interesting. One feature was remarkable—the vast amount of all kinds of wine at market; its free use all over the city; being used by all classes of citizens free as water: for the common claret and Bordeaux are drank morning, noon, and evening, freely—yet for weeks that we spent in the city and its environs, we never saw but two persons intoxicated. Brandy or strong drinks are rarely used. These are all sent abroad. In our visits in Paris we often met citizens of both sexes that had not drank either tea or water for many months. They use wine as the common beverage, and strong coffee as the main stimulant. We name these facts at this time, for we believe that in a few years we shall have our native wines as pure and good as in any portion of France or other wine growing countries; and we believe their introduction will drive out strong drinks and intemperance to a great degree.

Annexed is a brief descriptions of those famous wine vaults.

The Paris wine market, established in 1656, beyond the Porte St. Bernard, had long been found insufficient for the commerce of the capital. when Napoleon ordered the construction of one much more extensive upon the site of the celebrated abbey of St. Victor. The first stone was laid on the 15th of August, 1813. The works were carried on nt first with great activity, were relaxed during 1815 and the two following years, but have since been finished. The ground on which the Halle aux Vins is constructed measures about 26 000 square metres. It is inclosed by a wall on three sides, and towards the quay is fenced by an iron railing nearly 800 metres in length. This magnificent market is divided into streets called after different kinds of wine, as follows:—rue de Champagne, rue de Bourgogne, rue de Bordeaux, rue de Languedoc, and rue de la Cote d'Or. On the side next the quay are offices for those who superintend the entrance and departures of wines, and a great number of merchants' counting houses. The piles of building are seven in number, four in front and three in the back ground. Some augmentations and improvements have lately been made, and the whole will contain about 450,000 casks. In the background is a warehouse appropriated to spirits, and constructed without either wood or iron: as stone for the roof would have been found too heavy, a hollow brick about six inches long was used. In the halle there is also n *bureau de depotage*, containing guages of the casks of the different parts of France; and purchasers of casks may have them measured here. Wines entering this depot do not pay the octroi duty until they are sold out of it; but, so long as they remain in bond, the owners pay warehouse rent, etc. The number of casks that enter in one day is frequently 1,500. Olive oil also is sold here. The halle is open to the public from 6 to 6 in the summer; and from 7 to 5 in winter. An immense quantity of inferior wines is always on the wharf in front of this market."

Physical Education—Dancing.

A few weeks since we spoke of the necessity of Physical Education in our Schools. Every day we live we see more and more proof of the importance of urging the attention of our citizens to this subject. If any one will notice the difference between the various nations that are now congregated in California, if they will but notice individuals of each nation, they will see in their movements and gestures, in their address, speech, looks, health, all and singular, sufficient evidence to prove that those nations and people that give free scope to their physical powers are more accomplished, more active, better looking, more healthy, cheerful and happy, than those who have disregarded its importance; and it is worthy of note, too, that the *kind* of physical training—whether it be active, cheerful labor, or exercise hard work—in door, confined labor or open air toil, gymnastics or recreations and sportive exercises—each and all sufficient to keep the body constantly active, they each and all have their effect upon the mind, the tone of conversation, and the temper and the impressions thus affected affect the health and happiness of the individual and community. Among all the means used to give the physical powers full play and to give grace to the actions of the body, to give exercise to the mind, to give cheerfulness to the temper, to give health to the body, there is none that can do as much as Dancing, and we have those nations that have practiced it as a proof, and the French are the best evidences of it—for the adage of "polite as a French dancing master," is significant of the effect of the exercise. We present from our French work, a sketch of the French systems, as now exhibited in Paris, and do this, hoping that information and interest may be obtained from it:

Balls.—Dancing being the favorite amusement with the Parisians both in winter and summer, there is no quarter of the capital in which ball-rooms, suited to all classes, are not to be found. The principal places during winter are—*Prado*, near the Palais de Justice; *Bal Montesquieu*, rue Montesquieu; *Salon de Mars*, rue du Bac. Besides these there is an innumerable variety of ball rooms, for the middle classes. In summer dancing takes place within, or in the immediate vicinity of, the Capital, in gardens especially laid out for the purpose. The *Chaumiere*, and the *Chartreuse*, on the Boulevard Mont Parnasse, and the *Jardin de Paris*, at Montrouge, outside the Barriere Mont Parnasse, are the favorite haunts of the inferior classes of Parisians. Here also resort the students, and other mustachio'd denizens of the Quartier Latin, resort with their favorite fair, commonly known by the title of *studiantes*, from their peculiar penchant for the youthful followers of Minerva. As a general observation, we may remark that the character of the French population is nowhere seen to more advantage than at places of this description. Quarreling or ill temper is nearly unknown, and even the lower class display a politeness of address, and n natural grace in the evolutions of the dance, almost amounting to elegance. Some places of resort of a similar kind there are, somewhat superior to those above mentioned: of these the *Jardin Mabille*, in the Alleo des Veuvos, Champs Elysees, is a favorable specimen. A large circular space, with a pavilion for the orchestra in the centre, is reserved for the dancers, and lighted by a profusion of gas lights suspended from artificial palm trees, while small shady circular bowers placed around afford the dancers the means of repose after the fatigues of the polka or the waltz, apart from the intrusive eye of idle curiosity; for we must remark that the fair visitants of these places appear completely ignorant of, or at least to have forgotten, the well-meant caution of the poet of the "Seasons:"—

> "Ah! now, ye fair,
> Be cautious of your hearts, nor in the bower
> Where woodbines flaunt and roses shed a couch,
> While Evening draws her crimson curtains round,
> Trust your soft minutes with betraying man."

Leaving poetry, however, for the positive, we find a snug corner laid out with tables and chairs for refreshments; here the sober Parisian may enjoy his bottle of beer and his cigar, or the votary of Terpsichore treat his partner to a refreshing lemonade, and recruit for subsequent exercise in the many waltz. A *Jeu de Bagues*, a *Billard Chinois*, and other amusements are likewise provided, offering a variety to the most diversified tastes, while an immense covered saloon and rooms adjoining afford the visitor a secure asylum from the malicious influence of bad weather upon the sports of the evening. But the attractions of the Bal Mabille are far surpassed by the arrangements of the *Noureau Tivoli Chateau Rouge*, rue Neuve Clignancourt, outside the Barriere Rochechouart, nothing having been neglected to win the good graces of the public, and render this spot the favorite among all rival establishments of the kind. The visitor on entering finds a large space handsomely adorned with statues bearing innumerable lights, where family groups are assembled enjoying the cool of the evening, and the enlivening strains emanating from an adjoining pavilion. Small circular tents and bowers invite the guest to taste of the good things of the buffet. Another large space adjoining is devoted to dancing, whence a flight of steps descends into a third plot, containing a Jeu de Bagnes, various contrivances of billiard tables, swings, etc., besides a pistol gallery for the more bellicose of the visitors. All these spots communicate together by different walks, over one of which a bridge is thrown, called the *Pont des Supirs*, as unlike the "Bridge of Sighs" celebrated by the pen of Byron as possible, though the name unluckily recalls the Venitian strain of the greatest of modern poets, and by contrast throws an air of ridiculous cockneyism (if such a word may be applied to Parisian taste) over this part of the grounds. The name has, however, probably been adopted in allusion to the tender wailings of love-stricken swains, who may select this spot to give vent to their emotions. A spacious building contains rooms for refreshments, and is surmounted by a terrace, from which a general view may be taken of the lively scene below. The tasteful arrangement of the illuminations, contrasting with the verdure of the trees and the gay animation of the crowds here assembled, produces a very striking effect. We may note that *greenness* is here to be specially guarded against, for, though a very desirable attribute of the trees, any display of that quality on the part of a visitor may lead to inconvenience, and hence we must warn the youthful English visitor against the too seductive graces of the *Lorette*, who displays no mean tact in playing off her fascinations. In conclusion, we would observe that although Parisians of the middling classes are in the habit of taking their wives and daughters to these places of [illegible] a certain character for respectability and outward decorum may be [illegible] preserved, we cannot recommend them as [illegible] places for an Englishman's lady to visit [illegible] attended only by [illegible]. The *Rotonde* at the entrance of the Champs Elysees [illegible] Paris, is a [illegible] of a similar class and even of a superior description in point of company. Balls take place also at Sceaux, St. Cloud, Enghien and Montmorency, but are generally not so well attended. The days and hours vary according to circumstances, but are easily learned from the bills posted in different parts of the town. The prices of admission are between 1 fr. 50c. and 2fr. for gentlemen; the *beau sexe* have free entrance.

[From the Marysville Herald of Nov. 19, 1850.]

THE YOUNG EMIGRANT TO CALIFORNIA.

BY MRS. MARIA G. BUCHANAN.

While traveling on the Missouri river a few days ago I had the pleasure of becoming acquainted with Mr. and Mrs. L. of Connecticut. They had with them their only child, Metella. This lovely little girl, not quite three years old, attracted universal attention, and won every heart by the sweetness of her disposition, her gentleness, and her perfect obedience to the commands of her parents. She was, indeed, the pet of both cabins. Mr. and Mrs. L. are on their route to California, and the following lines were suggested while contemplating the little Metella—the sweet flower so early transplanted to another soil:

Young traveler to that distant clime
Of golden dreams and sunny skies,
Sweet is the memory of the time
When first I saw thy dove-like eyes,
Resplendent with the purity
To spotless childhood only known—
Oh! thy bright smile of infant glee,
Thy voice, with its low winning tone,
So sweetly woke the lyre of feeling,
That the soft echo of the strain
Breathes ever round me, gently stealing
My thoughts to thee, fair child, again.

Oh! all too soon the fairy stream
Of thy existence roughly dashes
Over the rocks of life whose gleam
Amid the swelling water flashes;
Metella, thou seemed only made
To sport beneath the rosetree's shade;
To rest upon the porch where twine
The scented jassamine leaves.
And where the graceful eglantine
Its spell of fragrance weaves;
To kneel, in twilight's lovely gloom
Beside thy mother's knee,
In the same old familiar room
Which echoed first thy glee.
Yet thou hast left this quiet home
Amid earth's sternest scenes to roam—
O'er boundless plains and mountains wild,
Thy pathway lies, thou gentle child.

But oh! thou wilt not be *alone*
Upon this weary pilgrimage—
That blessed light round thee is thrown
Which gilds our path from youth to age,
Sheltered beneath LOVE'S fostering wing,
The sweetest flowers of life will spring,
Whether the south wind o'er them blows,
Or they are nursed 'mid Alpine snows;
Then let fair hope the banner wave
To check the sad, foreboding tear,
A *father's* arm is strong to save,
A *mother's* smile is bright to cheer.
Sweet flower! thy opening leaves will be
Watched with love's fond intensity.

And when upon those far-off plains,
Beneath night's dewy sky,
Pale memory's melancholy strains
Shall float in sadness by,
Bowing thy parent's sinking soul
With their strange sorrowful control,
When thoughts of happy, by-gone years,
The home of youth, or early love,
Shall stir the fount of bitter tears,
Metella, then what wilt thou prove?
Thou'lt be to them, thou lovely flower,
Amid the shadows of that hour,
With the clear sunshine of thy smiles,
Thy gentle voice, thy winning wiles,
Thy wealth of artless tenderness,
A fountain in the wilderness.

And when they reach the distant goal,
Where the proud waters as they roll
Sweep over golden sand;
Where nature wears her brightest dress,
Shines forth in all her loveliness,
To deck that favored land;
Fairer thou'lt be than all around,
The sunshine of their home,
The joyous laughter's ringing sound
Shall chase each thought of gloom.
And oh! when on thy cheek is found
The maiden's lovely bloom,
Thou wilt their fostering care repay,
Their tenderness and truth,
And make the evening of their day
As bright as was thy youth.

Metella, I may never see
Thy gentle face again,
But when the harp of memory
Gives forth its mystic strain,
The notes of sweetest melody
Will ever fondly breathe of *thee*.

Jefferson City, April 30, 1849.

Language of Animals.

We make the following extracts from an article on this subject in Putnam's Magazine:

How easily spiders are made to know the voice of their master is familiar to all from [illegible] a sad prisoner's tale. When [illegible] and [illegible] Lauzun was held in captivity [illegible] by a comfort was a friendly spider. [illegible] at call; she took her food from his hand and understood [illegible] a word of [illegible]. In vain jailers and soldiers try to [illegible] her company. She would [illegible] and [illegible] the tempting food from their hand. Here [illegible] was an air and style, not a trace of [illegible] circumstance. The [illegible] with a [illegible] will, and [illegible] ate [illegible] and [illegible] of his country. He also had trained [illegible] and taught them to come at his call. For, when the French invaded Holland, the prisoner managed to send them a message, that the inundated and now impassable country would soon be frozen over so that they would be able to march over the ice-bridged swamps and lakes, for the spiders, true barometers as they are, had taught him to read, in their queer habits, the signs of approaching weather. The frost came, and with it the French; Holland was taken, and the lucky prophet set free. The spiders, alas, were forgotten.

Even the "hateful toad" has been the captive's friend and companion, and shown itself endowed with a fine ear with remarkable talents. They come out of the dark night of their holes, when their self-chosen master's voice is heard. They take flies from his hand; but what is the strangest of all, they actually learn to measure time; for more than one well-authenticated instance speaks of their having appeared only at stated times, when the jailor was absent and all was safe. * * * * *

The language which animals speak, by means of friction or concussion, is naturally the least known of all. We see the eager ant rushing homeward to tell the news of an invasion; she meets a friend, their antennæ touch and play with each other, in rapid succession. The messenger returns, the latter conveys the news by the same means to others, until the whole army is informed. Here we see, not an instinctive feeling of dread, but a clear, undoubted communication of facts. So among bees; the instant the queen dies, the sad event is made known throughout the hive. No sound, perceptible to human ear, is heard, but the antennæ move with surprising effect, and, as the result of a clear act of volition. It is not a sensation, nor an instinctive action, but it has all the signs of special purpose. How they speak, we know not; this only is certain, that their language is not like that of the deaf and dumb, with whom signs represent letters or words.

The cricket, even, is not without its note of utterance, and although a purely mechanical sound, its has its sweetness and charm, so that Milton could speak of being—

> "Far from all resorts of mirth,
> Save the cricket on the hearth."

It produces a loud, clear sound, by a quick vibration of the elastic skin between its wings; and from the time when the Athenians wore golden cicada in their hair, to our days, when the cricket on the hearth is the proverbial image of home comfort, its simple note has been dear to the heart of man. The true cricket, however, speaks only in the sunny time of love. The male begins in his hermit cell, as May approaches, to produce a low, inward note of longing. As the sun rises higher, and summer advances, his shrill song becomes louder, until he finds the desired companion. Then he returns to his solitary life once more, and his voice dies away by degrees. Dean Swift has left us a humorous description of the curious noto of the death-watch beetle. The little fellow, in his narrow cell, falls in love; immediately begins to thump his head against the ground, and uses such energy in his demonstrations that he leaves deep marks in the softer kinds of the wood. The powerful stroke produces a loud sound, the infallible presage of death to superstitious man, the soft music of love to the female beetle. If other males are within hearing, they all join in the concert with furious knocking, that even the ticking of an innocent watch excites their wrath and their loudest notes.

LITTLE AT FIRST, BUT MIGHTY AT LAST.

BY CHARLES MACKAY.

A traveler through a dusty road
Strewed acorns on the lea,
And one took root, and sprouted up,
And grew into a tree.
Love sought its shade at evening time,
To breathe its early vows,
And Age was pleased at heats of noon
To bask beneath its boughs;
The dormouse loved its dangling twigs,
The birds sweet music bore,
It stood a glory in its place,
A blessing evermore!

A little spring had lost its way
Among the grass and fern;
A passing stranger scooped a well,
Where weary men might turn.
He walled it in, and [illegible] with care
A ladle at the brink—
He [illegible] not of the deed he [illegible]
But [illegible]
He [illegible] again—and [illegible] the well
By summers never dried,
Had [illegible] ten thousand [illegible],
And saved a life beside!

A [illegible]
'Twas old, and yet 'twas new—
A simple fancy of the brain,
But strong in [illegible] true
It [illegible] upon a [illegible]
And [illegible] became
A [illegible] of [illegible]
A [illegible] flame.
The [illegible]
A [illegible]
[illegible]
[illegible]
A [illegible]
A [illegible]
[illegible]
[illegible]

PREMIUMS FOR STATE SOCIETY.—The beautiful Silver Plate as *Special Premiums* of the State Agricultural Society, will be on exhibition at the Society's Rooms, the early part of the week—and those who prefer Plate to money, can have a choice. Diplomas of the Society will soon be ready, and due notice will be given.

LATER FROM THE EAST.—The steamship Golden Age arrived at San Francisco on Thursday, bringing two weeks later news from New York, and fourteen days later from the seat of war.

The steamer brings 1,001 passengers, and full mails. No deaths nor sickness on the passage.

While an excursion train of eleven cars was crossing the Gasconade river, about 100 miles from St. Louis, the bridge fell, precipitating 10 cars a distance of nearly 30 feet into the water. Upwards of 20 are said to have been killed, and from 20 to 50 badly wounded.

The decision arrived at by the Bank of England to raise its rate of discount from 5 and 5 1-2 per cent. to 6 per cent. for bills not having more than 60 days to run, and to 7 per cent. for bills of larger date, has produced the greatest alarm and anxiety among the people of England. To counterbalance its effects, an agitation is about to be commenced to receive the restrictive clauses of Sir Robert Peel's bank measure, which would afford considerable relief.

A deficiency in breadstuff was apprehended, and the Government had taken measures to stop the exportation.

The financial aspects and bearings of the war absorb almost entirely the interest attaching to its strategical results.

THE WAR.—On the 29th Sept., the Russians attacked Kars, and were repulsed by the Turks, the former losing, in dead alone, about 4,000.

SPECIAL NOTICES.

PRINCE'S PROTEAN FOUNTAIN PEN.

[PATENTED JAN. 23, 1855.]

T. G. STEARNS, General Agent,

No. 271 Broadway, Cor. Chambers Street, New York.

☞ ADVANTAGES.—An incorrodible and durable Ink Reservoir, made of Protean, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time.

A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material

Its structure is simple, and not liable to get out of order.

Opinions of the Press.

We must regard this Pen as one of the grand improvements of the age.—*Portland Transcript and Eclectic.*

As a Reporter's Pen, I have never seen or heard anything to equal it. It is just the facility wanted in this department, so that it may keep up with the age of electrity and steam.

GEO. KELLOG, Reporter, 625 Broadway, N. Y.

Eureka! Eureka!! We have found it at last; a fountain Pen that will write for hours without once dipping in an inkstand.—*Knickerbocker Magazine.*

The ink flows from it so evenly and so easily, that the mechanical labor of writing becomes in itself a pleasure.—*Mother's Magazine.*

The Pen must have a great run. Any pen that runs for eight hours at a dip, may be said to have a great run—but this pen will become a tried and valued friend—will save the temper of the business man, and preserve the composure of the irritable poet.—*Hartford Courant.*

We are writing with one which does some six hours service without failure or stoppage, and have found it inexpressibly convenient, and comfortable.—*New York Evangelist.*

This Pen, among pens, is what Colt's Revolvers are among Pistols. One will fire a dozen shots, and the other write a dozen sheets, with a single charge or loading.—*Author of Major Jack Downing.*

A Clergyman who has written a whole sermon with one of these Pens, without once dipping in the ink, said to us that he would not dispose of it for twenty times its value.—*Boston Evening Traveller.*

If I could not procure another of similar merits, one hundred dollars would not purchase from me the one I have.—*A New York Clergyman.*

We continue to use our own with entire satisfaction.—*New York Independent, May* 16, 1855.

"Let those write now who never wrote before,
And those who always wrote, now write the more."

. Rights for Towns and Counties to vend, will be granted on favorable terms.

☞ A sample of these Pens can be seen at the at the Office of this Paper on the arrival of next steamer. v4-19 3m.

☞ Cured by Oxygenated Bitters.—*A Case of eighteen Years' Standing.*

[From Fitzhenry Homer, Esq., of Boston, Mass.]

BOSTON, September 28.

Dear Sir: It is now eighteen years since I was first troubled with the water-brash and derangement of the stomach. I have taken advice of the best physicians in this city and New York, in London, Paris, Germany, and Italy, and visited the several sulphur and other springs in this country, the watering places of Germany and elsewhere in Europe, and had found no relief. Since taking the Bitters I have never had a return of the water-brash, which daily troubled me of late years to a very great degree. Having found so great relief from this most discouraging disorder, I have recommended a trial of your medicine to many of my friends, who are now using it to great advantage. What little is in my scope to offer, in extending the circulation of your Oxygenated Bitters, will be done with grateful pleasure at all times. Yours, very respectfully,

FITZHENRY HOMER.

To DR. GEO. B. GREEN.

SETH W. FOWLE & CO., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agent for Sacramento—C. MORRILL. v4-2w

☞ Clove Anodyne Toothache Drops.—Those who have felt the pain of toothbrush and neuralgia pangs of this disease shooting through their jaws with most tormenting perseverance, and, as is often the case, have received but little sympathy from friends on such occasions, will no doubt be much pleased to know of a remedy that will never fail to quiet forever the unmerciful offender. The comfort that should be sought for is the Clove Anodyne Toothache Drops, a remedy that, while it removes the pain, preserves the teeth, and thus blesses as well as benefits. These drops have been extensively used, and thousands will bear grateful testimony to their value as a speedy and permanent cure for the toothache.

Agent—HENRY JOHNSON & CO.,
v4-19 1m 146 Washington street, San Francisco.

☞ JOSEPH GILLOTT'S STEEL PENS—For sale by all Stationers and Booksellers throughout California, and to the trade at the Manufacturer's Warehouse,

No. 91 *John street, New York,*

where a large stock of these popular Pens, of standard excellence may constantly be found.

HENRY OWEN,
Sole Agent for the United States.

MISCELLANEOUS.

Valuable Books
FOR FARMERS AND BUSINESS MEN.

Youatt on the Horse,
Their Structure and Diseases, with their remedies; also, Practical Rules to Buyers, Breeders, Breakers, Smiths, &c.; Notes by SPOONER. An account of breeds in the United States, by H. S. RANDALL—with 60 illustrations, muslin, 483 pp., 12mo. $1 50.

Twenty-six thousand copies of this valuable book have been sold within the last few years, and the demand is constantly increasing.

The American Fruit Culturist,
With directions for the Orchard, Nursery and Garden, by J. J. THOMAS; 300 accurate figures, revised and enlarged, muslin, 421 pp., 12mo. $1 50.

The Dairyman's Manual.
A complete Guide for the American Dairyman, by G. EVANS, 235 pp., 8vo. $1.

The American Farmer,
Or, Home in the Country, by J. L. BLAKE, D.D., 23 illustrations, muslin, 360 pp., 12mo. $1 50.

Blake's Farmer's Every Day Book,
Or, Life in the Country, with the Elements of Practical and Theoretical Agriculture; also, 500 Receipts on Health, Cookery, and Domestic Economy. By JOHN L. BLAKE, D. D., author of "Biographical Dictionary," "Family Encyclopedia." 664 large octavo pages, with a motto surrounding each page; bound in muslin—10 fine illustrations. $2 50.

THE SAME—embossed morocco, marble edge. $3.

A BOOK FOR EVERY AMERICAN.

Young's Science of Government,
New and improved edition, brought down to 1854, and adapted to the use of Schools, by A. W. YOUNG; sheep, 368 pp., 12mo. $1.

The New Clerk's Assistant,
Or every man his own Lawyer, a book of Practical Forms, containing numerous precedents for ordinary business transactions, designed for the use of County and Town Officers, Merchants, Mechanics, Farmers and Professional Men. By J. S. JENKINS; law sheep, 644 pp., 8vo. $2 50.

The new edition of this invaluable book of reference is particularly adapted to the wants of the Farmers, Business Men, and the Legal Profession in California.

Single Copies of any of the above books will be sent by mail, *postage paid,* to any State in the Union, on receipt of the retail price.

MILLER, ORTON & MULLIGAN, Publishers,
25 Park Row, New York,
v4 22 4t and 107 Genesee street, Auburn.

Domestic Animals
OF THE PUREST AND BEST BREEDS,
FOR STOCKING FARMS.

G. P. MORRIS, of Mount Fordham, Westchester county, N. Y., 11 miles from the city of New York, is breeding the following varieties, for sale:

Short Horn and Devon Cattle, Southdown Sheep, Berkshire and Essex Swine, and thorough bred Horses.

He will attend to and warrant their safe delivery on shipboard, free of charge, and will also have prepared the necessary boxes or stalls, with the proper amount and kind of food for voyage, charging the parties *cost only* for so doing.

Terms of payment, *cash,* or draft on some New York house, before the animals are shipped. A descriptive catalogue, with prices attached, will be forwarded by mail, if desired. v4 223m

A. LONGETT,
34 Cliff street, near Fulton, New York.

MANUFACTOR'S Agent for sale of—
Emery's Horse Powers, Threshers and Separators;
Wheeler's do do do
McCormick's, Hussey's and Manny's Reapers and Mowers;
Hall's and Taplin's Horse Powers and Threshers;
Fanning Mills, Grain Cradles, *Plows,*
Carts and Wagon Wheels;
Canal and Dirt Barrows. v4-22 3m

Wool and Hide Company.

HOYT, PIDWELL & CO., General Commission Merchants, No. 65 California street, San Francisco, California.

SAN FRANCISCO, November 1st, 1845.

Will pay a fair price for Wool, Sheep's Pelts, Dry and Green Salted Hides and Leather. Also, receive on consignment all kinds of produce for this market, or ship to the Atlantic States (if desired.) any of the above articles,—making liberal advances at the usual charges.

Particular attention paid to furnishing Tanners with Hides, and the sale of Leather.

Benicia Female Seminary.

THE Fourth year of this institution opens July 23, 1855. This is one of the oldest Female Seminaries in the State, and therefore well known. There is now a full corps of teachers, and those who are well qualified to fill their respective departments. A German lady, and an artist in her profession, is teacher of Music; and a French lady, as skilled in Drawing, is teacher of French and Drawing.

The School and Boarding Department are entirely under the supervision of the Principal.

Terms.—(Payable quarterly, invariably *in advance,*)

For Board and Tuition in English branches, per week...$7 50
Washing, per dozen..... 1 50

Extra Charges.

French, Spanish and Drawing, per month.....$3 00
Music, with use of Piano, per month..... 10 00

For further particulars, address

v3-26 MARY ATKINS, Principal.

Axle Grease! Axle Grease!!

THE attention of Farmers, Mill owners and others, is respectfully invited to the celebrated Patent Anti-Friction Grease, manufactured by Hucks & Lambert, and prepared by them expressly for the axles and bearings of agricultural machines, cogs, pinions and open bearings of mill machinery, and for the axles of all kinds of wheel carriages. This extraordinary composition is warranted to last three times as long as common tar grease, and to keep the bearings, axles, &c., in a cool, oily state to the last, *without gumming or corroding.* Samples in this of 2 lbs., price $1, may be obtained of

HUCKS & LAMBERT, 166 Front st., San Francisco;
COMPTON, SANDERSON & CO., Stockton;
BULL, BAKER & CO., Shasta;
AYRES & CO., Sacramento;
TREADWELL & CO., Marysville. v4-12

Dancing and Waltzing Academy.

MR. C. C. CLAPP takes pleasure in announcing to the ladies and gentlemen of this city, that his Academy is now open for the reception of Pupils, at the Assembly Rooms, K street, between Fourth and Fifth, recently known as Concert Hall. Days of Tuition, TUESDAYS and SATURDAYS, for beginners only.

All the most Fashionable Dances, both of Europe and America, are taught in this Academy. Private lessons given, if required. For terms, &c., apply on the above named days, or by note through Post Office. v4-21

BUSINESS CARDS.

HOTELS.

Beaty's Hotel,
(Formerly the Mansion House,)
SAN JOSE.

A. S. BEATY, Proprietor of the above Hotel, begs to inform his old friends and the public, that he has removed from the "Wood Lawn Hotel," Palmas Ranch, to the above premises, and is now prepared for their reception under more favorable circumstances than heretofore.

He begs to assure all who may favor him with a visit, that no pains will be spared to merit the patronage of the public, and make "Beaty's Hotel," San Jose, second to none in the State.

Gentlemen with their Families visiting San Jose, the Quicksilver Mines, &c., &c., will find at this House suitable accommodations. A. S. BEATY, Proprietor.

☞ HORSES KEPT AT LIVERY.—Stabling, Hay and Grain, and "Turn Outs" provided for Pleasure Parties.

Dillon, Hedge & Co.'s Line of Stages for San Jose, Santa Cruz, Monterey, and the Quicksilver Mines put up at this Establishment. v 412 tf

American Hotel, Benicia.

THIS HOUSE has been established *Five Years,* without interruption or change of proprietorship, and is believed by the travelling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.

3v-16 1st C. M. DAVIS, Proprietor.

Washington Hotel,
Georgia street, (Steamboat Landing,)
VALLEJO.

THE undersigned having taken the above Hotel, begs to call the attention of his friends and the public to the conveniences his house affords. As a Public Hotel and Stage House every needed comfort and convenience is provided, and full accommodations are offered for day and permanent boarders. Single and double rooms for permanent boarders on very reasonable terms.

The Proprietor is determined to keep a first-rate Hotel, and is confident he can please all that favor him with their patronage. [v4 21] JOHN MCELROY.

International Hotel.

THE extensive addition to this Hotel is now finished and ready for occupation, making altogether *one hundred and fifty rooms,* Suites of rooms for families, furnished or unfurnished; also, single rooms to let on reasonable terms.

Day Board—Ten Dollars per week.

This spacious Hall—85 by 35 feet—is elegantly furnished and lighted with gas, with Supper Room that will seat two hundred and fifty, will be let on reasonable terms for Balls, Concerts, Dinner Parties, &c. PECK & FISHER.

San Francisco, Jan. 9, 1855. v4-7

Rassette House.

SAN FRANCISCO,.....CAL.

THIS HOTEL offers inducements to persons visiting San Francisco, unequalled by any on the Pacific Coast.

Gentlemen can be accommodated with single rooms, or families with suites of rooms.

The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. v4-1

Something New and Wonderful in the CALIFORNIA ARTS.

JAMES W. JOHNSTON, Daguerreian Artist, southeast corner of the Plaza, has the pleasure of announcing to the public, from whom he has received many substantial favors, that he has just completed the *enlargement of his Gallery,* and combined with it several magnificent features of the Arts heretofore entirely unknown on the Pacific Coast. He is now prepared to execute in superior style—

1st. Daguerreotypes, as heretofore, on metallic plates, with or without coloring.

2d. Stereoscope Likenesses and Views from Nature.

3d. Daguerreotypes on *Glass* and *Paper*—the most splendid and remarkable discovery of the age. These Miniatures are susceptible of being worked up by the brush of the Painter, to embody all the freshness and naturalness of life, at about one-half the cost ordinarily attending miniatures on Ivory, which they far surpass in correctness of delineation. The business has now been commenced at Johnson's Gallery, for the first time in California, where Ladies and Gentlemen are invited to call and examine specimens.

Connected with Johnston's Rooms is a Portrait Gallery, also, where Mr. THOMAS S. OFFICER, late of New York, is prepared to execute Portraits on Canvass in elegant and life-like style.

☞ Call and behold the latest triumphs of Art. v4-15

To Farmers, Hotel Keepers, Ranchemen & Others.

BRADSHAW & CO., having removed into their New and Spacious Store, and being regularly supplied from the States by every clipper, enables them to have the largest and best stock of GROCERIES AND PROVISIONS in the State, and at Low Prices.

Sperm, Wax and Adamantine Candles;
Sperm Oil, in 5 gallon tins;
Stuart's Boston and New Orleans Syrups, in 5 and 10 gallon kegs; Spices of all kind; Assorted Herbs and Extracts; Java, Mocha, Manilla and Rio Coffee; Cheese in tin; Chocolate, prepared and cracked Cocoa, and Shells; Tubs, Pails, Brooms, Ground Rock Salt, Pickles, assorted Preserves, Jellies, Jams and Pie Fruit.

N. B. Highest price paid for California Butter and Cheese, corner California and Battery streets, San Francisco. v3-26

MEDICAL.

IT IS A FIXED FACT,

CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most [illegible] on Consumption, says: "The Profession [illegible] unable to [illegible] a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It Is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis. Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

DR. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured at the most disheartening malady. C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four to live. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The more fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

SETH W. FOWLE,

Proprietor, Boston, Mass.

☞ Agents for Sacramento,

v3-16 C. MORRILL, corner K and Third streets.

SANDS' SARSAPARILLA.

IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of *Scrafula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Biles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility,* &c., &c., &c.

THE value of this medicine is now widely known, and every day the field of its usefulness is extended. It is approved, and highly recommended by Physicians, and admitted to be the most powerful and searching preparation from the root, that has ever been employed in medical practice. Its operation extends to the remotest parts of the system, and consists in removing diseased action in the absorbing and secreting organs. In man, Nature seldom effects, unassisted, the cure of any virulent disease, but requires the aid of a stimulant, alterative, or antiseptic medicine. In diseases of the skin and flesh, a combination of these three classes of medical agents is highly desirable. All these properties are combined in this preparation; and instead of operating successively upon the system, as they must necessarily do when taken separately, they operate simultaneously, and in perfect harmony when administered in this form. Its tonic property strengthens the digestion, and improves the appetite. Its alterative tendency carries off the accumulations of morbid matter,—and its antiseptic influence neutralizes the virus, by which the disease is fostered. Its uniform success in curing and relieving the various diseases for which it is recommended, is established by a multitude of attested facts.

From the Army.

MONTEREY, Cal., Jan. 18, 1850.

Messrs. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, that you may lead some other unfortunate creatures to try its effects, and that they may be benefitted as I have been. I arrived here by the overland route, about the first of October last. A few days after I was first attacked with a very disagreeable eruption of the skin, which my physician could not cure. I happened to find your Sarsaparilla advertised in this place, and remembering the celebrity of it in the army, I purchased three bottles, which had the desired effect in removing my difficulty entirely. With thanks, &c.,

J. A. McLEL[illegible], Lieut. U. S. A.

Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, corner of William and New York streets, Druggists, corner of State and [illegible] streets, Albany, and by [illegible] & CO., [illegible] & CO., S. T. [illegible] & CO., [illegible].

v4-3 6m

BOSTON.

S. P. Ruggles' Power Press Manufacturing Co.

[illegible]

THE above-named company has purchased of the well known inventor, S. P. Ruggles, Esq., his Patents connected with the Printing Business, and is now manufacturing under Mr. Ruggles' immediate [illegible] the following machines, viz.:

	Size of Form in Inches.
Half Sheet Combination Engine	13 by 12
Quarto Sheet Combination Engine	12½ by 9
Half Sheet Cap Job Rotary	10½ by 7½
Card and Bill Head Rotary	7 by 4½
Diamond Rotary Card Press	4½ by 3
Circular and Half-fit Hand Press	8 by 6
Embossing Press	18 by 10
Cast Iron Imposing Table	26 by 22
Shaving Machine, shaves	27 by 16
Paper Cutter	cuts 27
Card Cutter, Improved	cuts 25
Bookbinders' Rotary Shears	cuts 25
" " larger size, in proportion.	

These presses are considered by the Job Printers as the best adapted to their wants of any machines ever manufactured.

All orders addressed to their agent, M. B. BIGELOW, 152 Washington street, Boston, Mass., will be promptly attended to.

Mr. Ruggles has also sold to the CUTTING MACHINE MANUFACTURING CO., his Patent ROTATING SHEARS, for cutting sheet tin, iron, copper, brass, zinc, steel, nail and boiler plates, and all other metallic sheets. This is entirely a new process for cutting metals, and is destined to supersede all other machines for that purpose.

ANSON HARDY, Agent,
152 Washington street, Boston.

And to a third company, called the BOSTON HAND STAMP CO., he has sold his patent for a very ingenious Flexible Hand Stamp, whereby perfect impressions may be made at the rate of sixty per minute, the die adapting itself to the surface to be printed on. A very convenient article for all business men.

v4-12 1y M. B. BIGELOW, Agent, Boston.

TO FARMERS.

For the destruction of Canker Worms, Borers, Grubs, &c., &c., &c.

THE MURIATE OF LIME.

A SUPERIOR fertilizer, and certain destroyer of the Canker Worm, and other destructive insects. It has been composted to take the place of mure costly manures, guano, &c., to which it has been pronounced fully equal, and in some respects superior, by those who have tested it during the two past seasons.

As a certain and sure destroyer of the Canker Worm, which has committed such ravages among the fruit trees the past season; of Grubs, Borers and other Worms, which oftentimes render the labor of the farmer of no avail, its qualities have been fully and successfully proved. For this purpose its success (in New England) has been such as to warrant the belief that it will be a sure preventive to the ravages of the Grassbopper, which have been so great the past season in California.

A sample and testimonials from Agriculturists of the first respectability may be seen at the Office of the CALIFORNIA FARMER; and orders sent through Messrs. WARREN & SON will be faithfully fulfilled.

This article is put up in bags of 150 and 200 lbs. each, or in barrels of 220 lbs. JAMES GOULD,

v4-15 3m No. 70 State street, Boston.

HORTICULTURAL, &c.

SMITH'S POMOLOGICAL GARDENS,

American River, 2½ Miles from Sacramento.

THE Proprietor of these extensive Nurseries and Gardens will be prepared to supply all the best varieties of Fruit Trees of the following kinds:

Apple, Pear, Peach, Plum, Cherry, Quince, Nectarine and Apricot; Grape Vines of every valuable variety; Gooseberry, Currant, and Raspberry Vines, &c.

ALSO.

Green House Plants of every rare and beautiful variety Flowers, Shrubs, and Plants, Shade and Ornamental Trees, Bulbous Roots, &c., &c., &c.

These will be ready as soon as the season of transplanting shall commence. Orders will be received at any time, and delivered in the order in which they are booked.

Garden Seeds.

THE Proprietor will also offer a large variety of **Fresh Garden Seeds,** at Wholesale and Retail, of his own raising and putting up. Great care has been taken to select the very best varieties, and to keep them pure and unmixed. They are all of the present year's growth, the same varieties having been used by the Proprietor in his own grounds for the last three years. The produce which has been exhibited in our markets is the best proof of their quality.

The undersigned would be pleased to see purchasers at his grounds, where the produce can always be seen in every stage of growth. [v4-17] A. P. SMITH.

P. S.—I have disposed of my entire stock of Seeds to J. R. RAY, 70 J street, Sacramento, to whom orders for my seeds may be addressed.

Seeds the Growth of 1855.

J. R. RAY, 70 J street, Sacramento, has purchased from Mr. A. P. SMITH his entire crop of Seeds, which, together with some choice foreign importations, constitute the most extensive and desirable stock of seeds on the Pacific Coast.

Fruit and Shade Trees, Flowering Shrub; Strawberry, Asparagus and Rhubarb Plants, &c., always on hand or for sale directly from the Nursery. v4-21

SAN JOSE NURSERY.

THE San Jose Nursery and Gardens, formerly known as L. Provost & Co., is now carried on in all its branches under the immediate eye of the present proprietor, who is sole director and owner of the same, having purchased the interest of his former partner.

L. Provost, the present owner, will now offer to his patrons and friends one of the largest and finest collections of Fruit Trees that can be found in any Nursery in the State, consisting of all the most desirable kinds of Apple, Pear, Plum, Cherry, Peach, Apricot, Nectarines and Quince, with a very extensive lot of Grapes and Figs, a beautiful lot of choice Ornamental Trees of rarest kinds, and Green House Plants in great variety.

The collection of Roses in these Gardens cannot be equalled, for nearly *twenty thousand* of the most beautiful plants, large sizes and rare kinds, can be found here.

Purchasers will be sure to be satisfied if they will visit the Gardens, where they can find much to please them, which the Proprietor will show them with pleasure.

☞ The Nursery is situated in the city of San Jose, immediately above the City Mills. L. PROVOST,

v4-17 Nurseryman and Florist.

PIONEER NURSERY, ALAMEDA.

A. H. MYERS, at the Pioneer Nursery, Alameda, has on hand, for the market this season, at reduced prices, every description of Budded and Grafted Fruit Trees, Vines, etc.,

EMBRACING

Apples—50 best varieties, from one to three years old.
Peach—20 best varieties, from one to two years old.
Pear—10 best varieties, from one to two years old.
Cherry—10 best varieties, from one to two years old.

Also—Almond, Nectarine, Plum, Apricot, Fig Trees, Grape Vines, Currant, Gooseberry and Raspberry Bushes. Four best varieties of Strawberry Plants.

Also—Green-house Plants and Ornamental Shrubbery.

Terms, Cash..... *Orders promptly attended to.*

A. H. MYERS, Proprietor.

☞ Alameda is Eight miles from San Francisco, and Four Miles South of Oakland.

September 9, 1855. v4-11

NAPA NURSERIES.

THE undersigned would call the attention of purchasers of Fruit Trees to their fine collection now in the state for planting out. We would offer the present season as follows: 5,000 Apple Trees, 5,000, Pear Trees, 1,000 Quince Trees; with a fine collection of Ornamental Trees, all of which we will sell at a very low rate.

Our Nursery is situated 11 miles from Napa City. All orders addressed to us there, will be promptly attended to, and Trees will be delivered at Napa City *free of charge for freight*, from thence they can be forwarded to any part of the State, agreeable to instructions given us.

We hope to receive a share of patronage.

v4-21 HAVEN & BAKER, Napa Nurseries.

Fresh Field and Garden Seeds.

THE undersigned receives constantly, by Express, a large variety of Seeds from one of the best establishments in the States, and purchasers may rely with confidence on the purity and freshness of them. Sold wholesale and retail at the Agricultural Seed Store, corner of California and Sansome streets.

Orders for shipment to any part of the country will be carefully executed.

Address by Post Office or Express.

THE IDLER.—The idle man is an annoyance—a nuisance. He is of no benefit to anybody. He is an intruder in the busy thoroughfare of everyday life. He stands in our path, and we push him contemptuously aside! He is of no advantage to anybody. He annoys busy men. He makes them unhappy. He is an unit in society. He may have an income to support him in idleness, or may "sponge" on his good-natured friends. But in either case he is despised. Young man, do something in this busy, bustling, wide-awake world! Move about for the benefit of mankind, if not for yourself. Do not be idle. God's law is, that by the sweat of our brow we shall earn our bread. That law is a good one, and the bread we earn is sweet. Do not be idle. Minutes are too precious to be squandered thoughtlessly. Every man and every women, however exalted, or however humble, can do good in this short life if so inclined; therefore, do not be idle.

HEROISM OF A DOG IN THE CRIMEA.—The following account of the exploits of a dog in the Crimea, which is copied from the Gazette of Trieste, surpasses everything heretofore recorded of the devotion and bravery of that noble animal: A great sensation has been raised in the camp of the Allies by the heroic deeds of a dog belonging to Col. Metman, of the 73d regiment of the line. On the 16th of August, during the battle of the Tchernaya, the quadruped broke his chain, fought in the ranks of the army, saved the life of a sergeant and a soldier, and took three Russian prisoners. A ball struck his foot, but the wound only embittered the animal the more. He threw himself on a Russian officer, flung him to the ground, and took him by the coat collar to the French. A physician has bound up the wound, and the four-footed hero is convalescing.

INGENIOUS.—A man, rather fond of the cider was bitten by a rattlesnake in Virginia, lately. Dr. Thomas, of Monticello, administered a quart of brandy and a gallon and a half of whisky, without causing intoxication. The patient wanted more, but was refused, and in 36 hours he was well. The next day, Mr. H., his next neighbor, was passing along, and saw him with his pants rolled up to his knees, barefooted, and wading round in some weeds and grass. H. asked if he had lost anything. "No, sir." "What are you doing, then?" "I am hunting a snake. There ain't any liquor only what Dr. Thomas has, and he won't let me have any unless I am snake bit, so I am hunting one."

DO AS YOU PROMISE.—There is no necessity for breaking your word. In the first place, never promise any thing unless you know it to be in your power to fulfill; and, in the second place, make up your mind, before you promise, that whatever you do promise you will fulfill. By so doing, you will gain and enjoy the confidence of those around you. When such a character is established, it will be of more value than ermine, gold, or princely diadems.

"MADAM, has your piano an Æolian attachment?" asked Sam the other night, of the wife of a man who appeared to live up to, if not beyond, his income. "Hush," whispered Seth, in in his ear, "it has a Sheriff's attachment!" Sam dropped the subject.

PERUVIAN FEBRIFUGE,

FOR THE PREVENTION AND CURE OF

FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THE usual method of administering tonics produces only temporary relief, merely breaking the chill without removing the disease; but it is necessary to relieve the liver and other organs of the unhealthy action, on which the illness of the patient depends. This can be safely, speedily, and effectually accomplished by this valuable preparation; and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians, with the most signal success. In all climates where bilious and remittent fevers prevail, this remedy will be found invaluable, and no persons traveling through, or residing in, infected and marshy districts, should be without it, as a few doses will effectually counteract the poisonous and miasmal influence arising from such location, by imparting activity and vigor to the biliary organs, and thus prove a sure *preventive* against an attack of Chills and Fever.

The following are selected from the numerous testimonials received, showing the superiority and efficacy of the Peruvian Febrifuge, not only in cases of long standing, but where other remedies had failed:

FLATBUSH, King's Co., N. Y., April 1, 1854.

Messrs. A. B. & D. SANDS: Gentlemen,—I have much pleasure in informing you that I have been entirely cured of the Fever and Ague by the use of your Peruvian Febrifuge, after suffering with it for over two years, and trying all the best known remedies with no success. The Chills could not be broken by using any other medicine, and I am not disposed to cure; but a neighbor was benefited by it, and he advised me recommended me to try it, which I did, and was entirely restored by using less than one bottle, and have had no return of it since. Very respectfully, MICHAEL COX.

GOWANUS, Long Island, N. Y., April 4, 1854.

Messrs. A. B. & D. SANDS: Gentlemen,—Myself and two of my children were afflicted with Fever and Ague, more or less, for about two years, and tried various medicines without any benefit. In October last we were persuaded to use your Peruvian Febrifuge, one bottle of which cured us; and we have not been troubled with it since. I can recommend it to others with the greatest confidence—having known of several cases which have been cured by it after every other medicine failed.

Respectfully yours, M. RAWL.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and BOWARD & CO., Sacramento. v4-19 3m.

MEDICAL.

DR. GUYSOTT'S IMPROVED

Extract of Yellow Dock and Sarsaparilla

Is acknowledged to be the best Sarsaparilla made, as is certified by the Wonderful Cures it has performed.

☞ **Remember this is the only TRUE Original Article.**

This Medicine, when used according to the directions,

Will Cure Without Fail,

Scrofula, or King's Evil, Cancers, Tumors, Eruptions of the Skin, Erysipelas, Chronic Sore Eyes, Ringworm, or Tetter; Scald Head, Rheumatism, Pains in the Bones and Joints, Old Sores and Ulcers, Swelling of the Glands, Syphilis, Dyspepsia, Salt Rheum, Disease of the Kidneys, Loss of Appetite, Disease arising from the use of Mercury, Pain in the Side and the Shoulders, General Debility, Jaundice, and Costiveness.

The Best Female Medicine Known.

The Yellow Dock and Sarsaparilla is peculiarly adapted for females of delicate health, resulting from irregularity of menstrual discharges, and other diseases peculiar to their sex. We assure the afflicted, that a bottle or two of DR. GUYSOTT'S EXTRACT OF YELLOW DOCK AND SARSAPARILLA will at once regulate those difficulties and renew the natural energies.

Syphilis, Scrofula, and Diseased Blood.

DR. GUYSOTT'S IMPROVED EXTRACT OF YELLOW DOCK AND SARSAPARILLA is a true specific. The proprietors have in their possession over one hundred certificates of the most extraordinary cures effected by it. We can safely say—TRY IT. It revives the drooping constitution, eradicates all bad humors from the Blood, and by its tonic properties restores the invalid to health and vigor. As a spring and summer medicine it has no equal. Its singularly efficacious action on the blood, its strengthening and vivifying action on the system, stands pre-eminent above all other Sarsaparillas. If you would have the rose brought back to your cheek, a clear, healthy and transparent skin, and life and vigor infused through the system, take Guysott's Extract of Yellow Dock and Sarsaparilla. It contains more of the pure Honduras Sarsaparilla than any other preparation extant, which is chemically combined with the Extract of Yellow Dock and the Extract of Wild Cherry, thus making the remedy more thoroughly efficient than any other Sarsaparilla before the public. At the same time it is perfectly free from all mineral poisons, which cannot be said of any other Sarsaparilla compounds.

Sold by all the Druggists in California and Oregon.

DR. R. H. McDONALD, Sacramento.

v4-15 RICE & COFFIN, Agents, Marysville.

OXYGENATED BITTERS,

CONTAINING NO ALCOHOL,

A CURE FOR

Dyspepsia, in all its various forms; Heartburn, Habitual Costiveness, Acid Stomach, Loss of Appetite, Nervousness, Coldness of the Extremities, General Debility and Asthma.

THESE Bitters are approved by some of the best physicians, who use them in their practice. Scientific men have more difficulty in overcoming and controlling the various symptoms of Dyspepsia than almost any disease in the world. They are so various, in different individuals and cases, that it has seemed impossible sometimes to obtain even temporary relief from suffering. But a medicine has been discovered which proves, beyond a doubt, that in most cases a permanent cure can be effected. By avoiding stimulants, and using the *Oxygenated Bitters* strictly according to directions, a healthy tone is imparted to the digestive system, and strength to perform its natural functions.

Ample testimony to the truth of this can be had by reference to numerous certificates in possession of the general agents. We have no hesitation in pronouncing the Bitters a sure cure for **DYSPEPSIA.**

From J. C. Dunn, Esq., City Treasurer.

BOSTON, June 6, 1852.

Gentlemen: I have been for some years troubled occasionally with severe attacks of Indigestion; have consulted many physicians, tried Allopathy and Homeopathy, and can truly say, I have received more speedy and effectual relief from the use of *Oxygenated Bitters*, procured from you, than from all other remedies, and most cheerfully recommend them to all who suffer from a similar affliction. Yours truly,

JAMES C. DUNN.

DR. HENRY E. MORRILL, a skillful Physician of New York city, in his remarks on Dyspepsia, says: "The most effectual medicine to improve the tone and energy of the stomach, is that prepared by Dr. George B. Greene, and called the Oxygenated Bitters. I would publish the receipt for preparing this valuable medicine, if I knew what it was, but as I do not, I can only recommend its use. It seems to me to be improperly called 'Bitters,' at least in the popular acceptation of that term, for it contains no Alcohol or other Spirit, and is rather sour than bitter. Though here, by the way, I cannot too earnestly caution the dyspeptic sufferer against using the thousand and one advertised 'Bitters,' the basis of which is alcohol, or other ardent spirits. They impart no real energy to the stomach.

The stimulation which they excite is only temporary, and sure to be followed by a reaction which at length will inevitably wear out the stomach. This medicine obviates these objections. It has been analyzed by that distinguished chemist, Prof Hayes, M. D., *State Assayer of Massachusetts*, who declares that 'the medicinal articles used are those prescribed by the most eminent physicians, for the diseases for which these Bitters have been so eminently successful.' I have employed them in a multitude of cases, and have uniformly found that when used according to the directions, they gradually, but surely, remove, one by one, the various distressing symptoms which cluster around the confirmed dyspepsic, restore to the stomach its lost energies, and thus lead the patient back to the enjoyment of permanent health and strength."

It has also been used by the following persons, and received their unqualified approbation:

Prof. EDWARD E. PHELPS, M. D., Dartmouth College.
Hon. MYRON LAWRENCE, Ex-President Mass. Senate.
" SAMUEL S. PHELPS, U. S. Senator from Vermont.
" J. F. SIMMONS, U. S. Senator from Rhode Island.
" L. H. ARNOLD, formerly Governor of Rhode Island.
" H. D. FENTON, Member of Congress from Pennsylvania.
" SOLOMON FOOT, U. S. Senator from Vermont.

Many other individuals of the highest respectability can be referred to, who will confirm all that has been said in favor of the Oxygenated Bitters

Prepared by DR. GEORGE B. GREEN.

ALBANY AGRICULTURAL WORKS,

ON HAMILTON, LIBERTY AND UNION STREETS;

WAREHOUSE AND SEED STORE,

No. 52 State Street, Albany, N. Y.

The Proprietors of the above-named establishment being the sole owners and manufacturers of

EMERY'S PATENT HORSE POWER, &c.,

☞ ALL ARRANGEMENTS WITH OTHER PARTIES FOR THEIR MANUFACTURE HAVING EXPIRED ☜

have formed a new Copartnership, under the firm name of

EMERY BROTHERS,

And will continue the manufacture and sale of AGRICULTURAL IMPLEMENTS and MACHINERY, as heretofore, at the old stands of EMERY & CO. By this arrangement the united efforts, and interest of the Brothers, long known to the public, are secured, and no exertions will be spared to meet the wishes of those dealing in and using the class of implements they manufacture—their leading branch being the manufacture of the justly celebrated

Emery's Patent Changeable Geered Railroad Horse Powers,

with the machines to be propelled by it, as Threshing Machines, Saw Mills, and Machinery generally.

These Powers having been submitted repeatedly to the most severe tests and trials to determine their relative merit and utility with those of every known manufacturer, have without exception been awarded the highest prizes for superiority—among which were the following:

N. Y. STATE AGRIC'L SOCIETY, 1854, 1853, 1852, 1851, 1850	MARYLAND STATE AGRICULTURAL SOCIETY, 1853
OHIO STATE BOARD OF AGRICUL., 1854, 1853, 1852, 1851	MISSOURI STATE AGRICULTURAL SOCIETY, 1851
MICHIGAN STATE AGRICUL'L SOCIETY, 1853, 1852, 1851	AMERICAN INSTITUTE, ... 1852, 1851
INDIANA STATE AGRICULTURAL SOCIETY, 1853	NEW YORK CRYSTAL PALACE, ... 1853
ILLINOIS STATE AGRICULTURAL SOCIETY, 1853	CANADA PROVINCIAL SOCIETY, ... 1852, 1851
PENNSYLVANIA STATE AGRICULTURAL SOCIETY, 1853	CONNECTICUT STATE AGRICULTURAL FAIR, 1854

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 224 bushels of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both kinds of Powers, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. If the crops be extraordinarily heavy or light, greater or less results will follow.

These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by this Circulars, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and full purchase money refunded if not found acceptable to purchasers.

The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, they hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.

They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery, Implements and Seeds, which are all new and of the most approved and complete kinds extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.

The attention of a discerning public is solicited to our present stock of goods, before selecting and purchasing the coming season.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!

Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishe PERFECT LIKENESSES? Because he has now the most arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

California Stage Company.

Office at the Orleans Hotel, Sacramento.

STAGES leave regularly for the following places: Nevada, Ophir, Auburn, Yankee Jim's, Georgetown, Placerville, Mormon Island, Coloma, Drytown, Jackson, Mokelumne Hill, Stockton, Sonora, Marysville and Shasta, and all parts of the Northern and Southern Mines, every morning, as follows:

Nevada and intermediate places, at 5½ o'clock A. M.
Georgetown " " 6 " "
All other places 6½ " "
Accommodation line for Mormon Island, 1½ o'clock P. M.

All passengers will be called for at their residences, and the utmost attention and care paid to them and their baggage.

Stages arrive in time every day for the San Francisco boats

THE CALIFORNIA FARMER

And Journal of Useful Sciences.

VOL. IV. SACRAMENTO, CALIFORNIA, FRIDAY MORNING, DECEMBER 7, 1855. NO. 23.

The California Farmer

AND JOURNAL OF USEFUL SCIENCES.

By WARREN & SON.

PUBLISHED EVERY FRIDAY MORNING.

[illegible] between J and K, Sacramento.

TERMS.—Six dollars per annum, in advance. For a club of five new subscribers, we will send a sixth copy gratis.

☞ Advertisements in this journal will have a circulation and notice unequaled.

California Agents.

L. P. FISHER, *corner Montgomery and Washington streets, San Francisco, General and Advertising Agent.*
WELLS, FARGO & CO., *at all their Offices in this State.*
PACIFIC EXPRESS COMPANY, *at all their Offices.*
LANGTON & CO., *at all their Offices.*
The FARMER can be found at the following places at all times:
GARDNER & KIRK, *Booksellers, Second street, Sacramento.*
ULLMAN & CO., *P. O. Building, San Francisco.*
BENJ. DODD, *Benicia and Vallejo.*
G. & O. AMY, *Booksellers, Marysville.*

Foreign Agents.

J. Q. A. WARREN, Boston, Mass., *resident Editor and Corresponding Agent for the Eastern States, by whom Subscriptions and Advertisements are received—Office, on Washington street.*
W. V. SPENCER, *Bookseller*, 128 *Washington street; and*
BURNHAM, FROERHEN & CO., *Court street, Boston, will always have the* FARMER *on sale.*
GRAY, ADAMS & HOGG, *Nurserymen, Seedsmen and Florists, Kensington Road, London, will receive Subscriptions for this paper.*
M. DUSACQ, *Bookseller, Paris, will receive Subscriptions.*

Volunteer Agents.

We are desirous of extending our circulation as widely as possible, and being anxious to open the New Year with a generous addition, and to present many improvements and embellishments, we would kindly invite our friends to give us a little portion of their interest at this time. That we may present to them some inducement, we propose that to those who will make us up clubs of five, ten or twenty copies, before the 1st day of January, we will allow them every *fifth* copy for their kind aid; and what person who feels an interest in the productions of our State and its rise and progress, cannot find *eight persons* to join him in subscribing for our journal. They will thus secure one copy for themselves, and one copy to send to a friend in the States, *free of cost.*
May we not anticipate a *New Year's Gift* in this form?

Farm and Stock of L. G. Morris, Esq.,

MOUNT FORDHAM, N. Y.

THIS farm is in the town of Fordham, Westchester county, eleven miles from New York, and accessible by the Harlaem Railroad.

The residence of Mr. Morris is at Fordham, where a portion of his stock is kept, the balance, and the larger portion is upon another large farm some sixteen miles distant, of which we shall speak hereafter.

The grounds about the mansion are tastefully laid out, and in front is a fine lawn, filled with fruit trees of choice kinds. From the grounds may be obtained a view of the Hudson river, and the surrounding scenery. Having thus briefly referred to the farm, we will go on and introduce the stock, which will be found to be most interesting to your readers.

"*Short Horn Cattle.*"—First comes "Duke of Gloster," (red bull) 11,382, calved Sept. 14, 1850, bred by Earl Ducie, Fortworth Court, England, and purchased at the great Ducie sale, in England in 1853, at £682 10s. or about $3,350, he being the highest priced bull, and the male gem. (Cut of the above has been sent you.)

"*Romeo*," red roan bull (13,619), winner of the first prize, in the class of bulls 3 years and upwards, at N. Y. State Show, in 1853: Also, the first prize at "Am. Institute," the same year.

This animal was bred by Marquis of Exeter, Burleigh House, Stamford, and imported from England by Mr. Morris, having been selected by him in 1852. Next came the—

Short Horn Cows—Some twenty-five in number; they were driven out into the lawn, for inspection, and looked finely. Among the first that attracted our attention was—

"Dutchess" 66th, also purchased at the above sale at £735 or about $3,500, she being the highest priced animal there—her heifer calf six weeks old selling at the same time for £325 10s., making £1,060, say $5,300 for cow and calf, to say nothing of the expense of transportation to this country.

Independent of the above, several importations have been made during the past year, by Messrs. Morris & Becar, of animals of the highest merit, to unite with the Bates and Ducie Blood. As I shall send you cuts of the principal animals here, I will then give further notice of such.

Next came the *Ayrshires*, some twenty-five in number, the principal among which were the imported bull "Victor Hugo," and "Aimwell" 1st, 2d and 3d—Tenny, "Minerva Hugo," and "Dutch Lass," in fine condition of [illegible]

The Fowls here are a speckled variety called Dominics, and quite handsome.

As this place is in the transition state from country to city suburbs, it was necessary to purchase some 300 acres more, which farm is about twelve miles distant by railroad, or sixteen miles by road, and to which place we drove in about an hour and a half, over a fine hard road. The whole distance from New York to this place, (which is called "Herdsdale") is about twenty-four miles.

Here are to be seen the Horses, Devon Cattle, Southdown Sheep, and Berkshire Swine.

First came "Frank Quartly," North Devon bull (205), bred by Mr. John Quartly of Moland, Devon, and selected by Mr. Morris in England in 1852. He was the winner of the first prize as a two year old, at the Y. Y. State Fair, in 1853, first prize at the American Institute, same year; first prize at the N. Y. State Show in 1854. A truly splendid fellow he was. He will be at the Boston Exhibition of the U. S. Ag. Society, and ought to take the first prize.

Of Devon Cows and Heifers we saw Birthday (38) imported; Birthday 2d, 3d and 4th; Ruth (1037), Alice (492), Helen (773), Edith (155), and some dozen more, looking in very fine order, and of which I shall speak another time.

We then went to the Shepherd's Cot, which stands in a dog-tight inclosure, of about nine acres, where we saw the imported Southdown ram "Young York," and a yearling son of his, bred by Mr. Morris. There was a very handsome lot of imported and home-bred ewes, preparing for the Exhibition at Boston. With the assistance of a trained dog, the sheep were worked up, to allow an examination, and we were much gratified at their handsome appearance. The flock numbers near a hundred head, and are of the best breed. The whole arrangements about the place, were in perfect keeping, and showed the great improvements which had been made by Mr. Morris.

We saw a very fine lot of White Dorking Fowls, which were cared for by the shepherd's wife, and which particularly attracted our attention. These fowls lay very steadily, even in the coldest weather.

A new road having been laid out over the farm we drove around, and examined the grain fields, and the turnip crop. The farm is undergoing a thorough transformation, and no pains or expense have been spared, bone manure having been freely used. The root crop (turnips, &c.,) comprises alone some eight or nine acres, and will be a very heavy yield. At some little distance were seen a flock of Southdown sheep, some imported and some descended from Mr. Webb's flock, and numbering some 125 in all.

From this we went to the *Horse Barns*. The principal attraction there was the celebrated mare "Fashion," and her three fillies. This distinguished mare was bred by the late William Gibbons, Esq., of Madison, Morris co., N. Y., where she was foaled on the 25th of April, 1837. Trustee, the sire of Fashion, was a distinguished race horse in England, and was foaled in 1829. By reference to the catalogue of Mr. Morris, the whole pedigree of Fashion can be seen, and a richer one could not be found. She is descended from the most eminently distinguished racing families, on the side of both sire and dam, that have figured on the turf for a hundred years and more. "Fashion is of a rich chestnut color, and in form a perfect picture of a race-horse. A list of her performances is given in the catalogue and it will be seen that she has won at [illegible] times some $[illegible]. (I shall send a cut of Fashion, and will then give you more particulars, which will be found interesting to California readers.)

We also saw "Lady Caston," with a colt by her side, sired by "Monarch." "Lady Caston" is a [illegible] bred by James B. Kendall, Esq., of Lexington, Ky. For her pedigree see catalogue of Mr. Morris.

We next saw the [illegible] with this imported [illegible] at the head. They were turned into an apple orchard, where they get a little fallen fruit by way of variety, and a fatter and finer lot I have never seen. Some of them are to be sent to the Boston Exhibition. They cannot fail to draw the prize.

The poultry at this farm are the Black Spanish, and well cared for, as their looks give evidence.

Returning through the farm by another route, we saw the remaining horses—"Cassandra," and several Trustee colts, &c. "Cassandra was bred by the late James Long, Esq., in 1838, and her pedigree is a superior one. On the turf, "Cassandra" proved herself a race-horse of the highest character by winning fourteen races, at all distances, against good competitors, losing only four races, one of them from foul riding.

A fine lot of Berkshire Swine, next attracted our attention. At their head was "Sir Robert," and "Lady Berk." "Sir Robert" was a winner of the 1st prize in his class, at the N. Y. State Fair, Oct. 1854. Lady Berk was also on exhibition with ten pigs, and was highly commended. (We shall have more to say upon Berkshires, in a future letter.)

Buck Lambs.—We saw a fine flock about twenty-five in number, and all sired by "Young York"—three in particular were noticed, winners of the first prize at the N. Y. State Fair, 1854. All the flock owned by Mr. Morris are bred direct from seven different importations, from the celebrated Jonas Webb, England, and he has nothing else on his farm. This department will be fully spoken of in a future letter, when I shall send you *cuts* of the principal prize sheep.

The above description of Mr. Morris' stock is in the form of a visit around the farm, or farms, which visit was enjoyed by the Boston Ed. in September, during a tour through a portion of the State of New York. The visit was a most agreeable one, in many respects, and the polite attention and hospitality shown will long be remembered. The ride through the tract of country between "Fordham," and "Herdsdale," was a most delightful one, rendered especially so by the fine scenery, and the season of the year, when *nature* was changing her *summer* robes for the *brilliant* ones of *autumn*. In conclusion, let me say, that the rest of my *notes* will be used from time to time, in my correspondence, as I intend to draw the attention of the Agriculturists in California to this subject, which should be a prominent one, in a country like California, unsurpassed for its grazing properties, which may be had nearly the year round. To those interested, let me refer them to the advertisement of Mr. Morris, in another column, and I trust that another year may see these valuable breeds of animals grazing in the valleys of Sacramento.

[For the California Farmer]

Cultivate the Basket Willow.

PAJARO RANCH, Santa Cruz Co., Nov 23, 1855.

MESSRS. EDITORS: Will you call the attention of my brother farmers to the importance of the Basket Willow as a crop—a crop at all times marketable at a good price; and a crop that will pay better than wheat, even if wheat should bring as high as 5 cents per pound. This may seem startling and extravagant, but it is a sober fact. Good basket willow has sold during the past ten years brought less than 4 cents per pound, and frequently brings 7 1-2 cents, or $150 per ton. The yield ranges from a ton and a half to two and a quarter tons per acre, and the expense per acre of cultivating, harvesting and preparing for market is not nearly as great as the money per acre on a crop of wheat. [illegible] I only expect [illegible] fire and the [illegible] good willow and [illegible] there are many [illegible] the business [illegible] Pajaro—as [illegible] for.

There are [illegible] and [illegible]

[illegible] best cultivators confine their choice to three of the varieties, viz.: the European Green Willow, (Salix viminalis); Forby's Willow, (Salix forbyana); or the three-stamened willow, (Salix triandra). My experience on the Atlantic side was that the first named is the best; that it yields the best crop; it is easiest cultivated, and grows the fastest—a shoot of 8 or 9 feet long in one year being nothing uncommon. It had a long narrow leaf of a bluish-green on the upper surface, and of a heavy appearance on the under side. The only objection I ever heard against this willow was from farmers in the more northern States, who occasionally complain that when they have a cold, wet summer, a foot or two of the wood at the end of the shoot does not become perfected and is worthless. This objection cannot be of any importance in California—we have no cold, wet summers. I have tried this willow (the Salix viminalis) in this State, and it answers admirably—whether better than the other kinds I cannot say, because I have not tried any other. You will naturally ask, "If you have cultivated the willow here, what has been the result—how much did it produce per acre? what did it cost to produce it and put it in a marketable condition? and what did you get for it?"

In reply I must simply say, "I cannot answer either of your questions." The increase from a dozen cuttings, procured and planted two years ago, has been entirely used in enlarging the plantation, as will also be all the cuttings I can make this year. I do not intend to sell any until I have some six or seven acres in cultivation.

But to return to what I commenced writing about: that is, how to grow willows for market. All know that the willow loves a rich, moist soil near, though not in, water. Therefore, in choosing the ground for your osier plantation, select the flat ground along the edge of the tule or the margin of the river. If the place is subject to an occasional overflow, it will not be any disadvantage, provided that the water does not stand more than a few days at a time, and that the land drains well as soon as the water subsides. Some may answer, why willows will grow in a swamp, or with their roots in a river. Granted. But I am not talking about where willows *will* grow, but about where they can be profitably cultivated as a crop.

Having chosen your ground (which should be fine and rich, and, if somewhat sandy, it will be all the better), plow—plow deep, and if you have a subsoil plow, or can afford to buy one, use it. Then, after leveling the field with a common harrow, plant as soon as the rainy season has fairly set in, unless your land is so situated that winter water will stand upon it and kill the cuttings before they fairly take root, in which case defer your planting until the water has run off in the spring. But even in the latter case, do your plowing in the fall, and lighten up the soil with a heavy harrow just before the spring planting.

When ready to plant, get either one or two year old shoots, (one year old are equally as good as those of two years, and can be purchased cheaper, cut into lengths of from fifteen to eight inches in length, cutting [illegible] so that the butt of each piece shall be [illegible] end. After they are [illegible] in the soil [illegible] as to keep the water [illegible] from [illegible] for spring planting, has perhaps [illegible] with [illegible] in the [illegible]

[illegible]

at the top, and the ground not pressed against the twig at the bottom, it cannot send out roots through the vacancy.

C. N. Bement, of Albany, and Wm. H. Deming, of Fishkill, N. Y., both celebrated cultivators of the willow, recommend that the plants be set in rows three feet apart, and one foot distant from each other in the row. Set this way, each acre will require between 14,000 and 15,000 cuttings. Other cultivators of equal celebrity put more than twice that number to the acre. I would recommend them to be planted in rows eighteen inches apart with the cuttings one foot distant from each other in the row. Such planting will require about 29,000 cuttings per acre, and the plants will not become too much crowded until their fourth or fifth year, after several crops have been gathered, when, by removing every other plant in the row, the remainder will stand eighteen inches by two feet apart, which is as great a distance as they should ever be; and the removed roots will plant three times the original quantity of land.

Your plantation having been made, as above, no further attention is necessary, except to keep the weeds down the first year, and, after the first cutting, to annually go over the plantation and remove the rotten stumps, and also to thin out the side shoots which, until the roots are firmly set and become strong and vigorous, should never be allowed to grow. And even afterwards care must be taken that the roots do not have too much to feed, as two or three straight shoots, eight or ten feet long, are worth more than half a dozen or a dozen three or four feet in length.

Cultivators disagree about the best time for cutting. The fact, I think, is that it makes but little, if any, difference whether they are cut in the fall as soon as the leaves drop off, or in the spring when the sap commences to start. You may, if you deem proper, gather a crop the first fall or spring after planting. Whether it is better to do so or not, you must judge by the size and appearance of your plants. From what I have seen of the willow in this State, I have no hesitation in saying, that so far as my knowledge extends it may be done with perfect safety, as one season here markes the shoots as strong as two seasons on the other side. The first fall after planting my first cuttings, (the ground is at all times moist, but does not overflow, so I felt no fear of the water standing on the stumps long enough to drown them out), I cut off the whole twelve within a few inches of the ground, and got between sixty and seventy fine cuttings which I planted, and all except one of which grew.

After the first year you can cut annually as long as you like. As soon as they are cut, if you intend to send them to market in their rough and least valuable state, dry them perfectly in the sun and tie them up in bundles of a suitable size for handling. But, if you intend to peel them, and thus get their full market value, tie them in bundles as soon as cut and stand their butt ends in a wet or muddy place until you have time to strip off the back. But do not let this operation be delayed longer than a few days, or, at the utmost, a week after they are cut, otherwise the butt ends become discolored and comparatively valueless. After they are peeled, dry them thoroughly or else they will mould badly and be worthless. When entirely dry so that there is no possibility of their moulding, tie them in convenient bundles and send them to market.

There are various plans used for taking off the bark. The most simple, cheap and effective one is described as follows: "The operation of peeling is so very simple that it may be performed by old and infirm persons or children. All the machinery required is an iron fork sixteen inches long, with tines or prongs about half an inch in diameter, tapering towards their tips, and placed sufficiently near each other to pinch the tips. The shank end of the fork is sharpened so that it can be driven firmly into the ground or a log of wood. The operator then sits down before it, and taking a twig by the small end, places it between the prongs and draws it towards him, at the same time slightly pressing the prongs together with his left hand. This strips off the entire bark. Can anything be more simple or more effectual?"

Your friend, V. G. P.

SPLENDID STOCK.—We are happy to announce to our readers that we have completed our plans abroad with our corresponding editor and agent at Boston, to receive every steamer descriptive lists, catalogues and plates of the most valuable stock now in the country, or such as shall be introduced. We are connected by a valuable chain of corresponding subscribers and friends who are largely engaged in importing and raising stock, who will give us every information upon the subject. To the stock raisers of this country this will be of the highest importance, and we trust these efforts to promote their interests will be duly appreciated.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, DECEMBER 7, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

Exchanges.—Will our cotemporaries that exchange with us, have the kindness to direct our papers to *Sacramento.*

Obituary.

AT Brighton, Mass., on the 25th October, CAPT. JOSEPH WARREN, aged 80 years.

We had sat watching till long past the hours of midnight, with that anxiety which many Californians have felt when waiting for news from the "loved ones at home." The mail steamer had been telegraphed, and the river steamer was to bear us wished-for messages. At the first cry of the newsboy we sprang to the office, and taking the Boston Journal, almost mechanically, we were tracing the records of those who had gone from earth, when our eye met the record above. Those who have been like afflicted can only know our pangs. As we gazed upon the record of a loved *Father's death*, we saw and we felt that *He* who gave us being had been laid in the "silent tomb."

Like the rushing of mighty waters came the memories of the past, and we went back to the days of our childhood and recalled how oft amid the bitter cold days of a bleak New England winter, we had been borne in the arms of that dear parent from our school to our home, to shield us from the bitter cold.

Childhood, youth and manhood came in quick succession, and there was still before us the guiding hand of the tender parent to lead, and the strong arm of the father to shield and protect. The many holidays received his welcome smile and gifts, and family gatherings at the annual thanksgiving found us "all there." Years, years, long years, at this festival of home, but one had ever passed since our childhood that had not been blessed by our "father's smile," until we had sought the shores of the Pacific. Nearly seven years have fled since we had been blest with that parent's smile. Hope had been whispering to us that we might ere long bask in the light of both loved parent's smiles; but the sudden summons came, the knell of death had been sounded, the record had glared in our eyes, telling us of the tolling bell, of the slow-moving hearse, of the weeping mourners who were bearing to the tomb the body of a loved one who was "passing on." We hear the bell, we hear the sob and groan, we crowd forward to the solemn train, we lift the lid, there a form reposes—*My Father!*

And such a parent! None were ever more faithful, none were ever more affectionate, none ever more beloved. As thy children knew thee best, so can thy children speak of thy virtues. As thy children loved thee most affectionately, so will they mourn thee, and mourning cherish thy memory. In all the relations of life—of husband, father, brother, friend, neighbor and citizen, thy children knew thou wert true, devoted and faithful, living beloved and leaving none that will not long mourn thee, and none more than *him*, who, far from his native home, has been deprived of the sweet consolation of a last look and a last kiss. That son in his loneliness feels the blow in this distant land, and would pay the tribute affection prompts.

My Father! I see around thy dying bed
My Mother, and her children all—
Nay! seven there had quickly sped,
And you do now their names recall.
Two more, these too, you dying blest,
As you had called them o'er and o'er,
Thy *eldest child*, in distant West;
Another on Pacific's Shore.
Then blessing all thy spirit fled
Back unto *Him*, by whom 'twas given,
The living mourned a LOVED one DEAD,
But knew that loved one, was in HEAVEN.

Our dear Mother, with nine sons and daughters, and thy many grand-children, and the little loved one of the fourth generation, mourn thee.

Thy public trusts have all been nobly filled, thy duties done and well done, thy life of love has been acknowledged by the band of weeping ones around thy grave, thy brothers with the "square and compass," they whom thou didst for long, long years honor as a faithful and devoted brother, have paid thee the tribute of their full affection, and borne thee to thy earthly resting place encircled in the emblems of thy Order; and now thou art with *Him*. They that mourn are comforted, for they hear voices saying—

"Well done good and faithful servant, enter into the joy of thy Lord."

TO READERS.—We would call especial attention to this number of the FARMER; we present many very important communications this issue: The Stock Farm of L. G. Morris, Esq., of Mount Fordham; the Report of the great U. S. Stock Show; the important action of the citizens of San Joaquin; Smut in Wheat; the important Flour and Grain Circular of Messrs. Pope & Co., and many other important subjects. We ask indulgence for some articles promised; they are on file, but crowded out—the space was needed for the Reports from the East. They will appear next week.

CORRECTION.—In number 13 of the FARMER, we published a cut of that splendid bull the *Duke of Gloster*. This appeared in connection with the descriptive account of the beautiful Farm and Stock of Jonathan Thorne, Esq., of Thornedale. By an omission in receiving the schedule of the pedigree of the animal, it was supposed to belong to the Thornedale stock. This animal belongs to Lewis G. Morris, Esq., a descriptive account of whose extensive estates and Stock Farm we present to-day. We shall with next number commence the plates of stock alluded to, which have been delayed by not receiving the descriptions of them.

SPLENDID APPLES—Too fine to specify—too large to describe. A case of Oregon Apples for exhibition, has been received at the State Society's Rooms. Come and see. Will report next week.

Stockton Asylum.

WE have been very much gratified by a visit we paid to this celebrated institution of our State. Melancholy as it ever must be to see the "wreck of mind," and to wander from room to room, amid hundreds of our fellow beings from whom the light of reason is shut out, yet it is a cheering thought to know the Commonwealth has a soul, and the people all as one are touched with true feeling, and have here, in California so well, so nobly, provided for this heavily afflicted portion of our fellow beings, whose lot has been cast where our care and sympathy can be shown to them.

By the kind courtesy of Robert K. Reid, Esq., Resident Physician, we were shown over the whole establishment. We spent several hours in the various departments, receiving many of the particulars in the histories of some of the patients, in examining the conveniences and comforts here provided for them, and in viewing the handsome cabinets in natural history, collected during five years, by the Doctor. We walked over the gardens and grounds yet unfinished, and noticed the designs and plans yet in embryo, which if they can be but properly carried out, this Institution will reflect honor upon the State and confer a blessing upon suffering humanity.

We learned from the authorities that there are at present in the Asylum 167 patients, of which 24 are females. As we passed over the building we could not but admire the order, neatness and perfect cleanliness that prevailed. Every room was provided with very neat and comfortable bedsteads (iron, for safety and cleanliness), bedding, good sheets, blankets, &c. We saw men in all stages of lunacy, from the speechless, the idiotic, to the manacled madman. We felt relieved to see that *leather bands* were the *only* manacles used, and these only on an ungovernable few, whose fighting propensities required it.

How deeply painful is it to recognize among those whose reason is overthrown, one whom you have known and respected; and yet this must often be the case when, in a State like ours, so many causes are at work to promote insanity.

We had examined every portion of the building and all the plans, medical, physical, and domestic, when leaving the building we came to the grounds outside; here we were pleased to see sufficient attention had been given to design, by a fine space left for a garden and park; but we regretted to learn that no means had been provided to lay out and mature the grounds around the building.

This we esteem one of the essential comforts for the patients of an insane asylum. If there is one plan more than another that aids to the restoring of a mind diseased, it is the garden walk—

Where trees and shady bowers
And beauteous blooming flowers
Their fragrance give;
Here will a mind diseased
With nature's voice be pleased—
Restored, still live.

We could not but notice how different were the movements and actions of those unfortunate sufferers of the gentler sex, while in the garden, from what in the asylum. They seemed to feel 'tis a prison. As we once approached the asylum, we heard a plaintive cry—"Doctor! I want to come out!" We could not but feel that the free air and earth, and a joyous freedom would do more to heal the malady than all other plans united. We hope our State Government will take measures to have the grounds around this noble structure made as attractive and as beautiful as possible, so that strangers shall see we are truly humane.

We again entered the building to examine the very fine collection of Dr. Reid, in his cabinet and rooms. The Doctor's cabinet of mineral and geological specimens is most creditable to him, and being of his own individual gathering, is of high merit. The collection of birds comprises the great Mexican vulture, the pelican, eagles, owls, &c., some 150 specimens. Of the animals are the grizzly, elk, antelope, wild cat, coyote, mountain cat, fox, hare, and smaller animals—some 150 specimens. Then of the shell-fish are lobsters, oysters, crabs, &c., in full variety, and are most interesting. We do not think there is a finer collection in the country.

We were struck with a very beautiful sketch of the Asylum, taken, as we learned from the Doctor, by quite a young man who was recently under his care. The process was entirely new; the drawing paper being covered with a composition first, and the building and grounds then drawn by a sharp instrument, by erasing the composition. The sketch is a most perfect one in all its features and outlines, and reflects the highest credit upon the young artist, whose name we learn to be Walton Vanloan, an estimable young man now in the employ of Messrs. Lecount & Strong, of San Francisco. Such evidences of a high order of artistical skill we trust will be encouraged and brought into notice.

The courtesy shown us at the Asylum and the interesting associations of the visit will long be remembered. We feel our State is most fortunate indeed in so efficient and worthy an officer as Dr. Reid; we trust he will be sustained in his plans for the furtherance of good to the institution, those committed to his care, and to the property of the State. We were indebted to the Doctor for valuable statistical reports, of which we shall hereafter speak.

Educate! Educate!!

BELIEVING it our duty to urge the subject of education at all times, and to use all the means in our power to promote it, we avail ourselves of every opportunity to investigate the subject and whenever we find ourselves in the vicinity of an institution of learning, or country school-house, we feel a desire to enter and witness these crucibles of human thought, and to watch the process of "separating the gold from the dross."

We have been a gold digger, and have rocked the "cradle" many a day at the river side. We have worked at the "sluice" and have pounded the "quartz," all to obtain gold; and the processes of education are as various as gold seeking.

We are sometimes pained upon entering a school room of young children to see them cribbed and cooped into a close, ill-ventilated school room, sixty, seventy or eighty little ones and *one teacher*, and here for long, long hours—two long sessions—these humans are drilled, more like soldiers preparing for battle, than young and tender children whose plastic minds are to be moulded into intelligence. But we are occasionally cheered by finding in one of these earthly dwellings a temple fit for a "living soul," and there a priceless teacher who knows the value of a soul. It is then we feel the value of education, for we see an interest felt that we know will make an impress for good.

We enjoyed a refreshing upon this subject while at Stockton recently. Meeting with the superintendent of schools, Mr. Buffington, we by invitation visited the two female schools; one under the charge of Miss Hutchinson, the other under the charge of Miss Thomas. Rarely have we been more pleased and gratified, than by the visit to these most excellent schools. As we approached the schools we were struck with the good care evinced by those having the charge of the them in giving a fine yard room outside for exercise and recreation; and upon entering we were more than pleased by the superior arrangement of the school room, the convenience and comfort of the benches, the ventilation of the rooms, and the neatness that presented itself in every thing appertaining to the school. We spent an hour and a-half in the school of Miss Hutchinson and listened to the various readings and recitations of the scholars. We conversed with them, and think that the scholars under the care of such a teacher will make rapid progress, judging from the appearance of the bright, sweet faces we saw. Happiness was stamped upon the faces of all, and their lessons were a pastime, not a task! We listened to their joyous singing, and its lovely melody has left its echoing sound with us still.

We next spent about an equal amount of time in the school of Miss Thomas, and here the recitations were very prompt, the reading most excellent. It was a real pleasure thus to break away from the busy world, and steal in among a group of loving, laughing faces, and hold communion with innocent hearts. These schools number each about thirty scholars, a goodly number for one teacher. We think few teachers in our State can present a fairer group of Misses, and very few more intelligent ones; and as for joyous spirits, we know of none to surpass these two schools, unless we except the excellent institution of Miss Atkins, of Benicia, and that being a private school, with extra facilities and many superior teachers, it was expected to reach, as it has, its high station.

Well may Stockton be proud of these schools, and too much praise cannot be accorded to the superintendent of the schools and his co-operators for their excellence. It is a proof they feel their responsibility and mean to acquit themselves of it. We trust they will receive from those parents who confide their children to them, that sympathy, that attention, and that respect which teachers of youth should always receive, who have their heart in the work. If parents would have their children well educated, let them regard the school teachers as their friends and the friends of their children. The teachers should often be

found in the houses of their pupils and when they see their parents show respect to the teacher then the children will likewise respect them. Children take the words and acts of their parents as their guide, and when they see their parents manifest respect and honor for the school teachers, they will also look up to them as their guide; and when the parents or guardians of children fail in this duty, the children lose respect and confidence, and all efforts in teaching are lost.

We have spoken more than we intended, but it is a subject in which we feel a deep interest, and one which we have been engaged in for years and therefore know its needs.

These two schools of Stockton we esteem most excellent examples of success in teachers, excellent examples of school house and grounds, and we hope ere long to record many such, especially in the female department: for we repeat, educate the girls. When we see *educated mothers*, we shall not fear for the boys.

New Publication for the Young.

THE STUDENT AND SCHOOLMASTER.—We have received the first number of the *new series* of this highly popular and interesting work, commencing with November, and it gives us great pleasure to commend it to all our readers, especially those interested in the education of the young, as the most useful and attractive Magazine that has yet been published. It has been long and favorably known for its encouragement of youth in self-improvement, for its admirable adaptation to all members of the family, and for useful instruction. As a class reader, it has awakened an interest before unknown in the school-room. For this purpose it has been adopted by Boards of Education in several States as a School Reader, and is receiving the hearty approbation of teachers, parents, and pupils, while every month enlarges its sphere of usefulness. Its articles are carefully and ably prepared by the editors, Messrs. N. A. Calkins and A. R. Phippen; and embrace the Sciences and the Arts, History, Poetry, Travels, Discoveries, Anecdotes, Speeches marked for inflection and gesture, Dialogues, Music, etc., and Chart, giving instruction to readers and speakers.

We would recommend teachers to get up clubs in their schools. The terms are very reasonable. only $1 00 a year, in advance; five copies, $5; fifteen copies, $10. It is published on the first day of every month, by Robinson & Richardson, 119 Washington street, Boston, Mass.

N. B.—The CALIFORNIA FARMER Office, Boston, is at the above place, and the agent may be always found there.

Copies may be seen at our office, Sacramento.

Flouring Mills of Stockton.

WHILE in Stockton the past week, we seized the opportunity to examine the Flouring Mills, and found much to interest.

The *San Joaquin Mill*, recently owned by Paige & Webster, but now by Wm. Neely Thompson, Esq., of San Francisco, is a large and very fine three-story brick Mill, with six run of stone; four for wheat, one for barley, and one for middlings. The mill is driven by a fine engine of seventy-five horse power—a half-beam engine, as they are termed; we believe this is the only one of the kind in any mill in the country. This mill, which runs day and night, turns out two hundred and twenty-five barrels per day, and the flour finds ready sale.

P. O. C. Newell is the miller. Grimes' Smut Mill is used here; in addition to which, Newell's new patent is also used, and gives great promise. Mr. N. thinks the grain is not so heavy this year, by two or three pounds per bushel.

Stockton City Mill, owned by Sperry & Baldwin; this is a large and spacious wooden Mill, with brick warehouse. The Mill has four run of stone, steam engine of thirty-horse power, and turns out one hundred barrels per day—very superior flour. This mill uses Grimes' Smut Mill, and runs day and night. A. Burkett, miller. He estimates the grain to fall short about three pounds to the bushel, from last year.

Agnew Mills.—These Mills have three run of stone—two for wheat, and one for barley. They also use Grimes' Smut Mill, and turn out seventy-five barrels per day, very superior flour. They believe the grain falls about three pounds short on weight this year to the last. H. S. Sargent & Co., owners of these mills, use the Sander's Winnower and Blower, and the Harrison stone. These also run night and day, and find a ready market for all they can do.

The above three mills turn out *four hundred barrels* [illegible] per day, and all find ready market—[illegible] as to require their running all the time. This speaks well for our State.

The Catawba Grape.

WE trust particular attention will be given to the cultivation of the Catawba Grape, the coming season. We believe it will be found a superior kind for California; and it is to be hoped more care will be bestowed upon the grape in its culture, than has yet been given to it. That the vine will *grow* any where in California, is admitted; but that it will succeed and produce a *good* crop of *fine* grapes without much cultivation, is another thing.

The grape requires a good, deep, rich and well-pulverized soil; our hill sides can be made the best vineyards, if the ground is properly prepared. No vineyard should be planted without first thoroughly subsoiling the land. Subsoil our hill sides—plow in the scattering bones and waste manure that lay scattered upon the ranch, and the vineyard that may be established there will support a family in luxury. Who will try the Catawba? See the following:

Catawba.—The Cincinnati Chamber of Commerce, in a recent report on the business of that city, states that there are no less than 2,000 acres of Catawba vines in cultivation in the vicinity of Cincinnati, of which 1,600 are in full bearing; and that by the average production of the past few years, this area will yield 700,000 gallons annually, and in a very short time must be greatly increased.

LANGTON & Co.—In our advertising columns the new advertisement of this house will be found, and it affords us much pleasure to make known the steady onward progress, and the increasing influence this house has been steadily making for some time past. By the new arrangement it will be seen that very important additions have been made and that by uniting their business with the house of Messrs. Stone & Wilkinson, they have given it great additional weight in character and influence at home and abroad. Langton & Co. are well and widely, as well as favorably known as expressmen; Messrs. Stone & Wilkinson, known as bankers. Capt. Stone, so favorably known as commander of the military department at Benicia, has won an enviable fame, which now united in business in this connection, cannot but secure a wide influence.

The House now consists of the two firms, united as seen in the advertisement, and they will carry on a Banking and Express business at Downieville and Marysville, and an Express business *only* at Sacramento, and all their other routes throughout the State. This House then connects with Freeman & Co., to the Atlantic States and Europe.

Langton & Co. thus firmly established in the confidence and good will of the people, can expect to receive, as they assuredly will, a full share of their favor also.

WE take pleasure in giving notice of a Public Address, which is to be delivered on Tuesday Evening next, at Musical Hall, San Francisco, by Gen. Van Voorhees, before the Mechanics' Institute. We hope a general and earnest interest will be manifested for the occasion.

Literary Announcements.

Messrs. John P. Jewett & Co. Boston, have in press, to be issued this winter, several very valuable works, among which we announce the following:

A History of India, Ancient and Modern—by Dr. Allen, for twenty-five years a Missionary of the American Board. This will be a valuable standard book. In one octavo volume of 600 pages, with a map, price $2. Will be ready Nov. 1st.

Glances and Glimpses, or Fifty Years of Social, comprising Twenty Years of Professional Life—by Harriet K. Hunt, M. D. This will be a work of uncommon interest, and will have an immense sale. Miss Hunt has been a person of mark for many years. The book will make a 12mo. volume of about 400 pages, price $1. Ready Dec. 1st.

"The Communion Sabbath"—a new volume, by Dr. Adams, written with the fervor and elegance which have characterized the writings of this author. 12mo. volume, price $1. Ready in December.

Sanborn, Carter & Bazin, Boston, will publish about the 1st of November, in one volume, embellished with [illegible] illustrations, "The Age of Fable," or Stories of Gods and Heroes—by Thos. Bulfinch. The book will be a desirable one, being the source from which poets and authors draw their illustrations, &c.

Shepard Clark & Co. Boston, announce for Nov. 1, a great work, entitled—"Lucy Boston" or Woman's Rights and Spiritualism—illustrating the follies and delusions of the nineteenth century. By Fred. Folio. "The tide of follies let loose." This book will have a great run.

Dix & Edwards, Park Place, New York, announce for the beginning of the year, the well known Magazine, "Sharpe's Ferrier," will pass into their hands, and it is their intention to make it excel any publication for children, ever issued in this country or elsewhere.

A new weekly paper to be called "The Portfolio" is to make its appearance the first of November, in the city of Boston, to be edited by J. S. Sleeper & Co. It will contain a literary variety of matter, a poem and poetry, original and selected, including tales and translations from foreign authors, and a page for [illegible] and [illegible]. It is to be printed with new [illegible] the same size of the Saturday Evening Post, well known [illegible] Journal will be [illegible], we may expect nothing but a first class paper. [illegible] a year, [illegible] in advance and [illegible] issued at [illegible] Washington [illegible] ton, will be [illegible] Da Quincy

Produce Market.

MONTHLY CIRCULAR OF GEO. G. POPE AND CO.

SAN FRANCISCO, Dec. 1, 1855.

THE receipts of produce during the past, have been much less than in any previous month since harvest, and although the demand that existed in the first fortnight was very light, yet the past two weeks have been marked by an active inquiry, arising from a demand both for export and also for local and interior wants. Sales were very light until the 15th, since when large parcels of Chili Flour in bond have been taken for export, as also, considerable parcels of Domestic, details of which will be noted in further review. The diminished receipts of Grain during the early part of the month might have been attributed to the lessened demand, had it not continued to be the case in the latter part, when an active inquiry prevailed, and we are forced to the conclusion that the greater portion of our crops have already been brought to market.

In our last Circular we referred to the advices of a large deficit in the crops of Great Britain and Europe, which would have to be met by exports from the United States. We have since been advised that large orders were in course of being filled in New York, purchases to the extent of 100,000 bbls. Flour having been made in one day, in that market, and we also hear that parties who were purchasing for foreign account had their agents in Chicago and other western cities, who had bought freely at extreme rates.

The advices received in New York, by the Baltic, that arrived just previous to departure of the California mail, brought intelligence of a farther advance in Liverpool of two shillings per bbl. for American flour, which led holders to advance their pretensions 25 to 37 1-2 cents per bbl., the market closing firm with an upward tendency. From Australia, we have advices to September 15th, at which date a reaction had taken place in the market for flour, and prices were ruling at £35 per ton, in Sydney; an advance of £5 to £8, since dates previously received. It is now certain, that stimulated by the high rates which our farmers have realized for their crops this season, a much greater breadth of land will be cultivated and a production far in excess of our own wants may be looked for.

Henceforth we are to be exporters, and prices here will be governed by those ruling in the marts to which we may export, and we would therefore the more earnestly call the attention of our farmers to the necessity of exercising greater care in the selection of the seed, and giving more attention to the cleaning of their grain from foul seed previous to marketing; as more discrimination will be shown in the future by buyers than has been in the past. The shipments which have been made this season, have almost without exception, reached the point of destination in most excellent order, eliciting high praise as to quality, weight, etc., of grain; but at the same time complaints have arisen from the causes above mentioned.

We would call the attention of our friends to the fact that there is an extensive packing establishment now in operation in our city, and already large orders for both beef and pork, to supply the vessels of war in our port have been filled: should farther experience show that this business can be carried on with profit, (of which there is now but little doubt), it will open to farmers a market for their pork and beef, of which they have hitherto been greatly in want, as they can raise enough to meet the wants of the entire State, and by retaining here the large amounts that have hitherto been paid to the Eastern States, for beef, pork, hams, bacon, lard, &c., add largely to the aggregate wealth.

FLOUR—The transactions during the early part of November, were extremely limited, being confined almost entirely to parcels taken for the interior and the supply of local wants at $9a10. Parties were in the market to buy for export, but the unfavorable character of Australia and Chili advices, to which we alluded in our last circular, led them to reduce the limit at which they were willing to purchase, while holders confident of a gradual appreciation of rates were firm in their demands. The John L. Stephens arrived on 13th November, bringing orders to purchase on English account, which led to a more animated inquiry, and large sales of domestic and Chili flour were effected. We are cognizant of 30,000 quarter sacks domestic, being taken at $8a8 50 and also some considerable parcels of Chili in bond, at $7a7 50 particulars of which have been kept private. The bark What Cheer has nearly completed loading for Australia, and the ship Mary Spencer, having the larger portion of her cargo engaged has been placed on the berth for Liverpool. At the close we consider prices as favoring holders, rates being well established at $9 50a $10 50 for superfine and extra for domestic consumption, while at the same time for such lots as are taken for export a concession is made by [illegible] miller; sales being made at $8 [illegible] with the express condition that the parcels [illegible] exported and not offered to remain in the market. Sales for the month as reported are, 22[illegible] bbls domestic 5,82[illegible]ls. Chili [illegible] Oregon, 2,50 Haxall and Gallego. Total [illegible] barrels.

WHEAT—The quantity [illegible] has been extremely light and [illegible] for the wants of the millers, who have [illegible] been compelled to resort to [illegible] were in store, which they had reserved for a better [illegible]. Sales [illegible] by parties [illegible] ment at a higher rate, [illegible] [illegible] [illegible]

The Great Exhibition of the U. S. Agricultural Society, at Boston.

The Great Exhibition opened to-day (the 22d Oct.) under the most favorable auspices. The weather was clear, with a cool westerly breeze prevailing, and the sun beamed forth in unwonted splendor, to enliven the scene. The grounds look finely; around the entire course were the cattle pens, covered with canvas, which had a very neat effect.

In the inclosure are the President's Marquee, the Marshal's Tent, the Reporters' quarters, and the Judges' Stand, all gaily decorated with flags. The entries have been quite numerous, the stalls are nearly all filled, and the show of stock is *superior* to any ever made at any previous fair; these have attracted universal admiration and attention. The scene in the race course, is beyond anything ever before seen. At precisely 10 o'clock the exercises of the day were opened by a brief address from the President, followed by music from the band. The Grand Cavaleade was then formed, composed of the horses on exhibition. The procession was imposing and contained 250 of the noblest steeds ever collected. I send you the names, though you may not find room for all. It was indeed a splendid sight, and of a novel character. After this, trials of speed followed, and the greatest excitement was manifested. thousands of visitors being unable to obtain a sight even, so great was the crowd.

The second day, a driving northeast wind prevailed, which with a soaking rain, quite spoiled all the arrangements for the day. At the Committee Room, a meeting was held, and President Wilder proposed deferring the programme, till the first pleasant day, saying that the Fair should take place, in fine weather, if they had to wait for it. This was received with hearty cheers.

The arrangements were perfect for the accommodation of visitors. Seats for 6000 have been erected, facing the track. The admission fee is twenty-five cents, and twenty-five cents extra for seats. Boston is alive with strangers, and the hotels are crowded to overflowing.

Third Day.—The weather is clear and delightful, and thousands are crowding the streets, on their way to the Fair. It being a public holiday, the whole city is in a general tumult, and the general centre of attraction is the Fair grounds.

Want of room will prevent us from giving the *full report sent us*, as it would occupy an *entire* paper; but we will give a few outlines of the *order* of the programme, with the Banquet, &c., and description of Stock and list of premiums.

Friday, the fourth day of the Exhibition, was the principal day, as it was announced that in the afternoon the grand Banquet would take place under Wright's Mammoth Tent. The crowd commenced pouring into the ground at an early hour, and by noon the number was estimated at about 50,000 people.

The Banquet was the grand feature of the occasion, and seats were ready for 2000 people, and all were filled. The scene can never be forgotten, for it was as intellectual an assemblage as ever gathered together at any Agricultural Banquet. The tent was *gracefully* ornamented with the different national flags, and gas fixtures arranged throughout the tent, making a very imposing appearance.

The assemblage was called to order by the President, who called upon Rev. Dr. Lothrop for a blessing, after which the repast was duly *discussed*, when thanks were offered by Rev. Dr. Kirk.

The President, Hon. M. P. Wilder, then arose and made a very appropriate speech, after which music from the band followed, and then came the regular toasts and speeches. But as the speeches were of some length, we have not room to report them in our columns, and can only allude to a few of the speakers.

The first sentiment, to "Massachusetts," and the second to "Boston," were responded to by his Excellency Gov. Gardner, and his Honor Mayor Smith. The first was an excellent one. "Massachusetts,—her first men were her best Farmers; they planted the Tree of Liberty, beneath whose grateful shade, their children may repose in peace and prosperity."

Speeches followed from Hon. John C. Gray, Pres. of the Mass. Ag. Soc.; Hon. R. C. Winthrop, whose remarks were very felicitous and warmly applauded; Hon. Edward Everett; Morton McMichael, Esq., the distinguished editor of the Philadelphia North American. This was the most eloquent speech of the evening, bringing down thunders of applause, and at its close, three hearty cheers were given. An appropriate sentiment called out Col. Thompson, President of the Board of Agriculture at the West, who spoke with pleasure of the warm feeling, rapidly growing up between the American's of the British Provinces and those of the United States. He stated the fact, that Canada West produced more fine wheat than any portion of America with an equal number of inhabitants. Three hearty cheers were then given for *Queen Victoria*.

Hon. John A. King, ex-Pres. of the N. Y. State Ag. Society, being called upon made some very appropriate and pleasing remarks, and closed with the following sentiment—"The citizens of Boston; the intelligent and munificent patrons of the Farmer's Festival." Other speakers followed, and the gas being lighted, the scene was a brilliant one.

The award of premiums was then read by the Secretary of the Society, Wm. S. King, Esq., of Roxbury, and being of great length, I send you the report entire, for you to use as you may have room. The company then retired, the lights were extinguished, and the Banquet Hall was left silent and deserted.

Saturday, the last day, the morning was a fine one, at the commencement, and occupied principally in trotting, by amateur parties. About 12 o'clock, a smart shower passed over the grounds, and scattered a good portion of the multitude. But in the early part of the afternoon the weather assumed a more cheerful appearance, and the crowds began to fill the grounds until every seat was filled, and thousands scattered round the race course. There was some fine trotting, and said to be the *best* of any previous day. As the shades of night began to fall, the crowds began to leave the grounds, and the *end* of the Grand Exhibition drew nigh.

The whole Fair has been a complete success, and one which has entitled a civic crown to the energetic President, Hon. M. P. Wilder, through whose tact and foresight the public are indebted for the great perfection of the whole display. To the various committees great credit is also awarded for their devotion to their important duties. We must not forget the able and courteous Secretary of the Society, Wm. S. King, Esq., who was always on hand. The Exhibition has been a remarkable one, and will long be remembered by all who witnessed it. The receipts are estimated at nearly $50,000, sufficient to cover all expenses and leave a surplus in the treasury of the Society. A short description of the Stock Department, and I am done.

The Devon Stock was very fine. The herds of L. G. Morris, C. S. Wainwright, and E. G. Faile, of New York, were well represented and attracted general attention. We have not room to go into a description of each animal, but will mention "Kate Kearny," "Moss Rose," and others from C. S. Wainwright, of Dutchess co., very handsome animals. B. V. French, Braintree, Mass. made a good display.

Of Short Horns, Messrs. Morris & Becar, of Westchester co. N. Y. exhibited some 18 head, the finest collection on the grounds.

Southdown Sheep—L. G. Morris exhibited 14 head, which were the best ever shown at any American exhibition. The yearlings were noted for their beauty and symmetry. Of Buck Lambs, "Young York" was the observed of all.

In Swine, the show was good, but L. G. Morris bore off the palm, having the finest stock of Berkshires and Essex that has ever been seen in the country. He also had a number of Berkshires on exhibition, but not entered for competition. Our *opinion* in regard to his stock, seen at Fordham, was more than verified.

The list of prizes I send you is complete, and from it may be taken the following:

First premium on Durham Bulls to "Romeo," property of L. G. Morris; 2d to Paoli Lathrop, South Hadley, Mass.

Devon Cattle—first premium of $100 each to L. G. Morris and C. S. Wainwright.

Horses—"Fashion," property of L. G. Morris, took the first prize of $150. Discretionary premiums were also awarded to "Etiquette," and "A La Mode," and the committee subsequently voted $25 each to the above fine animals—all owned by L. G. Morris, Mount Fordham.

We have not time to report more, but the list I send you will be sufficient to show that the best prizes in most of the departments were awarded to Messrs. Morris & Becar, and not without cause, for their *several* departments were *strongly and handsomely represented*.

In conclusion, we must not forget the "Reporters' Tent," which was under the charge of Mr. John M. Oxton, Marshal of the Tent. His uniform courtesy, politeness and attention to all the *reporters*, were noticed, and reflected great credit upon him for the faithful performance of his duties; a better selection could not have been made.

De Quincey.

The manufacture of paper from numerous kinds of grasses, straw and wood, is by no means a new thing. Jacob Christian Scaffers, a German theologican, printed a book in 1772, on sixty specimens of paper, made from as many substances, such as straw, wood of various kinds, willows, etc., and a number of grasses.—*Exchange.*

The Right Action.

We take pleasure in publishing from the San Joaquin Republican the report of the doings of the Agricultural and Mechanical Association of the county of San Joaquin. We call the attention of other counties to the value of such action, and we rejoice to see this union of those two great interests—the Agricultural and Mechanical. This is a sure guarantee of success to both. Having met each of the gentlemen, we feel assured their hearts are in the work. It now remains the duty of the citizens of the county to rally and support them.

MEETING OF THE AGRICULTURISTS' AND MECHANICS' ASSOCIATION.

The Agriculturists' and Mechanics' Association convened, pursuant to notice, at the City Hall, on the 5th Nov. This being the first quarterly meeting of the Society, it was looked upon with considerable interest, as the first great effort to stimulate united action upon the producing interests of this county. The number in attendance was gratifyingly large, and gave ample proof that before the year closes a large and efficient Society will exist in our midst, which will do immense good, not only in exciting judicious experiments in all departments of productive labor, but will be a powerful auxilliary to the efforts which may be made through other channels to increase our population, by the extensive circulation of reliable data as to the immense and various productions of our soil, and the thousand advantages which the southern portion of this great valley offers to industry and energy of all descriptions.

The President, M. Walthal, Esq., upon taking the chair, read a lengthy and able paper, setting forth the unusual advantages which the peculiarity of our soil and climate offered to agricultural enterprise. The numerous localities which are interspersed over the whole area of the State, with an equal diversity of soil and climate, adapted not only to the peculiar tacts and habitudes of the farmer himself, but to the luxuriant and continuous growth of every species of vegetation and fruits known to civilized uses, was a feature of unerring index to the rapidly progressing wealth and population of this State. Some interesting views in regard to the production of rice and cotton, and the reclamation of our overflowed lands; also, some instructive hints as to the policy the farmer should pursue to meet with the greatest success, were duly considered.

Numerous obstacles to agricultural advancement were amply set forth, together with the remedies, to be mainly acquired through legislative action. The paper embraced so wide a range of interesting and instructive topics, that an extended synopsis cannot here be given.

Judge Baino followed, with a series of valuable resolutions, which he ably supported in an interesting speech of thirty minutes. He said, the idea prevalent that we were not sufficiently advanced to derive material benefits from systematic and scientific farming was absurd. That every Farmer was capable of one or two experiments, which, when brought together in the annual reports of this society, would furnish not only an interesting but highly valuable compendium of facts to guide successful industry. Every farmer in the State was interested in the speedy development of our vast resources, and by forming these associations, in which not only the most valuable statistics were collected and circulated, but a free and extensive interchange of views and plans made and brought to bear upon the various obstacles to agricultural success, every farmer in the county was pecuniarly benefited, and when the great objects of this society were generally known and felt, here, as in the older States, there would exist a development of agricultural products that would astonish the cultivators of the old world. The following resolutions were then read, as offered by Judge A. C. Baino, which, after some interesting remarks by Mr. A. C. Bradford, were adopted:

Resolved, That it be recommended to the farmers in each township in this county to form two subordinate societies in each, to aid in carrying out the purposes we have in view; and that other counties be requested to adopt a similar plan.

Resolved, That a committee of —— persons be appointed to correspond with other societies, and by other means to ascertain, after each seeding, the number of acres of wheat, oats, potatoes, &c., and the amount of yield per acre of the same, and transmit the same to each subordinate township society, and to the State Society, the latter of which shall in return report the compiled statistics to each county society, as soon as practicable, after the statistics are gathered; so that the farmers of the State may have an accurate approximate basis upon which to estimate the amount and value of their crops.

Resolved, That the State Agricultural Society, be requested to appoint three committees upon staples, to-wit: One to ascertain quarterly, the amount and kinds of grain imported; one to ascertain the amount of sugar, tea and coffee imported, and one to ascertain the amount of bacon butter, lard and cheese imported; and that the State Society be requested to report those statistics quarterly to the county societies, and the latter to the township societies, in order that the farming interest may be always informed of the staples, and to some extent the value of their own and imported productions.

Mr. Bradford then moved that a committee of three be appointed by the president to gather statistics and such other general information, pertaining to the development of this portion of the State and its requirements in futuro, and to lay the same, from time to time, before the public—especially abroad, in order, if possible, to draw the attention of the immigration toward this portion of the State. Mr. Bradford illustrated very clearly that this portion of the State, including the southern mines, had lost by simple default, at least one-third of its legitimate population, and perhaps one-half of its rightful and paramount wealth, owing mainly to the greater enterprise and avidity with which our northern neighbors made their—perhaps inferior—natural advantages felt and known. He desired this committee to devote the larger portion of their efforts towards preparing papers, to be published in small pamphlets and circulated on our stage routes, river courses, and on the whole line of travel from the Eastern States, hitherward, exhibiting reliable facts as to the real condition, susceptibility, actual and destined progress of this beautiful and extensive region of country, contiguous and stretching southward for the distance of nearly three hundred miles. He diverted, with pointedness, to the great lack of information as to the real condition and progress of the surrounding country, by our operating capitalists and merchants, and whilst showing the true policy of more uniform and liberal methods of commercial transactions, urged strongly upon the agriculturists of this county to unite with this society, and thus by a combined and well advised effort, eventually be enabled greatly to control most of the causes that powerfully effect their particular interests. The intimacy, freedom and wide range of interest embraced in the objects of this Society, if fostered, would tend powerfully to revive that want of confidence in all the important transactions of the country, which hang like an incubus upon the healthy growth of our wealth and population. The idea of exclusive, individual interests, which seems to have thus far marked our rapid progress, must in a measure give place to a steady and healthy movement of classes and pursuits, under the harmonizing influence of these mutual associations in various parts of the State. Facts, experiments, energy and pride will be stimulated—business will be increased—and all those thousand associations which constitute the idea of home and of permanency, will be evolved; and perhaps, more real good will result from the efficient organization of such societies, than from all the political humbugs and much of the legislation of the last five years.

The following gentlemen were appointed as the committee, in accordance with Mr. Bradford's resolution: Judge A. C. Baine, A. C. Bradford, G. A. Shurtleff.

It being a late hour, the Society, after receiving the signatures of many new members, and requesting a publication of the proceedings, adjourned until further notice.

L. R. Chambers, Sec'y.

Smut in Wheat.

Stockton, 22d Nov., 1853.

Messrs. Editors: I am glad to see you watching the agricultural interest thus. I have been looking for some time in the Farmer for some one's experience about smut in wheat; but I have never seen it before the last issue. Now we have several remedies given out by practical men, and some very good ones, (one of which is from an acquaintance of mine in the South, and which was published in the Southern Cultivator of Sept., 1853), but probably there are some of your readers who would like to see a chemical analysis and a theory,—a doctrine of *causes* of smut, if I may so call it. Where is Agricola? Here is my friend's letter—

Messrs. Editors: As there has been so much said about smut in wheat, and as the time of sowing is near at hand, I thought I would give you my views respecting it.

I believe that it is deposited in the grain of the wheat, or the smut grain, and not in the land, as some suppose. I am confident that soaking in *blue stone*, a quarter of a pound to a bushel, will prevent smut. I have tried it for more than twenty years in South Carolina and Mississippi. But my object in writing was to give another remedy, which I have no doubt will answer as as well, and save a considerable amount of money. This remedy is *scalding*. Have a large pot or kettle boiling; take a handle-basket and fill it with wheat, dip it in the boiling water, and raise it out several times: do not let it remain long enough to kill the grain, which is not easily done. I have this from Dr. Weir, a respectable gentleman of Noxubee county, in this State, who has tried it several years and has never had smut. I intend giving it a fair trial this fall. * *

Yours respectfully, Wm. Covington.

Columbus, Miss., Sept., 1853.

The writer of the above is a man of truth and experience, and he has no doubt tried many experiments, as he lives in a country where this pest is very bad—much worse than in California.

Yours, &c., Colfon.

Large Yield.—A farmer in Windham, Ct., says the Windham County Telegraph, has just harvested the products of a cornfield which has yielded at the rate of a trifle more than one *hundred bushels to the acre*. The fertizer used was a mixture of lime and guano.

Death of a Race Horse.—The famous racer Henry Perritt, which it is said made the fastest mile on record, fell dead, lately, just after winning a four-mile race, on the Nashville, (Tenn.) Course.

Make no great haste to be angry; for if there be occasion, there will be time enough for it.

Miscellany.

CAN'T DO WITHOUT A PAPER.

What, do without a paper I no,
I've tried it many a score,
So to subscribe for one I'll go,
Nor wait until to-morrow.
Sloth loves down-hill to hang themselves,
Or other foolish caper,
I never get to hear of it—
I do not take a paper.

Why, there's my neighbor, Jotham Stout,
He always has the news,
And, having news to talk about,
He never gets the blues.
While others yawn in ennui,
His mind is light as vapor;
The cause is plain to half an eye—
He always takes a paper.

While neighbor Stout has all the news,
And knows each current price,
And always minds his P's and Q's,
By taking good advice—
I cannot tell the price of calves,
Or poultry, coffee, tape, or
Any kind of merchandise,
Because I take no paper.

Though, I have studies which require
Much time and mental labor,
Yet I can spare a little time,
As well as Stout, my neighbor;
Though time be precious, I can use
A longer midnight taper;
And thus take time to read the news—
Therefore I'll take the paper.

DON'T BELIEVE HIM.

BY WALTER.

When some one comes with accents smooth and oily,
And tells you that a friend you valued highly
Has fallen into grievous paths of error,
Or done a deed which makes you quail with terror—
Unless you know there's truth in what he's saying,
'Twere best to think that some one has been playing
On his credulity: it may relieve him
To tell the tale to you—*but don't believe him.*

If one should come and whisper that a woman
Of good repute has done a deed inhuman,—
Been frail and fickle—recreant to virtue,—
E'en though the tale be spicy, 'twill not hurt you
Once to deny yourself the bit of slander
With which unto your appetite he'd pander;—
If you're a man, you'll try to undeceive him,
But if you do not that—*still don't believe him.*

There's many a villian in the world who uses
His tongue but to disseminate abuses;
Who reads of nothing except thefts and murders,
And crime of which our inmost spirit shudders;
His mind's most choice, most eloquent production
Is some foul tale of rape, or of seduction;
To ruin man or woman would not grieve him:
Beware of such an one—and *don't believe him.*

Emerson's Maxims of Education.

Let it be your grand object to prepare your pupils for the greatest usefulness and enjoyment.

Teach for eternity.

Teach nothing, but what appears conducive to the usefulness of your pupils, if improved according to its natural tendency and influence.

Let every branch receive attention, in proportion to its probable utility.

As far as possible, make your pupils perceive and feel the importance of every branch they pursue.

Proceed systematically; and, as far as possible, teach those things first which are first in the order of nature, and which may be understood without an acquaintance with other things to be subsequently acquired.

As far as possible teach those things first which are easiest in themselves. In giving instruction, proceed very gradually and by the shortest steps, from the more easy to the more difficult.

As far as may be, see that your pupils understand each step before proceeding on to the next.

Never teach them directly what they can conveniently learn without such assistance.

Never do for your pupils what they can do for themselves, except so far as may be necessary to set an example.

Never indulge your pupils in saying "*can't.*" or expressing inability to perform any exercise required.

Freely indulge and encourage your pupils in asking questions; and, if possible, lead them to answer by questioning them.

Teach your pupils to teach themselves.

Teach as much as possible by example; and let your example in everything be such as may be safely imitated.

Endeavor to render your instructions interesting.

As far as possible instruct by exhibiting the real objects, or the most perfect natural signs of the objects, to which your instructions relate.

Endeavor to discover and correct the bad habits of your pupils.

As far as possible excite your pupils to vigorous and laudable efforts by inculcating upon them their obligations to God, to themselves, to their parents, to their ancestors, to future generations, and to the world.

In exciting in your pupils a sense of honor, shame and emulation, endeavor to guard their minds against [illegible] ambition to which these feelings, or the [illegible] of these feelings, are in danger.

[illegible] your fondness to be overcome by a fear of wounding the feelings of your pupils.

[illegible] your efforts by their improvement from day to day.—*R.)*

Great Performance of an English Bloodhound.—We have again to recount an extraordinary performance of the Hon. Grantley Berkeley's celebrated bloodhound, Druid. On Friday last, the last day of August, the morning being intensely hot, and the air oppressed as if with thunder, the hound, at ten minutes past ten, drew up to a deer in a large wood called Rymefield Sand's Enclosure, in the New Forest. It became at once evident that the scent was good, for instead of throwing his deep tongue at intervals, Druid flew from the wood over the heather, almost silent, and entered the next large cover, called Anderwood. He was rather there lost to view, and Mr. Berkeley and his men could only be guided by his occasional tongue. The chase continued right through the entire forest to the Telegraph, when the beaten deer turned, and by a series of wide rings on and off the burnt ground in the vicinity of Stoney Cross and Rufus' Stone tried to baffle her unerring pursuer. In vain. Druid at the end of four hours and twenty minutes ran into and killed his deer, the chase having lasted throughout the most oppressive heat of the day. Several times during this extraordinary run, the hound was met by casual passers by; one gentleman taking out his watch and marking the time between the appearance of the flying deer and her pursuer, and stating that she was then five minutes ahead of him; all remarking that on each occasion the pace was tremendous. On the burnt ground of our incendiary fires only, was there any cold hunting, at these George Bromfield was once enabled to lift the hound over a few hundred yards of foil. At the best guess, judging from the pace, the time and the distance from each other at the several points when the hound was seen, little less than forty miles could have been gone over, and when the heat of the day is considered, the performance, we believe, stands unequaled.—*English paper, Sept. 8th.*

Where Musketoes Come From.—A writer on entomology, discussing about these summer pests, thus handles the subject:

"The *musketo* proceeds from the animalcule commonly termed the 'wiggle tail.' I took a bowl of clean water and set it in the sun. In a few days some half-dozen wiggle-tails were visible. These continued to increase in size till they were about 3-16ths of an inch in length. As they approached their maturity they remained longer at the surface, seeming to live in two mediums—air and water; finally, they assumed a chrysalis form, and by an increased specific gravity, sank to the bottom of the bowl. Here, in a few hours, I perceived short black furze, or hair, growing on every side of each, until it assumed the form of a minute caterpillar. And thus its specific gravity being counteracted, or lightened, it readily floated to the surface, and the slightest breath of air wafted it against the side of the bowl. In a very brief space of time afterwards, the warm atmosphere hatched out the fly, and it escaped, leaving its small tiny house upon the water. How beautiful, yet how simple!

"After the water had gone through this process, I found it perfectly free from the animalcule. I therefore came to the conclusion that this wiggle-tail is a species of the shark, who, having devoured whole tribes of animalcule, takes to himself wings and escapes into a different medium to torture mankind, and deposit eggs upon the water to produce other wiggle-tails, who in turn produce other *musketoes.*"

Artificial Marble.—Mr. Benjamin Hardinge, of Cincinnati, has made a valuable discovery in synthetic chemistry, by which he is enabled to produce an artificial marble from common pebbles and sand. It is stated by the Express Messenger that he is about to erect in or near the City of Montreal a model palace, to be built entirely of marble and precious stones. The stones for the walls, which are now moulding, are formed of silicates in combination with mineral earths and and pebbles, and angular spots of granite variegated with mineral oxides. The roof will be a lava of chrystalized silicates of lime and white alumina, resembling the snow crust. The floors to be of the same material, colored in mosaic with oxides of minerals. The style of architecture will be unique. The pillars, pilasters, columns, capitals, cornices, architrabes, mantels, &c., will be of agate, asper, perphyry, &c., with colossal statuary of snow white marble. The inside finish of the walls will be of porcelain, in landscapes, with ceiling of fresco of porcelain, colored in rosewood and zebrawood, inlaid with pearl. The tables, both tops and frames, will be of sapphire and amethyst, embedded with bands of opal.—others of lapis-lazuli, chalcedony, onyx, set with garnet, topaz, ruby and cornelian. Others with entire frames of blood stone moulded in rich patterns of [illegible] to relievo, with tops of onyx, and other chalcedonic formations.

Afflicting.—A terrible instance of the suffering, caused by post-office mismanagement or robbery, has occured recently at St. Louis. A man who went [illegible] to Texas, to return immediately, found some profitable business which would detain him several months, and therefore wrote to his wife inclosing one hundred and fifty dollars for her present wants. The letter never reached her, and being, with her five children, turned out of her home for non-payment of rent, and driven to despair by the idea that her husband had deserted her, she drowned herself and youngest child in the Mississippi. The [illegible] husband and father [illegible] a letter [illegible] received in St. Louis [illegible] and his children [illegible] by public charity.

Ladies' Department.

[For the California Farmer.]

Autumn.

"The hedger stopping gaps amid the leaves
Which time her tints in every color weaves;
The milkmaid pausing with a timid look,
From stone to stone, across the brimming brook;
The cotter journeying with the noisy swine
Along the woodside where the branches twine,
Shaking from mossy oaks the acorns brown,
Or from the hedges red haws dashing down."

Supper dishes have been cleared away just long enough for me to write a hasty sketch before the going down of the sun, which continues to shine with a lessening ray. It is as combining the decline of the *day* with that of the *year*, the period both of beauty and decay, that an evening in autumn becomes so generally the parent of ideas of a solemn and pathetic cast. Not only as in the first of these instances, do we blend the sunset of physical with that of moral being, but a farther source of similitude is unavoidably suggested in the failure and decrepitude of the dying year—a picture faithfully, and in some points of view mournfully, emblematic of the closing hours of human life. With the daily retirement of the sun and the gradual approach of twilight, though circumstances as we have seen, often associated in our minds with the transitory nature of moral existence, there are usually connected so many objects of beauty and repose as to render this sunset scene in a high degree soothing and consolatory.

But with the decline of the light of day are now united the groaning of the blast among the outspread branches of the sturdy oaks, and the sighing of the coming storm. The whirling, twirling and eddying of the whitened foliage as it noiselessly falls to its earth—all dying nature seems to appeal to our feelings with that congeniality of spirit that autumn is sure to produce. It reminds us of the mutability of our species, and brings before us with such impressive solemnity, the earth as opening to receive us, that they have from the earliest period of society and in every stage of it, been considered as typical of the frailty and destiny of man. Like leaves on trees, says the first and the greatest of all uninspired writers—

> Like leaves on trees, the race of man is found,
> Now green in youth, now withering on the ground;
> Another race the following spring supplies—
> They fall successive and successive rise,
> So generations in their course decay,
> So flourish these when those have passed away.

The people are (exclaims the bard) like the waves of the ocean—like the leaves of woody Mornen, they pass away in the rustling blast, and other leaves lift their rustling heads on high.

November is the eleventh month in the year, or the ninth, as reckoned from March—which was, when the Romans named the year, accounted the first. It is usually represented by the artists in a garment of changeable green and in head-dress of black. In this month we see autumn approaching towards its termination—autumn! the glorious setting of the year—the last season of beauty. While I'm now writing, the withered leaves come rustling in at the open window and fall nolselessly at my side. The light of the sun sheds a more mellow light, and less fierce, and throws a more kindly influence on our heads. But one consolation is left us, if flowery Spring, sweet Summer and lovely Autumn are gone. Thanksgiving, Merry Christmas, and Happy New Year, will again be rolled around on the wheels of time, and bring with them pleasant associations.

> Our Merry Christmas with a wintry sky,
> O'er snowy [illegible] and rosy eyes:
> The housewife sets her spinning by
> To [illegible] welcome with her [illegible].

At the long nights of winter will be the burst of revelry from the illuminated mansions of the opulent. If we listen attentively we could hear from the low hovels of the destitute the plaintive wailings of helplessness and misery, and the cries of infancy; while the rich fare sumptuously every day, and retire seated with pleasure to their couches of down, when within a few [illegible] from their princely mansions are those who at nightfall huddle together for warmth or creep with their famished offspring to [illegible] places and [illegible] their misery until they awake to it in the morning. To shelter the homeless, clothe the naked and feed the hungry, to avert the ravages of the [illegible] from the needy, and to make the poor man's heart leap for joy—a receipt for Merry Christmas.

How I long to see the merry face of my old mother in the Atlantic States, and see the old fashioned turkey, such as [illegible] and [illegible], turkey [illegible] and [illegible] hams [illegible] and [illegible] pies and [illegible] and [illegible] the luxuries. [illegible]

Dare [illegible] —

[illegible] receipt among the [illegible] Farmer. [illegible] [illegible] [illegible]

CULTIVATE HOPS!—While on a visit at Stockton recently, we called at the brewery of Messrs. Wm. Musch & Co. to examine the process of changing our grain into *Lager Beer*. We were most kindly and readily shown through their establishment and furnished with the information we desired. Among other items was a very large amount monthly paid for the article of Hops, imported now at a heavy tax upon the State. The price now paid for Hops is $1 15 per pound, and yet no country in the world could compare with California in raising Hops. Those who engage in it will find it successful. Who will begin?

SPECIAL NOTICES.

PRINCE'S PROTEAN FOUNTAIN PEN.

[PATENTED JAN. 23, 1855.]

T. G. STEARNS, General Agent,

No. 271 Broadway, Cor. Chambers Street, New York.

☞ ADVANTAGES.—An incorrodible and durable Ink Reservoir, made of Protean, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time.

A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material

Its structure is simple, and not liable to get out of order.

Opinions of the Press.

We must regard this Pen as one of the grand improvements of the age.—*Portland Transcript and Eclectic.*

As a Reporter's Pen, I have never seen or heard anything to equal it. It is just the facility wanted in this department, so that it may keep up with the age of electrity and steam.

GEO. KELLOG, Reporter, 625 Broadway, N. Y.

Eureka! Eureka!! We have found it at last: a fountain Pen that will write for hours without once dipping in an inkstand.—*Knickerbocker Magazine.*

The ink flows from it so evenly and so easily, that the mechanical labor of writing becomes to it either a pleasure.—*Mother's Magazine.*

The Pen must have a great run. Any pen that runs for eight hours at a dip, may be said to have a great run—but this pen will become a friend and valued friend—will save the temper of the business man, and prove even the companion of the irritable poet.—*Hartford Courant.*

We are writing with one which does some six hours service without failure or stoppage, and have found it inexpressibly convenient, and comfortable.—*New York Evangelist.*

This Pen, anonie pens, is what Colt's Revolvers are among Pistols. One will fire a dozen shots, and the other write a dozen sheets, with a single charge or loading.—*Author of Major Jack Downing.*

A Clergyman who has written a whole sermon with one of these Pens, without once dipping in the ink, said to us that he would not dispose of it for twenty times its value.—*Boston Evening Traveller.*

If I could not procure another of similar merits, one hundred dollars would not purchase from me the one I have.—*A New York Clergyman.*

We continue to use our own with entire satisfaction.—*New York Independent, May* 16, 1855.

"Let those write now who never wrote before,
And those who always wrote, now write the more."

*** Rights for Towns and Counties to vende, will be granted on favorable terms.

☞ A sample of these Pens can be seen at the at the Office of this Paper on the arrival of next steamer. v4-19 3m.

☞ Cured by Oxygenated Bitters.—*A Case of eighteen Years' Standing.*

[From Fitzhenry Homer, Esq., of Boston, Mass.]

BOSTON, September 28.

Dear Sir: It is now eighteen years since I was first troubled with the water-brash and derangement of the stomach. I have taken advice of the best physicians in this city and New York, in London, Paris, Germany, and Italy, and visited the several sulphur and other springs in this country, the watering places of Germany and elsewhere in Europe, and had found no relief. Since taking the Bitters I have never had a return of the water-brash, which daily troubled me of late years to a very great degree. Having found so great relief from this most discouraging disorder, I have recommended a trial of your medicine to many of my friends, who are now using it to great advantage. What little is in my power to offer, in extending the circulation of your Oxygenated Bitters, will be done with grateful pleasure at all times. Yours, very respectfully,

FITZHENRY HOMER.

To DR. GEO. B. GREEN.

SETH W. FOWLE & CO., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agent for Sacramento—C. MORRILL. 22-2w

☞ Sands' Sarsaparilla.—It seems almost unnecessary to direct attention to an article so well known, and so deservedly popular, as this preparation, but patients often who wish to use the extract of Sarsaparilla are induced to try worthless compounds bearing the name, but containing little or none of the virtue of this valuable root; and we think we cannot confer a greater benefit on our readers than in directing their attention to the advertisement of the Messrs. Sands' in another column. The bottle has been enlarged to hold a quart, and those who wish a really good article will find concentrated in this all the medicinal value of the root. The experience of thousands has proved its efficacy in curing the various diseases for which it is recommended.

Agents—HENRY JOHNSON & CO.,
v4-23 1m 146 Washington street, San Francisco.

☞ Dr. Wistar's Balsam of Wild Cherry cures Bronchial affections and all diseases of the Lungs.

[From the Boston Evening Traveler, Jan. 6.]

It is perhaps but a simple act of justice to the proprietors of Wistar's Balsam of Wild Cherry for us to say, that our personal experience in the use of this article has impressed us favorably. One of the proprietors of the Traveler was completely cured of a severe cough of four months' continuance, by the use of this Balsam, and several of our friends and acquaintances, who have tried the article, have found it of great service in relieving them of severe coughs and shortness of breathing, with which they have been afflicted,

*** Be sure it is signed I. BUTTS on the wrapper.

Agent for Sacramento, C. MORRILL, corner K and Third streets.

Sold by all Druggists. 22 2w

☞ California State Agricultural Society's Rooms.—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the Executive Committee.

v3-26 C. I. HUTCHINSON, President.

☞ JOSEPH GILLOTT'S STEEL PENS.—For sale by all Stationers and Booksellers throughout California, and to the trade at the Manufacturer's Warehouse,

No. 91 John street, New York,

where a large stock of these popular Pens, of standard excellence may constantly be found.

HENRY OWEN,
Sole Agent for the United States.

MISCELLANEOUS.

LANGTON'S PIONEER EXPRESS.

Principal Offices:

SAN FRANCISCO—124 Montgomery, corner Sacramento street.
SACRAMENTO—Corner J and 3d streets, adjoining Messrs. Drexel, Sather & Church's Banking House.
MARYSVILLE—Banking House of Wilkinson & Co.
DOWNIEVILLE—Main street, Langton & Co., Proprietors.

WE will dispatch a Daily Express from Sacramento to Marysville and the following points:

Nevada,	Cherokee Corral,	Foster's Bar,
Grass Valley,	Monte Cristo,	Camptonville,
Rough and Ready,	Eureka North,	Galena Hill,
Orleans Flat,	Craig's Flat	Railroad Hill,
Moore's Flat,	French Corral,	Young's Gold Hill,

Kanaka Creek,	American Hill,	DOWNIEVILLE.

Also—To San Francisco,

Connecting with

Messrs. Freeman & Co.'s Express to all parts of the ATLANTIC STATES and EUROPE.

Treasure, Packages and Letters transmitted to and from the above points with unrivaled dispatch and security.

Gold Dust and Coin forwarded to all parts of the United States and Europe, insured or uninsured, at as low rates as can be done by any house with secu ity.

Our Treasure Express will always be accompanied by faithful Messengers.

Notes, Drafts, Bills, &c., collected or negotiated, and all orders attended to promptly.

Purchases of every description made. Forwarding of Merchandise and Commissions, of every nature, attended to with promptitude.

v4-23 ALEX. M. HAYDEN, Agent.

Agricultural Warehouse.

TREADWELL & CO., corner of California and Battery streets, San Francisco, have in store and are in constant receipt of a full stock of the most approved styles of Agricultural Implements, among which are the following:

Boston Clipper Steel Plow—a beautiful article;
Galena and Peoria do Evans & Adams' make;
"Eagle" (all sizes) cast do Ruggles, Nourse & Mason make;
"Geddes'" Folding Harrows, all sizes;
Scotch or square do do
Triangular do do
Steel and Cast tooth Cultivators;
Emery's Seed-sowers, hand and horse;
Churns—thermometer, cylinder, dash and barrel churns;
do Patent English, with balance wheels and double dash, to go with Dog Powers;
Corn Shellers, double and single; Corn Planters;
Vegetable Cutters;
Hoit's Furnaces and Cauldrons, assorted sizes;
Boiler Kettles, do
Garden Tools, all kinds; Garden Barrows;
Threshers—Pitts & Hall's, 8-horse;
Reapers, Fan Mills, Hay Knives, Cheese Presses;
Hay Cutters, Grist Mills, Bark Mills, and Tanner's Tools;
Horse Powers, double and single tread;
Shingle Machines; Ox Yokes and Bows;
Horse Powers, with Saw Mill attached for sawing wood;
Sun-age Cutters and Stuffers;
Belting Leather and India Rubber; Well Wheels;
Chain Pumps with Jubing;
Sugar Mills, Malt Mills;
Hand Coffee Mills, with balance wheel;
Hand or Horse Grain Mills;
Bushel Baskets, Half-bushel Measures;
Port Augers and Spoons; Grub Hoes and Spading Forks;
Grain Scoops and Manure Forks; Plow Points;
Field and Garden Seeds, &c., &c., &c. v4-21

Melodeons, Pianofortes, Violins and Brass Instruments.

172 Washington street,

The Musical World is invited to examine the very extensive Stock of Musical Goods now on hand. Pianofortes, and every other description of instruments of the first quality, and so warranted; fresh Strings for Guitars, Violins, etc., etc., constantly arriving from Europe and the Atlantic cities.

Repairing and tuning attended to with care and dispatch.

Popular and fashionable Sheet Music received by each steamer; Fancy Goods, Toys, Canes, Flags, Baskets, Boxing and Fencing Gloves and Foils, Billiard Balls, Cue Leather and Wax in great variety. Bird Cages of every pattern and size. Stationery, Statuary and Perfumery, for sale at wholesale or retail at the establishment long known as

ATWILL & CO,
v4-23 172 Washington street, San Francisco.

E. B. BATEMAN, M. D.

PRIVATE HOSPITAL,

Corner of Washington and Sutter streets, Stockton, Cal.

HAVING been engaged as a Hospital Physician for many years, (since 1851 in California), and being familiar with the causes of California diseases and the remedy needed for their cure, the undersigned believes he need only refer to his successful practice and the good results flowing from it, to speak his ability in the profession.

The Hospital has been enlarged and improved, and every attention needed is found at this establishment. Patients received for longer or shorter periods upon satisfactory terms.

v4-22 3m E. B. BATEMAN.

DENNIS WIRE WORKS.

MANUFACTORY OF

Wire Cloth, Wire Neeting,

Sand, Wheat, Corn and Coal Screens, Riddles, Sieves, Bird Cages, Fenders and Fire Guards, Meat Safes, Dish Covers, Patent Gauze Window Blinds, Wire Fencing, &c., &c.

No. 108 *Clay street, between Battery and Sansome,*
San Francisco, Cal.

Particular attention given to the manufacture of **Prentiss Wire Cloth,** for Flour and Running Mills and Threshing Machines. v4-23 3m*

Wool and Hide Company.

HOYT, PIDWELL & CO., General Commission Merchants, No. 65 California street, San Francisco, California.

SAN FRANCISO, November 1st, 1855.

Will pay a fair price for Wool, Sheep's Pelts, Dry and Green Salted Hides and Leather. Also, receive on consignment all kinds of produce for this market, or ship to the Atlantic States (if desired,) any of the above articles,—making liberal advances at the usual charges.

Particular attention paid to furnishing Tanners with Hides, and the sale of Leather. SAMUEL HOYT,
J. T. PIDWELL,

HOTELS.

Beaty's Hotel,

(Formerly the Mansion House,)

SAN JOSE.

A. S. BEATY, Proprietor of the above Hotel, begs to inform his old friends and the public, that he has removed from the "Wood Lawn Hotel," Pulgas Ranch, to the above premises, and is now prepared for their reception under more favorable circumstances than heretofore.

He begs to assure all who may favor him with a visit, that no pains will be spared to merit the patronage of the public, and make "Beaty's Hotel," San Jose, second to none in the State.

Gentlemen with their Families visiting San Jose, the Quicksilver Mines, &c., &c., will find at this House suitable accommodations. A. S. BEATY, Proprietor.

☞ HORSES KEPT AT LIVERY.—Stabling, Hay and Grain, and "Turn Outs" provided for Pleasure Parties.

Dillon, Hedge & Co.'s Line of Stages for San Jose, Santa Cruz, Monterey, and the Quicksilver Mines put up at this Establishment. v 412 tf

American Hotel, Benicia.

THIS HOUSE has been established *Five Years*, without interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.

3v-16 ist] C. M. DAVIS, Proprietor.

Washington Hotel,

Georgia street, (Steamboat Landing.)

VALLEJO.

THE undersigned having taken the above Hotel, begs to call the attention of his friends and the public to the conveniences his house affords. As a Public Hotel and Stage House every needed comfort and convenience is provided, and full accommodations are offered for day and permanent boarders. Single and double rooms for permanent boarders on very reasonable terms.

The Proprietor is determined to keep a first-rate Hotel, and is confident he can please all that favor him with their patronage. [v4 21] JOHN McELROY.

International Hotel.

THE extensive additions to this Hotel is now finished and ready for occupation, making altogether *one hundred and fifty rooms.* Suites of rooms for families, furnished or unfurnished; also, single rooms to let on reasonable terms.

Day Board—Ten Dollars per week.

This spacious Hall—85 by 35 feet—is elegantly furnished and lighted with gas, with Supper Room that will seat two hundred and fifty, will be let on reasonable terms for Balls, Concerts, Dinner Parties, &c. PECK & FISHER.

San Francisco, Jan. 9, 1855. v4-7

Rassette House.

SAN FRANCISCO,.....CAL.

THIS HOTEL offers inducements to persons visiting San Francisco, unequalled by any on the Pacific Coast.

Gentlemen can be accommodated with single rooms, or families with suites of rooms.

The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. v4-1

ALBANY AGRICULTURAL WORKS,

ON HAMILTON, LIBERTY AND UNION STREETS;

WAREHOUSE AND SEED STORE,

No. 52 State Street, Albany, N. Y.

The Proprietors of the above-named establishment being the sole owners and manufacturers of

EMERY'S PATENT HORSE POWER, &c.,

☞ ALL ARRANGEMENTS WITH OTHER PARTIES FOR THEIR MANUFACTURE HAVING EXPIRED ☜ have formed a new Copartnership, under the firm name of

EMERY BROTHERS,

And will continue the manufacture and sale of AGRICULTURAL IMPLEMENTS and MACHINERY, as heretofore, at the old stands of EMERY & CO. By this arrangement the united efforts, and interest of the Brothers, long known to the public, are secured, and no exertions will be spared to meet the wishes of those dealing in and using the class of implements they manufacture—their leading branch being the manufacture of the justly celebrated

Emery's Patent Changeable Geared Railroad Horse Powers,

with the machines to be propelled by it, as Threshing Machines, Saw Mills, and Machinery generally.

These Powers having been submitted repeatedly to the most severe tests and trials to determine their relative merit and utility with those of every known manufacturer, have without exception been awarded the highest prizes for superiority—among which were the following:

N. Y. STATE AGRICL SOCIETY, 1854, 1853, 1852, 1851, 1850	MARYLAND STATE AGRICULTURAL SOCIETY, 1853
OHIO STATE BOARD OF AGRICUL., 1854, 1853, 1852, 1851	MISSOURI STATE AGRICULTURAL SOCIETY, 1851
MICHIGAN STATE AGRICULTL SOCIETY, 1853, 1852, 1851	AMERICAN INSTITUTE, ... 1852, 1851
INDIANA STATE AGRICULTURAL SOCIETY, 1853	NEW YORK CRYSTAL PALACE, ... 1853
ILLINOIS STATE AGRICULTURAL SOCIETY, 1853	CANADA PROVINCIAL SOCIETY, ... 1852, 1851
PENNSYLVANIA STATE AGRICULTURAL SOCIETY, 1853	CONNECTICUT STATE AGRICULTURAL FAIR, 1854

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 224 bushels, of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both kinds of Powers, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. If the crops be extraordinarily heavy or light, greater or less results will follow.

These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by this Circulars, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and full purchase money refunded if not found acceptable to purchasers.

The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, they hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.

They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery, Implements and Seeds, which are all new and of the most approved and complete kinds extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.

The attention of a discerning public is solicited to our present stock of goods, before selecting and purchasing the coming season.

PRICES FOR 1855.

Emery's Patent Changeable Horse Power Thresher, Separator, Bands, &c., for two horses	$160	Sets of Bands for Machine	$5

ALBANY, N. Y., March 15, 1855. (v4-10 6m) EMERY BROTHERS.

BOSTON.

S. P. Ruggles' Power Press Manufacturing Co.

[Incorporated February 8, 1854.]

THE above named company having purchased of the well known inventor, S. P. Ruggles, Esq., his Patents connected with the Printing Business, are now manufacturing under Mr. Ruggles' immediate superintendence, the following machines, viz.:

	Size of Form in Inches.
Half Sheet Job Engine	18 by 12
Half Sheet Combination Engine	18 by 12
Quarto Sheet Job Engine	12½ by 9
Quarto Sheet Combination Engine	12½ by 10
Half Sheet Cap Jobber Rotary	10½ by 7½
Card and Bill Head Rotary	7 by 4½
Diamond Rotary Card Press	4½ by 3
Circular and Flat-tip Head Press	8 by 6
Embossing Press	18 by 10
Cast Iron Imposing Table	26 by 22
Shaving Machine, shaves	27 by 16
Paper Cutter	cuts 27
Card Cutter, improved	cuts 25
Bookbinders' Rotary Sheers	cuts 25
" " larger size, in proportion.	

These presses are considered by the Job Printers as the best adapted to their wants of any machines ever manufactured.

All orders addressed to their agent, M. B. BIGELOW, 152 Washington street, Boston, Mass., will be promptly attended to.

Mr. Ruggles has also sold to the CUTTING MACHINE MANUFACTURING CO., his Patent ROTATING SHEARS, for cutting sheet tin, iron, copper, brass, zinc, steel, nail and boiler plates, and all other metallic sheets. This is entirely a new process for cutting metals, and is destined to supersede all other machines for that purpose.

ANSON HARDY, Agent,
152 Washington street, Boston.

And to a third company, called the BOSTON HAND STAMP CO., he has sold his patent for a very ingenious Flexible Hand Stamp, whereby perfect impressions may be made at the rate of sixty per minute, the die adapting itself to the surface to be printed on. A very convenient article for all business men.

v4-12 1y M. B. BIGELOW, Agent, Boston.

TO FARMERS.

For the destruction of Canker Worms, Borers, Grubs, &c., &c., &c.

THE MURIATE OF LIME.

A SUPERIOR fertilizer, and certain destroyer of the Canker Worm, and other destructive insects. It has been composted to take the place of more costly manures, guano, &c., to which it has been pronounced fully equal, and in some respects superior, by those who have tested it during the two past seasons.

As a certain and sure destroyer of the Canker Worm, which has committed such ravages among the fruit trees the past season, of Grubs, Borers and other Worms, which oft times render the labor of the farmer of no avail, its qualities have been fully and successfully proved. For this purpose its success (in New England) has been such as to warrant the belief that it will be a sure preventive to the ravages of the Grasshopper, which have been so great the past season in California.

A sample and testimonials from Agriculturists of the first respectability may be seen at the Office of the CALIFORNIA FARMER, and orders sent through Messrs. WARREN & SON will be promptly handled.

This article is put up in bags of 150 and 200 lbs. each, or in barrels of 300 lbs.

JAMES GOULD,

MEDICAL.

DR. GUYSOTT'S IMPROVED

Extract of Yellow Dock and Sarsaparilla

Is acknowledged to be the best Sarsaparilla made, as is certified by the Wonderful Cures it has performed.

☞ Remember this is the only True Original Article. ☜

This Medicine, when used according to the directions,

Will Cure Without Fail,

Scrofula, or King's Evil, Cancers, Tumors, Eruptions of the Skin, Erysipelas, Chronic Sore Eyes, Ringworm, or Tetter; Scald Head, Rheumatism, Pains in the Bones and Joints, Old Sores and Ulcers, Swelling of the Glands, Syphilis, Dyspepsia, Salt Rheum, Disease of the Kidneys, Loss of Appetite, Disease arising from the use of Mercury, Pain in the Side and the Shoulders, General Debility, Jaundice, and Costiveness.

The Best Female Medicine Known.

The Yellow Dock and Sarsaparilla is peculiarly adapted for females of delicate health, resulting from irregularity of menstrual discharges, and other diseases peculiar to their sex. We assure the afflicted, that a bottle or two of DR. GUYSOTT'S EXTRACT OF YELLOW DOCK AND SARSAPARILLA will at once regulate those difficulties and renew the natural energies.

Syphilis, Scrofula, and Diseased Blood.

DR. GUYSOTT'S IMPROVED EXTRACT OF YELLOW DOCK AND SARSAPARILLA is a true specific. The proprietors have in their possession over one hundred certificates of the most extraordinary cures effected by it. We can safely say—TRY IT. It revives the drooping constitution, eradicates all bad humors from the Blood, and by its tonic properties restores the invalid to life and vigor. As a spring and summer medicine it has no equal. Its singularly efficacious action on the blood, its strengthening and vivifying action on the system, stands pre-eminent above all other Sarsaparilla. If you would have the rose brought back to your cheek, a clear, healthy and transparent skin, and life and vigor infused through the system, take Guysott's Extract of Yellow Dock and Sarsaparilla. It contains more of the pure Honduras Sarsaparilla than any other preparation extant, which is chemically combined with the Extract of Yellow Dock and the Extract of Wild Cherry, thus making the remedy more thoroughly efficient than any other Sarsaparilla before the public. At the same time it is perfectly free from all mineral poisons, which cannot be said of any other Sarsaparilla compounds.

Sold by all the Druggists in California and Oregon.

PARK & WHITE, Sole Agents,

OXYGENATED BITTERS,

CONTAINING NO ALCOHOL,

A CURE FOR

Dyspepsia, in all its various forms; Heartburn, Habitual Costiveness, Acid Stomach, Loss of Appetite, Nervousness, Coldness of the Extremities, General Debility and Asthma.

THESE Bitters are approved by some of the best physicians, who use them in their practice. Scientific men have more difficulty in overcoming and controlling the various symptoms of Dyspepsia than almost any disease in the world. They are so various, in different individuals and cases, that it has seemed impossible sometimes to obtain even temporary relief from suffering. But a medicine has been discovered which proves, beyond a doubt, that in most cases a permanent cure can be effected. By avoiding stimulants, and using the *Oxygenated Bitters* strictly according to directions, a healthy tone is imparted to the digestive system, and strength to perform its natural functions.

Ample testimony to the truth of this can be had by reference to numerous certificates in possession of the general agents. We have no hesitation in pronouncing the Bitters a sure cure for

DYSPEPSIA.

From J. C. Dunn, Esq., City Treasurer.

BOSTON, June 6, 1852.

Gentlemen: I have been for some years troubled occasionally with severe attacks of indigestion: have consulted many physicians, tried Allopathy and Homœopathy, and can truly say, I have received more speedy and effectual relief from the use of *Oxygenated Bitters*, procured from you, than from all other remedies, and most cheerfully recommend them to all who suffer from a similar affliction. Yours truly,

JAMES C. DUNN.

DR. HENRY E. MORRILL, a skillful Physician of New York city, in his remarks on Dyspepsia, says: "The most effectual medicine to improve the tone and energy of the stomach, is that prepared by Dr. George B. Greene, and called the Oxygenated Bitters. I would put the receipt for preparing this valuable medicine, if I knew what it was, but as I do not, I can only recommend its use. It seems to me to be improperly called 'Bitters,' as not in the popular acceptation of that term, for it contains no Alcohol or other Spirit, and is rather sour than bitter. The bark, by the way, I cannot too earnestly caution the dyspeptic never to use, the tannin and gum are abstracted. They do not possess energy to the stomach.

The stimulating wines only excite a city appetite, and are sure to be followed by a reaction which at last will wear out the stomach. The same may be said of the vegetable bitters. It has been and will yet be demonstrated, I trust, by Prof. Hayes, M. D., *State Assayer of Massachusetts*, who prepares the chemical analysis used at the [illegible] physicians, for the diseases for which these bitters have been so eminently successful. I have used them in a number of cases and have [illegible] to the directions, [illegible] the various [illegible] the confirmed dyspeptic, restore [illegible] ges, and [illegible] permanent [illegible].

It has [illegible] by the following persons and received the

MISCELLANEOUS.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishe PERFECT LIKENESSES? Because he has now the best arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

Something New and Wonderful in the CALIFORNIA ARTS.

JAMES W. JOHNSTON, Daguerrean Artist, southeast corner of the Plaza, has the pleasure of announcing to the public, from whom he has received many substantial favors, that he has just completed the *enlargement of his Gallery*, and combined with it several magnificent features of the Arts heretofore entirely unknown on the Pacific Coast. He is now prepared to execute in superior style—

1st. Daguerreotypes, as heretofore, on metallic plates, with or without coloring.

2d. Stereoscope Likenesses and Views from Nature.

3d. Daguerreotypes on *Glass* and *Paper*—the most splendid and remarkable discovery of the age. These Miniatures are susceptible of being worked up by the brush of the Painter, to embody all the freshness and naturalness of life, at about one-half the cost ordinarily attending miniatures on ivory, which they far surpass in correctness of delineation. The business has now been commenced at Johnson's Gallery, for the first time in California, where Ladies and Gentlemen are invited to call and examine specimens.

Connected with Johnston's Rooms is a Portrait Gallery, also, where Mr. THOMAS S. OFFICER, late of New York, is prepared to execute Portraits on Canvas in elegant and life-like style.

☞ Call and behold the latest triumphs of Art. v4-15

To Farmers, Hotel Keepers, Ranchers & Others.

BRADSHAW & CO., having removed into their New and Spacious Store, and being regularly supplied from the States by every clipper, enables them to have the largest and best stock of GROCERIES AND PROVISIONS in the State, and at Low Prices.

A MODEST DUN.—The Texan Mercury, in a modest dun to its patrons, says: "Suffer little sums to come unto us, for such is our ineome."

"THEY don't make as good mirrors as they used to," remarked an old maid, as she observed a sunken eye, wrinkled face and livid complexion in a glass that she usually looked into.

AN Irish girl lost her certificate on the way across the sea, but her cousin supplied her with the following:—"This certifies that Bridget O'Flaunegan had a good character when she left Ireland, but she lost it on the ship coming over.

READ THIS.—The following is the statement of a master of a vessel engaged in the East India trade: "About three years since on my return from China, I stopped at Calcutta, and while there I was taken sick with diarrhœa, which continued until I arrived in Boston. I there met a friend, who advised me to make use of Mrs. Kidder's Cordial. I did so, as I was at that time very sick and weak, and was glad to hear of anything which might relieve. I did not think at that time that I should ever regain my health. But to my astonishment, I soon found myself quite well. Since that time I have never sailed without providing enough of the Cordial for myself and crew, in case they should need it. I have experienced the benefit of it, both for myself and others on board, in many instances, while sailing under the tropics. J. C. CROCKER."

A WINDFALL.—A vessel of 240 tons, named the Carleston, was recently purchased by three watermen belonging to Wapping. She had been engaged in the Newcastle coal trade, but from some cause or other, the owners agreed to part with her. The new purchasers, on examining, found one of her afterbeams to be very much decayed, on which one of them observed: "It seems to be lined; we had better take down the lining, and see what state the beam is in." On doing so, to their great surprise, they discovered Spanish dollars to the value of £16,000. It is understood that she had been used as a slave vessel some fifteen years ago, and, on the eve of being captured was deserted by her captain and crew before they had time to possess themselves of their hidden booty. The captors, not having any idea of such treasure being on board, the vessel passed into other hands, and she was ultimately embarked in the Newcastle colliery trade, whilst employed in which traffic the discovery was made; and there is no reason to suppose that the lucky possessors are likely to be disturbed in their enjoyment of it.—*Eng. paper.*

A CHINESE MUNCHAUSEN.—A Chinaman was arrested lately in New Orleans, for a petty crime, and brought before Recorder Bright, and gave a very curious history of his life. He stated that at the age of eighteen he was beheaded in China, for rebellion; ten years after he was flayed alive for an attempt to assassinate the Emperor of China, Moon Sing, who is the Son of the King, or the King of the sun; and five years after he was cut to pieces because he was accused of murder. He was then imprisoned nineteen years and had his tongue cut out for lying, which is considered a very serious crime in the Celestial Empire. After coming out of prison he was banished from the country for making sport of a Mandarin during the feast of the Lanterns. He embarked on board of an American man-of-war, and was in the battle of the Nile, under Commodore Stockton; a cannon ball terminated his eventful career, and now he found himself arrested in New Orleans for the crime of petty larceny! The Recorder thought it was time for him to rest from his labors, and so sent Mr. Chinaman to the workhouse for the next ninety days. In making oath to the above statement he swore by one of the earthen spittoons, for Chinese all swear by their earthenware and by nothing else.

Valuable Books
FOR FARMERS AND BUSINESS MEN.

Youatt on the Horse,
Their Structure and Diseases, with their remedies; also, Practical Rules to Buyers, Breeders, Breakers, Smiths, &c.; Notes by SPOONER. An account of breeds in the United States, by H. S. RANDALL—with 60 Illustrations, muslin, 483 pp., 12mo. $1 50.

HORTICULTURAL, &c.

SMITH'S POMOLOGICAL GARDENS,
American River, 24½ Miles from Sacramento.

THE Proprietor of these extensive Nurseries and Gardens will be prepared to supply all the best varieties of Fruit Trees of the following kinds:

Apple, Pear, Peach, Plum, Cherry, Quince, Nectarine and Apricot; Grape Vines of every valuable variety; Gooseberry, Currant, and Raspberry Vines, &c.

ALSO,

Green House Plants of every rare and beautiful variety; Flowers, Shrubs, and Plants, Shade and Ornamental Trees, Bulbous Roots, &c., &c., &c.

These will be ready as soon as the season of transplanting shall commence. Orders will be received at any time, and delivered in the order in which they are booked.

Garden Seeds.

THE Proprietor will also offer a large variety of **Fresh Garden Seeds,** at Wholesale and Retail, of his own raising and putting up. Great care has been taken to select the very best varieties, and to keep them pure and unmixed. They are all of the present year's growth, the same varieties having been used by the Proprietor in his own grounds for the last three years. The produce which has been exhibited in our markets is the best proof of their quality.

The undersigned would be pleased to see purchasers at his grounds, where the produce can always be seen in every stage of growth. [v4-17] A. P. SMITH.

P. S.—I have disposed of my entire stock of Seeds to J. R. RAY, 70 J street, Sacramento, to whom orders for my seeds may be addressed.

Seeds the Growth of 1855.

J. R. RAY, 70 J street, Sacramento, has purchased from Mr. A. P. SMITH his entire crop of Seeds, which, together with some choice foreign importations, constitute the most extensive and desirable stock of seeds on the Pacific Coast.

Fruit and Shade Trees, Flowering Shrub; Strawberry, Asparagus and Rhubarb Plants, &c., always on hand or for sale directly from the Nursery. v4-21

SAN JOSE NURSERY.

THE San Jose Nursery and Gardens, formerly known as L. Provost & Co., is now carried on in all its branches under the immediate eye of the present proprietor, who is sole director and owner of the same, having purchased the interest of his former partner.

L. Provost, the present owner, will now offer to his patrons and friends one of the largest and finest collections of Fruit Trees that can be found in any Nursery in the State, consisting of all the most desirable kinds of Apple, Pear, Plum, Cherry, Peach, Apricot, Nectarines and Quince, with a very extensive lot of Grapes and Figs, a beautiful lot of choice Ornamental Trees of rarest kinds, and Green House Plants in great variety.

The collection of Roses in these Gardens cannot be equalled, for nearly *twenty thousand* of the most beautiful plants, large sizes and rare kinds, can be found here.

Purchasers will be sure to be satisfied if they will visit the Gardens, where they can find much to please them, which the Proprietor will show them with pleasure.

☞ The Nursery is situated in the city of San Jose, immediately above the City Mills. L. PROVOST,
v4-17 Nurseryman and Florist.

v3-2 CHARLES TAYLOR, Agent.

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,
has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

DR. BOYNEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]
Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "SIR—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.
Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.
Signed I. BUTTS on the wrapper.

SETH W. FOWLE,
Proprietor, Boston, Mass.

SANDS' SARSAPARILLA.
IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of *Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Boils, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility,* &c., &c., &c.

THE value of this medicine is now widely known, and every day the field of its usefulness is extended. It is approved, and highly recommended by Physicians, and admitted to be the most powerful and searching preparation from the root, that has ever been employed in medical practice. Its operation extends to the remotest parts of the system, and consists in removing diseased action in the absorbing and secreting organs. In man, Nature seldom effects, unassisted, the cure of any virulent disease, but requires the aid of a stimulant, alterative, or antiseptic medicine. In diseases of the skin and flesh, a combination of these three classes of medical agents is highly desirable. All these properties are combined in this preparation; and instead of operating successively upon the system, as they must necessarily do when taken separately, they operate simultaneously, and in perfect harmony when administered in this form. Its tonic property strengthens the digestion, and improves the appetite. Its alterative tendency carries off the accumulations of morbid matter,—and its antiseptic influence neutralizes the virus, by which the disease is fostered. Its uniform success in curing and relieving the various diseases for which it is recommended, is established by a multitude of attested facts.

From the Army.

MONTEREY, Cal., Jan. 18, 1850.

MESSRS. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, hoping it may lead some other unfortunate beings to try its effects, and that they may be benefitted as I have been. I arrived here by the overland route, about the first of October last. A few days after I was first attacked with a very disagreeable eruption of the skin, which my physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine at home, I purchased three bottles, which had the desired effect of removing my difficulty entirely. With high regards, yours, &c.,

J. H. MILLER, Lieut. U. S. A.

Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, 100 Fulton street, corner of William, New York. Sold also by Druggists generally throughout the United States and Canadas. Price $1 per bottle; six bottles for $5.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-18 3m

THE CALIFORNIA FARMER

A Journal of Useful Sciences.

VOL. IV. SACRAMENTO, CALIFORNIA, FRIDAY MORNING, DECEMBER 14, 1855. NO. 24.

The California Farmer

AND JOURNAL OF USEFUL SCIENCES.

By WARREN & SON.

PUBLISHED EVERY FRIDAY MORNING.

Office—on Fourth street, between J and K, Sacramento.

TERMS.—Two dollars per annum, in advance. For a club of five new subscribers, we will send a sixth copy gratis.

☞ Advertisements in this journal will have a circulation and notice unequaled.

California Agents.

[illegible] Washington streets, San [illegible]

WELLS, FARGO & Co., *at all their Offices in this State.*

PACIFIC EXPRESS COMPANY, *at all their Offices.*

LANGTON & Co., *at all their Offices.*

The FARMER may be found at the following places at all times:

GARDNER & KIRK, *Booksellers, Second street, Sacramento.*

ULLMAN & Co., *P. O. Building, San Francisco.*

BENJ. DOLD, *Benicia and Vallejo.*

G. & O. AMY, *Booksellers, Marysville.*

Foreign Agents.

J. Q. A. WARREN, Boston, Mass., *resident Editor and Corresponding Agent for the Eastern States, by whom Subscriptions and Advertisements are received—Office, on Washington street.*

W. V. SPENCER, *Bookseller, 128 Washington street; and*

BURNHAM, FEDERHEN & Co., *Court street, Boston, will always have the* FARMER *on sale.*

GRAY, ADAMS & HOGG, *Nurserymen, Seedsmen and Florists, Kensington Road, London, will receive Subscriptions for this paper.*

M. DUSACQ, *Bookseller, Paris, will receive Subscriptions.*

Volunteer Agents.

We are desirous of extending our circulation as widely as possible, and being anxious to open the New Year with a generous addition, and in present many improvements and embellishments, we would kindly invite our friends to give us a little portion of their interest at this time. That we may present to them some inducement, we propose that to those who will make us up clubs of five, ten or twenty copies, before the 1st day of January, we will allow them every *fifth* copy for their kind aid; and what person who feels an interest in the productions of our State and its rise and progress, cannot find *eight persons* to join him in subscribing for our journal. They will thus secure one copy for themselves, and one copy to send to a friend in the States, *free of cost.*

May we not anticipate a *New Year's Gift* in this form?

Subsoil Plowing,

We rejoice to see how strong and numerous the arguments are beginning to appear in behalf of this all-important subject, and we wonder that it has been possible to smother up so long. For two years we have urged and urged, again and again have we recommended various experiments, and although every season gives more and more proof of its great value in warding off the effects of drought, yet either from a want of knowledge of what subsoiling meant, or from an unwillingness to go the expense, many of our best farmers have never yet tried it. That ignorance has prevented the practice of subsoiling we have no doubt, for in our travels we find many who profess to be large farmers, who never saw a subsoil plow, and do not know what it means—much less know how to use it.

And again, we have called at Agricultural stores, and when we ask to see their subsoil plows, they would show us a large breaking-up plow, or a deep-tiller; even *here* they did not know a subsoil plow. It is a pity that the old adage of "every one to their trade," could not be carried out better in California, so far as Agriculture is concerned; for we should as soon expect a blacksmith to put us up a medical recipe, as to expect correctness in some who are engaged in agricultural merchandising; they cannot tell you the difference between a subsoil and a sod plow, or the uses of either, any more than they can tell you the difference between a cucumber and a melon seed, or rutabaga and radish, or the nature and character of either vegetable. All this ignorance is detrimental to progress. This could be excused in the earlier times, but not now, and farmers should find those to trade with who can give them all the required information.

We call the attention of our readers again to the able article of "Colfon," in number 22 of our paper; it will bear repeated perusals. And we ask them to notice that from all the older States, and from Europe, every mail brings us the good results of *subsoil plowing.*

We copy from an able editorial, in the new paper issued at Louisville, Ky., called the Commercial Review (published by L. W. Fiske & Co., an excellent paper) upon Agriculture, Commerce, and manufactures, the extracts below. This was intended for Kentucky, but will apply well to this section in many instances. If grain-growers would wish to know why their crops are steadily decreasing, let them read the following:

These three facts are well known to every man of ordinary intelligence in the older portions of Kentucky: 1st, That heretofore as a general rule, the crops of our farmers have not been diversified. 2d, That nothing like a judicious system of rotation has been pursued. And 3d, That the same fields have been seeded to the same staples, year in and year out, for half a century, until of them the land will not produce enough to pay for the labor of working it—in many cases failing to return even so much as the seed sown. Beyond these three facts, however, is a fourth, not generally known, or if known, not thought of, which, while not denying the exhaustion spoken of, yet shows that that exhaustion is only partial. This fact is the important one of *shallow plowing.* We know what we are writing about when we make the averment, that in much the larger number of the old farms in Kentucky, which are supposed to be *worn out*, nothing has ever been touched by the plow, the harrow, or the hoe of the husbandman, but the first five or six inches of the top. To this, then, the *exhaustion* has been confined, such as it is; and it is to this that the attention of the cultivator must be turned, who undertakes to put in heart again what has been abused and impoverished. And the whole process of *rejurenation*, though for a time requiring labor and patience, is simple and certain, as we think we shall be able to demonstrate in successive numbers of this journal.

"A few simple principles lie at the basis of successful Agriculture, without a fair understanding of which it is useless to lean upon the soil for support. Warmth is necessary to vegetation; change is requisite to frequent cropping; rest, or its equivalent, *restitution*, is essential to all soils. But few cultivated crops, if any, have strength enough to push their roots where the plowshare has not been pushed before them, and if they had they would be chilled instead of nourished, for the soil has not been opened to the genial influence of the sun and the storm. Without rotation of crops, the best land in the course of a few years becomes exhausted of the elements that most enter into the production of plants grown upon it, and having no longer power to yield them sustenance, they fail to grow and produce. But even with deep plowing, and judicious changing of crops, the land must sooner or later give out, unless rest be allowed it for the purpose of recuperating its exhausted energies, or artificial stimulants be applied for to keep it in heart. These simple principles, and the necessity of their observance, we shall hope to elucidate and enforce as successive numbers of our journal make their appearance.

"The influence of judicious systems of tillage upon the prosperity of a people, has been forcibly illustrated in Belgium, England and other European countries and so in some of the older States of our own nation, as to admit of no denial. Wealth now is not more power. Education is no more engagement. Christianity is no more religion, than *Science is Success* in Agriculture."

DIANA GWYNNE.

Roan, calved January 28th, 1852.

The Soil of Stockton.

We were somewhat surprised on our visit at Stockton to notice so many fine garden lots unimproved, and upon inquiry we found that an impression prevailed that it was *impossible to cultivate that kind of soil.*

During our stay we took pains to visit various portions of the city and environs, and we found the soil generally a heavy dark marl, a fit substance for brick-making; in fact the whole surface soil of the city would make most excellent brick, and we afterwards learned that the soil had been so used in several instances.

Simply believing this fact, that this soil would bake hard in summer, but little thought had been given to any process by which it could be improved, and therefore it has been neglected and *this feature*, of neglected ground, detracts much from the beauty that would otherwise strike the visitor as one of the most prominent and attractive sights of any beautiful city.

It is impossible to make any city really beautiful without nature's adornments, however gorgeous may be its palaces of marble and granite. We care not how stately may be the buildings, how broad the streets, or how neatly paved; we care not how rich or showy may be the merchandise in the shops or warehouses, no lover of even these rich and attractive appendages to wealth, will wander long without wishing to have the eye relieved by a *tree* or garden spot, or some of earth's fair adornments; and it is the garden of C. M. Weber, Esq., at the first approach to Stockton, that gives to strangers so good an impression when they make their first visit to the place.

The first impression, however good, of Stockton, is lessened after a little, by the fact before stated, of the general neglect of improving the streets by shade trees, and improving the garden grounds around their dwellings. This neglect arises from the fact we have before named, of a mistaken idea that the soil [illegible] cannot be successfully cultivated. [illegible] that all the "waste places of the earth" shall be redeemed; and we are happy to [illegible] that we can offer to our friends at Stockton convincing proof that the soil in and around their beautiful city contains many of the richest and most nutritious elements of fertility, and all that is now required is a knowledge of what is wanting, to bring into immediate use all the waste and uncultivated spots, and thus increase the same in value and appearance, and render the city more attractive, healthy and prosperous.

If the citizens of Stockton desire to bring their grounds into immediate use, all that is required of them to do is to ameliorate the condition of their lands. This is easily done for nature, and Providence has been most kind, and provided them with the means near at hand. The heavy black and brown marl which is the principal soil, is underlaid or mixed with more or less clay, which when dry must necessarily bake and crack, and it is almost impossible to cultivate it in a moist state. In order to cultivate, it requires ingredients to make it malleable, and give it life and strength; and *the very best thing* is the *coarse river sand* near at hand. Nothing could be better, and it seems so providential that so large quantities of this material should be found exactly where it is most needed.

In addition to the sand, a good dressing of stable manure, after the land has been thoroughly plowed, subsoiled and cross plowed, the manure to be plowed in and harrowed, will render the land fit for use. For small gardens the system of trench *spading* (not *sapling* as mis-spelt in a former number) and constant cultivation, with liberal supplies of sand and careful manuring—as is so well practiced at Mr. Weber's garden, by his excellent gardener—will in a brief time enable the citizens of Stockton to have as beautiful gardens, squares and walks as any city in the State.

We have extended this article already to a greater length than we intended, but hope some good may result to [illegible]; for the remembrance of our visit and the kindness received will make us desirous of seeing the city as flourishing as may be.

FRUIT PIECE.—A [illegible] took up a [illegible] that had been planted [illegible] years, and found that a [illegible] as white potatoes, but [illegible] the [illegible] remained sound.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, DECEMBER 14, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

Exchanges.—Will our cotemporaries that exchange with us, have the kindness to direct our papers to *Sacramento.*

BILLS TO SUBSCRIBERS.

Those to whom we send Bills will please bear in mind that we need what is due us. As the year draws to a close we hope that those who are indebted to us will not require us to "call again."

The Enthusiast.

How often this word is applied as a term of *reproach*, when the one who uses it deserves to feel its keenest stings rather than those to whom it is applied.

Every poet and scholar, every professional man, every artist, who gives the whole energies of his soul to his study and profession until he is the master of it—such when they give the result of their investigation, when they reveal the real beauties of their profession—and utter with earnestness the thoughts that inspire them or speak of those themes that they would have others love too, as means of conferring happiness—'tis then, the cold and heartless, the unthinking and ignorant, hurl forth in contemptuous tones the cry *Enthusiast Enthusiast*—and the small talk and tattle of the vulgar throng for a moment darken those scenes of interest, that were intended to make life more joyous and happy.

How many joyous thoughts are repressed, how many of life's brightest scenes are blighted through fear of the cold ridicule or heartless misjudging of a censorious world.

When will the day come when we can act out our own thoughts as God and nature shall dictate when will the day come when the soul shall shake off the fear of "*Mrs. Grundy*" and live true to itself.

We have heard the charge of ENTHUSIASM so often hurled against partienlar persons that we have taken pains to investigate some cases and never yet have we pursued the inquiry without a favorable and earnest interest resulting in behalf of the assailed and a corresponding contempt for those who had not soul enough to appreciate the good and true in others..

What art or science, what profession would be advanced without *true* enthusiasm? and devotion to one's pursuit is but another name for enthusiasm—and is any employment worthy man's pursuit that has not the earnest energies of his mind?

The painter may stand entranced for hours before the canvas upon which he has just put the finishing touch to a work that had laid upon his brain for years—an ideal—but now looking out from the canvas a creation of his hand almost speaking to him who has created this form of beauty. The painter can gaze and admire—but the *crowd as they pass* see no beauty—but wonder at the painter and cry "Enthusiast! Enthusiast!"

The sculptor, who has taken the cold and lifeless marble—and from the senseless block has chiseled out a "Venus de Medici," an "Apollo," or a "Greek Slave," he too might worship his own creation as beautiful, but the mass again would pass and gaze in wonder at what could attract—they see nothing but the lifeless marble—and they too, cry Enthusiast! Enthusiast!

And he, who may love the truthful in nature, he who finds "books in the running brooks, sermons in stones, and good in everything"—he who hears music in the rustling leaves of the waving forest—who see diamonds in the dew drops upon the opening flower, or voices in the rippling brook, and feels that the royal robes of kings are not more beautiful than the "lilies of the field" that God scatters so profusely in our pathway to make life blessed, if those who recognize all this—if they but give voice to their thoughts and in the fullness of a truthful and warm heart speak what they feel, the purest feelings of the heart are chilled, for the cry goes up Enthusiasm! Enthusiasm!!

We stood in the gallery of an artist gazing upon the work of that divine art by "Daguerre," we wandered from picture to picture describing to a friend the perfections acquired in thus transcribing so lifelike the features of kindred and friends, we felt how few can see all the beauties of this wonderful art—the *artist alone*, he who creates enjoys in fullness the work of his hands —he can point you to each feature and dwell with minuteness upon every line that marks the human face, divine—and *he* the artist sees beauty and truth where others see it not, and with his devotion to his art, he makes *his mark upon the age* for as you walk through his gallery amid the throng, you hear from various lips, the recognitions of those they love: as they take up picture after picture: 'Tis my father! and my child, my brother, my sister, my wife bursts from the lips of those who look from face to face—but this is *enthusiasm* but the *artist*, hear from *him* and if he loves his profession and speaks as he loves he too will be an enthusiast although he gives you the features you love most on earth—let him who scoffs at the earnest devotee of any profession, go to the gallery of "Vance," in San Francisco, and look at the "Picture of the Child" and then if *this artist* should speak warmly in praise of his profession, CALL HIM AN ENTHUSIAST if you will.

But—we rejoice to know that a just appreciation will ere long rest upon the labors of every advocate of truth—and the world's "misnomers" will no longer be regarded—we rejoice to see the *Press* write freely—we copy from the "Alta" of Sept. 1st the following—we fully agree with the writer and hope to see this same spirit of enthusiasm manifested in all that shall tend to elevate our State.

We rejoice particularly to see this tone in the Alta for if we recollect aright it is not long since the same journal pronounced the efforts made to advance the cause of Agriculture in the Exhibition held in that city merely the work of enthusiasts—we rejoice at the change and hope our neighbors will lend a little of *their enthusiasm* now for the great work of awakening the energies and enterprise and genius of the dwellers in our golden State—the words from the Alta are a good beginning and we hope more from the same source:

"Enthusiasm is the philosopher's stone. It can do anything, and everything that ever was done good or noble has been done by it. We care not how few they be that set forth in a great work whether there be one or one thousand if there be enthusiasm; abiding, lasting enthusiasm, that amounts to a trusting faith, it will overcome all opposition and work out its purposes. Enthusiasm gave birth to the revolution. It nerved the arm and strengthened the resolution of our forefathers. It sent forth the pioneers into the wilderness. It sustained the Pilgrims, and it pushed on their descendants to do noble deeds, and trust in the right. It has built our railroads—dug our canals; it has leveled the forest, it has sent steamers over the ocean. It has delved into our mines, explored the foundations of our mountains, it has caused cities to spring up, as it were, in a day. It has effected not only physical but moral revolutions, and it can do what neither kings nor potentates, nor laws, nor standing armies can do without it. Enthusiasm made *La petite Corporal* the wonder of his age, of all time. He knew its power and he knew how to create it. Enthusiasm made America a republic, and it has perpetuated republicanism."

THE CINCINNATI OF CALIFORNIA.—In a very brief time, when the Sacramento Valley Railroad shall be finished to Nevada, that city will become as famous for its Packing Houses as the famed City of the West which stands at the head of this article. The packing of beef and pork, the curing and smoking of hams and bacon, will be objected to in our populous cities in the warm season, and more or less loss would accrue from them; but the cool atmosphere of the mountains and other facilities there offered will induce a general business to centre near the mountains. Already large packing houses have been established: one at San Francisco, at North Beach, by Lewis & Brady, and they are doing a large and very profitable business. Another recently commenced at Sonora, by Messrs. Lawton & Smith, who we learn pack sixty thousand pounds per week; and we also learn that a preference is now given by merchants for California-packed pork. More than a year ago we prophesied such results, and we have ever felt confident that California would stand pre-eminently high as a State, independent, by means of her own resources.

SPLENDID SADDLES.—Among the evidences of California skill and industry which we noticed while at Stockton, we saw while passing an extensive saddlery, a magnificent saddle. We entered and were surprised at the extent of the business carried on. We learned from the proprietors, Messrs. Bird & Hall, that they are large exporters of Mexican saddles to the East. We saw some very superior specimens of their workmanship, and were pleased to learn from them that they find ample employment for many workmen in their line. We should judge by the business we saw them doing, that they were on the high road to prosperity. Messrs, B. & H. had fine saddles at the Fair.

Mechanics' Institute of San Francisco.

This most valuable institution, we are happy to say, is under a most prosperous headway. Availing ourselves of our visit to that city, we called at their rooms in the block corner of California and Montgomery streets, up staris, and were highly gratified to learn of the interest being evinced for the Institution among the mechanics of that city and vicinity.

It was pleasing to see so extensive a library, at so early a day. Several hundreds of volumes have already been contributed by friends of the Institute. It was partienlarly interesting for us to know that the first volume donated to the library was the splendid volume of Loudon's Encyclopedia of Cottage, Farm, and Villa Architecture—a rare work here and most desirable. We look upon this incident as symbolical of a happy union of feeling between the Mechanics and Agriculturists of California. A magnificent edition of Schoolcraft's Indian Tribes, with plates—an estimable work; and Explanation of the Pacific Railroad Route—these with many other valuable works were the gift of Gen. Jas. McDougal.

We saw donations from Col. Pardee, and some beautiful petrifactions of the Oregon pine from Mr. Dumun. We saw also a wonderful specimen of an eagle's leg and claw, of monstrous size; the claws extended measured seven inches. This eagle was shot while bearing off a *sheep*. Noble bird! Bird of power! May the enemy of the Stars and Stripes remember that the *talons* of this bird thus represented are but a figure of its power.

Although there is a good interest, there is not that universal interest that should be felt for so valuable an institution.

A BEAUTY.—Look at *Diana Gwynne*! Is she not beautiful? Her bright speaking eye tells you of her good quality. She stops a moment to inhale the balmy breezes of Autumn, ere she turns down to her home near by, to give the generous mess of rich milk as a reward to those who know the value of good stock and know how to take proper care of it. We shall continue to publish plate numbers every week, and we trust the stock raisers of California will appreciate the value of such efforts to benefit them, and commence immediately to subscribe, and thus secure the plates and history of the *best stock* of the country. *Diana Gwynne* is the property of Samuel Thorne, Esq., of Thornedale—one of the most distinguished stock raisers of the country. We ask particular interest for these publications, and hope an immediate increase of names to our list of subscribers—this will give us additional ability to progresss.

CURIOUS VEGETABLE.—A very curious specimen of nature's freaks, we received through Langton's Express, from Downieville. It is a "Blood Beet," and is in the form of the human body, except the head and feet; it is about two feet long, well grown, smooth and handsome. The foliage starting from the crown falls down at the sides, nearly covering it, giving it the appearance of a digger Indian woman! It is in reality one of the most remarkable specimens we have ever seen. It was raised at Downieville, by a Frenchman. We have had a daguerreotype taken of it, to preserve so curious a freak of nature, and shall dispatch a likeness of the same to Europe and to the States.

SPLENDID APPLES.—The Apples alluded to in our last issue have attracted many visitors. They were indeed remarkable, and conclusive evidence that ere long we shall have them plenty and at reasonable price. Several of these apples weighed *a pound* each, and their quality was of a superior order. The collection embraced five or six varieties, and were brought from Oregon. The contrast between these specimens and the fruit usually offered for sale, is very great.

The whole quantity are for sale by J. R. Ray, Esq., fruit dealer on J street, near the Antelope restaurant.

DONATIONS OF BOOKS.—The State Agricultural Society has received, the present week, near 400 volumes of valuable books on Agriculture, Mechanics, Finance, &c.,—works issued at the Patent Office. They were kindly donated by Hon. C. L. Weller, of San Francisco, and Col. Forman, of this city. It will be the object of the Society to scatter them widely, so that the greatest good may result from them.

We have received for the "FARMER'S Library," also, a liberal supply, for which we are kindly indebted.

CALIFORNIA OWL.—W. W. White, Esq., has presented us a curious but very handsome specimen of the Brown Owl, found by him at the base of Mount Diablo. The face of the Owl is remarkable, and the bird is supposed to be quite rare. Can be seen at the Society's rooms for a short time.

Discoveries.

A COAL FIELD has been found at Corral Hollow, thirty miles southwest of the city of Stockton. It is of a light color, but gives evidence of improving as the vein deepens.

THE Union Democrat tells of Diamonds being found in Scorpion Gulch, near Byrne's Ferry, on the slope of Table Mountain. They are said to be very valuable—one was valued at sixty dollars. The claim is now called Diamond Claim.

NEW SPRINGS have been found six miles from the old Mission of Soledad. One of the springs is of medicinal power and is so hot that the body cannot bear it. The Monterey Sentinel thinks this is to be the second "Saratoga."

Numerous springs are being examined in Napa county—up the valley, at the Geysers, and upon Mount Diablo; and it is probable that with the opening season of traveling, many new places of resort at these several springs will be opened.

California will soon be more celebrated for her famous medicinal springs than any part of the world.

American Competition.

WE have received from the celebrated American manufactory of A. W. Harrison, Philadelphia, a beautiful assortment of his various soaps, perfumery and toilet articles; and as it may not be generally known in this section of the country that we have such an establishment in full operation in the United States, and entirely American, a few words concerning the above house will be found interesting to our readers.

The principal department is perfumery, although there are several large departments for the manufacture of the choice varieties of toilet soaps, extracts, oils and inks. The ink department is a large one, and the demand is now above any other quality in the market. But we would speak at this time of the perfumery, as the samples we have received are so rich and fragrant as to seem like the natural flowers from which they were made. The perfumes are procured from the original manufacturers and are of the purest quality in the world. The principles of combination into the various articles involve the most scientific knowledge, the most recent discoveries, the most newly invented machinery, and the highest artistic skill which have ever been combined in one establishment. The style in putting up, as well as the constitution of the various articles of perfumery, are strictly American, and the list of articles manufactured at this establishment comprise several hundred varieties. Mr. Harrison has an ambition to create an *American standard* in advance of, and above all European origin, and hopes the refined of society, the ladies and gentlemen of America, will be the first to appreciate such endeavors.

Having had the pleasure of a visit to the establishment of Mr. Harrison, and been shown through every department, which occupied some hours, we were astonished at the immense business done, and at the most perfect system employed. It was indeed a pleasing and instructive sight, and to the credit of the proprietor, we would say that his is the only establishment which visitors or friends are allowed to examine. We intend in a future number to give an extended account of this American manufactory, the only one in the United States, and in the meantime would invite our readers to procure some of the new extracts of Mr. Harrison's and they will never wish to use any other. His "Sweet Clover" is beyond all praise, and will be very popular with the ladies.

W.

New Music.

HORACE WATERS, the great Music Publisher and Piano Dealer, 333 Broadway, New York, has sent us the following popular music, to which we would call the attention of our musical friends:

"Jeannie Marsh of Cherry Valley." Song and Chorus. Words by General Morris; Music by Thos. Baker. This song possesses all the elements of immense popularity, and will soon be found on every piano throughout the country.

"The Rachel Schottisch," by Thos. Baker, a pretty and elegant specimen of this popular style of music, admirably adapted for dancing. The title page is embellished with a beautiful vignetto of M'lle. Rachel (the celebrated actress), in the character of Camille.

"The Marseilles Hymn," as sung by M'lle. Rachel. Newly arranged with French and English, by Thos. Baker.

"Longing" and "Parting." Ballads, by M'lle. Julia Pettigrew. Two charming songs by the clever pianiste, M'lle. Pettigrew. The melodies are pretty and flowing, and the accompaniments easy of attainment. The title pages are embellished with handsome vignettes.

"Kind Words can never Die." Ballad, by Sister Abby. This is one of the most popular songs of the celebrated Hutchinson Family, and sung by them at their concerts with rapturous applause. The ballad ought to be in the portfolio of every lover of good music.

We shall from time to time announce the new and popular music, from the above celebrated house, and would ask the attention of the ladies to our columns, as they will find the best list published, being sent to us by our New York and Boston correspondent.

Mining News.

Every paper that comes to us seems to be filled with new discoveries and a richer yield to old diggings; the rivers yield largely, the mountains give forth of their abundance, and the quartz mills are pouring out streams of gold. This is well for the miners; we rejoice at their success, and it is good for the country if we can keep the *gold here*. The great aim now should be to manufacture and produce all we want, even if we pay a little higher price for home manufactures. Let the miner encourage California industry, and more comforts will flow back to him for it.

We make extracts from the several journals that speak of the new diggings and the success of the miners.

SPRINGFIELD,

Is a large town, within sight of Shaws Flat; the buildings are in a continuous line between the two towns. The settlement in this place, is not so scattering, and the houses have the appearance of permanent population. There are many substantial buildings for business and some beautiful private residences, inclosed with substantial stone fence. This town derived its name from a large spring, convenient, that was formerly used for sluicing dirt hauled from other places. There can be no doubt that in a few years, Columbia, Springfield and Shaw's Flat will be united in one large, corporate city.

COLUMBIA,

The Gem of the Southern mines, is surrounded by hills, upon the sides of which are meandering the ditches of the companies that supply the miners of a large portion of country with water. The inhabitants of Columbia and vicinity have displayed great foresight in projecting improvements of a permanent character, that will for ages bring business and prosperity to their doors. The Tuolumne county ditch was projected in 1851, and the water was first conducted through the Ditch, in 1852; when the Stanislaus river was at a very low stage of water, they carried a large stream in the Ditch, supplying over two thousand miners with water. The miners within the last year, demanded that the water rates should be reduced. Through some misunderstanding a strike was made, and a new company formed and organized, called the "Columbia and Stanislaus River water Company."

The ditch was commenced in March last, and the capital stock of the company is $300,000, divided in 1,500 shares. The work has been carried on so far without issuing scrip, certificates or shares being issued for labor or materials furnished when the amount reaches to a share. The stock is at a very slight discount at present.

The company contemplate having it completed within one month. The first division is nine miles down the south Fork of the Stanislaus; the size of the ditch is six feet on the bottom, three feet deep, and nine on the top. The second division, is thirteen miles to the Ice House; from thence to Shaw's Flat, six miles; the least portion of grade being fifteen feet to the mile. From the Ice House to Shaw's Flat there are many water privileges suitable for quartz mining.

There is another ditch from the Ice House to Bald Hill, near Sonora, where it is contemplated to continue it on to Jamestown. The new ditch is elevated above the Tuolumne ditch, from 20 to 30 feet, which will reach ground that has not been heretofore worked. The two companies will not by their united efforts be able to furnish the demand for water during the ensuing year, although the Tuolumne county company have recently doubled their capacity for furnishing water.

The Tuolumne county company have constructed a large reservoir forty-five feet in hight across the river. There are many other valuable improvements in and around Columbia. The town is supplied with good water, which is conveyed through pipes, and would be found useful in case of another conflagration. The improvements now going on in the business parts are of a permanent character. The flumes, ditches, and deep holes, with the timbered railways, would induce the belief that there is valuable mining ground in and around Columbia.

The frequent showers with which we have been favored during the week, have caused a total cessation of mining operations in the rivers. Miners are congregating in large numbers at the principal trading posts, and are making vigorous preparations for the winter's golden harvest.

Between Abbey's Ferry and the rich mineral district around Vallecito and Douglass' Flat, more than a score of tunnels enable the adventurous miner to explore the internal resources of our Table Mountain.

Within the past ten days a rich lead has been found, which the discoverers claim is a continuation of that recently struck in Tuolumne. A few weeks more will place this fact beyond dispute, when this region will become one of the most populous and flourishing in the Southern mines. —*Stockton Argus.*

HOOSAC TUNNEL BORER.—Arrangements are now being made to put this great boring machine at work in Table Mountain. It cuts a tunnel five feet in diameter, and advances at the rate of twenty to thirty feet per day.—*Union Dem.*

MAIN STREET DIGGINGS.—From a hole just sunk to the bed rock, eight feet below the surface of the street, and forty feet from the door of our office, C. W. Haskins & Co., are taking out gold at the rate of three dollars to the pan of dirt. Can we not say that gold (not so rare as of old) is as stones about the streets. —*Placerville Herald.*

AROUND MOKELUMNE HILL the miners are now making better wages than at any previous period since '49 and '50. On Corral Hill, and in the vicinity of Stockton Hill—at each end—the claims continue to pay a rate of wages which will shortly enrich the owners.

TABLE MOUNTAIN.—The Sonora Herald states that a meeting of the miners and all interested in Table Mountain, was held at the Table Mountain House, Dec 1st, to consider the mining regulations in regard to the size of claims. The contest was between those known as three-hundred feet men and one-hundred feet men. The old regulation prevailed, allowing three hundred feet to the man, and resolutions to that effect were adopted. The meeting passed off without any disturbance.

WELLS, FARGO & Co.—This popular house have removed their head quarters at the Bay, from their former location to the granite building opposite, formerly the banking house of Page, Bacon & Co.; and in that spacious establishment they are doing a world of business. This house is now so firmly and well established as to rank as the largest Express and Banking Company in California. Although they yielded for a brief time to the great convulsion in the panic times of February, 1855, (a day long to be remembered), yet they promptly regained their high position, and most honorably met their engagements, and are now on the swelling tide of public favor. Their new location is most admirably adapted to their increasing business, and presents a most splendid and spacious suit of rooms. T. M. Janes, Esq., who was recently at the head of the house, having returned to New York, Louis McLaoe, Jr., Esq., now stands as the head of the house in California, and from his high standing with all classes in the community, every efficiency is given and every success is insured by his acknowledged reputation and high qualifications. Not only in the principal head of the House, but in the several departments below, and in all the principal cities, men of known character and integrity are a guarantee for the permanency of the House. In our city W. B. Rochester, Esq., most favorably known, secures great favor from all men. We have ever found this House ready to act liberally, and ready at all times to transmit packages of very large dimensions *free of cost*, in order to benefit public enterprise; and we cannot but thus acknowledge that we feel pleased at these instances of generosity. We have been under obligations to this House through the kindness of Mr. Rochester, for great kindness in sending to various Societies the products of California—without which liberality these products could not have been made known.

CALIFORNIA MATHEMATICALS.—While at San Francisco last week we strolled into the establishment of Wm. Schmoltz, Mathematical Instrument maker. Mr. Schmoltz has been very successful in manufacturing all the various instruments for surveyors' and similar scientific purposes, thus securing to our State the honor and credit of being independent of others for these instruments, and also saving so much wealth to the State. We invite the scientific to visit this establishment, confident it will be a source of pleasure. Mr. S. has manufactured a splendid set of fine instruments, consisting of a self-registering Thermometer, a Hygrometer (to test the humidity of the atmosphere), a Barometer, a rain Gauge, and a Wind Gauge, this last a curious and most scientific instrument. The whole set of five can be had for $125.

IMPROVEMENTS.—Another tribute is being paid to the "Goddess Flora," by one of her disciples. A beautiful Temple, or House of Flowers, in the shape of a Conservatory for the cultivation of choice green-house plants, is being erected in our city at the fine garden of Rev. O. C. Wheeler, where in a short time we may expect a show of some of the "pet plants" in all their glory. The house is fifty feet long, and of fine proportions otherwise; of good pitch, and well calculated for the growing plants. We are pleased to see these improvements going on, and strangers visiting our city will be gratified by a visit to these gardens.

LARGE TOMATO.—We learn from the gardener at the ranch of D. H. C. Chapman, Esq., of White Rock Springs, Placerville road, that a vine at that ranch the present season, has grown to cover a space of thirty-three feet in circumference, and has produced six hundred and eight pounds of full ripe Tomatoes, very fine. They were the yellow tomato, and are yet in bearing. They were cultivated by Mr Miller, the gardener.

CALIFORNIA ALMANAC.—We are indebted to the publishers of this valuable and interesting publication for a copy of it. It is a neat and well arranged Almanac and will be found useful, and undoubtedly have a very ready and profitable sale. Published by Monson, Cooper & Damon, San Francisco.

INTERESTING SABBATH LECTURES.—Rev. O. C. Wheeler commenced a Course of Lectures on the last Sabbath evening, at the Temperance Hall, corner of Tenth and J streets. Subject: "Eve—the Mother of us all." The Hall was well filled with an attentive audience, and the lecturer elicited warm approbation from an intelligent assembly. The next lecture will be given next Sunday evening, 16th, when it is expected from the interest already elicited by the first lecture, that a crowded audience will be in attendance. We were about to speak of the well known eloquence of the lecturer, when the annexed admirable communication from the able pen of "Bessie," was handed us, which speak more appropriately than we could ourselves, and coming from one of "Eve's Daughters," is most admirably appropriate:

LECTURE ON "MOTHER EVE."

Rev. O. C. Wheeler, whose name is familiar among us, began a Course of Lectures on Sunday evening last, on the *Women of the Bible*. No one ever made a more decided or deserved hit than the reverend gentleman in his first lecture, of which our sainted though much abused foremother *Eve* was the subject.

Mr. Wheeler is too well known as an orator and a man of letters to need a panegyric pronounced upon his effort, but I was so much pleased by the masterly and original style in which he handled his subject, that I cannot refrain from asking a space in your columns whereby to express it. His delivery was that of a well-bred gentleman addressing an enlightened audience, and proceeding throughout on the assumption that all were more or less familiar with the topic he was discussing. He spoke or rather read from his MS. about three-quarters of an hour, with unwavering attention from every one, and the intense interest with which he was listened to could not be otherwise than flattering. He did not preach from Milton—as too many of his cotemporaries have done, casting all the blame of the stolen apple upon poor Eve—but confined his researches to Biblical history; and in his delineation of her character, making every allowance for youth and inexperience, no more graceful or fitting tribute could be paid.

The beautiful, simple and unaffected manner in which he related the sad story of the fall, and the amusing episode on *woman's rights*, served to chain the attention of every listener to the close of the discourse. In the way of the latter, about which so much absurdity is talked by masculine women and feminine men, we could not possibly get up an argument; being quite content with the existing order of Providence as to the relation of the sexes, and the subordination of woman to man, we do not think it worth while to seek any new light on the subject.

His lecture next Sabbath evening, will be on the *Women of the Ark*—and I am a little curious to know how he will paint Mrs. Noah and her three daughters-in-law. The good old lady must have been a pattern of excellence—for at the advanced age of six hundred years, or thereabouts, how otherwise could she be—living for forty whole days and nights in a little gopher-wood cabin, three hundred cubits by fifty, with only a single door and window, among such a "goodlie companie" of bipeds and quadrupeds, and, worse than all, the society of her *three son's wives?* It is a moral mystery to me how he will award to the four those ennobling qualifications which adorn the female characters of Holy Writ; for son's wives and mothers-in-law now-a-days, possessing any degree of amiability, are freaks in nature. He will probably tell us whether they lived together without quarreling; and if so, their praise should fill the whole earth, and their names live in the annals of everlasting fame.

BESSIE.

MARINE OF SACRAMENTO.—One of the sure signs of the prosperity of Sacramento is the fact that in eleven days no less than thirty seven sail of vessels arrived at our levee, loaded with merchandise, coming from the producing grounds and dairy sections of Petaluma, Suisun, Alviso, Napa Creek and the Bay City—about half each. This is an increase of two hundred per cent from the same time last year. Be it also remembered that this is in addition to the immense freights on two or three steamers every day.

SPIRIT OF THE AGE.—This is the title of the first "Evening" paper started above San Francisco. It has commenced under very favorable auspices and is indeed a *spirited* little journal; its typographical dress is creditable, the editorials thus far interesting, spicy and independent. It is a sprightly publication, and creates some little stir—long may it prosper for by those who relate, and also at the tax[illegible]. Geo. H. Fisher & Co., publishers. May success crown their enterprise and continue with them.

PRIZES OF THE STATE SOCIETY.—The "Special Prizes" of the State Society of Silverware are [illegible] Rooms of Fourth [illegible] awarded are [illegible] prefer [illegible] at the rooms [illegible]

PUBLIC ROADS.—We shall watch with interest everything that tends to progress, and the more rapid the safe communication and conveyance the better. The new road just opened and announced below, is a very important one, for it is connected with some of the largest stock ranches and nurseries in the State; and we hope every facility will be offered to the community that can be afforded. We fully agree with our friends of the State Journal in the following:

The public is already aware that the road embankment, leading from this city across the tules to Puto, Cache Creek and elsewhere, on the west, is completed. The enterprise keeps open, at all seasons, the communication between the places named. On Wednesday the Supervisors of Yolo temporarily fixed the rates of toll on the road. They intend examining into the cost of its construction, and allowing only such rates, as in their opinion, will pay a fair interest on the investment and keep the road in repair. For the present the prices are:

Wagon or buggy drawn by	1	animal, -	$2 00
" " "	2	" - -	3 00
" " "	4	" - -	5 00
" " "	6	" - -	7 00

Horse and rider, $1 50; Footman, 50 cents.
Horses, mules, or cattle, each, - - 1 00

These rates are too high—much more than the community can afford to pay. If the proprietors charge to the extent of the law, they will prevent, during the season of high water, all traffic over it, save only that which is absolutely necessary, and thus not only be a drawback on the enterprise of that section of the country, but also keep money out of their own pockets. We have sufficient confidence, however, in their shrewdness, to believe that they will demand only reasonable rates—such as will encourage, rather than retard travel over their road.

NEW ADVERTISEMENTS.—We desire to call the attention of our readers to the advertisements in our columns: they embrace important notices.

We ask attention to the notice of the arrival of superior Pear Trees from the Somerville Nursery to Messrs. Bradshaw & Co., San Francisco. We know the parties from whom the trees came, and know that Messrs. Bradshaw & Co., will only give such assurances as will be fully realized.

The new advertisement of Bailey Brothers, Jewelers, of this city, deserves more than a passing notice. This house is too well known in our city to need a word of commendation; but it will be well for our readers to call and see the splendid array of goods they are now opening. Christmas and New Year are near at hand, therefore you should give this house a call and carry a full purse with you and make your kindred and friends glad by a generous remembrance.

We have many very important advertisements in our paper, and we advise our readers to look over them carefully, and they will find some one that will reach their case and meet their wants.

GRAND PEACH CROP.—The Ohio State Journal notices the peach crop of Mr. Loughry, whose farm is on the Ohio river, in Adams county. Ten years ago he set out eleven acres with the choicest varieties of the peach. The Journal says that his eleven acres of peaches this year, will bring him the substantial sum of five thousand dollars, or nearly five hundred dollars per acre.

ONIONS planted in the same hill with vines will protect them from the depredations of the striped bug. Farmers and gardeners who remember this may profit by it.

A CURE FOR DYSPEPSIA AND GENERAL DEBILITY.—Those who wish to find the most efficacious remedy for these complaints, will never regret a fair trial of the Oxygenated bitters. They contain no alcohol.

Horticultural Department.

Currants.

THE following excellent article on the growing of Currant Trees, we lay before our readers, and we say amen to it, with all our heart. There is no one fruit more nutritious and wholesome in the summer months, none more palatable, and if pains be only taken to give them room and care, California would produce the finest currants in the world:

There is no class of fruits so much neglected as the currant, and none possessing so many good qualities and so susceptible of improvement, under good cultivation. Planted in some far off corner, where other fruits would starve and die, it is left to take care of itself, receiving no care in the way of manuring and pruning, or mulching.

In almost every garden where they are planted, we find them complete nuisances—hedge-rows of poor weak straggling branches, utter incapable of producing good sized fair fruit.

In the production of new varieties, the currant has been sadly neglected, while every year adds to the too already extended lists of pear, apple, peach, etc., until within a very few years past we have had nothing new added to this list. Lately, however, several new varieties have been sent out from England, some of which promise to become worthy of extended cultivation.

To cultivate the currant thoroughly, it should be pruned to one stock six or eight inches high, and planted against the south side of the garden fence for fruiting early in the season, and against the north side for fruiting later; in this way the fruiting season may be much lengthened. Suckers should by all means be removed as fast as they appear, and the head pruned annually, keeping a sufficient distance from each other to admit the sun and air—the young shoots should be shortened at least one-half of last season's growth, thus keeping up a good supply of lateral spurs for fruiting the succeeding season.

The ground around each bush must be kept well pulverized, and have a top dressing every fall, with a covering of fine manure, or good compost. Fork this in the spring, and apply immediately under the branches a mulching three or four inches thick of decayed leaves, grass, or fine straw. Repeat this every year, and very soon you will be surprised at the quality and quantity of your fruit. We gathered a few days ago fifteen varieties, nearly all of which were very fine. Among them were the following, with the description taken at the time:

"White Grape." The finest and largest of all white currants; the bunches large; berries very large and closely set, pale white but quite transparent; the bush rather a slow grower; wood short and stout; leaves dark green. The "White Dutch" has been to some extent confounded with this.

"Red Dutch." The bunches are short, compact; bush of fair size; the berries are large, high colored and rich, and for jams and jellies have no superior; free grower and abundant bearer; best of red currants.

"Red Grape." A fine grower and good bearer, with long bunches; larged light red berries, and quite acid.

"Champagne." A new variety, fruiting with us for the first time; evidently a cross between a white and red. The bunches are of fair size; leaves medium, color light delicate pink. I think when more extensively known, will be much in demand for preserving.

"Cherry Currant." Berries very large, at least one-third larger than Red Grape; bunches short, very compact; a vigorous grower, and with close pruning an abundant bearer.

"Victoria." Bunches of enormous length; berries above medium size, pale red; abundant bearer, and trained against the north side of a tight fence, may be kept until August.

"Morgan's White." Pale white, of good size; abundant bearer, but very acid.

"Rotterdam White." Similar to the above, but sweeter and richer.

"Black Naples." Best of the black currants; bunches of good size; berries above medium. These are much used in England for jams and jellies, but as yet are little cultivated in this country.

"Rotterdam Red," "Long Bunched Red," "Knight's Early Red," and "Pitmaston Red," are all good varieties; similar, except in length of bunches.

"Knight's Sweet Red." Bunches long; berries large; abundant bearer; one of the sweetest.

Any of the foregoing, with the treatment and pruning recommended, will produce well.—*J. B. G., in Progressive Farmer.*

FOSSIL CURIOSITY.—A tree was discovered says the Stockton Argus, in a tunnel at La Grange. It may be termed petrified, yet not as heavy as stone, although heavier than the natural wood. It appears to be neither wood nor stone, yet partakes seemingly in some degree of the nature of both. It scrapes off with the finger nail in the same manner as chalk, although not so hard as that substance. The tree from which the piece presented us was taken is thirty feet in circumference, standing upright, therefore its length cannot be ascertained either above or below the tunnel. The tunnel is three hundred and sixty feet long. A smaller piece of wood accompanying that already mentioned, has the figure of a leaf accurately and plainly indented upon it.

THE Rockingham (Va.) Register boasts of Tomatoes raised by Conrad H. Kite, Esq., on Shenadoah river, which weigh three pounds, and calls upon Mr. Anybody to beat that if he can.

Literary Department.

"TWICE MARRIED," a story of Connecticut Life.—12mo. 264 pages—published by Dix & Edwards, New York:

A lively romance, that has appeared in successive numbers of Putnam's Magazine, and having been quite popular, is now reprinted in book form. The scene is laid in a Connecticut village, and the description of life there is quite lively and picturesque. The plot is simple, but well wrought out, and makes one of the most entertaining stories that we have read for a long time. The author says in his preface, that his ardent desire was to please the readers of the magazine, and if the reader can discover a moral he is welcome to it, for it was not put in by design. The story is a plain sketch of rustic Yankee life and character, and at the conclusion the very rare circumstance occurs, of the hero and heroine being *twice married* to each other.

"THE PHYSIOLOGY OF MARRIAGE,—by a married man and a distinguished physician—published by John P. Jewett & Co. Boston:

One of the most remarkable works ever published in this country, and is attracting universal attention. It is written by one of our oldest and most experienced medical men, who has devoted a long life to the study of Physiology. It breathes a truly christian spirit, and is pronounced to be as unexceptionable a work as any that has appeared in the English language. Let all read it who would desire to be instructed in this great subject, for marriage is a social, intellectual, and moral duty.

"STRAY LEAVES FROM THE BOOK OF NATURE," by M. Schele de Vera, of the University of Virginia—published by G. P. Putnam & Co., New York:

A pleasant and entertaining volume of essays, which attracted much attention on their first appearance in Putnam's Magazine, and being now collected in book form will give all an opportunity of perusing them. The work does honor to the author, who is an ardent admirer of the beautiful in nature. The book is handsomely got up, printed on fine white paper, and of about 300 pages, and will prove a delightful treat for the lover of nature.

"GLENWOOD," or the Parish Boy—12mo. 429 pages—published by Shepard, Clark & Co., Boston:

The work purports to be a New England tale, and the plot is laid at Glenwood, a pleasant village in one of the New England States. The chief object of the tale seems to be a desire to expose to view the glaring faults of New England Society, and many of the characters are carricatured after the manner of Dickens, and though somewhat overdrawn, still there are some fine touches in the book. The work also shows up the abuse practiced upon paupers, and the shameful condition of the poorhouses, as well as the ill treatment received from the overseers. Let all the charitably disposed look at this subject, and they will be astonished to see how such things are managed in country villages. We congratulate the young and enterprising firm, upon their success in their first publication, and hope their future efforts will meet with as hearty a response from the public. We would refer our readers to the Literary Announcements published last week, of new books in press by the above firm.

"INDIA, CHINA AND JAPAN,"—by Bayard Taylor—published by G. P. Putnam & Co. Park Place, New York:

The above work contains the records of two years' journey to the above countries, including the homeward voyage around Cape Horn. The portions of the book devoted to India and China, says the author, are as complete as his stay in those countries allowed him—and speaks fully of the description of the country, manners and customs of the inhabitants, modes of hunting, coast surveys, &c., all of which will be found intensely interesting. No work has been published, which contains so descriptive an account of those countries as the present volume. The journey was commenced in August, 1851, and lasted two years. The author having visited most of the countries of Europe, ascended the Nile to the Negro Kingdoms of Central Africa, journeying in Palestine, Asia Minor, and India, visited China twice, and taken part in the American Expedition to Japan—having traveled in all some fifty thousand miles, and been received in every clime with kindness, and attended with uniform good fortune. Our readers will find themselves well repaid for a perusal of this valuable work.

Putnam's Magazine for November has been received from Dix & Edwards New York, containing an interesting article upon the United States Coast Survey; Living in the Country, and the usual editorial notes. No periodical ever issued in this country has acquired such a permanent position in the literary world. It takes the lead of American magazines, and rivals all others in literary merit. Its literary notices are the most impartial that appear in any periodical in this country.

The American Publishers' Circular and Literary Gazette, is issued weekly by the Book Publishers' Association. Their rooms are located at No. 348 Broadway, and are appropriately fitted up and comfortably furnished, containing the publications of most of the principal publishers in the country. The above *Circular* is a very welcome sheet and is well printed.

"*Table Traits*," with something on them, by Dr. Doran, author of "Habits and Men," and "The Queens of England of the House of Hanover." Published by J. S. Redfield, New York. Dr. Doran is one of the most interesting and humorous writers of the day—choosing the most familiar subjects, and with good humor pouring out a fund of historic lore. The table of contents is headed *Bill of Fare*, and includes *dishes of the most digestive kind*. The chapter headed "a few odd glasses of wine," is extremely interesting, speaking of the different kinds of wine used by the ancients, as well as their styles of drinking. The Roman ladies had their especial drinks, sovereign in their effects, to calm a nervous system too sorely excited. "It was a custom with the ancients to swallow, to the health of their mistresses, as many cups or glasses as there were letters in her name." The whole information, in regard to the familiar life of the ancients is very curious, and the *book* is indeed a *treat*, which one may partake of as often as he pleases, and yet have a longing desire for more.

"The New Odeon," a collection of secular melodies, arranged for four voices—designed for singing schools, and social music parties—by Geo. J. Webb and Lowell Mason—published by Mason Brothers, New York. The work above alluded to contains a larger variety of fine songs, duets and concerted pieces, than other work, so harmonized as to be within the capabilities of many singing schools and most choirs of the land. The book numbers some hundred pages more than any other collection, and it will be found a welcome visitor into every social circle.

"Almacks," a tale of English Society—published by H. Long and Brother, New York—paper covers. A very entertaining novel, containing a peep at society during the most brilliant time of George IV.

Hovey's Magazine for October is received, with an unusual variety of horticulturul reading, a series of articles upon European Parks, and the Reports of the Annual Exhibition of the Mass. Hort. Society, with the list of premiums awarded—a valuable number.

Harper's Magazine for November is before us, and is full of valuable reading, enough to satisfy the most eager. A day at Pompeii is the first article, and is finely illustrated with engravings. Hints for Country House Builders, is another excellent article, and the engravings are very useful to those interested in architectural matters. *Mr. Slim's final Piscatorial Experience*, is represented by sixteen comical illustrations. Received through Messrs. Burnham Brothers, Cornhill, Boston.

Harper's Story Book, No. 12, The Studio, is also at hand, and is the last number of the present volume. We shall refer to these again.

THE DEW.—The following quotation from Dr. Wells on dew is highly instructive: "I had often smiled in the pride of half-knowledge at the means frequently employed by gardeners to protect tender plants from cold, as it appeared to me impossible that a thin mat, or any such flimsy substance, could prevent them from attaining the temperature of the atmosphere, by which alone I thought them liable to be injured. But when I had learned that bodies on the surface of the earth became, during a still and serene night, colder than the atmosphere, by radiating their heat to the heavens, I perceived immediately a just reason for the practice which I had before deemed useless. Being desirous, however, of acquiring some precise information on the subject, I fixed perpendicularly in the earth of a grass-plot four small sticks, and over their upper extremities, which were six inches above the grass, and formed the corners of a square, whose sides were two feet long, I drew tightly a very thin cambric handkerchief. In this disposition of things, therefore, nothing existed to prevent the free passage of air from the exposed grass to that which was sheltered except the four small sticks, and there was no substance to radiate downward to the latter grass, except the cambric handkerchief. The sheltered grass, however, was found nearly of the same temperature as the air, while the unsheltered was five degrees or more colder. One night the fully-exposed grass was eleven degrees colder than the air, but the sheltered was only three degrees colder. Here we see the power of a very slight awning to avert or lessen the injurious coldness of the ground."—*Hunt's Elementry Physics.*

A THOUGHT IN NONANTUM VALE, BRIGHTON.

BY WM. B. TAPPAN.

I WALK among the plants and flowers,—
The air is charged with sweets;
I live, as this Arabian gale
My fainting spirit greets.

I go:—my garments bear away
The fragrance on them laid,
And with their many-voiced perfumes
Tell where to-day I've strayed.

And so the soul that seeks delight
In interview with God,
And hath His garden of chief spice,
Myrrh, aloes, cassia, trod,

Will find, wherever he may go,
The fragrance with him stay;
And Heaven, still lingering on his steps—
More odorous than May.

THE QUAKERESS BRIDE.

BY MRS. E. C. KINNEY.

THE building was humble, yet sacred to one
Who heeds the deep worship that utters no tone,
Whose presence is not to the temple confined,
But dwells with the contrite and lowly of mind.
'Twas there, all unveiled save by modesty, stood
The Quakeress bride in her pure satin hood;
Her charms unadorned by the garland or gem,
Yet fair as the lily just plucked from its stem.
A tear glistened bright in her dark shaded eye,
And her bosom half uttered a tremulous sigh,
As the hand she had pledged was confidingly given,
And the low murmured accents recorded in Heaven.

THE KISS OF WEDDED LOVE.

GIVE me of wedded love the holy kiss,
Bestowed with rapture and received with bliss,
Where soul embracing soul in union sweet,
Not only lips, but hearts together meet.
Give me the kiss that asks no fancied aid,
From warbling nightingale in myrtle shade,
From flow'r enamelled mead or secret bow'r,
Beneath the moon's pale beam at midnight hour.
Be mine the kiss that's given without fear,
That stains not honor, and that wakes no tear,
The kiss whose raptures gold can never buy,
The kiss that's ne'er remembered with a sigh.
Give me the kiss of innocence alone,
The hallowed kiss, that I can call my own.

A Way to Create Happiness.

THE following beautiful incident we publish for the benefit of those who desire to make others happy. The hero of the story must have been one of the lucky editors—a big salary, or a goodly list of prompt-paying subscribers—and with these means he could act out his whole heart. If every reader of this story would only do *his* duty in thus giving the means whereby editors and publishers could testify their affection for their wives, there would not be quite so many old bachelors—nor would there be so many divorces. Reader, just think how much good you can do; perhaps you may witness such a scene. Will you try?—for we endorse all the writer has so beautifully depicted of Happiness:

A PLEASANT SURPRISE.

ONE evening last month, a prominent editor took his friends and his household by surprise in a most novel and charming fashion.

His wife—a most charming woman by the way—had a birthday just in the pleasant season of fruit, and as birthdays only come once a year, and all husbands so favorably matched, like our cotemporary, notice these rare occurrences, our friend of the editorial chair devised a conspiracy against his better-half, which was to come off on the evening of this particular birth-day. Sitting in his editorial sanctum, in the city, he dispatched private runners to three hundred friends, inviting them to join in this present conspiracy against the partner of his bosom. Besides this, various written mandates, in the form of a programme, went forth to servants, confectioners, and musicians, all being intended to arrange and consolidate this household treason. When the preliminaries were settled, and the place of rendezvous named, the gentleman—like a gay deceiver as he was—in a legal way remember—obtains an invitation for his wife to attend a reunion at the house of a friend, who was herself in the secret, and thus managed to get the lady in a costume of brocade and Brussel's lace without suspicion. He promised to be home early, in order to act as her escort, and urged great punctuality in her toilet.

All this was done so naturally—editors do catch little habits of dissimulation in their sanctums—and with such amiable simplicity, that the lady dropped into the snare, innocently as a dove. All the conspirators were prompt and faithful, and what was very extraordinray, where a majority were females, silent also. They gathered at a given hour at the house of a friend, in the same block with the editor's residence, where they were to await a signal which was to proclaim when the coast was clear.

A band of music, a whole forest of flowers, and some hundreds of people, thus were gathered and in waiting within ten minutes of the appointed time. Really the whole thing was so much like a genuine conspiracy—it seemed so like a spicy bit of naughtiness, that—everything contributed to the excitement. The guests laughed low and spoke in whispers, bright eyes sparkled with mischief, and roguish flashes of wit flew like arrows around the room.

At last the signal was given. The lady who was to be surprised almost into the middle of another birthday, had been decoyed into her next neighbors. The company defiled softly and sil-

ently down the whole length of a block, the ladies with their hands full of flowers, the gentlemen doing duty in profound silence. The front door was softly opened, and three magnificent rooms were crowded with these silent guests. The musicians were ranged in their places. Chandeliers and side-lights were prepared for a sudden illumination, and all was ready. The guests standing breathless in the dim light, the musicians with their instruments prepared, and pyramids of flowers scattering fragrance from every table in the suit of rooms, while numerous birthday gifts were arranged in conspicuous positions. Then there was a light step in the hall, a quiet trying at the door, and the lady of the house came in with her shawl and rigolette on. As her foot touched the threshold, the chandeliers burst into a blaze, the band struck up an exhilarating welcome, and before she could speak, the lady was overwhelmed with joyous birthday congratulations. It was quite wonderful the way in which she dropped into the spirit of the thing; but once in a while, she would break out in exclamations of wonder, that her house could have been invaded without having excited the slightest suspicion with her. It was like enchantment, both to the lady and her guests. Never was dancing more spirited, or conversation more lively. But not content with deluding his own wife, our wicked brother began practising on the credulity of his guests too, for about two hours after every one had left a table lavishly furnished with melons and fruit, which they supposed had supplied all the refreshments that need be required, and had returned to the dance again, another summons came, and to a most sumptuous supper, replete with every conceivable delicacy. Then came dancing again, and some time after midnight the party broke up, entreating the lady to have a birthday at least twice a-year, and let her husband cheat her in the same fashion, just as often as he liked. We recommend that, decidedly; if anybody on earth has a right to such birthdays, its an editor's wife, we think.—*Ex.*

THE SECRET OF ADVERTISING.—The man in business who does not advertise, cannot expect to prosper. In all commercial communities, the publicity thus given is the keystone of fortune's arch. Americans are advertisers par excellence, and it is not to be doubted that our present position and our progress as a nation, in all material points, are to be traced to our sense of the argument we have laid down.

The necessity for advertising once established, the first query that must suggest itself, is what is the best medium to select. Here many sad mistakes are made. It is the impression of numerous persons in trade, many young beginners, that the paper of the highest circulation (real or pretended) is the best for them. A few words, however, will dispel this delusion. It is not precisely the aggregate of readers, but the sort of readers, that an advertiser should consider. We could name many papers, supposed to sell forty thousand copies a week, in which a tradesman or a professional man may advertise with less advantage to himself than in many others of ten or twelve thousand. The reason of this apparent anomaly must be sought in the adaptability of the wares advertised, to the class of persons appealed to. Thus—and we are not traveling out of our way for example, these sort of things being governed on the same principles all over the civilized world—a London paper, (the Examiner,) whose returns are seven thousand weekly, could purchase three times over the advertising interest of another London paper, (the Dispatch,) which sells eighty thousand. A glance at the two papers will show why this is. The ordinary multitude read one; the cultivated portion of the community the other, who, without doubt, are the principal patrons of advertisers in general.

Many journals, we know, are started in different places, on their presumed claims on the advertiser's patronage, and to confirm what is nothing more than a silly error at best, the proprietor's aim is to give these sheets a fictitious circulation. Foolish people may be taken with the bait, but we believe that were ninety-nine out of every hundred of our really practical men to be questioned on the point, they would decide in accordance with ourselves—that it is the sort of people a paper goes among, who are most likely to benefit its advertising friends—not the rough numbers, even if established to the last unit of the supposed sum total.—*Sunday Mercury.*

MEANNESS DOES NOT PAY.—There is no greater mistake that a business man makes than to be mean in his business. Always taking the half cent for the dollars he has made and is making. Such a policy is very much like the farmer's, who sows three pecks of seed when he ought to have sown five, and as a recompense for the leanness of his soul, only gets ten when he ought to have got fifteen bushels of grain. Everybody has heard of the proverb of "penny wise and pound foolish." As liberal expenditure in the way of business is always sure to be a capital investment. There are people in the world who are short-sighted enough to believe that their interest can be best promoted by grasping and clinging to all they can get, and never letting a cent slip through their fingers. As a general thing, it will be found, other things being equal, that he who is the most liberal is most successful in business. Of course we do not mean it to be inferred that a man should be prodigal in his expenditure: but that he should show to his customers, if he is a trader, or those whom he may be doing any kind of business with, that, in all his transactions, as well as social relations, he acknowledges the everlasting fact that there can be no permanent prosperity or good feeling in a community where benefits are not reciprocal.—*Hunt's Merch. Mag.*

Ladies' Department.

The Mother.

THE mother's influence is almighty for good or evil. Upon the mother depends in a great measure the future character of the child. As clay in the hands of the potter, so is the *mind* of the child in the power of the mother. We publish the following sketch as most truthfully delineative of the action of some who *bear that relation*, without understanding the responsibility:

PATIENCE.
BY MIST.

"MOTHER!" No answer.

"Mother! I say, *mother!*"

"What now, you little troublesome thing?" asked Mrs. Moore, as she entered from the kitchen, looking very stern and impatient.

"Mother, is it school-time?"

"Yes, it is, and after, too; and I am glad of it. I believe you children were never so troublesome before in the world. Go along to school as fast as you can go; I shall be rid of you until dinner time, at any rate."

So Charley went, feeling very cross and unpleasant, and ready to dispute and quarrel with the first child he met. The influence of his mother's fretfulness was with him all day, rendering him peevish, restless and unhappy. A kiss and a pleasant word from her lips in the morning would have prevented all this, and sent him on his way cheerfully and happily.

"Oh dear, what plagues children are!" exclaimed Mrs. Moore, as he disappeared,—"here is everything out of place and all over the room, how provoking! Here, you little mischief!" she continued, addressing a little girl of three or four years' experience in this trying state of existence—"how came your shoes off? haven't I told you, often and often, not to unbutton your shoes at all?"

With a rough shake, the child was taken up and the shoe replaced, the mother adding, "There, take that off again, and you'll be sorry!"

Having finished her morning's housework, Mrs. Moore sat down to her sewing, looking flushed and disturbed. In her girlish days, she had been regarded as a remarkable amiable and pleasant person; as she could then well afford to be; for like girls in general, she had little to try her temper or patience. That must be an unhappy temper which cannot preserve its equanimity when there is nothing to disturb or provoke it. Not that girlhood is entirely exempt from annoyances and vexations—but then girlish trials are nothing in comparison with the after trials of the *woman*. In common with many, Mrs. Moore found it hard to be *always* patient, and she had almost unconsciously fallen into the habit of fretting and scolding at her children—than which nothing could have a more unhappy effect on them and herself.

She had sewed only a few minutes, when the baby, a fine little boy of six months or so, began crying heartily.

"Rock the cadle, Ally," she said in a quick peremptory voice, to the little girl.

The child commenced rocking it very slowly.

"Rock it faster!" exclaimed the mother; "strange you never can do anything right! Don't rock hard enough to break the child's bones, either," she added, as Ally doubled her diligence; "There, go away, do, I'll rock it myself, and do you go and pick up every one of those rose-leaves, scattered all over the carpet. Every one, I say! Why, you keep the room in confusion the whole time. I shall be glad when the flowers are gone, you make so much trouble with them."

"But, mamma, those are my little birds, see them fly, now!" and the child took some in her hand, and, blowing them briskly, they fell around her like a snow shower.

"There they are, scattered worse than ever, naughty girl! The place for birds is out of doors, so gather them up and throw them out at the window."

The child unwillingly obeyed; but she must have something to do. Every child craves employment of some kind; and if proper amusement is not provided for it, it will be continually in mischief. Its nature craves something to do, and something it must and will have. In a minute, Ally was cutting up an embroidery pattern with her mother's scissors.

"Oh, you mischievous child! Bring those scissors here to me, this minute! See how you've spoiled my pattern! Shall I shake you, naughty girl? Go sit down out there in the corner of the room, and if you do another bit of mischief this morning, I'll whip you soundly!"

The child went, pouting. In a minute she began—"Mother, may I take one of your books and look at the pictures?"

"No, you'll tear them. Books are not for little girls."

"Well, may I have a pencil and a piece of paper, then?"

"No, I can't stop to find them now for you."

"Well, may I have a needle, and sew something?"

"Oh, dear, what a tease! Yes you may, and perhaps it will keep you still two minutes. Here's a needle, now thread it, and sew till you are tired."

Ally took it and busied herself for a few minutes in trying to thread the point of it, but not succeeding, ventured—"Mother, won't you thread it?"

"Oh, yes, that's the next thing, of course! I might have known you would vex me half an hour about it. Here take it, and if you pull out the thread, it will stay out, for I shan't stop to put it in again."

The child stood with her needle in her hand—but what good did it do her? She had nothing to sew! She looked timidly in her mother's face, but she saw nothing encouraging there, and she dared "tease" no farther, so she took up the skirt of her frock, and began sewing and puckering it in every direction with her needle and thread." Presently her mother looked up.

"What are you doing, gipsy? See how your frock looks, all drawn every way! Don't you know better than that?" and she gave the child a slight blow on the ear. "Let me know you to do that again, if you think it best for you!"

At this moment, Mr. Moore entered. "It seems to me, Emeline, that you are rather impatient with Ally," he said, gently. "If there is one virtue which a mother needs above all others, it is *patience*, and this is the very thing in which most mothers are sadly deficient. I am sorry to say, Emeline, that you have a 'plentiful lack' of this same good quality."

"Well, I'd like to have you stay with the children just one day, and be fretted, teased, worried and annoyed as I am *every* day, that's all. If you didn't scold, I am much mistaken. If I only saw the children two hours in a day, I think I could afford to be pleasant and patient with them for two hours."

"But, Emeline, do you think they behave any better for this continual fretting? Wouldn't they be less troublesome if you were a little more gentle with them?"

"Oh, you don't know anything about it. They never behave half so badly when you are here. Ally is more quiet now, standing there counting your fingers, than she has been before to-day."

"Which only proves, my dear, how easily she may be amused, and kept from these mischievous pranks which so trouble and annoy you. You are always telling her what she may *not* do, but you never think to propose any amusement for her. She is not, nor is any child of her age malicious and wilful in her mischief, she does mischief because she can find nothing else to do, and she must do something."

"Oh, dear, well, if you are not satisfied with my way of training the children, you must stay in the house and do it yourself. It would be a great relief to me, I assure you. How that baby screams! Do give him to me—I believe these children will craze me!"

"Patience, Emeline," said Mr. M., taking up the crying child and carrying it to her. "I believe this fretful disposition is growing upon you. Do try and govern it, for your own sake as well as for that of the children. I know you have many vexations and trials, but this continual worrying and scolding only makes them harder to bear."

"I can't help it. Charley has come to be one of the most obstinate, headstrong children that I ever saw. He does not pretend to obey me until I have spoken three or four times, and he is so noisy and turbulent and passionate; I can't think what makes him so. I'm sure I never was ill-tempered, it can't be that he takes it from *my* side."

"Possibly not," returned the husband, smiling—"but a little gentleness would be an excellent palliative for this naughty distemper of his. But here he comes."

"Charley," said his mother, "go hang up your hat and put your book on the shelf where I bade you. *Hurry!*" she continued, sharply, as he hesitated a minute to speak to the baby, which laughed and crowed as he approached—"haven't I told you to start *quick* when I bid you?"

He went sullenly, and in a minute returned.

"How came your jacket torn?" she asked presently.

"I tore it playing on the pile of boards at the corner," he answered, hesitatingly.

"Didn't I tell you only yesterday not to go there? Naughty boy?" and she gave him a spiteful box on the ear. "Oh, me, what plagues children are!"

In vain did Mr. Moore venture "Patience, Emeline!" Poor Mrs. Moore had allowed herself to fret until the disposition to scold and rebuke had become a part of her nature. Is it any wonder that she was always unhappy and low-spirited, always "plagued to death" and "tired of living?" Is it strange that her children grew stubborn and disobedient, and were entirely beyond her control at a dozen years old? It is strange that they "learned the trick" of fretfulness, and inherited a disposition which, carried into their respective homes in after life, were followed by the same disastrous consequences to *their* children?

It has been said that "domestic happiness is the nearest earthly approach to heaven," and if this be so, it is no less true that a home which is the scene of continual fault-finding, bitterness and ill-feelings, is "the nearest earthly approach to" the other supposable extreme. Home may be the happiest or the most unpleasant place on earth, a Paradise or a Purgatory, only in the latter case lacking the redeeming feature ascribed to Purgatory, in that it prepares its inmates for misery instead of happiness.

The practice of calling children "plagues," "torments" and "trials," is one of [illegible] which a parent can [illegible] the life of more [illegible] than any [illegible]. Let a mother talk to a child as [illegible] is a care and trouble [illegible]—[illegible] into the world uncalled, and [illegible] the very natural error of going [illegible] will soon lose all [illegible] good and [illegible] treat him as [illegible] happiness, and as [illegible] and forbearance, [illegible] grieving [illegible] unwillingness—and he becomes another [illegible]

The consciousness that we are beloved will go farther towards stimulating us to goodness and worthiness, than all the threatenings and punishments which could be invented. So long as children are born into this land of tribulation without their consent, so long as, for the first few years, at least, they are *entirely* dependent on you for happiness, O, fathers and mothers be patient!—*Portland Transcript and Eclectic.*

Search for Wives.

WHERE do men usually discover the women who afterwards become their wives, is a question we have frequently heard discussed, and the custom has invariably become of value to young lady readers. Chance has much to do in the affair; but then there are important governing circumstances. It is certain that few men make a selection from ball rooms, or any other places of public gaiety; and nearly as few are influenced by what may be called showing off in the streets, or by any allurements of dress. Our conviction is, that ninety-nine hundredths of all the finery with which women decorate or load their persons, go for nothing as far as husband catching is concerned. Where, and how, then, do men find their wives? In the quiet homes of their parents or guardians—at the firesido, where the domestic graces and feelings are alone demonstrated. These are the charms which most attract the high as well as the humble. Against these, all the finery and airs in the world sink into insignificence. We shall illustrate this by an anecdote, although not new, it will not be the worse for being again told:—"In the year 1773, Peter Burroll, Esq., of Beckenham, in Kent, whose health was rapidly declining, was advised by his physicians to go to Spa for the recovery of his health. His daughters feared that those who had only motives entirely mercenary would not pay him that attention which he might expect from those who, from duty and affection united, would feel the greatest pleasure in ministering to his ease and comfort. They proved that it was not a spirit of dissipation and gayety that led them to Spa, for they were not to be seen in any of the gay and fasionable circles—they were never to be seen out of their father's company, and never stired from home, except to attend him either to take the air or drink the waters—in a word, they lived a most reclusc life in the midst of a town then the resort of the most illustrious and fashionable personages of Europe. This exemplary attention to their father procured these three amiable sisters the admiration of all the English at Spa, and was the cause of their elevation to that rank in life to which their merits gave them so just a title. They all were married to noblemen—one to the Earl of Beverly—another to the Duke of Hamilton, and afterwards to the Marquis of Exeter—and a third to the Duke of Northumberland; and it is justice to them to say that they reflected honor on their rank, rather than derived any from it."

Embroidery.

DIRECTIONS FOR WORKING.

THERE is no work which allows of more care, judgment and taste than embroidery; and no more pleasing, either to the fair worker or to the favored one for whom it was worked. It is adapted to all kinds of articles, whether for wear or ornament; and there is no work where better materials are required, neither is there any where greater care and judgment in the choice of materials and colors can be shown. If the work is on white muslin, always choose soft embroidery cotton, coarse or fine, according to the boldness or delicacy of the work: Dick's embroidery cotton is the best, in our opinion, amongst all the makers. Let all your work be very regular and even; and never, or in very few instances, draw it tight, but let it spread out to fill up between the threads, so that the muslin may not be seen between the stitches. If on satin, velvet, or leather, the same directions must be followed; but in the latter the greatest care must be taken that the work does not get soiled, for it cannot be washed. For satin, velvet, or leather, silk is invariably used, and in most instances it is a very soft silk; if the hard-twisted silk is used, it tears the material, especially leather, which must always be avoided, besides which it never fills the hole made by the needle. To draw the pattern upon muslin, first have your pattern drawn very strongly upon paper; then lay your muslin upon it, and go over the lines with a little indigo from a collar-box in either a reed pen or a camel-hair pencil; the indigo will not stain, and will wash out; or you may get the paper same as the drapers use in their bill-books, and lay that under your design, and trace through with a hard pencil or point. For satin, silk, velvet, or leather, puncture your pattern with a pin or needle, and rub either a little powdered flake-white, blue, or any color which you can cover up with your work, for in these materials you cannot wash the mark out again. In all fastenings of the ends let it be done at the under side, for there is nothing looks so untidy as loose ends and dirty places.

TO KEEP SILK.—Silk articles should not be kept [illegible] paper as the [illegible] paper will [illegible] Brown or blue paper is [illegible] the yellow. [illegible] for [illegible] [illegible] [illegible]

SPECIAL NOTICES.

☞ JOSEPH GILLOTT'S STEEL PENS—For sale by all Stationers and Booksellers throughout California, and to the trade at the Manufacturer's Warehouse,

No. 91 John street, New York,

where a large stock of these popular Pens, of standard excellence may constantly be found.

HENRY OWEN,
v3-22 3m Sole Agent for the United States.

☞ Dyspepsia can be Cured.—*From R. P. Stow, Esq., Assistant Clerk U. S. House of Representatives.*

WASHINGTON, D. C., June 15.

DR. GEO. B. BROWN,—Dear Sir: I feel it a pleasure to make known to you and the public, the surprising effects of the *Oxygenated Bitters*, in relieving me from that most discouraging disorder, Dyspepsia. I have been afflicted for about seventeen years with the usual attendant symptoms, viz.: constipation of the bowels, headache, pain in the chest, flatulence, acidity of the stomach, and severe nausea; and most of the time I was extremely bilious. I have used various remedies, have been strict in my diet, but all to no good purpose. Hearing of the *Oxygenated Bitters*, I procured some; have used four bottles, and find the bad symptoms all removed, and myself once more in the enjoyment of health. None but the dyspeptic sufferer, who has felt all the horrors of the disease, can at all appreciate the value of the medicine.

Respectfully yours, R. P. STOW.

SETH W. FOWLE & CO., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agent for Sacramento—C. MORRILL. 24-2w

☞ Dr. Wistar's Balsam of Wild Cherry cures Bronchial affections and all diseases of the Lungs.

[From the Boston Evening Traveler, Jan. 6.]

It is perhaps but a simple act of justice to the proprietors of Wistar's Balsam of Wild Cherry for us to say, that our personal experience in the use of this article has impressed us favorably. One of the proprietors of the Traveler was completely cured of a severe cough of four months' continuance, by the use of this Balsam, and several of our friends and acquaintances, who have tried the article, have found it of great service in relieving them of severe coughs and shortness of breathing, with which they have been afflicted.

*** Be sure it is signed I. BUTTS on the wrapper.

Agent for Sacramento, C. MORRILL, corner K and Third streets.

Sold by all Druggists. 22-2w

☞ Sands' Sarsaparilla.—It seems almost unnecessary to direct attention to an article so well known, and so deservedly popular, as this preparation, but patients often who wish to use the extract of Sarsaparilla are induced to try worthless compounds bearing the name, but containing little or none of the virtue of this valuable root; and we think we cannot confer a greater benefit on our readers than in directing their attention to the advertisement of the Messrs. Sands' in another column. The bottle has been enlarged to hold a quart, and those who wish a really good article will find concentrated in this all the medicinal value of the root. The experience of thousands has proved its efficacy in curing the various diseases for which it is recommended.

Agents—HENRY JOHNSON & CO.,
v4-23 1m 146 Washington street, San Francisco.

PRINCE'S PROTEAN FOUNTAIN PEN.

[PATENTED JAN. 23, 1855.]

T. G. STEARNS, General Agent,

No. 271 Broadway, Cor. Chambers Street New York.

☞ ADVANTAGES.—An incorrodible and durable Ink Reservoir, made of Protean, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time.

A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material

Its structure is simple, and not liable to get out of order.

Opinions of the Press.

We must regard this Pen as one of the grand improvements of the age.—*Portland Transcript and Eclectic.*

As a Reporter's Pen, I have never seen or heard anything to equal it. It is just the facility wanted in this department, so that it may keep up with the age of electrity and steam.

GEO. KELLOG, Reporter, 525 Broadway, N. Y.

Eureka! Eureka!! We have found it at last; a Fountain Pen that will write for hours without once dipping in an ink-stand.—*Knickerbocker Magazine.*

The ink flows from it so evenly and so easily, that the mechanical labor of writing becomes in itself a pleasure.—*Mother's Magazine.*

The Pen must have a great run. Any pen that runs for eight hours at a dip, may be said to have a great run—but this pen will become a tried and valued friend—will save the temper of the business man, and preserve the composure of the irritable poet.—*Hartford Courant.*

We are writing with one which does some six hours service without failure or stoppage, and have found it inexpressibly convenient, and comfortable.—*New York Evangelist.*

This Pen, among pens, is what Colt's Revolvers are among Pistols. One will fire a dozen shots, and the other write a dozen sheets, with a single charge or loading.—*Author of Major Jack Downing.*

A Clergyman who has written a whole sermon with one of these Pens, without once dipping in the ink, said to us that he would not dispose of it for twenty times its value.—*Boston Evening Traveller.*

If I could not procure another of similar merits, one hundred dollars would not purchase from me the one I have.—*A New York Clergyman.*

We continue to use our own with entire satisfaction.—*New York Independent, May 16, 1855.*

"Let those write now who never wrote before,
And those who always wrote, now write the more."

*** Rights for Towns and Counties to vende, will be granted on favorable terms.

☞ A sample of these Pens can be seen at the at the Office of this Paper on the arrival of next steamer. v4-19 3m.

Tremont House,

(LATE BURCH'S),

RISING & CLARKE, Proprietors,

Jackson street, between Montgomery and Sansome streets,

San Francisco.

☞ THIS House—*fire proof*—has just been completed, having been designed expressly for a *First Class Hotel*, and in point of elegance, convenience and comfort, is not excelled by any other on the Pacific Coast. It is situated near the new Custom House, Merchant's Exchange, and the heavy business portion of the city v4-24

Seeds.

HOVEY & CO., Dealers in Seeds, No. 7 Merchant's Row, Boston, Mass., are now receiving their new and fresh stock, embracing all the best and most desirable varieties of Agricultural, Garden and Flower Seeds, grown expressly for them by the most experienced cultivators. Purchasers who wish to obtain the most reliable seeds are requested to forward their orders early. Seeds packed securely for California or any other part of the country.

Remittances must accompany orders. v4-24 3m

1,000 Dwarf Pear Trees,

GRAFTED on Quince Stocks, just received via Panama, only thirty days from the Nursery. The above trees were selected by Mr. James Hill, from his Nursery, Somerville, near Boston, are labelled true to their names, and packed in his best manner for this market. The varieties consist of the Bartlett, Roxbury, Mass. Lecuve, Duchess, White Doyenne, Beurre Bosc, Madeline, Lecuve, Golden Beurre, Louise Bonne de Jersey, Beurre de Anjou, Beurre de Anjou, &c.

Persons residing out of this city can have them sent by Express, well packed in straw and bundles, to any part of the State. Orders with remittances, by other Expresses, will be attended to with dispatch. Price $1 each, (assorted), less 10 per cent in 25 and upwards. BRADSHAW & CO.

v3-24 Cor. California and Battery streets, San Francisco.

MISCELLANEOUS.

NEW GOODS! NEW GOODS!!

Watches, Jewelry, Fancy Goods, &c.,

AT

BAILEY BROTHERS,

Successors to the business of

JAMES BAILEY,

118 J street, between Fourth and Fifth.

BY the arrival at the last steamer, "Golden Age," we are in the receipt of various new and fancy articles of Jewelry, as also a large assortment of Watches, and all other goods usually kept in our line. These, together with invoices coming to hand by every steamer for the next month, will make our stock complete and most desirable from which to make selections for the Holidays. From the late arrival we would enumerate—

T. F. Cooper, E. D. Johnson and David Taylor's Duplex and Lever London Watches. Detached Levers of superior quality, in silver and gold cases;

Diamond Ear-Rings, Brooches and Finger Rings, and other Diamond Jewelry;

G. W. SIMMONS,
OAK HALL, North street, Boston, Mass. v3-16.

TO FARMERS.

For the destruction of Canker Worms, Borers, Grubs, &c., &c., &c.

THE MURIATE OF LIME.

A SUPERIOR fertilizer, and certain destroyer of the Canker Worm, and other destructive insects. It has been computed to take the place of more costly manures, guano, &c., to which it has been pronounced fully equal, and in some respects superior, by those who have tested it during the two past seasons.

As a certain and sure destroyer of the Canker Worm, which has committed such ravages among the fruit trees the past season; of Grubs, Borers and other Worms, which oftentimes render the labor of the farmer of no avail, its qualities have been fully and successfully proved. For this purpose its success (in New England) has been such as to warrant the belief that it will be a sure preventive to the ravages of the Grasshopper, which have been so great the past season in California.

A simple and testimonials from Agriculturists of the first respectability may be seen at the Office of the CALIFORNIA FARMER; and orders sent through Messrs. WARREN & SON will be faithfully fulfilled.

This article is put up in bags of 150 and 200 lbs. each, or in barrels of 220 lbs. JAMES GOULD,
v4-15 3m No. 70 State street, Boston.

S. P. Ruggles' Power Press Manufacturing Co.

[Incorporated February 8, 1854.]

THE above named company having purchased of the well known inventor, S. P. Ruggles, Esq., his Patents connected with the Printing Business, are now manufacturing under Mr. Ruggles' immediate superintendence, the following machines, viz.:

	Size of Form in Inches.
Half Sheet Job Engine	18 by 12
Half Sheet Combination Engine	18 by 12
Quarto Sheet Job Engine	12½ by 9
Quarto Sheet Combination Engine	12½ by 10
Half Sheet Cap Job Rotary	10½ by 7¼
Card and Bill Head Rotary	7 by 4½
Diamond Rotary Card Press	4½ by 3
Circular and Hat-tip Hand Press	8 by 6
Embossing Press	18 by 10
Cast Iron Imposing Table	26 by 22
Shaving Machine, shaves	27 by 16
Paper Cutter	cuts 27
Card Cutter, improved	cuts 25
Bookbinders' Rotary Shears	cuts 25
" " larger size, in proportion.	

These presses are considered by the Job Printers as the best adapted to their wants of any machines ever manufactured.

All orders addressed to their agent, M. B. BIGELOW, 152 Washington street, Boston, Mass., will be promptly attended to. Mr. Ruggles has also sold to the CUTTING MACHINE MANUFACTURING CO., his Patent ROTATING SHEARS, for cutting sheet tin, iron, copper, brass, zinc, steel, nail and boiler plates, and all other metallic sheets. This is entirely a new process for cutting metals, and is destined to supersede all other machines for that purpose.

ANSON HARDY, Agent,
152 Washington street, Boston.

And to a third company, called the BOSTON HAND STAMP CO., he has sold his patent for a very ingenious Flexible Hand Stamp, whereby perfect impressions may be made at the rate of sixty per minute, the die adapting itself to the surface to be printed on. A very convenient article for all business men.

v4-12 1y M. B. BIGELOW, Agent, Boston.

PERUVIAN FEBRIFUGE,

FOR THE PREVENTION AND CURE OF

FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THE usual method of administering tonics produces only temporary relief, merely breaking the chill without removing the disease; but it is necessary to relieve the liver and other organs of the unhealthy action, on which the illness of the patient depends. This can be safely, speedily, and effectually accomplished by this valuable preparation; and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians, with the most signal success. In all climates where bilious and remittent fevers prevail, this remedy will be found invaluable, and no persons traveling through, or residing in, infected and marshy districts, should be without it, as a few doses will effectually counteract the poisonous and miasmal influence arising from such location, by imparting activity and vigor to the biliary organs, and thus prove a sure *preventive* against an attack of Chills and Fever.

The following are selected from the numerous testimonials received, showing the superiority and efficacy of the Peruvian Febrifuge, not only in cases of long standing, but where other remedies had failed:

FLATBUSH, King's Co., N. Y., April 1, 1854.

Messrs. A. B. & D. SANDS: Gentlemen,—I have much pleasure in informing you that I have been entirely cured of the Fever and Ague by the use of your Peruvian Febrifuge, after suffering with it for over two years, and trying all the best known remedies without success. The Chills could not be broken by using any other medicine, and I almost despaired of a cure; but a neighbor who had been cured by your Febrifuge recommended me to try it, which I did, and was entirely restored by using less than one bottle, and have had no return of it since. Very respectfully, MICHAEL COX.

GOWANUS, Long Island, N. Y., April 4, 1854.

Messrs. A. B. & D. SANDS: Gentlemen,—Myself and two of my children were afflicted with Fever and Ague, more or less for about two years, and tried various medicines without any benefit. In October last we were persuaded to use your Peruvian Febrifuge, one bottle of which cured us; and we have not been troubled with it since. I can recommend it to others with the greatest confidence—having known of several cases which have been cured by it after every other medicine failed.

Respectfully yours, M. RAWL.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

MEDICAL.

SANDS' SARSAPARILLA

IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of *Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt Rheum, Fever Sores, Erysipelas, Pimples, Blles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.*

THE value of this medicine is now widely known, and every day the field of its usefulness is extended. It is approved, and highly recommended by Physicians, and admitted to be the most powerful and searching preparation from the root, that has ever been employed in medical practice. Its operation extends to the remotest parts of the system, and consists in removing diseased action in the absorbing and secreting organs. In man, Nature seldom effects, unassisted, the cure of any virulent disease, but requires the aid of a stimulant, alterative, or antiseptic medicine. In diseases of the skin and flesh, a combination of these three classes of medical agents is highly desirable. All these properties are combined in this preparation; and instead of operating successively upon the system, as they must necessarily do when taken separately, they operate simultaneously, and in perfect harmony when administered in this form. Its tonic property strengthens the digestion, and improves the appetite. Its alterative tendency carries off the accumulations of morbid matter,—and its antiseptic influence neutralizes the virus, by which the disease is fostered. Its uniform success in curing and relieving the various diseases for which it is recommended, is established by a multitude of attested facts.

From the Army.

MONTERREY, Cal., Jan. 18, 1850.

Messrs. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, hoping it may lead some other unfortunate beings to try its effects, and that they may be benefitted as I have been. I arrived here by the overland route, about the first of October last. A few days after I was first attacked with a very disagreeable eruption of the skin, which my physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine at home, I purchased three bottles, which had the desired effect of removing my difficulty entirely. With high regards, yours, &c.,

J. H. MILLER, Lieut. U. S. A.

Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, 100 Fulton street, corner of William, New York. Sold also by Druggists generally throughout the United States and Canadas. Price $1 per bottle; six bottles for $5.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-18 3m

IT IS A FIXED FACT,

CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or calculating likelihoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis. Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

DR. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many times to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice for last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also that I had in the restorative power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had been painful.

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, compounded from a recipe of the late, and carefully prepared by his successor, and skillful physician, is receiving the confidence of the public, and has been prescribed in many desperate cases of disease, and its fame has rapidly extended."

It is a perfect remedy for Asthma, as we have seen by its use in a case of [illegible] standing for more than twenty years with the Asthma, at times in a very aggravated form, we speculate me from attendance to business, and had consulted many physicians without any but temporary relief. I procured several bottles of WISTAR'S BALSAM OF WILD CHERRY from the other, and before I had used more than two-thirds of the medicine I had taken [illegible] was relieved. I have, by the repeated use of your valuable Balsam, been entirely free of pressure for breath, and [illegible] I anticipated, and, indeed, cannot express my [illegible] at the heartening result.

SAN JOSE NURSERY.

THE San Jose Nursery and Gardens, formerly known as L. Provost & Co., is now carried on in all its branches under the immediate eye of the present proprietor, who is sole director and owner of the same, having purchased the interest of his former partner.

L. Provost, the present owner, will now offer to his patrons and friends one of the largest and finest collections of Fruit Trees that can be found in any Nursery in the State, consisting of all the most desirable kinds of Apple, Pear, Plum, Cherry, Peach, Apricot, Nectarines and Quince, with a very extensive lot of Grapes and Figs, a beautiful lot of choice Ornamental Trees of rarest kinds, and Green House Plants in great variety.

The collection of Roses in these Gardens cannot be equalled, for nearly *twenty thousand* of the most beautiful plants, large sizes and rare kinds, can be found here.

Purchasers will be sure to be satisfied if they will visit the Gardens, where they can find much to please them, which the Proprietor will show them with pleasure.

☞ The Nursery is situated in the city of San Jose, immediately above the City Mills. L. PROVOST,

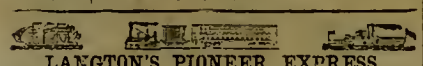
Varieties.

One new bonnet will make a young lady feel happy. One "funny man" will bother a whole neighborhood. One drop of oil will stop a hideous noise. One pretty flirt will make a dozen plain girls unhappy for an entire evening.



The Hoosiers on the Wabash turn their "ague shakes" to some account. They climb into the top of a shellbark tree just as the chill comes on, and by the time the "personal earthquake" leaves them, there's not a hickory nut left on the tree.

A physician, who resides in the southern part of New York city, visiting a patient at the extreme north, was asked by a sick man if he did not find it very inconvenient to come such a distance. "Not at all, sir," replied the son of Æsculapius, "for, having another patient in the next street, I can kill two birds with one stone." "Can you, sir?" replied the invalid; "then you are too good a shot for me;" and the M. D. got his walking ticket.

A Yankee pedlar once called at a house, and wanted to sell his commodities as usual. Finding he could not trade with the woman, he turned to a boy standing by, and asked him if he didn't want to buy a "Fortune-teller." The boy's "granny" spoke up and said—"Lor' sakes, no, he don't want that?—he's got more in his head now than I wish he had." "Then I've got just the article he needs," and he handed out a fine tooth comb!

Interesting History.—The following extract from Judge Pendleton's charge to the Grand Jurors of Georgetown, South Carolina, in 1787, is well worthy a place in our columns: "As Grand Jurors, gentlemen, the laws have selected you as their principal auxilliary. On you, then, it is peculiarly incumbent to interest yourselves in the conduct of all around you. Your example, therefore, must be of great weight. Investigate the policy of your district, and wherever any person has accepted a public trust, and neglects or abuses it, *drag him forth, let his position, character and fortune be what it may.* If the officers of justice violate the trust reposed in them, you are bound, in duty to your country, in duty to yourselves and to your children, as well as by the solemn oath you have just taken, to name them in you presentments. Even in your private capacity as citizens, to inform against and prosecute all such offenders is highly meritorious. The malevolence of the wicked and turbulent, which may for a time be directed against an honest, spirited and patriotic citizen, *is like the harmless hissing of serpents* that cannot bite. He will soon triumph over all their impotent clamors, and obtain the esteem and support of all good men. Without a change of conduct and union of all good men in the State to put a stop to the fraud, rapine and licentiousness that stalk abroad in the land, we are an undone people, the Government will tumble about our heads, and become a prey to the first bold ruffian who shall associate a few desperate adventurers and seize upon it! May Heaven avert it!"

The above charge might be worthy of note in this State, and at this time.

MEDICAL.

DR. GUYSOTT'S IMPROVED

Extract of Yellow Dock and Sarsaparilla

Is acknowledged to be the best Sarsaparilla made, as is Certified by the Wonderful Cures it has performed.

☞ **Remember this is the only True Original Article.**

This Medicine, when used according to the directions,

Will Cure Without Fail,

Scrofula, or King's Evil, Cancers, Tumors, Eruptions of the Skin, Erysipelas, Chronic Sore Eyes, Ringworm, or Tetter; Scald Head, Rheumatism, Pains in the Bones and Joints, Old Sores and Ulcers, Swelling of the Glands, Syphilis, Dyspepsia, Salt Rheum, Disease of the Kidneys, Loss of Appetite, Disease arising from the use of Mercury, Pain in the Side and the Shoulders, General Debility, Jaundice, and Costiveness.

The Best Female Medicine Known.

The Yellow Dock and Sarsaparilla is peculiarly adapted to females of delicate health, resulting from irregularity of menstrual discharges, and other diseases peculiar to their sex. We assure the afflicted, that a bottle or two of DR. GUYSOTT'S EXTRACT OF YELLOW DOCK AND SARSAPARILLA will at once regulate those difficulties and renew the natural energies.

Syphilis, Scrofula, and Diseased Blood.

DR. GUYSOTT'S IMPROVED EXTRACT OF YELLOW DOCK AND SARSAPARILLA is a true specific. The proprietors have in their possession over one hundred certificates of the most extraordinary cures effected by it. We can safely say—TRY IT. It revives the drooping constitution, eradicates all bad humors from the Blood, and by its tonic properties restores the invalid to life and vigor. As a spring and summer medicine it has no equal. Its singularly efficacious action on the blood, its strengthening and vivifying action on the system, stands pre-eminent above all other Sarsaparillas. If you would have the rose brought back to your cheek, a clear, healthy and transparent skin, and life and vigor infused through the system, take Guysott's Extract of Yellow Dock and Sarsaparilla. It contains more of the pure Honduras Sarsaparilla than any other preparation extant, which is chemically combined with the Extract of Yellow Dock and the Extract of Wild Cherry, thus making the remedy more thoroughly efficient than any other Sarsaparilla before the public. At the same time it is perfectly free from all mineral poisons, which cannot be said of any other Sarsaparilla compounds.

OXYGENATED BITTERS,
CONTAINING NO ALCOHOL,
A CURE FOR

Dyspepsia, in all its various forms; Heartburn, Habitual Costiveness, Acid Stomach, Loss of Appetite, Nervousness, Coldness of the Extremities, General Debility and Asthma.

These Bitters are approved by some of the best physicians, who use them in their practice. Scientific men have more difficulty in overcoming and controlling the various symptoms of Dyspepsia than almost any disease in the world. They are so various, in different individuals and cases, that it has seemed impossible sometimes to obtain even temporary relief from suffering. But a medicine has been discovered which proves, beyond a doubt, that in most cases a permanent cure can be effected. By avoiding stimulants, and using the *Oxygenated Bitters* strictly according to directions, a healthy tone is imparted to the digestive system, and strength to perform it natural functions.

Ample testimony to the truth of this can be had by reference to numerous certificates in possession of the general agents. We have no hesitation in pronouncing the Bitters a sure cure for **DYSPEPSIA.**

From J. C. Dunn, Esq., City Treasurer.

Boston, June 6, 1852.

Gentlemen: I have been for some years troubled occasionally with severe attacks of Indigestion; have consulted many physicians, tried Allopathy and Homeopathy, and can truly say, I have received more speedy and effectual relief from the use of *Oxygenated Bitters*, procured from you, than from all other remedies, and most cheerfully recommend them to all who suffer from a similar affliction. Yours truly,

JAMES C. DUNN.

DR. HENRY E. MORRILL, a skillful Physician of New York city, in his remarks on Dyspepsia, says: "The most effectual medicine to improve the tone and energy of the stomach, is that prepared by Dr. George B. Green, and called the Oxygenated Bitters. I would publish the receipt for preparing this valuable medicine, if I knew what it was, but as I do not, I can only recommend its use. It seems to me to be improperly called 'Bitters,' at least in the popular acceptation of that term, for it contains no Alcohol or other Spirit, and is rather sour than bitter. Though here, by the way, I cannot too earnestly caution the dyspeptic sufferer against using the thousand and one advertised 'Bitters,' the basis of which is alcohol, or other ardent spirits. They impart no real energy to the stomach.

The stimulation which they excite is only temporary, and sure to be followed by a reaction which at length will inevitably wear out the stomach. This medicine obviates these objections. It has been analyzed by that distinguished chemist, Prof. Hayes, M. D., *State Assayer of Massachusetts*, who declares that 'the medicinal articles used are those prescribed by the most eminent physicians, for the diseases for which these Bitters have been so eminently successful.' I have employed them in a multitude of cases, and have uniformly found that when used according to the directions, they gradually, but surely, remove, one by one, the various distressing symptoms which cluster around the confirmed dyspepsic, restore to the stomach its lost energies, and thus lead the patient back to the enjoyment of permanent health and strength."

It has also been used by the following persons, and received their unqualified approbation:

Prof. Edward E. Phelps, M. D., Dartmouth College.
Hon. Myron Lawrence, Ex-President Mass. Senate.
" Samuel S. Phelps, U. S. Senator from Vermont.
" J. F. Simmons, U. S. Senator from Rhode Island.
" L. H. Arnold, formerly Governor of Rhode Island.
" H. D. Foster, Member of Congress from Pennsylvania
" Solomon Foot, U. S. Senator from Vermont.

Many other individuals of the highest respectability can be referred to, who will confirm all that has been said in favor of the Oxygenated Bitters

☞ ALL ARRANGEMENTS WITH OTHER PARTIES FOR THEIR MANUFACTURE HAVING EXPIRED ☜

have formed a new Copartnership, under the firm name of

EMERY BROTHERS,

And will continue the manufacture and sale of AGRICULTURAL IMPLEMENTS and MACHINERY, as heretofore, at the old stands of EMERY & CO. By this arrangement the united efforts, and interest of the Brothers, long known to the public, are secured, and no exertions will be spared to meet the wishes of those dealing in and using the class of implements they manufacture—their leading branch being the manufacture of the justly celebrated

Emery's Patent Changeable Geered Railroad Horse Powers,

with the machines to be propelled by it, as Threshing Machines, Saw Mills, and Machinery generally.

These Powers having been submitted repeatedly to the most severe tests and trials to determine their relative merit and utility with those of every known manufacturer, have without exception been awarded the highest prizes for superiority—among which were the following:

N. Y. STATE AGRIC'L SOCIETY, 1854, 1853, 1852, 1851, 1850	MARYLAND STATE AGRICULTURAL SOCIETY, 1853
OHIO STATE BOARD OF AGRICUL., 1854, 1853, 1852, 1851	MISSOURI STATE AGRICULTURAL SOCIETY, 1853
MICHIGAN STATE AGRICUL'L SOCIETY, 1853, 1852, 1851	AMERICAN INSTITUTE, 1852, 1851
INDIANA STATE AGRICULTURAL SOCIETY, 1853	NEW YORK CRYSTAL PALACE, 1853
ILLINOIS STATE AGRICULTURAL SOCIETY, 1853	CANADA PROVINCIAL SOCIETY, 1852, 1851
PENNSYLVANIA STATE AGRICULTURAL SOCIETY, 1853	CONNECTICUT STATE AGRICULTURAL FAIR, 1854

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 221 bushels of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both kinds of Powers, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. If the crops be extraordinarily heavy or light, greater or less results will follow.

These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by this Circular, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and toll purchase money refunded if not found acceptable to purchasers.

The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, they hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.

They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery, Implements and Seeds, which are all new and of the most approved and complete kinds extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.

The attention of a discerning public is solicited to our present stock of goods, before selecting and purchasing the coming season.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

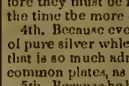
WHY should every one go to Vance's who wishe PERFECT LIKENESSES? Because he has now the most arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: to order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.



All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

ENORMOUS SACRIFICE IN FURNITURE
IN FORTY DAYS!

[For the California Farmer.]

Praotical Suggestions on Wheat Raising.

MESSRS. EDITORS: As it is very important to all the citizens of California that the next crop of wheat should be free from the complaints of all farmers the past season, I feel it a duty to give some instructions, drawn from long experience in wheat growing sections. The first requisite is thorough plowing, as an evenly crop cannot be expected from unequally deep plowing. for the grain on the shallow stirred soil will ripen sooner than on the deep. The next in importance is good seed, and perfectly clean; if there should be the least smut in the seed it should be carefully washed, thus: take a large and a smaller vessel, fill the smaller one with a strong brine, so that when the wheat is poured slowly into it, all imperfect grains, whether of wheat or oats or smut, will flow over into the larger vessel; when filled, drain off the brine and empty the vessel, and return the brine through a sieve to the former vessel, and repeat the process. The same brine will continue to cleanse by adding to it; if strong enough, it will float off the oats and barley, leaving the seed pure. The next is the quantity of seed. Some sow sparingly, expecting the strength of the ground to force it to stool and become thick; but this wheat if it should become thick, will grow tall and be late ripening, both serious objections. It would be much surer to sow thick enough, thereby securing a short growth of straw and early ripening; the former saving the danger of lodging or falling down, as well as labor in handling; the latter securing from rust, and both very important. I would not sow less than 80 pounds on an acre, on any land, and would put 180 pounds on the richest lands; from 120 to 150 pounds being a fair proportion for the land I have seen on the American river; then with good plowing—no *cutting* and *covering*—good clean seed and a proper proportion of it, you will have a reasonable prospect of a crop which will be not only satisfactory in quantity, but also in quality. I would suggest to the Farmers tho propriety of plowing their wheat ground, where they have no crop on, in the spring, and then they could sow as early as the rains would come. Respectfully submitted, by an old Farmer. W. G. W.

How Much Seed to the Acre?

THE following is about the usual amount of seed sown to the acre in the Middle and Western States. We should remark that about twenty-five per cent. less would be the average of the want of California culture. This would depend upon the quality of the soil and the cultivation adopted, as this is for broadcast sowing:

Wheat	1½ @ 2	bushels.
Barley	1 @ 2½	"
Oats	2 @ 4	"
Rye	1 @ 1	"
Buckwheat	0¾ @ 1½	"
Millet	1 @ 1½	"
Indian corn	1 @ 2	"
Beans	2 @ 3	"
Peas	2¼ @ 3¾	"
Hemp	1 @ 1¾	"
Flax	0¾ @ 2	"
Timothy	12 @24	quarts.
Mustard	8 @20	"
Herd grass, (red top)	12 @16	"
Flat turnips	2 @ 3	pounds.
Red clover	10 @16	"
White clover	3 @ 4	"
Kentucky blue grass	10 @15	"
Orchard grass	20 @30	"

The quantity for sowing in drills is as follows:

Broom corn	1 @ 1¼	bushels.
Beans	1½ @ 2	"
Peas	1½ @ 2	"
Pea Nuts	1 @ 2	"
Onions	4 @ 5	pounds.
Carrots	1 @ 2½	"
Parsnips	4 @ 5	"
Beets	4 @ 6	"

We would say to our readers that in California so enormous are the yields that two pounds per acre is the general average of seed for root crops All will, however, be governed by quality of soil

Experiment in Sowing Wheat.

A CORRESPONDENT of the Southern Planter, who seems to have kept "well up" in his classical studies, gives the subjoined as the result of following the advice of an agricultural writer, who flourished as long ago as the reign of Augustus. We would not advise our friends to try the experiment upon a very large scale:

I sowed one hundred bushels of wheat last October, every grain of which was put into *boiling hot* water; it is at this time the best looking wheat in this part of the country. I tried fifty bushels of very smutty wheat in the fall of 1853, and not one head of smutty wheat, nor fly, nor anything to injure the crop bnt rust. I got this hint from Virgil, so that it is not *exactly* new, and should it turn out well this harvest, I will give you a full account. I am afraid to *holler* on one experiment; but knowing that smut proceeds from the puncture of a bug that deposits an egg which turns to a maggot, and then to a fly, I showed the worm *in the smut grain* to Mr. Newton and to Col. Brown, at my house. Now the *boiling water* will destroy all things of this sort. Let me refer you to the Agricultural Museum, published at Georgetown, D. C., in 1811.

Speaking of boiling water, says the Northern (Vt.) Farmer, reminds us of a desperate remedy applied to a bed of wormy onions, two years since, by the wife of a farmer in this region. Her onion crop had failed for several years, being destroyed by a worm which attacked them when the tops were about three inches high. In the summer of 1853 happening to go into the garden one morning she noticed that the worms had commenced its annual warfare. Being very fond of onions, her grief was great, but before resigning all hope she determined to make one more attempt to save them. She accordingly took a kettle filled with *boiling hot water*, and poured it on the onion bed, saying to her husband, that she would kill either the worms on the onions." To her surprise the former were only killed, while the latter in a short time re-commenced growing, and in the fall rewarded her boldness with a handsome and healthy crop. She also tried the same experiment this last summer, with complete success.

"Fashion,"

HER PEDIGREE, CHARACTERISTICS AND PERFORMANCES.

THIS distinguished mare was bred by the late William Gibbons, Esq., of Madison, Morris county, N. J., where she was foaled on the 26th of April, 1837. She was got by imported Trustee, out of Bonnets-o'-Blue by Sir Charles, and she out of Reality. Reality was got by Sir Archy, and her pedigree extends back through the imported horses Medley, Centinel, Janus, Monkey, Silver Eye and Spanker, to an imported Spanish mare. Trustee, the sire of Fashion, was a distinguished race horse in England; he was foaled in 1829, and was got by Catton, out of Emma by Whisker, and combines the blood of Hermes, Pipator and Sir Peter, on his dam's side, with that of Penelope by Trumpator and Prunella by Highflyer on the side of his sire.

It would be difficult, perhaps impossible, to compile from the Stud Book a richer pedigree than Fashion's. She is descended from the most eminently distinguished racing families on the side of both sire and dam, that have figured on the turf for a hundred years and more.

Fashion is a rich chestnut in color, and in form a perfect picture of a race horse.

(Among the many races recorded in the Turf Register, we make the following selection of her performances:)

Fashion made her first appearance on the turf as a 3 year old, in the autumn of 1840. She appeared but twice that season, and won both her races, viz:

1840.—At Camden, N. J., Wednesday, Oct. 21, she won a sweepstakes for 3 year olds, two mile heats, heating Amelia Priestman in 4:13—4:22 the track being knee deep in mud. Two others paid forfeit; value of stakes $800.

At Trenton, N. J., Oct. 27, she beat Fleetfoot and Nannie in a sweepstakes for 3 yr. olds, two mile heats, in 3:52—3:56; track heavy. Amelia Priestman and Truxton paid forfeit. Value of the stakes $1100.

* * * * * *

1842.—Fashion appeared on the Union Course, L. I., on the 19th of May, to contend with Boston for the great match, North vs. South, for $20,000 a side. So confident were the friends of Boston that he would prove the winner, that 5 to 6 and in some cases 2 to 1 was bet on him; but the invincible Fashion proved to the world that speed and bottom are more to be relied upon than "long odds" in a race of four mile heats. This race excited more interest in the United States than any since the great match between Eclipse and Henry, and large numbers of people from every part of the Union assembled upon the course to witness it, the vast assemblage being estimated at sixty thousand. A full description of this race may be found in the "Spirit of the Times," and "Porter's Register," vol. 13, p. 257—8. The following is a summary:

Union Course, L. I., Tuesday, May 19, 1842.—Match, the North vs. the South, for $20,000 a side, $5000 forfeit, four mile heats.

Henry K. Toler named Wm. Gibbons' ch. m. Fashion by Imp. Trustee, out of Bonnets-o'-Blue by Sir Charles, 5 yrs. old, 111 lbs. 1 1

Col. Wm. R. Johnson and James Long named ch. h. Boston by Timoleon, out of Robin Brown's dam by Bal's Florizel, 9 yrs. old 126 lbs. - - - - - - - 2 2

Time 7:32 1-2—7:45.

This was a magnificent race, and one which will be remembered by all who witnessed it so long as memory lasts.

On the 6th of October following, Fashion walked over the Union Course for the Jockey Club purse of $1000, no competitor appearing to contest her claim.

* * * * * *

1844.—Fashion's first race this year (being now seven years old) was at Baltimore, Md., on the 10th of May. The Colonel challenged her title to the club purse of $700, four mile heats, but after Fashion winning one heat in 7:50, he allowed her to walk over for the money.

* * * * * *

On the 1st of October, on the Union course, Fashion won from Dunvegan (by Imp. Trustee out of Jemima) the purse of $400, three mile heats, in 6:13, with the greatest ease, Dunvegan being withdrawn after the first heat.

* * * * * *

1845.—Fashion opened her campaign of 1845 on the 13th of May, on the Union course, L. I., with the great sectional match between the North and the South, for $10,000 a side, $2500 forfeit, four mile heats.

Thos. Kirkman, of Alabama, named ch. m. Peytona, by imported Glencoe, out of Giantess by imp. Leviathan, 6 years old, 118 lbs. - - - - - - - - 1 1

Henry K. Toler, of New Jersey, entered ch. m. Fashion, by Imp. Trustee, out of Bonnets-o'-Blue, by Sir Charles, 8 yrs. 128 lbs. 2 2

Time, 7:39 3-4—7:45 1-4.

In this race Fashion was not quite up to the mark, though she succeeded in helping Peytona to make one of the best four mile races ever run in this country.

* * * * * *

1847.—Fashion's first race this year was at Baltimore on the 29th May; it was a three mile race for a purse of $400, for which Passenger (by Balie Peyton) most gallantly contended—winning the first heat and making a dead heat of the third. Fashion winning the 2d and 4th. Time 5:45—5:51—5:51—6:05.

* * * * * *

1848.—On the 19th of May of this year, we again find Fashion a gallant winner on the Union course, L. I. The race was for $1200, four mile heats, and was won from Bostona (by Boston), whom the renowned 11 year old mare distanced the first heat in 8:17, over a very heavy track.

* * * * * *

On the 19th October, at Baltimore, Fashion was again a winner at four mile heats, beating Lucy Toland (by Imp. Priam) for the club purse of $600, in 7:59—7:56.

Thus closed the racing career of this most extraordinary mare, whose turn of speed is only equaled by her thorough game. As a readier means of reference, we give annexed recapitulation:

DATE	COURSE.	DISTANCE	TIME.	PRIZE.
1840 Oct. 21,	Camden, N. J.,	2 m. h.	4 13—4 22	$800

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, DECEMBER 21, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

Exchanges.—Will our cotemporaries that exchange with us, have the kindness to direct our papers to *Sacramento*.

BILLS TO SUBSCRIBERS.

THOSE to whom we send Bills will please bear in mind that we need what is due us. As the year draws to a close we hope that those who are indebted to us will not require us to "call again."

California Makes her Mark.

SHORTLY after the State Exhibition, we selected some of the fine specimens that had won so much notice at the Hall, and had them carefully prepared and arranged for exhibition at Boston, and other places, with a view of giving our friends East ocular demonstration of what California could do, on the Pacific shores, in the way of Agriculture and Home Industry.

By the liberality of the house of Wells, Fargo & Co. they were transmitted to the office in Boston, free of charge, and exhibited there by the junior editor of this paper. The interest they excited and the astonishment they have produced, will best be explained by the editor of the Boston Traveller, who speaks in the following glowing terms:

CALIFORNIA AGRICULTURAL PRODUCTS.—We took occasion a few days since, to refer to some remarkable products of the soil of California. We have since had the pleasure of examining numerous samples of these products, brought to this city by the liberality of Wells, Fargo & Co., and now on exhibition at the offices of the Inventor, and CALIFORNIA FARMER, 119 Washington street, up stairs; and we can assure our readers that the collection is well worth their attention. It will open to them a new view of the value of our Pacific possessions. It will satisfy them that there is in California soil something more precious than gold; a productiveness which, with proper cultivation, will make California the glory of all our States as an agricultural region.

In the collection referred to may be seen a double onion, which weighs about *three pounds;* the finest broom corn, probably, that was ever seen in these parts, and a very superior broom manufactured in California; native oats, on stalks which must have stood nearly eight feet in the field; beautiful samples of wheat on the stalk, and of barley, oats, millet and linseed in jars; also, mammoth pea nuts, one of which would be a mouthful for even the Speaker of our House of Representatives—whoever he might be; native tobacco, and fine cut in jars and papers; twin squashes; yellow and white corn; samples of cotton, and of wool from the flat-tailed Asiatic sheep; and last of all, seed from the Mammoth Tree of California.

These articles were all, we believe, exhibited at the State Agricultural Fair in Sacramento, Sept. 27th, 1855, and most of them received premiums. Mr. Warren will be happy to exhibit them to any one who may have the curiosity to call at his rooms above indicated.

To say we feel gratified at the honorable praise bestowed upon our State, is but a faint expression of our sentiments; we feel an honorable pride in having been instrumental in securing for our adopted State the meed of praise to which she is so justly entitled. It has been our aim to elevate the cause of Agriculture, to increase a love of the science, and to awaken a just sense of its importance throughout the length and breadth of our Commonwealth.

A consciousness of this purpose, and a confidence that there was a basis for every assertion made relative to the richness of her soil and the geniality of her climate to make it bring forth all the fruits of the earth, induced us to labor unceasingly in order for the revealment of these resources; and now, as we see the promised fulfillment of these predictions and the glorious certainty of their realization, we feel that it was something more than mere imagination or enthusiasm that induced us to inscribe upon the scroll of her fame—"*California the Garden of the World.*" We feel a glow of honest pride and exultation as we read the handsome tribute of our cotemporary of the Traveller, as he points to her products, and says: "*These products will make California the glory of all our States as an Agricultural region.*" "These," exclaims he, "will satisfy us that there is in California *something more precious than gold.*"

What true friend of California will not say Amen! with all his heart.

THAT PEACH.—Dr. Brown has presented to the State Agricultural Society a Peach nearly full grown. The tree blosomed very late, and contained several peaches. The one presented was so far advanced as to be colored; and were more particular attention given to cultivation and seasons, we could easily secure two crops.

Gambling.

THAT unfortunate young man A. C. Haskell, who has recently fallen from the high position of a confidential clerk of a large mercantile house, is now a prisoner at the station-house, in San Francisco. He who was once trusted with untold thousands is now branded with crime, and is within the barred cells of a prison, among felons. What a lesson for the young men of California. How terrible the fall—how gloomy the contrast—and how important it is to hold up this awful example as a warning to others. What has wrought this change? What were the temptations? And who the tempters?

We are told that Haskell lost largely at the gaming table, and that lured on by the hope of winning back what was lost, he plunged deeper and deeper into debt, until he was tempted to commit the crime of robbery, hoping by these ample means, perhaps by some lucky turn of the die, to win all back and be saved! With this fallacious hope he staked all, and lost.

It is a terrible calamity to know and record such a crime—a terrible thing to see a young man of high promise fall from such a position, and it is always difficult to form a correct judgment of his guilt. It is far better to lean to the side of mercy, to be lenient and try to save and restore, than by a harsh and cruel decision shut out forever the hope of reformation and restoration.

We have long known this unfortunate young man, as a messenger to Adams & Co., and to Wells, Fargo & Co., also to the Pacific Express Company, having traveled much on the boats; we have been under many, very many, obligations to him for courtesies and kind favors, and these we shall not forget; and when we heard of his fall, we could not but mourn his errors, great though they were. Having learned of his arrest, we called to see him, and found him deeply afflicted with his present position. He seemed fully sensible of his fall, was ready to meet it, and to make all the atonement in his power. He expressed a strong desire to have an opportunity to try to recover himself and retrieve his present lost and ruined character. We confess we were moved with compassion for him; when we contrast *his guilt*, with the guilt of those who spend their lives in continual crime, we ask only *that* judgment which mercy and humanity dictate. Compare his life of active public usefulness, with those who are now incarcerated with him, and shall his *first crime* be so heavily dealt with as to shut out hope of mercy? Among all the messengers upon the Sacramento river, few have been more active in duty; let his *good* be remembered when his crimes are judged. Never have we been more moved to deep pity than when we saw this young man and heard from his own lips his sorrow and the account he gave of the mental tortures experienced lest he should not have an opportunity to recover his lost name and character.

We would not raise a voice in defence of *crime*, or lift a hand to shield the hardened criminal; yet we would make a distinction between criminals, and we would try to save those who are *penitent*, from a great fall. If mercy should be extended to the *guilty*, it should be to those who have been fearfully tempted to do wrong; and those who are snared in the wiles of the gambler's den we believe are those who need mercy.

The Great Lawgiver has said—"It needs must be that *offences* will come!—but woe unto them, through whom they come." We believe that those who *lay snares to lure* the *unwary* are *more guilty* than those who are snared. Abolish gaming houses, drive such out of the community, and a large portion of crime would cease.

We only ask for this most unfortunate young man, that justice may be so tempered with mercy, that he shall repent of his wrong doing, and be enabled to restore and make good the injury he has done, and if possible restore himself to his friends and the community by a thoroughly reformed life. Let the judgments of Him who "spake as never man spake," be the criterion for the unfortunate Haskell. If the Savior of Men, as he looked around upon those who brought the "woman" taken in the very act of "adultery," as He saw *their guilt*, saw them shrink abashed from his presence, could say to *her*, as His eye looking into her soul could read her *temptations* and the *cause* of her *first sin*, if He could in His mercy to save, say, "Go, and sin no more," shall not the voice of mercy be raised for this young man, so that it may be extended to him, *go, and sin no more*? If that mercy saved the repentant Mary, may not the same mercy save Haskell? God grant the trial may be made. We speak not because there is any tie of kindred, or any interest bids us plead other than that great voice of Humanity that will ever find an echo in our heart for the erring, the *penitent* erring! the *returned prodigal!*

We have suffered, and deeply too, by those who had been lured to the gamblers' den; we have seen their agony, and have pitied and forgiven them. And we have suffered deeply by the wrongs inflicted upon us by others; but we never turned away from the tears of the penitent. We heard a voice saying, "if thy brother trespass against thee, and turn to thee saying, 'I repent!' *then shalt thou forgive him.*" This command supersedes all earthly laws, and must be obeyed.

San Francisco Bulletin.

WE do not know but we should come up before the "King" with an apology, for not extending the usual courtesies of the press, when that spirited journal made its first appearance; but as it is so very difficult to keep posted up about *all* the *new papers* that make their appearance, and as we were so much engaged with our duties abroad, we know we shall be kindly forgiven—and write this paragraph to say to our cotemporary that we shall be happy to exchange. Had we not found very much to please ourselves, had we never have seen the Bulletin, we should now be anxious to see it, believing there was good in it, because so many were finding fault about matters of which they were not perfect themselves.

We like the Bulletin—there is very much to approve, and the *good* is what we seek. Why need the Press spend so much time, brains and money, in finding fault with the Bulletin? Is it because the Bulletin is *finding favor with the community?* And some papers, wanting to find *something*, only know how to *find fault.* This continual fault finding by some journals is one convincing proof that there is talent and enterprise in the Bulletin, and that "green-eyed monster" makes them uneasy. Now we have found pleasure and interest in it; there is a fearlessness in its tone that bespeaks *true independence*—aye, of the "Kingly" sort, too. We do not approve or endorse *all* the Bulletin says, but we *do approve* much, and read it with pleasure. We select that which we like and approve, and feel improved with the truthful; and on the same principle that we would cull a beautiful flower and inhale its fragrance, and not find fault because the whole roadside is not covered with the same flowers: neither do we *hunt* for thorns, lest we *feel* the point. If our public journals would all strive to develop what was *good* and excellent, and to encourage it, evil would *die out*—precisely on the same principle that we encourage the planting and growing of *only the good.* We do believe that evil is increased in our community by parading before the minds of the youth these *newspaper reports of police courts, embezzlements, frauds, murders,* etc.; matters of this nature in journals of this kind, should never be found in the family of children and youth.

And while we say we like the Bulletin, we mean the *good we find in it.* Its personal attacks, its attacks upon banks, its condemnation of public officers, etc.,—that may be its "forte;" but *that is not ours.* We therefore leave that matter for the Bulletin, and those it assails—and we believe every journal should do the same. Each journal should be *responsible for its acts*, however much we boast of the "freedom of the press."

Festivals of this Week.

FIRST and we believe the one that will leave the best impression, is the festival season of the Female Seminary of Miss Atkins, at Benicia,—a seminary for young ladies, one of the most popular as well as the happiest and most successful in the State—on Thursday and Friday. The hours of the days were to be devoted to the recitations, and examinations of the pupils. Thursday evening the Musical Festival was to be held at the Town Hall (late capitol), the design and object of which was to provide apparatus for the Institution. This musical banquet was to be presented entirely by the teachers and pupils. From the interest everywhere felt for this occasion, a very rich repast was anticipated. As we have a parent's interest in this institution and intended to be present, we shall speak fully in our next number.

The Great New England Festival in honor of the Landing of the Pilgrims, will be celebrated on the 22d, at San Francisco, by a dinner and ball, by the New England Society. From the preparations in progress, it is anticipated to make it one of the most splendid affairs ever got up. One of the best features of the festival, and one that indicates progress and intellectual advancement, is the announcement that the ladies are to be the honored guests on the occasion. Whose heart has not beat with a holier impulse while listening to that noble song—"Sons and Daughters of the Pilgrims," and had it not been for the deep and true sympathies of the mothers, wives, and daughters, of the men of the Revolution, the heart of many a brave soldier would have shrunk from the contest. If they share in the perils, shall they not share in the glorious conquests?

We learn that a very select party of gentlemen, comprising twenty-five, will keep Pilgrim Day at Sacramento, and to make it a very happy affair, twenty-five ladies join them; this is the fairest feature in this exclusive dinner.

At the East—the Boston Atlas states that very extensive arrangements have been made at Plymouth, for the celebration on the 22d of December of the anniversary of the Landing of the Pilgrims. A committee of the Pilgrim Society have taken measures to insure a brilliant affair, which shall at once commemorate in a becoming manner the virtues of a pious ancestry and reflect credit upon the Society. The festivities of the day will consist of services in the First Church, in which the venerable Dr. Kendall will take part; an oration by Hon. Wm. H. Seward of New York; a public dinner, at which many distinguished men will be present; and the whole to conclude with a ball in the evening.

To add to the weekly festivities, a very brilliant affair, got up by the ladies for the benefit of Rev. Mr. Benton's Church, in this city came off last evening,

MANY FAVORS RECEIVED.—We are very much indebted to Messrs. E. E. Griggs & Co. Booksellers, of this city, for their prompt and kind regards, in a most generous parcel of new magazines by last steamer. We feel it due to our readers to say that we are sure they can find every new and valuable magazine and book they desire; the variety sent us is a sure guarantee of a large assortment at this establishment.

What can we say to our friend Vance, of the "Great Gallery" of San Francisco, for those elegant pictures of the American Water Lily? We believe they will surpass any picture of flowers ever daguerreotyped before. They are a gem of art. Do any doubt this meed of just praise, let them come to the Society's Rooms and they will say "the half was not told them."

We are indebted to Hon. C. Mason, of the Patent Office, for valuable works from that institution.

DAMON AND PYTHIAS.—We believe it now conceded that among expressmen there are two prominent able leaders whose fame has been heralded throughout the world. As the "fast ones" say, there are not two better "whips" on the Pacific coast, nor probably two men who have made faster or better time than these aforesaid leaders, who, by their skill and attention, truly deserve to be knighted as generals among expressmen. Verily we should like to see them in full uniform, well mounted and upon a good road. Je-ru-sa-lem, what a dust they would kick up, these same Gen. Martin and Gen. Moulton. By the way this reminds us that Martin was a long way ahead this week with a great variety of papers from all sections of the country; and Gen. Moulton, he—he—broke down on the road, or forgot us in his parcels. Never mind, "Ben," we *were* supplied this week. We will think of you next time, or you of us.

JOHNSON'S SPLENDID STEREOSCOPES.—We spent some time in the gallery of J. W. Johnson, Esq., of San Francisco, last week, and after repeated examinations of his beautiful pictures, we had a desire to look them all over again. The stereoscopes are indeed masterpieces of art. It seems almost impossible that so much distinctness could be given to a picture—buildings, animals, trees and flowers stand out like living objects. Johnson has also succeeded in taking daguerreotypes on glass. We examined these also, and could not but feel that in this science there seemed to be no limit. Johnson's gallery is quite a fashionable resort. Gov. Johnson and many other distinguished personages are now "suspended" there. We invite those who feel any interest in this great science to visit these galleries.

WATER FOUNT AND HOME JOURNAL.—We hail the advent of this valuable sheet, as a proof of the progress of morality, and we trust the advocates of sound doctrine, peace on earth, and good will to man, will sustain this journal nobly, until the whole community shall rejoice in the voluntary abandonment of that evil which has wrecked the happiness of so many of earth's brightest stars, and blasted the happiness of so many homes.

CHANGE OF NAME.—Gold Hill, in El Dorado county, has had its name changed to Granite Hill.

The Carob Tree, or St. John's Bread.

We publish the following account of this singular tree, having received and distributed the seeds from the Patent Office:

Of all the seeds imported by this office for the purpose of distribution, there is not one more interesting or more valuable than those of the Carob tree. The pods, when matured, contain a few drops of a substance resembling honey. The tree is unquestionably of Eastern origin, and it is supposed to be identical with that upon which St. John fed while in the wilderness. The seeds were procured for the office from the Alicante, in Spain. In Murcia, Valentia, Catalonia, and other provinces in that country, it abounds, and frequently forms, with the olive and other valuable trees, large forests. It was without doubt introduced there by the Moors, who knew its nutritive qualities as a food for their horses, mules and cattle. They probably brought it from Palestine and Egypt, whence it appears to have originated. In these Spanish provinces it now grows naturally, in every kind of ground, not excepting the driest and most barren spots, where the underlying rock shows itself more frequently than the earth. Its roots, twisting in every direction, accommodate themselves to the lightness or depth of the soil; while the trunk, remarkable, for its smooth and light colored bark, attains in sheltered positions a colossal size. The branches, furnished with greyish colored leaves, spread majestically around the trunk, and, when loaded with fruit, hang quite to the ground in the form of a tent. The fruit ripens rapidly, and such is its abundance and weight, that it is necessary at once to gather it. The pods are sweet and rich in sugar, and animals feed on them with avidity, and become quite fat and in good condition for work. There are several varieties of the tree. The produce is necessarily in proportion to the attention given. It blooms twice a year—about the first of February and the middle of September—and when well watered, arrives at a considerable height, and sometimes covers a space of one hundred feet in diameter, bearing upwards of a ton of pods. It will doubtless succeed in the Southern and perhaps in the Middle States.—*Patent Office Report.*

Death of Professor Jas. W. F. Johnston.

The steamer lately brought the sad news of the death of this distinguished friend and promoter of agricultural improvement. No other man has labored more diligently or more successfully to disseminate correct information among the farmers of Great Britain; and his voluminous works, owing to a cheaper press—have been read quite as much in this country as there. His writings were chiefly devoted to collecting and arranging the developments of scientific agriculture, and no individual has done more to substitute a system of enlightened cultivation for one of mere routine farming. His "Notes on America," were valuable, though in some instances, too careless in the collection and comparison of facts, and like most similar works, tinged too strongly with English prejudices.

He did not, however, confine himself wholly to Agriculture proper. His last work, "Chemistry of Common Life," (recently published here by the Appletons,) is a most valuable contribution to popular science. It shows that there is an interesting philosophy even in the plainest things, and that the humblest details of common life abound in marvels, where there is the "seeing eye" to observe, and the searching intellect to explore them. His success has been due more to resolute energy and to indefatigable industry than to comprehensiveness and depth of native intellect, and in this respect, the history of his life when published will be a fine example to others.

His loss to agricultural science, is a very great one at the present era. After the completion of this last work in the spring, he visited the continent, hoping to recover his failing health, but without avail; and he returned home late in the summer with his lungs deeply and fatally effected. He resigned himself to his lot with christian submissiveness, and expired at Durham, England, Sept. 18th, at the age of 59.—*Am. Agriculturist.*

Commerce, Navigation and Agriculture.

The Washington correspondent of the New York Journal of Commerce communicates the following intelligence:

"The Annual Statement of Commerce and Navigation for the fiscal year is now complete and ready for press, at an unusual early day, to the great credit of the Treasury Department. The printing of the document is now nearly complete. The aggregate amount of the imports for the year was $261,382,960; while the domestic exports amounted to $246,705,553. Of the latter, the amount in gold and silver coin was $19,842,423, and in gold and silver bullion $34,114,995. The products of agriculture were: of animals, $17,-178,080; of vegetable food, $23,651,352; of cotton, $49,829,442; of tobacco, $55,113,814; and hemp, $14,712,408.

"Our agriculture is greatly to be benefitted, at least on the Atlantic slope, by the use of fertilizers, especially of guano. The prices of produce of all kinds fully justify the farmers in paying the present extravagant price of $75 a tun for this article. Our expected supply at a cheaper rate from the Gallipagos Islands, has proved a failure, and the treaty respecting it is at an end. To some new source of supply it has been found expedient to look. The government will, therefore, necessarily encourage any enterprise of a private nature that will develop such new sources. Some months ago it was announced that a new guano island had been discovered in the Pacific Ocean by an American shipmaster. The island is believed to be of great value, and means have been taken to make it available for the discoverer. Two ships have been fitted out and supplied with new implements to make the guano ready for shipment; and the Executive government, after having held an interview with the discoverer, has not hesitated to send orders to the Commander of the Pacific squadron to proceed to the island, survey it, and protect the interests of Americans therein."

U. S. Land Commission.

A very long and able opinion was delivered by Judge Felch in the case of the claim of Joseph S. Allemany, the Bishop of the Diocese of Monterey, for—

1st. Lands alleged to have been granted by the Governor of California for a college. Two grants are presented, signed by Micheltorena. The first grant contains six square leagues in the "Canutales." The second grant contains two square leagues in addition to the above.

2d. Lands granted for the support of divine worship at the Mission of San Miguel.

3d. Lands granted for the service of the church at San Luis Obispo, containing one square league in the "Laguna," and the garden in front of the Casa Cural.

4th. The church edifices, cemeteries, and priests' houses, with the curtileges and appurtenances at the several Missions in California; and

5th. Certain gardens and graveyards, situated at or near said Missions.

In view of the whole case, we are of opinion that the claim to this property by dedication to the church should be sustained for the following reasons:

1st. The permanent establishment of churches was contemplated from the first, and the necessity of their possessing the usual buildings and lands in permanent right, was recognized.

2d. The knowledge on the part of the government, and the aid rendered by its officers in locating these establishments give evidence of more than silent consent to the permanent use of the land, &c.

2d. The churches, cemeteries, buildings and gardens, used by the priests were recognized by the authorities as well as by the community as belonging to the church.

4th. The possession and use of the property was never interrupted by any act of the government.

5th. The decree of the President of the Republic of Mexico, in Nov., 1850, in response to the petition of the Bishop is a recognition of the ecclesiastical character of the property, and of the express dedication of the buildings, gardens and orchards in question to the church, for the religious purposes specified.

The concurring proofs bring us irresistably to the conclusion that before the treaty of Gandalupe Hidalgo these possessions were solemnly dedicated to the use of the church, and the property withdrawn from commerce.

A decree of confirmation must, therefore, be entered in the case.

CLAIMS CONFIRMED.

The claim of Andreas Pico et al. for 30,000 acres of land, the establishment of the Mission of San Jose, in Santa Clara county, was decided by Judge Thompson in favor of the claimant, as to the unoccupied and vacant lands belonging to the Mission. Judge Felch dissented.

The claim of Clement Panaud et al. for the place called the Orchard of San Juan Batista, in Monterey county, consisting of 400 acres, was confirmed.

REJECTED.

The claim of J. W. Redman et al. for 10 acres in Santa Clara county, was rejected.

The claim of T. O. Larkin for 15 acres in Santa Clara county, was rejected.

The claim of C. Panaud et al. for the garden of San Coyetano, Santa Clara county, 1,000 varas long by 200 wide, was rejected.

Prompt Indemnity.—We take pleasure in giving publicity to the honorable example set by the New York house of Wells, Fargo & Co. This is the testimony that will satisfy Californians that their property is safe when intrusted to such a house:

Fifty Thousand Dollars Paid by the American Express Company.—On Tuesday, Nov. 20, says a New York paper, Messrs. Wells, Butterfield & Co., 62 Broadway, paid fifty thousand dollars into the hands of John J. Cisco, Esq., Assistant Treasurer of the United States; being indemnification in full for the non-delivery of two boxes of gold coin, receipted for by the agent of the Company at Dubuque, Iowa, Sept. 17, 1855, for transportation to this city. Our readers will remember that we stated at the time that upon opening the boxes they were found to contain only lead, yet they were apparently in the same order in which they had been received by the agent. The Government gave the Express Company a stipulated number of days to identify the robber and recover the money, and $15,000 reward was offered by the losers for that purpose; but the last day of grace (Nov. 20) came, and no discovery having been made, Messrs. Wells, Butterfield & Co. (though satisfied that the fraud was not committed while the boxes were in charge of the Express) paid the $50,000 to the Government officer appointed to receive it.

This was a noble example. It is the largest sum ever paid by public carriers for a loss, and the handsome manner in which the American Express Company have stood up to it is an honor to them and to mercantile good faith.

Where is there a State a bank, or an insurance company, that would meet a loss more promptly? We challenge Europe and America to show a more honorable instance. Fifty thousand dollars is a large sum, but fortunately the wealthy Express Company who have paid it are amply able, and it was taken from their surplus fund. We believe it to be simply the truth to say, that if the loss had been half a million of dollars, it would have been met with equal certainty; the aggregate property of the stockholders exceeding eight millions.

The entire transaction, from first to last, demonstrates how important and indispensable, good substantial Express Companies are for the security of the public moneys when *in transitu*, as well as for the safety of funds remitted by banks, bankers and individuals. The Post Office Department, it is well known is not responsible for similar losses. If A or B sends $100 or any other amount of money by mail, and it should be abstracted or lost before reaching destination, he can obtain no redress; yet, when Uncle Sam himself sends his valuables by express, he expects the Express man to pay for them if lost. Consequently it is much better to remit money by a responsible and honorable Express Company.

Prosperity of the Southern Mines.—There never was a time, remarks the Stockton Argus, even in '49 and '50, in which the miners of the Southern mines of California were as well satisfied, generally, as at the present time. Each miner seems imbued with a feeling of hope in the gains which appear so readily offered him for the working. Tunnels are being run into the mountains; shafts are being sunk, open cuts are made, and surface diggings by the old sluice operation and the new hydraulic process are in progress, quartz ledges are being prospected, and those already known to be rich are being quarried out prior to the rock being crushed by machinery; in many gulches which have not been worked heretofore for want of water, immense reservoirs have been made at elevated points to catch the winter rains, so that the miners may be enabled to search and bring out the hidden wealth washed from the mountains' sides, or embedded in the earth in those ravines. In Calaveras county alone, we are assured that over 500 tunnels have pierced the mountains, and that over 1,000 are at present engaged in that mode of mining.

Another Method of Saving Fine Gold.—The Placer Herald thus describes a method adopted by a Mr. Craig, of Spanish Flat: He takes a number of sluice boxes, say from four to five inches deep, and sets them as in the ordinary way of washing; over these he places his common sluices, with an aperture across the bottom a quarter or an eighth of an inch wide, near the upper end of the sluice. These apertures in the upper sluice boxes permit the most of the gold and fine gold to pass into the lower tier of sluices, with sufficient water to wash down regularly, while the rocks and coarse gravel are carried down the upper sluice.

Rich Deposit.—The "Down East Company," who are at work in the Table Mountain, nearly opposite Tuttletown, struck through the "rim rock" on Saturday last, when a large body of water gushed out, driving the workmen from the tunnel. In a short time, however, the water subsided when the men went in and found they had struck upon a surprisingly rich lead. The gold could be discovered in large quantities diffused throughout the gravel. It payed at the rate of sixteen ounces to a wheelbarrow full of dirt—eight or ten buckets to the wheelbarrow.—*Sonora Herald, 15th inst.*

A Company that has been at work tunneling into the Table Mountain, opposite to Jamestown, has succeeded in penetrating to the lead, where they discovered very rich dirt, paying at the rate of from twenty to thirty dollars to the pan.—*Ib.*

Destructive Fire at Weaver.—Another destructive conflagration broke out in the El Dorado Saloon, at Weaver, Shasta county, at 6 P. M. 15th inst., and destroyed about twenty buildings. The principal buildings destroyed were the Independence and St. Charles Hotels, and the Diana and El Dorado Saloons. The following are the principal sufferers: S. Hovey, J. Bachelder, E. A. Rowe, Greenhood & Newbauer, A. Blair, A Love, Messrs. Kelly, and Carr. Many persons escaped from the flames by jumping from the second story windows.

The Shasta Republican says that a party coming to Shasta from the Salmon river, lost their way, on account of the depth of the snow, and encamped three days on Scott's Mountain, and had at last to return to the Salmon. One of the party had to be carried back.

Big Fish.—We saw a sturgeon hanging before Wyson & Dewitt's meat market, one day this week, which weighed 225 pounds, and measured 9 feet in length. It was caught in the Sacramento, a few miles below this place.—*Shasta Courier.*

Gas at Last.—Last Saturday evening [illegible] inst. Sacramento was [illegible] for the first time. Most of the [illegible] on J street up to the [illegible] and I streets and I Street [illegible] We have two rooms of the [illegible] which are thrown [illegible] and we think [illegible] the Sacramento Union.

A Friend [illegible] to the use of Wistar's Cherry to all who are afflicted with [illegible] troubles or asthma. Its singular power over these diseases has rendered Dr. Wistar famous wherever pulmonary complaints are known.

England and the United States.—In relation to the recent misunderstanding between the two countries, the N. Y. Tribune has the following: "That there has been some misunderstanding between the two cabinets, we do not deny. That they construe differently the Nicaragua treaty, was long ago known. That they may agree to annul that treaty is possible, though we trust they will not; for there is very little in the diplomacy of either country so creditable or so truly advantageous as this treaty. That it may be thought best that Mr. Crattipton should be sent to some other Court, is quite likely; but this Government has sent home several ministers—so, we presume, has the British—and neither party dreamed of going to war about it. Nations now-a-days make war for substantial cause—not for a punctilio. There has been no moment when either Government even thought of going to war—none when the good sense of the two nations would not have held their hands had they both been intent on it. We repeat, that the War bubble that was blown a few days ago was a stock-jobbers' and journalists' flyer, never deserving of a moment's consideration.

The Crimea.—From the Crimea there is absolutely nothing to report. The armies are engaged in building huts for the winter, with occasional military promenades and exchange of long shots with the Cossack picquets.

Several rumors of battles near Sympherapol have turned out to be false.

Letters from Sebastopol say the Russian projectiles from the north side reach almost every part of the city, and that a desultory fire is kept up on both sides.

The Allies say that the Russians, although keeping up a continual fire, are making preparations for a retreat.

General La Vaillant has been appointed by the French Governor of Sebastopol.

Pardon of Dr. Beale.—Gov. Pollock, of Pennsylvania, has extended his clemency to Dr. Beale, and remitted the remainder of his sentence of imprisonment, which was four years and six months, beginning on the 28th of November, 1855. He has served, therefore, about one year of his term.

Salt.—It is said that the quantity of salt manufactured this season, at the Onondaga Salt Works, Syracuse, New York, will reach 6,000,000 bushels—an excess over the average of 500,000 bushels, which will be very opportune, as there is a partial failure of the salt crop in the West Indies. The price will be about $1 40 per barrel, making the whole crop worth about $1,600,000.

A Noble Dog.—In Covington, Ky., recently a man rudely jostled a little girl into the gutter with seeming indifference as to the consequences. A large dog, a very peaceful animal, witnessing the affair, instantly sprang upon the man and seized him by the throat, holding him fast until taken away by the bystanders. The child was somewhat injured by the fall, but the indignant people thought the fellow had been sufficiently punished by the dog—the nobler brute of the two—and let him go.

Sale of Wild Animals.—The New York Evening Post gives an account of the sale by auction of the zoological collection of Mr. Seth B. Howes, which has been on exhibition at the Hippodrome in that city. The animals were disposed of at very low prices. A white Polar bear, said to be the only one now alive in America, was sold with his cage, (valued at $2000.) for $450. The original cost of the animal, was $1,100. A Bengal tiger brought $225—cost $800; three performing lions, $375—cost $2000; a zebra and a leopard, $285—valued at $800; a rhinoceros, $575—cost $1,100; the elephants Canada, Fanny Mogul and Mickey, brought, the first $1,400, the second $1,000, and the last two $1,100 each—original cost $2000 each; a camel, now in Ohio, was bid off for $10. Quite a number of the animals were purchased for Barnum.

An Interesting Relic of the Revolution. On Thursday, Nov. 15, there was placed in Independence Hall, the coat worn by Gen. Israel Putnam, and his commission as Major General, which was signed in Independence Hall, in June, 1795, by John Hancock as President, and Charles Thompson, Secretary. The coat, which now belongs to Israel Ward Putnam of Ohio, was presented to Gen. Putnam by Gen. La Fayette. The commission is now in possession of Walter W. Putnam, of Mississippi. These gentlemen have been to Pottsfret, in Connecticut, where a public meeting has been held to devise ways and means for the erection of a monument on the spot where the mansion of General Putnam stood. The coat and commission were to be allowed to remain for public inspection that day.

Hedge Plants.

One of the finest adornments to a garden is the Hedge that divides it from the highway and the buildings that surround it.

A Hedge is not only ornamental and useful for the *outside* of the ground, as a protection, but it is necessary as a dividing line between the various departments of a garden. The Flower and Fruit Gardens should always be separated by a Hedge. It would be much better in a large establishment to divide each class by hedges. The Fruit Orchard, the Vineyard, the Flower Garden and the Vegetable Ground should each be separated by an ornamental Hedge. The Hedge should also separate the grounds from all the several buildings,

In California a Hedge can be made in a very brief time; two, three, or four years are sufficient to establish a beautiful and strong Hedge, according to the nature of protection wanted. There are several species of Hedge plants admirably calculated for these purposes, that are indigenous to California, and so well adapted for Hedges that we hope they will be thoroughly tried; for we are sure, if but once commenced, we should see them become generally adopted, and this would add much to the beauty of our garden grounds.

The varieties to which we allude particularly are: 1st, The *Ligustrum* or Privet. It grows abundantly in the valleys and swamps back of San Francisco, and is known by its pretty bone flower, grown in the form of a small cone. This shrub grows about six feet high, and is most admirably adapted for an *outside Hedge*—an ornamental one. It will form a strong and thick Hedge, and can be trimmed and shaped to suit. Number 2 is the *Arbor Vitæ* of the mountains. This is abundant and makes a beautiful evergreen Hedge, either for an outside Hedge or as a separating Hedge between the several gardens; *this* would be our preference. Number 3 is the *Escallonia*. This is an evergreen also and is of very quick growth, grows very compact, easily formed, and is most appropriate around the flower garden or near the dwellings.

There are *two kinds* of the Escallonia; one inclined to an upright growth or tree form, the other low and shrubby. The first we denominate the *female* plant, and produces abundance of a white linty blossom, which it scatters freely in the garden. This is objectionable, but it can be obviated *by* being constantly pruned, thus preventing its blooming. This species we recommend for a garden, in single clumps, as an ornamental tree, to be shaped into fancy forms. The other variety, or male plant, is a shrubby plant, bearing a pure white flower, more minute and does not open and scatter its lint. This is the variety for the hedge. The first variety is a yellowish green leaf; the latter a dark shiny leaf. We would refer our readers to a most perfect Hedge of this kind at Smith's Gardens, at Sacramento. It is worth a long ride, and if seen, will be copied.

At another time we shall speak of another kind of Hedge Plants.

The Fire Blight—Cracking of Pears.

BY J. A. ERNST, CINCINNATI, O.

I have been a learner for the last fifty years, a large portion of it devoted to Horticulture. My zeal has prompted me to close scrutiny of the various phenomena that often cross the horticulturist's path, the solution of which has not always been as satisfactory as is desirable. This is especially the case with the Pear, the trees and the maladies to which it is subject. The cause of the fire-blight, so called, I think I fully understand, experience confirming the correctness of the views presented by me on former occasions in the pages of the Horticulturist.

This summer has afforded another opportunity for testing them. Those who have paid attention to the matter will probably remember that I suggested, that with the return of a wet summer, we should have the fire blight, which seemed to have disappeared for several years. Time has proved so, most fatally so in some situations destroying very large trees. I have had much of it in my own trees this summer—some very severe attacks in large and small trees, on the quince and on their own stocks. I have however succeeded in checking it in every instance and saved my trees. And as a knowledge of the saving or curing process is of more importance to the cultivator, (as that is a practical operation within his reach, and the other, the cause of it, is not with our present enfeebled stock of trees,) I will here give more fully my method of checking it than I have elsewhere, that others may practice it if they will.

The moment I discover symptoms of blight I proceed with the knife: if in the limb I lop it off until I come to the sound and healthy wood, then I examine downwards; I often find other branches and sometimes the body of the tree affected. This is very readily discovered by the dark and unnatural appearance of the bark: this will sometimes be found in streaks up and down, at other times in blotches, at times encircling the branch or body of the tree. If there is any doubt about it, it is only necessary to cut into the bark a little, when its unhealthy condition will appear. Just so far as this is discoverable, carefully take off with a sharp knife the outward bark, to the sapwood, being careful to do this as little harm as possible. It will be found that the injury is in this outward bark, that it has not yet seriously affected the sapwood, and the inner coating of vitality, but which it soon will if permitted to remain. I have invariably found when I have attended to this process in time, that soon a new healthy bark is formed and the remaining unhealthy parts are thrown off. The tree resumes its unusual healthy action in the forming of wood and the maturing of fruit. This I have proved not only once, but in twenty instances or more: and not one year, but a series of years. Trees treated thus years ago, are now healthy and full of fruit. I have been pained to witness the destruction of valuable trees in other collections for want of timely and proper attentions, the proprietors holding on to the *old notion of insect poison*, and in hopeless despair looking on the work of destruction. It is not safe to delay one moment after it is discovered to exist in a tree, but instantly to apply the knife. This disease, may, with great propriety, be termed vegetable mortification, which extends rapidly inwards to the sap vessel, to the vitals of the tree; when these are once reached on the body of the tree, all hope to save it is at an end.

A remark if you please, on the singular freak of my white Doyenne trees, in producing fine splendid fruit for years after planting, then for the space of nine or ten years uniformly cracking and producing only unsightly and worthless fruit; then suddenly to resume their former habit in the production of as fair and handsome fruit as you could wish to look on, or to eat; and this without any apparent cause, or the least change to the soil or anything being done to the tops. This to me is altogether an unaccountable mystery. I had attributed the return to their former habit, of the production of fair and good fruit to the last two or three unusually dry summers, but this being an unexampled wet one, and my fruit being now fully formed and grown, without the blemish of a crack, I am just where I started, a *know nothing* on that subject. And I think the facts developed in my trees upset all the theories that have been started as to the cause. At all events, they prove conclusively that it is not the variety having run out by old age, or that the trees had absorbed from the soil all the parcles necessary to their healthy action, and the perfection of fruit. As I have observed in a former communication, my trees are scattered over my ground, some in cultivated land and others in grass; the latter have never been disturbed about the roots, some the first fruited; the others have shared in the benefits of the other crops in the cultivation, and yet all have acted precisely alike. I feel very desirous for more light on the subject; can you or some of your numerous subscribers furnish it? I certainly shall feel myself greatly obliged for it. —*The Horticulturist.*

The Winter Rest of Trees.

Trees have not an absolute and entire rest during winter. The sap circulates more or less from root to branch during the mild days of the season. If the trunk of a tree is measured in Autumn, and again in the spring, it will be found that it has enlarged itself. And yet, relatively to their condition in summer, trees in winter are at rest. They close their annual labors in autumn, some of them early in the season, others later. Some of them show that they are tired of making leaves and branches and fruit, even before frost comes. The maple, bass, birch and hickory indicate it, about the middle of September, by holding out flags of yellow and red. Others, as the elm and ash, give up work at the first touch of frost. But with what splendid pomp do these and all the other trees combine to clothe the hills before they lay off their summer drapery and go to rest! This, their last, is the most brilliant performance of the year. It would seem that they did this on purpose that the world might deeply feel, during the desolations of winter, that it was a serious matter for them to go to sleep. Some other trees, as the oak, willow, poplar, and certain fruit trees, hold their leaves unchanged several weeks after frost, and drop them only in the very teeth of winter.

An important part of the last work of all trees for the year, is the making of leaf and fruit buds for the next season. And what a beautiful and wonderful piece of work it is! By a subtle process, best known to themselves, (say rather, known only to the God of nature,) the delicate germ is formed, around it, small tender leaves are folded in successive layers, and over all a coat of varnish is laid, making it water-proof, and then this work is done! These buds being formed, and the newly-grown wood matured, so as to endure the cold of winter, the leaves rustle to the ground, and the entire summer's work of the tree is ended.

Trees obviously need this rest: they must and will have it. Leaves do not fall, simply because they are cut off by the chemical action of frost; they would fall, even if there were no frost. In some cases, they drop before frost comes. In our extreme southern States, and in the region of the tropics, trees have their rest in winter, as well as they do in northern countries. The oak, maple, mulberry, ash, peach, etc., cast off their leaves and remain dormant during the winter months, although the temperature of the air is as high as it is during much of the summer at the north. Their winter rest is, indeed, shorter than they would have in colder climates, but a season of repose, of considerable length, they always have.

The beech sheds its leaves in November, and does not send out new ones till April—a rest of about one hundred and forty-nine days. Several of the oaks rest one hundred and ten days. The palm-tree drops its leaves in the middle of October, and rests nearly one hundred days. The tulip-tree rests one hundred and fifty-seven days. From facts like these, it appears that many trees which are the natives of cold climates, when transplanted in warmer regions, drop their leaves nearly as soon, and rest nearly as long as in their original localities.

Evergreen trees, likewise, have their period of rest, and that in all climates. They do not cast all their leaves at one time. Like deciduous trees, they have a short rest in summer, and a long one in winter.

If we dig up a small tree or shrub late in the autumn, and transfer it to a box or pot in a green house, it will not open its buds and grow, until it has taken its annual rest. We may water it ever so abundantly, and surround it with the air of summer, it still claims its appropriate rest. That rest may be shorter there than it would have been in the open air; the plant may be forced into a premature growth, but it will show plainly that it needs a period of repose, and is reluctant to be disturbed. If stimulated too long, it will become sickly, and at length die,—thus showing that an important law of nature has been violated. But suffer trees to lie dormant for a season, and they will then start into growth at a temperature of 40 deg, while before such a period of rest they would remain unmoved by a temperature of 60.

We may infer from such facts as these, that little harm is to be apprehended to fruit-buds from warm weather in the early part of winter. At that time, trees have just got fairly settled in their winter quarters, and it will be almost impossible to arouse and call them forth. The violet may wake up and smile at the unexpected kiss of the sun, and certain other plants, originating in warm climates, or of susceptible natures, may shoot forth leaves; but as a general rule, vegetation has lapsed into its wonted slumber, and will not be disturbed at such an unseasonable hour.—*X., in Northern Farmer.*

For the California Farmer.]

Flowers.

There exists in every mind an inate faculty for the appreciation of the beautiful, and happily for its gratification there is an adaptation in the material world to this as well as every other principle of our nature, and where the mind of man has not been debased by "earth's too sordid touch," he is not slow in perceiving the dwelling places of the spirit of beauty, as well as to seek what may strictly be termed useful in this varied and changeful world of ours.

Among all this variety which inspires us with the love of the pure and beautiful, the flowers hold no mean rank. This rank they have held from the most remote ages, and no nation, however rude or uncultivated, has withheld from them their most enthusiastic admiration.

Notwithstanding, they have from days of yore, been the poet's theme, and have often found a place in the most prosaic productions of men of science, yet now they again return to us in all their freshness and beauty, claiming a slight tribute of remembrance. Flowers seem the gift of Divine Benevolence to minister to the better nature of man, for surely every physical want of ours could have been supplied, and the earth still been clothed in one unvaried hue. They are as one writer expresses it, "God's smiles," and surely their delicate texture and radiant hues brighten earth's bosom and furnish an additional proof of the goodness of that Being who causes the flowers to spring up under our feet, in every valley and on every hill.

And in this our adopted country can it be truly said, that nature with a bountiful hand has strewn them along our pathway, not only in our fertile valleys, but upon the hights of our distant mountains are they found; not only at the return of spring, when we were wont to seek them in our native homes, when "to the fresh, green woods, a merry troupe we've hied, the festive day of May to greet, and there in chaplets wove the first spring flowers;" but in chill December, when Christmas comes with her varied gifts, can the fresh bouquet be found among them, speaking the language of love and friendship. Then who that has a taste for the beautiful, with all the inducements here presented by nature, can fail to cultivate flowers? for they are lovely, whether we discover them in their native haunts, as in the shady woods, by the side of the running brook, in the cleft of some rock, or whether we behold them wreathing the trellis of the simple cottage, or adorning the walks of the more cultivated parterre. Aside from the pleasure afforded from their beautiful hues and graceful forms, or delicious fragrance, they have a sort of *spiritual* beauty, which enlists the affections and speaks to the heart. They are made the type of every feeling and the expression of every sentiment. They have mingled in the religious rites of the heathen, as well as in the sacred ceremonies of the christian. They have strewn the pathway of the conqueror, and crowned the head of the ardent victor, or have been wove in the chaplet to be placed upon the brow of the fair maiden as she is pronounced "the Queen of May." Or when *love* may have sealed the lips or palsied the tongue of some aspiring lover, it is in flowers that his unspoken sentiments find utterance. They are plucked by the hand of affection to cheer the couch of the invalid, for in them he reads messages of love, for they may truly be said

> "To comfort man, to whisper hope,
> Whene'er his faith grows dim;
> For He who careth for the flowers
> Will much more care for him"

By their *frailty* are we reminded of the fleetness of our own lives, and they awake in us an interest which makes us cherish with greater care the beauty which is so soon to pass away. But though the corulla fade and die, the germ still remains which under genial influences will again be re-animated to life and beauty, perhaps to flourish under the protection of some more skillful florist. Thus we see in them the emblem of our own mortality, and the shadowing forth of our future and immortal existence, and thus they can be made to the admirer of nature's works, lessons full of meaning, for they are the language of affection, the gift of love, the remembrancers of scenes past, and the inspirers of faith and hope.

As they surpass in delicacy and beauty the earth which embosoms them, so the spirit of man should preserve itself pure and unsullied amid the unhallowed influences which surround him.

Mabel.

Literary Department.

Fruit, Flower and Vegetable Gardener's Companion, with a Calendar, by Patrick Neill, L. L. D., F. R. S. E., Secretary to the Royal Caledonian Horticultural Society. Edited by G. Emerson, M. D., Editor of Johnson's Farmers' Encyclopedia; with notes and additions by R. G. Pardee—with elegant illustrations. Just published by C. M. Saxton & Co., Fulton street, New York.

This is a most reliable and comprehensive work, adapted to all interested in Horticulture and Fruit Culture. There is a large amount of valuable thought and accurate information embodied in the work. There is not probably a similar work in the country which embraces so wide a range of fruit, vegetables and flowers. The work is quite full and complete on the subject of hot and forcing houses, their construction, heating by steam, hot water, &c., and the cultivation in them of the grape, peach, fig, &c. The illustrations are worthy of particular notice, and the work will be found a very complete one to the gardener or fruit grower, being divided into three parts—the Fruit Kitchen, and the Flower Garden, and to the whole a Calendar is added.

A Manual; or, an easy method of Managing Bees in the most profitable manner to their owner, with infallible rules to prevent their destruction by the moth. By John M. Weeks, of Vermont. Published by C. M. Saxton & Co., Agricultural Book Publishers, Fulton street, New York.

A work of this description is much needed in this country, for the cultivation of the bee has been too long neglected in the United States. The work is designed as a directory to those who are engaged in the cultivation of bees, and is divided into chapters and sections, with the intention to facilitate their management in all their different stages, so that any person properly situated may cultivate bees and avail himself of all the benefits of their labors. It treats upon all the general management of bees: the construction of the hive, remarks upon swarming, ventilation, removing the honey, directions for preventing the depredations of the moth, general observations, &c. No one who cultivates bees should be without it.

The Horses Foot, and How to Keep it Sound—with illustrations. By William Miles, Esq. Published by C. M. Saxton & Co., New York.

The object of the work, says the preface, is to communicate in the most familiar language the subject will admit of, the result of several years' observation, and of much tedious experiment, undertaken with a view of ascertaining what mode of shoeing, system of stabling, and quantity of exercise, promised the fairest prospect of preserving the foot of the horse in soundness and comfort to himself, and usefulness to his owner for the longest period. The work is in pamphlet form and should be read by all. It can be sent by mail to any part of the country. The illustrations are well executed and help to render the difficult parts easy.

Amy Lee; or, Without and Within. By the author of "Our Parish." Published by Brown, Barzin & Co., Boston.

Those who have read "Our Parish" will be

pleased to see another production by the same author. It is a quiet domestic tale, and the plot is well developed, and serves to strengthen the morals as well as to benefit the mind. Amy Lee, the heroine, is a fine character, and the interest awakened in her welfare is kept up throughout the whole tale. It is a handsomely bound work of nearly four hundred pages, and the description of the village scenes give a deep interest to the volume. All speak in high terms of the work, and we think all our readers will be pleased with a perusal of "Amy Lee."

CONVERSATION—its Faults and Graces. Compiled by Andrew P. Peabody. Published by James Munroe & Co., Boston.

The work before us is a most interesting one, and the subject of the greatest importance. How large a portion of life does conversation fill up. It is the most refined species of recreation, and the most sparkling source of merriment, and yet how many there are who are deficient in the characteristics of graceful and profitable conversation. The compiler has attempted to bring together, in one volume, the principles which should govern conversation among persons of true refinement of mind and character, and to point out some of the most common and easily besetting vulgarisms occurring in the colloquial English of our country and day. The work is divided into four parts, and each part is particularly instructive. The work is un able one, and should command attention from all, for it is a subject in which all should have an interest.

RAMBLES IN EASTERN ASIA, including China and Manila, during several years' residence; with notes of the voyage to China, Manila, Hong Kong, Canton, &c. By B. L. Ball, M. D. Published by James French & Co., Boston.

The Chinese are a most peculiar people, and seem indeed hardly to belong to the same human family with ourselves. The love of money seems to be their ruling passion. Repulsive and attractive, interesting and disgusting, they are indeed an object of curiosity and wonder. Dr. Ball has given us a most faithful and interesting account of his adventures with that people, which will be found remarkably attractive.

THE FORAYERR; or, the Raid of the Dog Days. By W. Gilmore Simms, Esq., author of the "Partisan," "Wellichampe," &c. Published by J. S. Redfield, Beekman street, New York.

Another of those exciting and deeply interesting Revolutionary Tales is before us. Each tale published has its own proper historical connection, corresponding with the several transitional periods of tha Revolutionary War in South Carolina; and each work should be read in order to keep progress with the events. In the Forayers nearly all the great captains of the partisans are equally engaged—Marion, Sumpter, Pickens, Lee, and many others. These brave men swept the country as with a fiery besom, even amid the blazing heats of July and August, and the famous campaign was called the Dog Days, a season proverbial for the wonderful endurance of the partisans. The work is illustrated by Derby. Received through John P. Jewett & Co.

LIVES OF THE QUEENS OF ENGLAND, of the House of Hanover—2 vols. By Dr. Doran, author of "Habits of Men," "Table Fruits," &c. Published by J. S. Redfield, New York.

These volumes, announced by us in a former number, as in press, are now issued. They need no further introduction than the author's name, for his fame is already wide spread. Our readers will welcome with delight any work from so lively and humorous a writer. He always has a fund of anecdote. The works now published are a series of sketches of the prominent characters of the Georgian period in English history, Sophia Dorothea, Queen Charlotte, &c., &c. The Life and Trial of Caroline of Brunswick is alone the best portion of the work, and will be read with interest as well as sorrow. Dr. Doran has been a great reader in his times, and a hunter-up of antiquarian lore. He is connected with the London Athenæum.

BORDER BEAGLES, a Tale of Mississippi. By W. Gilmore Simms. Published by J. S. Redfield, N. Y.

This work forms the third volume of the new and revised edition of Border Romances of the South, now in process of publication by the above enterprising publisher. The history upon which the present one is founded is beyond question, and all the leading characters are drawn from life. There is not a more popular writer in the field of revolutionary romances than Simms. His works are all replete with daring and thrilling historical adventures. The illustrations by Derby are well executed. Received through John P. Jewett & Co., Boston.

Two more volumes of the "Dicken's Little Folks" have just been published by the above firm. They are "Smike" and the "Child Wife," and are uniform with the first volume of "Little Nell," published a short time since. Mr. Redfield deserves much praise for his efforts in bringing down these famous stories from the library to the nursery. They are to supply the want of a class of books for children of a vigorous and manly tone, and the writings of Chas. Dickens have been selected as the scheme. A complete set will be a very beautiful and appropriate present for the holidays.

HUNT'S MAGAZINE for November contains an excellent article upon the Finance, Food and Future of France; also valuable commercial statistics, which make the magazine invaluable for reference in every branch of statistics and industry.

THE WESTMINSTER REVIEW for October is received. Published by Leonard Scott & Co., New York. It contains valuable and interesting matter.

BLACKWOOD'S for October contains Part II. of the Baltic in 1855, an article upon Light Literature, and other matter of absorbing interest.

Received the above through Crosby, Nichols & Co. Boston.

HOVEY'S MAGAZINE for November is just published, by Hovey & Co., Boston, containing among other valuable matter, European Parks, No. 13, by Howard Daniells, N. Y.; and No. 9 of the excellent series of Studies in the Field and Forest, by Wilson Flag, entitled the Flowers of Autumn

Legislation.

THE first of January approaches—already the "busy note of preparation soundeth." The State House has been thoroughly repaired, and every necessary facility and comfort prepared in order to give opportunity for quiet legislation. It is indeed gratifying to know California can present a public building so highly creditable to all who may have business or curiosity to draw them to the Capital. We trust with the present facility and comfort, in their duties, our Legislators will labor more for the development of the industry and resources of the country, and less for party.

The hotels are brushing up—refurnishing, and improving. The Orleans, the A 1 hotel, has been enlarged and improved. The Union, (formerly the Verandah) is much improved and embellished. Miss Clark's, known as the Vernon House, one of the most *recherche* hotels in the State, is making ready for the *elite* boarders who transiently visit our fair city; the Vernon, for order, quiet comfort and gentility, is not excelled.

Many excellent Restaurants are preparing to furnish all the necessary catables, and some of the luxurious "tit-bits." No. 1 restaurant is the Antelope, kept by Bassett & Huntting; the very best restaurant, and where every luxury in season can be found.

Several Confectionery establishments are also making ready with all the good things. Little & Burr, and Colburn & Sand's, stand well. But California is a fast country, and Sacramento is the Capital—and this winter the people do say the Levee City will be a "gay city," for the New Year's gala-day ball is already announced, and the Inauguration ball on the 8th January, is to follow, and people will have the luxuries; and it is said that "Prince of caterers" for ice creams and jellies, Winn, of the Fountain Head, talks of coming to the Capital. Although he makes a "world of good things" down below, he finds that Sacramento will come in for a share, and he thinks they must have him there to "Winn" the best.

Tremont House.

COME, dine with me at the Tremont House!

What associations crowd upon the mind of an old "Bostonian" at a name like this. Tremont House! That princely head quarters of all good living, that good old familiar home for so many thousands of travelers, east, west, north and south. For many years it was unnecessary to ask any respectable traveler who was about to visit Boston, where he was to be found; it would only require you to call at the *Tremont House!*

The mountain hunters, who would carry the fat venison and bear meat to Boston, did not stop to inquire who wanted the best; they drove to the Tremont House. The fishermen who were so lucky as to catch the "first salmon," he would hurry to the Tremont House. It mattered not what delicacy was brought to Boston, fish, flesh, or fowl, I'm going to the Tremont House, *they* always buy the first and best.

Was a splendid dinner to be got up? That dinner was at the *Tremot House*. Bostonians, remember this, and it won a name and fame that will live as long as memory lives—for it is identified with the history of Boston.

Well, says the reader, what has this to do with me? We answer—passing along Jackson street after bidding farewell to friends, as the steamer had departed for the East, we heard the voice of a familiar friend say, come and dine with me at the *Tremont House*. And sure enough, it was a matter of fact, for we had met not only one friend, but two of them, and these were no others than the *proprietors* of the new Hotel, now just opened under the most popular name that stands at the head of this article. This Hotel, the Tremont, has formerly been called Burch's Hotel; but having changed ownership, it has been taken by Messrs. Rising & Clarke. Both of these gentlemen are widely known, and their energy and capability to manage such an establishment, will be conceded. Mr. Rising is a gentleman every way calculated to receive and please the guests that shall call and make their home at the Tremont House. Mr. Clark, was long and favorably known as the efficient head of Gregory's Express at Sacramento, in early years, and recently as a large farmer at Suscol; and the firm thus embracing a knowledge of country and city, can draw a goodly portion of the business of the community.

D. V. Henaric, so long connected with the Orleans Hotel of Sacramento, is bookkeeper, and Sacramentans will find a ready welcome.

The Tremont House is a large and spacious granite hotel, on Jackson street, near Montgomery—and is finished and furnished in superb style. The furniture will compare with the best, and excels many hotels. Perfect cleanliness and order are found in the house; and we venture to say that few hotels will equal the Tremont for chaste elegance in the arrangements of the suits of rooms and the furnishing of the tables. Certainly we have seen none to excel it—and we sincerely hope success will crown the efforts of our friends. Their present efforts to please deserve it.

A SABBATH SONG.

[Written on board ship Sweden, March 25, 1849.]

MY MOTHER.

'Tis Sabbath day, my Mother,
'Tis Sabbath day at sea,
The day above all other
That I should think of thee.
Then let me raise a chorus, a chorus dear to me—
Thy spirit floating o'er us, my Mother's form I see.
'Twas winter when I left thee,
The days were chill and cold,
But "Mother" has not left me—
My mother's hand I hold.
This, this shall be my chorus, each Sabbath day I see—
Thy spirit hovering o'er us, dear Mother, come to me.
I hear my Mother's blessing,
I see her parting tear,
I feel her warm caressing,
My Mother still is near.
Oh let me sing the chorus and let all sorrow flee,
Mother, still hovering o'er us, our guardian still to be.
My Mother's early lesson
Within my heart shall be
The light to guide my reason
And bid all evil flee.
Then come to me dear Mother, this blessed Sabbath day,
Thy voice above all other, hath early taught the way.
Once more we'll raise the chorus, and bid all sorrows flee,
My Mother's spirit o'er us, our guardian still to be.

LIGHTLY TREAD.

The Principal of the Quincy Grammar School, Boston, having requested his pupils to write an imitation of the song "Lightly Row," the next morning this original song was presented to him by one of his pupils, and sent to us for publication. We hope it will be sung in hundreds of schools.—*Life Illustrated.*

Lightly tread—
Lightly tread,
So our teachers oft have said,
Softly go—
Softly go,
'Tis the law we know.
Lightly tread the echoing floor,
Lightly shut the slamming door.
Lightly all—
Lightly all,
Let our footsteps fall.

Childhood here—
Childhood here
Comes to learn, obey, and fear—
Fear the wrong—
Fear the wrong,
This our strife and song.
Thus shall love and filial fear
Mingle with our studies here.
Pressing on—
Pressing on,
Youth will soon be gone.

Far away—
Far away,
We may run, and jump, and play,
Laugh and shout—
Laugh and shout,
Childhood ringing out:
But assembled here in school,
Let us all obey the rule,
Lightly go—
Lightly go,
Thus our love we show.

Study now—
Study now,
Happy hearts and healthy brow.
This the time—
This the time,
Now in youthful prime.
Wisdom, goodness, honor, all,
Childhood to obedience call,
Let us all—
Let us all,
Listen to the call.

H. HAWELIN

[We publish the above simple and pleasant song as one calculated to impress the minds of the young with kindness, truth, order, and attention, so requisite to be taught in schools; and we feel assured, that these lessons impressed in song, always have a lasting benefit. We hope to hear them in our visits which we intend to make to the schools of our State as we pass from county to county.]

THE GENTLEMAN'S ROOM.—Far beyond drawing-room, and important above almost every other arrangement in your domestic establishment, is the consecration of one room to the especial use of the master of the house. Let his pursuits be *such as to render occasional solitude and quiet needful, or merely pleasurable to him.* A sound and lovely policy is that which ministers to a husband, in his own family, certain privileges and comforts that he can never find elsewhere, and that are calculated to counterbalance the weight of the many other attractions which his fashionable circle can offer. A room to himself—a home within his house—is such a privilege and few sacrifices are too great, if they may procure it for him; few advantages are great enough, if they must take it from him; it will keep him from clubs and card parties abroad, or from being "always about" at home; it will prove a sanctuary from the numerous petty domestic troubles and annoyances that, as few men can comprehend for tolerate, it is much better that they should not see; or, should business or amusement induce a temporary absence, the image of his *own* room, and the gentle loving being presiding over its many indulgences and comforts, will follow him into "hall and bower," and creating a salutary yearning in the midst of greater luxury and wealth, will guide him safely back again, where only he can rest in perfect happiness and safety.

How the Apes Catch Crabs in Java.

AFTER walking close up to the old campong, they were on the point of turning back, when a young fellow emerged from the thicket, and said a few words to the mandoor. The latter turned, with a laugh, to Frank, and asked him if he had ever seen the apes catch crabs. Frank replied in the negative, and the mandoor, taking his hand, led him gently and cautiously through the deserted village, to a spot which the young fellow had pointed out, and where the old formerly planted hedges, rendered it an easy task for them to approach unobserved.

At length they reached the boundary of the ormer settlement—a dry sandy soil and strip of beach, where all vegetation ceased, and only a single tall pandanus tree, whose roots were thickly interlaced with creeping plants, formed, as it were, the advanced post of the vegetable kingdom. Behind this they crawled along, and, cautiously raising their heads, they saw several apes, at a distance of two or three hundred paces, who were partly looking for something as they walked up and down the beach, while others stood motionless. It was the long-tailed brown variety, and Frank was beginning to regret that he had not his telescope with him, to watch the movements of these strange beings more closely, when one of them, a tremendously large fellow, began to draw nearer to them.

Carefully examining the ground, over which he went on all fours, he stood at intervals to scratch himself, or to snap at some insect that buzzed around him. He came up so close that Frank fancied that he must scent them and give the alarm to the other monkeys, when, suddenly passing over a little elevation covered with withered reedy grass, he there discovered a party of crabs, parading up and down on the hot sand. With a bound he was amongst them, but not quickly enough to catch a single one; for the crabs, though apparently so clumsy, darted like lightning into a quantity of small holes or cavities, which made the ground here resemble a sieve, and the ape could not thrust in his paw after them, for the orifices were too narrow.

The mandoor nudged Frank gently, to draw his attention, and they saw the ape after crawling once or twice up and down the small strip of land, and peering into the various holes, with his nose close to the ground, suddenly seat himself very gravely by one of them, which he fancied most suitable. He then brought round his long tail to the front, thrust the end of it into the cavity, until he met with an obstacle, and suddenly made a face, which so amused Frank that he would have laughed loudly, had not the mandoor raised his finger warningly—and directly after the ape drew out his extraordinary line with a jerk. At the end of it, however, hung the desired booty, a fat crab, by one of its claws, and swinging it round on the ground with such violence as to make it lose its hold, he took it in his left paw, picked up a stone in the other, and after cracking the shell, devoured the savory contents with evident signs of satisfaction.

Four or five he thus caught in succession, on each occasion when the crab nipped him making a face of heroic resignation and pain; but each time he was successful, and he must have found in the dainty dish and revenge for the nip, abundant satisfaction for the pain he endured, or else he would not have set to work again so soon.

Thus then the ape, quite engaged with the sport, and without taking his eyes off the ground, had approached to within about twenty paces of the party, concealed behind the pandanus tree. Here again the ground was full of holes, and half closing his eyes, he assumed such a resigned and yet exquisitely comical face, as only an ape is capable of putting on under these circumstances. But his quiet was destined to be disturbed in a manner as unexpected as it was cruel; he must have discovered some very interesting object in the clouds, for he was staring up there steadily, when he suddenly uttered a loud yell, clapped both of his knees, felt with both hands for his tail, and made a bound in the air, as if the ground under him was beginning to grow red hot.

At the end of his tail, however, hung a gigantic crab, torn with desperate energy from its hold place, and Frank could not restrain himself any longer, but burst into a loud laugh. The mandoor at first retained his gravity; but when the ape alarmed by the strange sound, looked round in spite of his pain and astonishment, and then himself at full length, with his forearms [illegible] at the end of his tail the old man could contain himself from either and they both laughed till the tears ran down their cheeks. The ape in the meanwhile threw away the [illegible] followed by all the others towards the [illegible] and in a moment after all [illegible] be.—*Tremont.*

Sidney Smith said of a [illegible] would grow [illegible] them "a few [illegible]"

SPECIAL NOTICES.

☞ **JOSEPH GILLOTT'S STEEL PENS** —

☞ **Dyspepsia can be Cured.**—*From R. P. Stow, Esq., Assistant Clerk U. S. House of Representatives.*
WASHINGTON, D. C., June 15.

DR. GEO. B. BROWN,—Dear Sir: I feel it a pleasure to make known to you and the public, the surprising effects of the *Oxygenated Bitters*, in relieving me from that most discouraging disorder, Dyspepsia. I have been afflicted for about seventeen years with the usual attendant symptoms, viz.: constipation of the bowels, headache, pain in the chest, flatulence, acidity of the stomach, and severe nausea; and most of the time I was extremely bilious. I have used various remedies, have been strict in my diet, but all to no good purpose. Hearing of the *Oxygenated Bitters*, I procured some; have used four bottles, and find the bad symptoms all removed, and myself once more in the enjoyment of health. None but the dyspeptic sufferer, who has felt all the horrors of the disease, can at all appreciate the value of the medicine.

Respectfully yours, R. P. STOW.

SETH W. FOWLE & CO., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.
Agent for Sacramento—C. MORRILL. 24-2w

☞ **Sands' Sarsaparilla.**—It seems almost unnecessary to direct attention to an article so well known, and so deservedly popular, as this preparation, but patients often who wish to use the extract of Sarsaparilla are induced to try worthless compounds bearing the name, but containing little or none of the virtue of this valuable root; and we think we cannot confer a greater benefit on our readers than in directing their attention to the advertisement of the Messrs. Sands' in another column. The bottle has been enlarged to hold a quart, and those who wish a really good article will find concentrated in this all the medicinal value of the root. The experience of thousands has proved its efficacy in curing the various diseases for which it is recommended.

Agent—HENRY JOHNSON & CO.,

PRINCE'S PROTEAN FOUNTAIN PEN.

[PATENTED JAN. 23, 1855.]
T. G. STEARNS, General Agent,
No. 271 Broadway, Cor. Chambers Street, New York.

☞ ADVANTAGES.—An incorrodible and durable Ink Reservoir, made of Protean, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time.

A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material

Its structure is simple, and not liable to get out of order.

Opinions of the Press.

We must regard this Pen as one of the grand improvements of the age.—*Portland Transcript and Eclectic.*

As a Reporter's Pen, I have never seen or heard anything to equal it. It is just the facility wanted in this department, so that it may keep up with the age of electrity and steam.
GEN. KELLOG. Reporter, 625 Broadway, N. Y.

Eureka! Eureka!! We have found it at last; a Fountain Pen that will write for hours without once dipping in an inkstand.—*Knickerbocker Magazine.*

The ink flows from it so evenly and so easily, that the mechanical labor of writing becomes in itself a pleasure.—*Mother's Magazine.*

The Pen must have a great run. Any pen that runs for eight hours at a dip, may be said to have a great run—but this pen will become a tried and valued friend—will save the temper of the business man, and preserve the composure of the irritable poet.—*Hartford Courant.*

We are writing with one which does some six hours service without failure or stoppage, and have found it inexpressibly convenient, and comfortable.—*New York Evangelist.*

This Pen, among pens, is what Colt's Revolvers are among Pistols. One will fire a dozen shots, and the other write a dozen sheets, with a single charge or loading.—*Author of Major Jack Downing.*

A Clergyman who has written a whole sermon with one of these Pens, without once dipping in the ink, said to us that he would not dispose of it for twenty times its value.—*Boston Evening Traveller.*

If I could not procure another of similar merits, one hundred dollars would not purchase from me the one I have.—*A New York Clergyman.*

We continue to use our own with entire satisfaction.—*New York Independent, May* 16, 1855.

"Let those write now who never wrote before,
And those who always wrote, now write the more."

** Rights for Towns and Counties to vende, will be granted on favorable terms.

☞ As sample of these Pens can be seen at the at the Office of this Paper on the arrival of next steamer. v4-19 3m.

Smith's Pomological Gardens and Nursery,
On the American River, 2½ miles from Sacramento City.

The stock of Trees offered to the patrons of the above well known establishment this season is unusually large and fine, embracing by far the largest assortment of Fruit and Forest Trees, Shubbery, Vines and Greenhouse Plants to be found in any one establishment on the Pacific Coast.

Care and experience in selecting and propagating varieties, is always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers. Fruit Trees, fine, vigorous and in every variety, of the following: Apple, Peach, Pear, Cherry, Nectarine, Apricot, Fig, Currant, Gooseberries, Raspberries, Strawberries, and Grape Vines of all the choice kinds. Ornamental Trees, Flowering Shrubs and Hardy Climbers. Among the fine Trees are the following varieties: Elm, Locust, Catalpa, Maple, Laburnum, Weeping Willow, Ash, Ailanthus and China Trees; some fine Arbor Vitæ and other Trees and Shrubs, too numerous to particularize.

ROSES in all their classes as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELIAS are now in bloom, of the finest varieties, and for health and beauty we challenge comparison.

P. S.—BOUQUETS of fine and rare flowers, on hand to order.

NOTICE.—Having noticed a Card in the Daily Union of this city, headed "Caution to my customers and the public," stating that various Nurserymen are selling Trees as coming from his Nursery, &c., we would distinctly state that we have no Trees from his grounds, neither do we offer stunted half grown stock, as our Trees are of large size and vigorous growth, and *true to their name*, as our fruit for the past two seasons will fully prove. Neither are we compelled to force our Trees off at auction, or hawk them about the country, as good Trees will sell themselves. v4-23 3m

E. B. BATEMAN, M. D.
PRIVATE HOSPITAL,
Corner of Washington and Sutter streets, Stockton, Cal.

HAVING been engaged as a Hospital Physician for many years, (since 1851 in California), and being familiar with the causes of California diseases and the remedy needed for their cure, the undersigned believes he need only refer to his successful practice and the good results flowing from it, to speak his ability in the profession.

The Hospital has been enlarged and improved, and every attention needed is found at this establishment. Patients received for longer or shorter periods upon satisfactory terms.
v4-22 3m E. B. BATEMAN.

MEDICAL.

DR. GUYSOTT'S IMPROVED
Extract of Yellow Dock and Sarsaparilla

Is acknowledged to be the best Sarsaparilla made, as is Certified by the Wonderful Cures it has performed.

☞ **Remember this is the only True Original Article.**

This Medicine, when used according to the directions,

Will Cure Without Fail,

Scrofula, or King's Evil, Cancers, Tumors, Eruptions of the Skin, Erysipelas, Chronic Sore Eyes, Ringworms, or Tetter; Scald Head, Rheumatism, Pains in the Bones and Joints, Old Sores and Ulcers, Swelling of the Glands, Syphilis, Dyspepsia, Salt Rheum, Disease of the Kidneys, Loss of Appetite, Disease arising from the use of Mercury, Pain in the Side and the Shoulders, General Debility, Jaundice, and Costiveness.

The Best Female Medicine Known.

The Yellow Dock and Sarsaparilla is peculiarly adapted for females of delicate health, resulting from irregularity of menstrual discharges, and other diseases peculiar to their sex. We assure the afflicted, that a bottle or two of DR. GUYSOTT'S EXTRACT OF YELLOW DOCK AND SARSAPARILLA will at once regulate those difficulties and renew the natural energies.

Syphilis, Scrofula and Diseased Blood.

DR. GUYSOTT'S IMPROVED EXTRACT OF YELLOW DOCK AND SARSAPARILLA is a true specific. The proprietors have in their possession over one hundred certificates of the most extraordinary cures effected by it. We can safely say—TRY IT. It revives the drooping constitution, eradicates all bad humors from the Blood, and by its tonic properties restores the invalid to life and vigor. As a spring and summer medicine it has no equal. Its singularly efficacious action on the blood, its strengthening and vivifying action on the system, stands pre-eminent above all other Sarsaparillas. If you would have the rose brought back to your cheek, a clear, healthy and trans-parent skin, and life and vigor infused through the system, take Guysott's Extract of Yellow Dock and Sarsaparilla. It contains more of the pure Honduras Sarsaparilla than any other preparation extant, which is chemically combined with the Extract of Yellow Dock and the Extract of Wild Cherry, thus making the remedy more thoroughly efficient than any other Sarsaparilla before the public. At the same time it is perfectly free from all mineral poisons, which cannot be said of any other Sarsaparilla compounds.

Sold by all the Druggists in California and Oregon.

OXYGENATED BITTERS,
CONTAINING NO ALCOHOL,
A CURE FOR

Dyspepsia, in all its varieties forms; Heartburn, Habitual Costiveness, Acid Stomach, Loss of Appetite, Nervousness, Coldness of the Extremities, General Debility and Asthma.

THESE Bitters are approved by some of the best physicians, who use them in their practice. Scientific men have more difficulty in overcoming and controlling the various symptoms of Dyspepsia than almost any disease in the world. They are so various, in different individuals and cases, that it has seemed impossible sometimes to obtain even temporary relief from suffering. But a medicine has been discovered which proves, beyond a doubt, that in most cases a permanent cure can be effected. By avoiding stimulants, and using the *Oxygenated Bitters* strictly according to directions, a healthy tone is imparted to the digestive system, and strength to perform its natural functions.

Ample testimony to the truth of this can be had by reference to numerous certificates in possession of the general agents. We have no hesitation in pronouncing the Bitters a sure cure for **DYSPEPSIA.**

From J. C. Dunn, Esq., City Treasurer.

BOSTON, June 6, 1852.

Gentlemen: I have been for some years troubled occasionally with severe attacks of Indigestion; have consulted many physicians, tried Allopathy and Homœopathy, and can truly say, I have received more speedy and effectual relief from the use of *Oxygenated Bitters*, procured from you, than from all other remedies, and most cheerfully recommend them to all who suffer from a similar affliction. Yours truly,

JAMES C. DUNN.

DR. HENRY E. MORRILL, a skillful Physician of New York city, in his remarks on Dyspepsia, says: "The most effectual medicine to improve the tone and energy of the stomach, is that prepared by Dr. George B. Greene, and called the Oxygenated Bitters. I would publish the receipt for preparing this valuable medicine, if I knew what it was, but as I do not, I can only recommend its use. It seems to me to be improperly called 'Bitters,' at least in the popular acceptation of that term, for it contains no Alcohol or other Spirit, and is rather sour than bitter. Though here, by the way, I cannot too earnestly caution the dyspeptic sufferer against using the thousand and one advertised 'Bitters,' the basis of which is alcohol, or other ardent spirits. They impart no real energy to the stomach.

The stimulation which they excite is only temporary, and sure to be followed by a reaction which at length will inevitably wear out the stomach. This medicine obvintes these objections. It has been analyzed by that distinguished chemist, Prof. Hayes, M. D., *State Assayer of Massachusetts*, who declares that 'the medicinal articles used are those prescribed by the most eminent physicians, for the diseases for which these Bitters have been so eminently successful.' I have employed them in a multitude of cases, and have uniformly found that when used according to the directions, they gradually, but surely, remove, one by one, the various distressing symptoms which cluster around the confirmed dyspepsic, restore to the stomach its lost energies, and thus lead the patient back to the enjoyment of permanent health and strength."

It has also been used by the following persons, and received their unqualified approbation:

Prof. EDWARD E. PHELPS, M. D., Dartmouth College.
Hon. MYRON LAWRENCE, Ex-President Mass. Senate.
" SAMUEL S. PHELPS, U. S. Senator from Vermont.
" J. F. SIMMONS, U. S. Senator from Rhode Island.
" L. H. ARNOLD, formerly Governor of Rhode Island.
" H. D. FOSTER, Member of Congress from Pennsylvania
" SOLOMON FOOT, U. S. Senator from Vermont.

Many other individuals of the highest respectability can be referred to, who will confirm all that has been said in favor of the Oxygenated Bitters.

S. P. Ruggles' Power Press Manufacturing Co.

[Incorporated February 8, 1854.]

THE above named company having purchased of the well known inventor, S. P. Ruggles, Esq., his Patents connected with the Printing Business, are now manufacturing under Mr. Ruggles' immediate superintendence, the following machines, viz.:

	Size of Form in Inches.
Half Sheet Job Engine	18 by 12
Half Sheet Combination Engine	18 by 12
Quarto Sheet Job Engine	12½ by 9
Quarto Sheet Combination Engine	12½ by 10
Half Sheet Cap Job Rotary	10½ by 7½
Card and Bill Head Rotary	7 by 4½
Diamond Rotary Card Press	4½ by 3
Circular and Hat-tip Hand Press	8 by 6
Embossing Press	18 by 10
Cast Iron Imposing Table	26 by 22
Shaving Machine, shaves	27 by 16
Paper Cutter	cuts 27
Card Cutter, improved	cuts 25
Bookbinders' Rotary Shears	cuts 25
" " larger size, in proportion.	

These presses are considered by the Job Printers as the best adapted to their wants of any machines ever manufactured.

All orders addressed to their agent, M. B. BIGELOW, 152 Washington street, Boston, Mass., will be promptly attended to.

Mr. Ruggles has also sold to the CUTTING MACHINE MANUFACTURING CO., his Patent ROTATING SHEARS, for cutting sheet tin, iron, copper, brass, zinc, steel, nail and boiler plates, and all other metallic sheets. This is entirely a new process for cutting metals, and is destined to supersede all other machines for that purpose.

ANSON HARDY, Agent,
152 Washington street, Boston.

And to a third company, called the BOSTON HAND STAMP CO., he has sold his patent for a very ingenious Flexible Hand Stamp, whereby perfect impressions may be made at the rate of sixty per minute, the die adapting itself to the surface to be printed on. A very convenient article for all business men.

corner Leidesdorff and Sacramento streets, San Francisco.
v3-e8 CHARLES BRENT, Resident Engineer, Benicia Works.

MISCELLANEOUS.

PERUVIAN FEBRIFUGE,
FOR THE PREVENTION AND CURE OF
FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THE usual method of administering tonics produces only temporary relief, merely breaking the chill without removing the disease; but it is necessary to relieve the liver and other organs of the unhealthy action, on which the illness of the patient depends. This can be safely, speedily, and effectually accomplished by this valuable preparation; and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians, with the most signal success. In all climates where billious and remittent fevers prevail, this remedy will be found invaluable, and no persons traveling through, or residing in, infected and marshy districts, should be without it, as a few doses will effectually counteract the poisonous and miasmal influence arising from such location, by imparting activity and vigor to the billary organs, and thus prove a sure *preventive* against an attack of Chills and Fever.

The following are selected from the numerous testimonials received, showing the superiority and efficacy of the Peruvian Febrifuge, not only in cases of long standing, but where other remedies had failed:

FLATBUSH, King's Co., N. Y., April 1, 1854.

MESSRS. A. B. & D. SANDS: Gentlemen,—I have much pleasure in informing you that I have been entirely cured of the Fever and Ague by the use of your Peruvian Febrifuge, after suffering with it for over two years, and trying all the best known remedies without success. The Chills could not be broken by using any other medicine, and I almost despaired of a cure; but a neighbor who had been cured by your Febrifuge recommended me to try it, which I did, and was entirely restored by using less than one bottle, and have had no return of it since. I can recommend it to others with confidence.

Yours, &c., JOHN C. SCHENCK.

GOWANUS, Long Island, N. Y., April 4, 1854

MESSRS. A. B. & D. SANDS: Gentlemen,—Myself and two of my children were afflicted with Fever and Ague, more or less for about two years, and tried various medicines without any benefit. In October last we were persuaded to use your Peruvian Febrifuge, one bottle of which cured us; and we have not been troubled with it since. I can recommend it to others with the greatest confidence—having known of several cases which have been cured by it after every other medicine failed.

Respectfully yours, M. RAWL.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-19 3m.

Something New and Wonderful in the CALIFORNIA ARTS.

JAMES W. JOHNSTON, Daguerreian Artist, southeast corner of the Plaza, has the pleasure of announcing to the public, from whom he has received many substantial favors, that he has just completed the *enlargement of his Gallery*, and combined with it several magnificent features of the Arts heretofore entirely unknown on the Pacific Coast. He is now prepared to execute in superior style—

1st. Daguerreotypes, as heretofore, on metallic plates, with or without coloring.

2d. Stereoscope Likenesses and Views from Nature.

3d. Daguerreotypes on *Glass* and *Paper*—the most splendid and remarkable discovery of the age. These Miniatures are susceptible of being worked up by the brush of the Painter, to embody all the freshness and naturalness of life, at about one-half the cost ordinarily attending miniatures on ivory, which they far surpass in correctness of delineation. The business has now been commenced at Johnston's Gallery, for the first time in California, where Ladies and Gentlemen are invited to call and examine specimens.

Connected with Johnston's Rooms is a Portrait Gallery, also, where Mr. THOMAS S. OFFICER, late of New York, is prepared to execute Portraits on Canvass in elegant and life-like style.

☞ Call and behold the latest triumphs of Art. v4-15

Benicia Female Seminary.

Varieties.

THE Syracuse Standard tells a story of a resident in that city, "a staid middle-aged gentleman, the father of a large family of children," having got into a laughable scrape recently, in this way: "He had taken a letter from the office, directed to his name, which being somewhat illegible, he took home for his wife and daughter to decipher. It turned out to be a letter informing him that he had 'just become the father of a fine child, weighing nine pounds without its clothes; that its fine mother was much better than could be expected,' and earnestly requested him to visit his loving wife and offspring on the coming Saturday, and bring with him four diaper pins, a few yards of flannel,' and a number of other 'baby things.' The lesson the old gentleman learned was, not to carry any letters home for his wife to read till he was satisfied of their contents."

THE IRISH SNUFFERS.—We are reminded, by the anecdote of young Giddings, of the Irishman, lately arrived, who, in visiting one of his countrymen already resident several years in America, discovered on the table a pair of snuffers. "By my soul," says Pat, picking them up and examining them, "that's a queer scissors!" "Scissors? Mahoney," responded his companion, "sure that's no scissors; that's what they call *snuffers*." "Snuffers—for what's that?" "Sure for snuffing the candle now," and suiting the action to the word, he forthwith pulled the snuff from the candle with his fingers, deposited it in the box, and shutting the snuffers together, exclaimed, with wonder-staring eyes, "By my soul, but it's a *nate invintion*, isn't it?"

A PROUD parson and his man, riding over a common, saw a shepherd tending his flock, and having a new coat on, the parson asked him, in a haughty tone, who gave him that coat? "The same," said the shepherd, "that clothed you—the parish." The parson, nettled at this, rode on murmuring a little way, and then bade the man go back, and ask the shepherd if he would come and live with him, for he wanted a fool. The man, going accordingly to the shepherd, delivered his master's message, and concluded as he was ordered, that his master wanted a fool. "Why, are you going away, then?" said the shepherd. "No," answered the other. "Then you may tell your master," returned the shepherd, "that his living cannot maintain three of us."

A SMART BOY.—A little boy of our acquaintance, recently attended church and after listening attentively to the parable of the wise and foolish house-builders, said to his mother, on the way home, "I don't think that man was so wise after all." "And why not, my son?" "Why, if his house was built on a rock, where could he find a place for his cellar?" "Sure enough, sonny, where could he? That, dear, never struck us before."

THE Rev. Mr. Gates recently married Mr. Joseph Post to Miss Martha Rails. If that trio don't make a good fence, we should like to know what will?

The Best Work on the Horse.

Price One Dollar.

C. M. SAXTON & CO., NEW YORK,
HAVE JUST PUBLISHED

THE STABLE BOOK;

A Treatise on the Management of Horses, in relation to Stabling, Grooming, Feeding, Watering and Working.

By JOHN STEWART,
Veterinary Surgeon, and Professor of Veterinary Medicine in the Andersonian University, Glasgow,
with Notes and Additions adapting it to American Food and Climate.
By A. B. ALLEN.
Editor of the American Agriculturist.

Illustrated with Numerous Engravings.

CONTENTS.

Chap. I.—Stabling, Construction of Stables, Ventilation of Stables, Appendages of Stables.
Chap. II.—Stable Operations, Stable Men, Grooming Operations of Decoration, Management of the Feet, Operations in the Stable.
Chap. III.—Stable Restraints, Accidents, Habits, Vices.
Chap. IV.—Warmth.
Chap. V.—Food—Articles of, Composition of, Preparation of, Assimilation of, Indigestion of,—Principles of Feeding, Practice of Feeding, Pasturing, Soiling, Feeding at Straw Yard.
Chap. VI.—Water.
Chap. VII.—Service, General Preparation for Work, Physiology of Muscular Exertion, Preparation for First Work, Treatment after Work, Accidents of Work, Repose.
Chap. VIII.—Management of Diseased and Defective Horses, Medical Attendance.

"I have aimed in this Work TO MAKE PRACTICE THE MASTER OF THEORY, and have endeavored to arrange the whole subject into divisions which will render every part of it *easily understood*, and *easily referred to by every one*."—*Author's Preface.*

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,
has cured hundreds of cases of
Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.
We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

DR. ROYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs, for many patients, with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACAXAIN, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider it every way of a nature of the fatal symptoms of pulmonary disease a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of WISTAR'S Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]
Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.
Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The more fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.

SANDS' SARSAPARILLA.
IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of *Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Biles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.*

THE value of this medicine is now widely known, and every day the field of its usefulness is extended. It is approved, and highly recommended by Physicians, and admitted to be the most powerful and searching preparation from the root, that has ever been employed in medical practice. Its operation extends to the remotest parts of the system, and consists in removing diseased action in the absorbing and secreting organs. In man, Nature seldom effects, unassisted, the cure of any virulent disease, but requires the aid of a stimulant, alterative, or antiseptic medicine. In diseases of the skin and flesh, a combination of these three classes of medical agents is highly desirable. All these properties are combined in this preparation; and instead of operating successively upon the system, as they must necessarily do when taken separately, they operate simultaneously, and in perfect harmony when administered in this form. Its tonic property strengthens the digestion, and improves the appetite. Its alterative tendency carries off the accumulations of morbid matter,—and its antiseptic influence neutralizes the virus, by which the disease is fostered. Its uniform success in curing and relieving the various diseases for which it is recommended, is established by a multitude of attested facts.

From the Army.

MONTEREY, Cal., Jan. 18, 1850.
Messrs. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, hoping it may lead some other unfortunate beings to try its effects, and that they may be benefitted as I have been. I arrived here by the overland route, about the first of October last. A few days after I was first attacked with a very disagreeable eruption of the skin, which my physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine at home, I purchased three bottles, which had the desired effect of removing my difficulty entirely. With high regards, yours, &c.,
J. H. MILLER, Lieut. U. S. A.

Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, 100 Fulton street, corner of William, New York. Sold also by Druggists generally throughout the United States and Canadas. Price $1 per bottle; six bottles for $5.

ALBANY AGRICULTURAL WORKS,
ON HAMILTON, LIBERTY AND UNION STREETS;
WAREHOUSE AND SEED STORE,
No. 52 State Street, Albany, N. Y.

The Proprietors of the above-named establishment being the sole owners and manufacturers of
EMERY'S PATENT HORSE POWER, &c.,
☞ ALL ARRANGEMENTS WITH OTHER PARTIES FOR THEIR MANUFACTURE HAVING EXPIRED ☜
have formed a new Copartnership, under the firm name of
EMERY BROTHERS,
And will continue the manufacture and sale of AGRICULTURAL IMPLEMENTS and MACHINERY, as heretofore, at the old stands of EMERY & CO. By this arrangement the united efforts, and interest of the Brothers, long known to the public, are secured, and no exertions will be spared to meet the wishes of those dealing in and using the class of implements they manufacture—their leading branch being the manufacture of the justly celebrated

Emery's Patent Changeable Geered Railroad Horse Powers,

with the machines to be propelled by it, as Threshing Machines, Saw Mills, and Machinery generally.

These Powers having been submitted repeatedly to the most severe tests and trials to determine their relative merit and utility with those of every known manufacturer, have without exception been awarded the highest prizes for superiority—among which were the following:

N. Y. STATE AGRICL SOCIETY, 1844, 1850, 1852, 1853, 1850	MARYLAND STATE AGRICULTURAL SOCIETY, 1853
N. Y. STATE AGRICL SOCIETY, 1851, 1853, 1852, 1851	MISSOURI STATE AGRICULTURAL SOCIETY, 1853
MICHIGAN STATE AGRICUL'L SOCIETY, 1853, 1852, 1851	AMERICAN INSTITUTE, - - - - - 1852, 1851
INDIANA STATE AGRICULTURAL SOCIETY, 1853	NEW YORK CRYSTAL PALACE, - - - - - 1853
ILLINOIS STATE AGRICULTURAL SOCIETY, 1853	CANADA PROVINCIAL SOCIETY, - - - - 1852, 1851
PENNSYLVANIA STATE AGRICULTURAL SOCIETY, 1853	CONNECTICUT STATE AGRICULTURAL FAIR, 1854

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 224 bushels, of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both kinds of Powers, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. If the crops be extraordinarily heavy or light, greater or less results will follow.

These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by this Circular, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and full purchase money refunded if not found acceptable to purchasers.

The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, they hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.

They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery, Implements and Seeds, which are all new and of the most approved and complete kind extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.

The attention of a discerning public is solicited to our present stock of goods, before selecting and purchasing the coming season.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

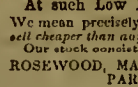
WHY should every one go to VANCE'S who wishe PERFECT LIKENESSES? Because he has now the most arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.



All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

ENORMOUS SACRIFICE IN FURNITURE
IN FORTY DAYS!

HAVING now in Store $150,000 worth of FURNITURE, together with a purchase of $50,000 worth of stock of parties here at *less than home cost*, we now offer to our friends and customers

OUR ENTIRE STOCK

At such Low Prices as to Defy all Competition.

We mean precisely what we advertise, that we *can and will sell cheaper than any other store in the City or State.*

Our stock consists of
ROSEWOOD, MAHOGANY AND WALNUT SETS, FOR PARLORS AND BEDROOMS.
ALSO,
PAINTED SETS, WITH KITCHEN AND DINING-ROOM FURNITURE, IN GREAT VARIETY.

THIRTY THOUSAND CHAIRS!

Bedding and Bedsteads of every Description.

To particularize and describe our stock would require one half of a newspaper, but having

An Enormous Stock,

and at the same time paying storage on much of it, we are

Determined to Sell it

and reduce our expenses, and we solicit the public to give us a call in every instance before purchasing elsewhere.

We are desirous of extending our circulation as widely as possible, and being anxious to open the New Year with a generous addition, and to present many improvements and embellishments, we would kindly invite our friends to give us a little portion of their interest at this time. That we may present to them some inducement, we propose that to those who will make us up clubs of five, ten or twenty copies, before the 1st day of January, we will allow them every *fifth* copy for their kind aid; and what person who feels an interest in the productions of our State and its rise and progress, cannot find *eight persons* to join him in subscribing for our journal. They will thus secure one copy for themselves, and one copy to send to a friend in the States, *free of cost*.

May we not anticipate a *New Year's Gift* in this form?

SOUTHDOWN RAM

"YOUNG YORK," in two positions. Winner of the 1st prize at the N. Y. State Show in 1854. Property of L. G. Morris, Esq., Mount Fordham, Westchester county N. Y. (See advertisement.)

[Extracts from Mr. Morris' Catalogue.]

South Down Sheep.

To describe the section of country, the origin, peculiarities, &c., of this (in my judgment) the most valuable of Sheep, I make the following quotation from Low and Martin: "The South Downs of Sussex consist of low chalky hills of five or six miles in breadth, stretching along the [illegible] of sixty miles and passing into [illegible] lands of Hants on the west. In connection with this range of hills is a tract of low cultivated ground, which is usually connected with the Down farms, although many of the latter have no vale or flat land attached. The herbage of these hills is short, but well adapted for the keeping of sheep, of which vast numbers have, in every known period occupied the pastures. Whilst the dryness of the air, the moderate elevation of the land, and consequent mildness of the climate, are all eminently favorable to the rearing of a race of Down or Mountain Sheep, the contact of the cultivated country affords the means of supplying artificial food in due quantity. It is this combination of favorable circumstances which has rendered these calcareous hills capable of supporting a greater number of sheep than perhaps any tract of similar fertility in the country, and has afforded the means to the breeders of applying the resources of artificial feeding to their improvement. The original breed of the Sussex Downs was not superior to that of any other districts of the chalk formation; but the means of supplying the animals with artificial food, which the geographical situation of this long and narrow chain of hills in contact with the richer country afforded, aided the breeders in applying to the improvement of the race a system of breeding and feeding, which has rendered the South Down Breed the most esteemed in the countries suited to it of all the Short Wooled sheep of England."

Martin says—"Attempts were first made to improve the South Downs by crosses with the Leicesters, a long wooled sheep, but these attempts ended in utter failure; nor were the crosses between them and the Merinos ultimately advantageous. It was by careful selections, and the keeping in view of a definite purpose in the choice of breeding stock that the improvement of the South Downs was achieved. It is to Mr. Ellman, of Glynde, that the elevation of this breed to its unrivaled position in its own line as a hill sheep, is due."

Low also says—"It is to the effects of careful culture, under favorable circumstances, that the modern South Downs owe the superiority which they have acquired over all the other Short Wooled Sheep of the midland and Southern counties of England. With the advancement of tillage, and the [illegible] production of turnips and other succulent plants, the breeders of Sussex had the means of treating their animals well while young to maturity, when [illegible] raised at [illegible] was given to the [illegible] the breeding parents and to the [illegible] calling forth those properties [illegible] were even [illegible] to arrive at early maturity [illegible] and fatness. The improvements of the South Down Breed began about the period of the American war, but it received its chief impulse with the commencement of the contests with the French Republic, and has continued progressive until the present time. The wide extension of a breed so greatly improved as the South Down, must be regarded as having been in a singular degree beneficial. Although itself the native of a dry country, and therefore, it may be supposed, imperfectly suited to a humid soil and atmosphere, yet its range is not confined to very narrow limits. It is naturally of a healthy constitution, patient of scanty herbage, and, from the closeness of its fleece, fitted to resist changes of temperature. Further, like every race of Sheep, it possesses the faculty of becoming inured to new conditions of soil and temperature, and experience has accordingly shown that it may be gradually naturalized in countries very different from that from which it was derived. By crossing, it can be readily amalgamated with all the varieties of Sheep which can be referred to the Black-faced Heath Breed as their type; and it can be made to improve the Black-faced Heath Breed itself in situations in which hardiness and adaptation to a rude climate and country are not more to be regarded than the improvement of the form and fleece.

"The wool of the South Down Sheep weighs, when washed, about 3 pounds the fleece; but in some of the more highly fed flocks of the lower countries, its weight is now 4 pounds or more."

I will now, after the foregoing description as to the origin and skillful improvement of the South Downs in England, continue an account as to their relative value as a wool-producing sheep, as contrasted with other breeds in this country, and for which information I am indebted to my friend, Mr. Jonathan Stott, of Columbia County, N. Y., who is well known as a gentleman of high standing, and for many years a successful manufacturer of woolen goods. On the 19th Dec. last, Mr. Stott paid me a visit, and examined the wool on the back of my sheep, and also in the fleece (as I had my last year's clip on hand). He prefaced his remarks by stating that the South Down produced the proper wool for medium fabrics, which yield more profit to the manufacturer, always creates a more ready demand at its rated value than either *finer* or *coarser* goods; and stated that the annual value of wool for the last five years, as taken from *flocks* in our *Western States*, called fine wooled, which yield 2 1-2 pounds per head and worth 44 cents per pound. He rated the quality of my South Down wool as worth within 10 cents per pound of the fine wool, or 34 cents, and that the finest Saxony wool of a *few* choice flocks in Pennsylvania, &c., have been worth for the same number of years an average of 60 cents per pound, and would yield about 2 pounds per head. My flock of South Downs, numbering about 100 all told, will average 5 pounds. Say a large flock of the same would yield - - - 4 lbs. per head at 34c. $1 36

Saxony fleece, -	2 "	"	60c. 1.20
The ordinary called *fine wool*,	2 1-2 "	"	44c. 1.10

This calculation gives the South Down 16 cents per head more than the Saxony, and 25 more than the ordinary fine wooled. It is [illegible] doubt correct, but for more certainty I will reduce the value of the South Down per head [illegible] per cent below and take the [illegible] that they will [illegible] the same amount of [illegible] product. The above statements as to weight are based upon the wool being well washed on the sheep at the time, and not in poor condition by order. In answer to the question as to how much dirt there could be in wool that would pass for merchantable, he said that if I wished to get at the real weight of wool, to take a fleece and wash it as clean as could be with warm water, and after it was perfectly dry, add 15 per cent. to its weight, or in other words, he thought merchantable wool possessed 15 per cent. of dirt.

In answer to my inquiry as to the French Merino, or Rambouillet, he replied he was without experience as a manufacturer, as from what he had examined on the back of the sheep, and from the amount of dirt and grease which always appeared connected with or added to them, he had never the least desire to purchase their wool, neither does he like to manufacture the old fashioned Merino wool, on account of the natural grease it contains. This calculation is based upon flocks as ordinarily cared for in large numbers; of course where small flocks are kept and well cared for, the average weight of wool will be greatly increased. My calculations and statements are made for those who may wish to embark in sheep farming on a large scale.

Having fixed the value of the wool certainly per head, let us now proceed to the value of carcase. As to the quality of mutton, contrasted with other sheep, it is a fact as well established that South Down mutton is as far superior to any other in *this country*, as a canvass back duck is to all others of its kind. In the Highlands of Scotland and in Wales there is a little mountain breed of sheep that equal, if not surpass the South Downs in quality of mutton, but it is mainly owing to the herbage upon which they feed. I was so struck with the quality of that mutton in 1850, while in the Highlands near the Trossacks, that I determined to purchase some of the sheep and forward them to Liverpool to be shipped with a lot of animals I sent home that year. I was recommended to a Mr. MacGregor as the best person to get them from; after quite a toilsome journey, and making my wishes known, MacGregor said he would let me have them with pleasure, and the main outlay would be the expense of getting them to Liverpool, as the sheep themselves were of little value; and upon informing him that I wanted them for mutton sheep in America upon cultivated farms, where they would be cared for as domestic animals should be, he said,—"You had better take the South Downs, for they possess all the advantages as to quality of mutton when fed on the same food, and will produce a great deal more of it." This wound up my desire for the Black-faced Heath Sheep, and rather increased my appetite for the mutton in its native location.

The value of South Down Mutton is regularly established by a certain additional price per pound in all the markets in England, and in all cases the sheep's head and legs are left on to satisfy the purchaser. The average size and weight of the South Downs in large flocks would be greater than either of the kinds [illegible] I contrasted the value of their wool and their hardy constitutions, and being very prolific [illegible] producing twins, [illegible] good mothers and kind nurses, all tend to make them in my judgment the most valuable sheep [illegible] in the United States. The large-wooled [illegible] such as the Bakewell, Leicester and Cotswold, I have not taken into consideration, as the [illegible] and mutton vary [illegible] from the South Downs, [illegible] a [illegible] and they are [illegible] for keeping [illegible] farm.

The result of [illegible] by driven the [illegible] would change nearly [illegible] entirely out of the [illegible] calculating agri[illegible] fair to [illegible] that [illegible] At the present day, [illegible] price as [illegible] from [illegible] to [illegible]

HOW TO PLOW UNDER A TALL WEEDS.—[illegible] weeds have not been kept down by other crops, or by close pasturing, they have, as might be expected, made a most luxuriant growth; and as many such fields will have to be plowed for wheat, and other fall crops, it becomes a matter of much importance to know how we can best turn them under with the plow, so as to be completely out of the way of the harrow and drill. An excellent way to do this, is to fasten one end of a heavy log-chain to the end of a double-tree, to which the furrow or off horse is attached, bringing the other under the beam of the plow, just before the sheath, and confining it there. The chain should lag long enough to touch the ground, or nearly so. A little practice will teach how tight it should be. By this plan the weeds are drawn into the furrow, and completely covered by the furrow-slice falling on them while there. Will somebody tell us of a better way?—*Ex.*

BRINE A POISON.—M. Reynal, of the Veterinary school at Ayort, France, communicated to the Imperial Academy of Medicine in May last, the results of investigations upon the poisonous properties acquired by brine, after a considerable length of time, in which pork or other meats had been salted or pickled. Although the nature of the poison is involved in considerable obscurity, its existence is clearly demonstrated. The poisonous [illegible] after the preparation of the brine, and its use, then, mixed with food for any length of time, even although in small quantities, may produce death. A simple solution of salt in water after the same length of time, does not produce the same effect. The poison acts as a local irritant, exciting violent intestinal congestion and inflammation, but likewise increases the [illegible] skin and kidneys, and exerts a direct effect upon the nervous system, giving rise to trembling, loss of sensation, convulsions, etc. Experiments were tried with it, in the veterinary school, upon horses, dogs, and pigs.—*Ex.*

As brine is sometimes used a second time for pickling, and for other purposes, these facts should be remembered.

CURING BACON WITHOUT SMOKE.—To smoke your best bacon, fat your hogs early and fat them well. By fattening early you make a great saving in food, and well-fattened pork. Then kill as early as the weather will allow, and salt as soon the animal heat is gone, with a plenty of the purest salt, and about half an ounce of salt-peter to one hundred pounds of pork.

As soon as the meat is salted to your taste, which will generally be in five weeks, take it out, and if any of it has been covered with brine, let it drain a little. Then take black pepper, finely ground, and dust on the hock end as much as will stick, then hang it up in a good, clean, dry, airy place. If all this is done as it should be, (it ought to be done now,) you will have no further trouble with it, for by fly time in spring, your bacon is so well cured on the outside that flies or bugs will not disturb it.

Curing bacon is like the Irishman's mode of making punch. He said, "Put in the sugar, then fill it up with whisky, and every drop of water you put in after that spoils the punch." Just so with curing bacon, after following the directions given above, every "drop" of water you put about it, spoils the bacon.

TO PREVENT METALS FROM RUSTING.—Melt together three parts of lard and one part powder. A very thin coating, applied with a brush will preserve [illegible] iron stoves and grates from rusting during summer even in damp situations. For this purpose a piece of black lead may be mixed with the lard. The effect is equally good on brass, copper, [illegible] etc. The same mixture forms an excellent water-proof paste for leather boots, which treated with it will [illegible] take the [illegible] when blacked, and the [illegible] be preserved with a [illegible] during the year, as it does not [illegible]—*Ex.*

TO MAKE CAKE SOFT.—A [illegible]

The California Farmer.

WARDEN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, DECEMBER 28, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

Exchanges.—Will our cotemporaries that exchange with us, have the kindness to direct our papers to *Sacramento*.

NEW VOLUME—REDUCED PRICES.

We now call the attention of the friends of Agriculture and of Home Industry to our plans for the coming year. It will be our desire to make our journal the medium of the most important knowledge that is available for scientific and practical Agriculture. Having completed our plans for an extensive and reliable correspondence, both in the old States and Europe, upon all important matters; and having arranged to receive from the very best sources the most reliable information upon the best Stock and Stock Raising in the country; having also a most complete set of Exchanges, both in the States and abroad—we feel confident we can present to our readers a paper unequaled in merit as a Scientific and Practical Journal of Home Industry. We are also most happy to say we have the promise of some of the very best Female writers of this State for our Ladies' Department. This, with the column devoted to education, we are confident will make our journal worthy to be welcomed into every family of our State.

We shall present to our friends and patrons the CALIFORNIA FARMER, on the opening of the New Volume, at the low price of **Five Dollars a Year**, *always in advance. No paper sent without the money.*

Shall we have the support of the workingmen of California? Shall we not have the support of every family that desires the prosperity of California? It is for this we plead.

Clubs that send us the amount at *five names* shall receive a *sixth copy gratis for one year.*

EXECUTIVE MEETING OF THE California State Agricultural Society.

The Executive Committee elect of the Cal. State Agricultural Society are requested to meet at the Society's Rooms, on Fourth street, Sacramento, on Wednesday, January 9th, 1856, at 10 A. M. It is earnestly desired that every member of the Executive Board will be present, as business of importance will come before them, and it is necessary that the Board should organize for the coming year's duties.

Per order. E. L. Beard, President.

Our Fourth Volume.

With this number we finish the Fourth Volume of the California Farmer. When we take a retrospect of the past, as we look back upon the labors of *two long years* devoted to the work of editing and publishing a journal of the Agriculture of California, our chief regret arises from knowing how far short of our desire has been the sheet we have presented to our readers; but when we remember that single-handed and alone we have had to contend against the obstacles that have surrounded us, as we remember the universal embarrassment that came over the whole agricultural community soon after we had commenced our labors, and as we recall the fact that the science was new to many engaged in it—that the majority, even, of those somewhat familiar, were ignorant of the nature of the soil and the climate, these difficulties magnify even in the retrospect.

Again, when we call to mind the conflict that has been carried on in regard to the ownership of the very soil that was to be cultivated, that few only, dreamed of a permanency in their agricultural pursuits, and much less of making California their home—when these difficulties are recalled and we remember how few felt an interest in sustaining a journal devoted to their own interest even, we feel that however much we have come short of our desires or fallen below the standard of what our journal should have been, we do feel that the generous minded and the true hearted will make due allowance for our short comings, and seeing the difficulties with which we have had to contend, give us their sympathy, rather than their censure.

To sustain our position, has caused us sacrifice, this every reflecting mind will readily conceive. But our purpose was, *never to falter.*

It was neither *wealth* nor *fame* that we sought when we entered upon the duties and trials of an editor and publisher; but to manifest that love and devotion to a science that we believe brings more joy, happiness and prosperity to a State, than all other sciences combined. For this reason we entered upon this work, and for the love we bear it *we shall continue it.*

With the next number we commence our new volume, and although we frankly confess we have fallen far short of our desires, we can, as we look back, proudly claim to have offered in some humble degree, a journal worthy the support of those who have so kindly sustained us. Of one thing we can boast—we have never pandered to a base appetite; we have never sullied our columns with political wrangling or sectarian strife; we have never "rendered railing for railing;" but, contrary-wise, blessing—and, in all our intercourse with our cotemporaries we have never exchanged an unkind word. We can say more—we can look back and say we *remember no unkindness.* If others have wronged us, have slighted us, or neglected those courtesies or encouragements due from one to the other, we forgive them and ask the same at their hands. Intentionally, we have never offended; and as we recall the past two years' labors—though we have not made the California Farmer all it should have been—we can say that according to our means and the circumstances by which we have been surrounded, "we have done what we could;" and though our readers may have looked for more and desired better, no one has ever had cause to blush for the sentiments that have been published in the Farmer, or regret that it has found a place in the family circle.

In our next issue we do hope to be greeted by our friends with a voluntary list of new subscribers that shall nerve the arm and cheer the heart for the labors of another year. Our terms for the new year will be found in another place. With grateful sentiments for past kindness, we leave our friends and Volume IV. to greet them anew in Volume V.

Silk Manufactures.

Nearly two years since we prophesied that ere long we should behold upon this our favorite land, cocooneries, and silk manufactures; and for *such a wild fancy*, wise(?) ones smiled.

These were our words, as published Jan. 5, '54, in the first number of our journal, and in a memorial to Congress, asking the endowment of an Agricultural College in California:

"Already California has commenced the cultivation of cotton and tobacco, the great staples of our Southern States, and sugar, tea, and coffee will soon be added; and before many years the silks and satins and rich shawls, like those of India, will be the proud product of our beloved country, if we are but true to ourselves and to other nations whom a wise Providence is sending to us, as helpers in all these great works of art and science."

In the soil and climate of California, unequaled by any other State, we saw the surety that this must be; and it is with the truest rejoicings that we begin to see the complete fulfilment of our hopes, by announcing that we have *native silk worms in California.*

We have now before us as we write, a sample of fine *cocoons* that were found upon the shrubbery of the hills of San Francisco. These cocoons were presented to us by E. Seyd, Esq., of San Francisco. Mr. Seyed informs us that he has about sixty cocoons, and is preparing to feed them as they shall emerge from their silken houses. We examined them. They are larger than the cocoon of the India worm, and of a darker shade, but the outside fibre promises well.

We rejoice at this discovery, and feel assured, from the hands into which it has fallen, that this important matter will be pushed forward to success. We shall in future issues present the food of the silk worm, to call the attention of nurserymen to the subject.

California Potteries.—Several potteries for the manufacture of earthen ware have been established on the Pacific shore. If we remember well, there were two in Santa Clara, two near the Mission Dolores, one on Cache Creek, and one or two others. But we believe that only two now remain; one at the Mission Dolores, doing very well, and one in our own city (or rather the outside of the city), which is doing a large and prosperous business. Every kind of ware is made, both for mercantile and domestic uses. Dairymen can be supplied with every article, from a churn to a cooler, and florists can find all *they* want, and the merchant every kind of earthen ware for trade. This establishment is now conducted by Messrs. Taylor & Co, and we confess that the variety and quality surprised us. Those beautiful samples of pottery from this firm which took the prize of the Society at the Fair, have been sent to Gen. Sutter as a gift from the proprietors. They also sent this week to Hock Farm, some splendid pots of seventeen inches in diamter, and of excellent design for starting exotics.

A Beautiful Work of Art.—The new "Diploma of the California State Agricultural Society," in proof sheets, is now on exhibition at the Society's Rooms. It is from the Artists' room of Brittan & Rey, of San Francisco; and reflects high credit upon their skill.

The new line of telegraph between this city and Benicia, is now completed.

Vine Growing—Wine Making.

As everything upon this subject is of vital importance to California, we copy such facts and notices as we gather from time to time, for the benefit of our readers; ever reminding them that the subject of wine making will soon assume a form of great importance to our State.

The New York Times in speaking of wines says there has never been a bottle of *clos Vougeot, Romance conte*, or Johannisborger in the United States, and presents facts to show the proportion of genuine and adulterated wines sold.

The fact is conceded on all sides, that *pure wine* is a rare article; yet we believe that we can find in California pure wines, and those imported too—both the Johannisberg and the celebrated brands of Rhenish wines.

But we will not *dispute* upon this point; we rather agree with the Times on the fact stated, that considerable attention is now being given to the cultivation of the grape and the manufacture of wine.

The following extracts from a letter from Ohio, published in the N. Y. Journal of Commerce, will be of interest and may be of value to our readers; and we also call their attention to the letter of the Pioneer, of Hock Farm, for every cultivator will wish the General success in deed and truth:

This has been a bad year for the grape. Owing to the unusually wet season, most of the vineyards suffered seriously from the mildew and the rot. Some few escaped these diseases and produced crops of 400 to 600 gallons to the acre; but the general average for the whole country will scarcely exceed 150 gallons per acre. Mr. Robert Buchanan's large vineyard of six acres produced 1200. In the year 1853, which was the most favorable for the grape crop experienced for a long period, the yield averaged about 600 per acre, on the best cultivated vineyards, and a few produced 800 to 900 gallons. Mr. Buchanan in that year obtained from five acres, 4,236 galluns, 847 per acre.

The quality of the wine made this year will be very good. The usual price of the juice from the press is 75 cents to $1 per gallon, according to quality; after the first and second fermentation, $1 to $1 50 per gallon. Within twenty miles around Cincinnati some 1500 acres are planted with the vine, of which about 1000 acres are now in bearing, and may produce 150,000 gallons of wine the present season. This is about a two-thirds crop for the Ohio valley. The growth of the wine business is shown by the fact that in 1835 there were 350 acres of vines in the vicinity of Cincinnati, and in the year 1842, about 1200. The value of the sparkling wine produced in 1851 was estimated at $175,000. In Missouri and Illinois about 1100 acres are already planted, and the culture is rapidly increasing through the West and Southwest. Tennessee and Georgia are particularly well adapted to the growth of the Catawba grape. The Catawba is our great wine grape, and is without a rival. It was found in the famous county of Buncombe, North Carolina, in the year 1802, by Col. Murray, and brought into notice as a wine grape by Maj. Apium, of Georgetown, D. C., about the year 1820, and by Mr. Longworth of Cincinnati in 1825. Nearly all our vineyards are planted with this grape, which, with careful attention, produces a wine fair comparing with the best Rhenish and French sparkling and still wines.

In Cincinnati alone, about 200,000 bottles of sparkling Catawba and 300,000 bottles of still wine are put up annually. Of the Isabella, Schuylkill and Herbemont grape, a small quantity of wine is made every year, and the wine from the last named is growing into favor with many, from its resemblance to the Spanish Manzanilla. Of late years, the interest of the producer has been greatly advanced by the construction of wine cellars or large subterranean vaults in Cincinnati, and the establishment of regular wine houses, conducted by dealers of ample capital, and which serve to insure a ready market for the product of the vineyardt. The wine is kept in bottles well corked and sealed, and laid on their sides.

The vines in our vineyards are set in rows, generally three by six feet apart, and trained to single stakes six or seven feet high. The grape bears its fruit on the wood of the preceding year's growth; hence two long canes as branches are always left to produce the next year's crop. These canes are cut down, one to a spur of two points, and another is left with eight or ten joints, and bent round in the form of a bow, and fastened to the stake with a willow twig or tie. The bearing shoots in summer are shortened in, and the vine kept clear of superfluous wood, so as to admit sun and air to ripen the grapes.

The ground is hoed or plowed in May, and kept free from weeds in summer, and the vines neatly tied to the stakes and trained from one to the other as the growth increases. The process is simple and easily understood. When ripe in October, the imperfect and unripe berries are picked from the bunches of grapes, and the perfect bunches passed through wooden rollers, or bruised in a tub with a beetle mashing the skins and pulp, but not the seeds. The mashed grapes are then thrown into a press, resembling a cider press, and the juice extracted. The juice or must is put into a clean cask, and the fermentation, which immediately commences, ceases in about a week. A second fermentation takes place in May following, after which the wine may be bottled when clear. It is usually racked off from the lees in December or January, and before the second fermentation. From the lees and the pumice an excellent and high-flavored brandy is made, which is now attracting considerable attention.

The demand for Catawba wine exceeds the supply and the quality is constantly improved, both by the cultivator and those who prepare it for market. As regards the vine culture, the future is full of promise.

The following is an extract from the letter of General Sutter to us, accompanying the sample of wine mentioned:

My Dear Colonel: I have the pleasure of sending you a sample of our Wine made at Hock Farm. We have only made a very small quantity, but we can see what it will be when a little older; it is only three months old now, and it will doubtless be of a most excellent quality. Next year I intend not to send my grapes to market, but to make the genuine good wine of them. The result of this experiment has encouraged me much, so that I intend to go very largely into the cultivation of the grape.

The Artesian well has been begun at Hock Farm, at last, and I hope that we may have good success.

When I come to your city, which will be when the inauguration takes place, I will bring the so-long-spoken-of likeness to you.

The above letter from the good General should awaken generous feelings in every breast. We see the General at work to elevate the character of our State by personal efforts, in the great branches of Home Industry; at work himself; looking with hopeful heart to the future for *those promises* from *nature*, that are more reliable than friends; and those returns from a grateful soil, that are more to be trusted than friends or country even. It is a glorious example the General gives to all, even the young, of frowning down misfortune and disappointment, and not laying to heart the black ingratitude he has received from those who have been enriched by his bounty. Oh the blackness of ingratitude! 'tis like envy, "a coal that comes hissing hot from hell." But 'tis a pleasing thing, that neither can crush the noble impulses of the good General. We tender our grateful thanks for the generous gift of his splendid wine, and the promise of the portrait; in the first we wish him a long life and prosperity, and pledge him eternal friendship, and the latter we shall treasure as the valued gift of an honored and venerated friend, and salute it as our Dear General.

Exhibition.

There have been presented to the Rooms, within the last few days, various specimens in several departments. Among them were large specimens of Petrified Wood, some of them weighing several hundred pounds: with a very handsome collection of of Geological specimens, some of them very beautiful. Also a mammoth specimen of Mullen. All the above were collected by Rev. Mr. Dheil, who displays a commendable interest in science.

Very handsome scions of the Basket Willow were presented by J. Lewis, Esq., of Sacramento. Mr. L. also presented a specimen of Agate.

J. A. Patterson, Esq., sent specimens of Coal from the mines at Livermoro's Pass, Alameda county. From this mine we have received specimens before. This coal has been recently tested on board the steamer Cornelia, on a trial trip to Mare Island, and we give the tests, which were of the most interesting character and gratifying in their results. We give the log of the engineer, as copied from the Alta:

On the 20th of November, 1855, started fires at 8 A. M., steam at 9; on cold water at 10h. 45m.; got under way and stood across the bay; steam, 40lbs.; running blower slow; revolution, 21; throttle quarter open; vacuum, 26.

10h. 50m., off Vallejo street wharf; throttle quarter open.

11h. 7m., revolution, 20; steam, 32lbs; vacuum, 26; throttle quarter open.

11h. 12m., abreast Angel Island Point; flood tide.

11h. 25m., revolution, 21; steam 32 1-2; vacuum, 26; throttle quarter open.

11h. 35m., abreast Red Rock.

11h. 40m., revolution, 21; steam, 35; vacuum, 26; throttle quarter open.

12h. 13m., revolution, 21; steam, 25; vacuum, 26; throttle quarter open.

12h. 30m., revolution, 20; steam, 32; vacuum, 26; throttle quarter open.

12h. 48m., revolution, 18; steam, 28 1-4; vacuum, 26; throttle quarter open.

12h. 48m., abreast of Navy Island.

1h. 3m., abreast of Navy Dock, steam, 34; revolution, 21; vacuum, 26; throttle quarter open.

Consumed eight hogsheads of coal from San Francisco to Navy Dock and back to Pinole Point.

Average pressure of steam, 32 12 lbs. Average revolutions per minute, 20 2-7.

However valuable may be our gold mines, there is a value to this discovery far beyond even gold. It will prove so to all internal improvements,

Christmas Fare.—Christmas—San Francisco and Sacramento rush a tilt it seems for the good things this Christmas week. The mammoth hog of Snipe which has created no little stir on account of its size and beauty, was slaughtered on Monday last, and shown up on the stall of Mr. John Wilson, Washington Market, San Francisco. When dressed, the quarters weighed 1700 pounds, and the tallow 310 pounds; price of meat from 25 cents to 31 per pound. Some 3000 persons went to visit this stall Christmas day. Other stalls in that market were gaily dressed and admirably supplied. But our friends below should take a trip up to this city, the Capital, to see the way our stalls are supplied. The City Market, by Hayward & Co., was a sight worth a long walk; it was enough to restore a sick man, the beef that reminded one of Quincy Market, Boston, and the fat ox Columbus, together with mutton, veal, lamb, venison, bear meat, pigs and game; epicures were satisfied. Then at the K street market, stalls numbers 1 and 2, by Sloper & Margent, and numbers 7 and 8, by Armstrong & Fash, were evidences of what California could do. But we will not forget the Antelope Restaurant, and *that table* outside the door, placed there to tempt the hungry one, and to awaken an appetite in all passers by. We learn that in addition to a great array of the choicest meats, all of the best pieces, and turkeys and chickens, were pigs, that lay temptingly before the eyes. We saw upon those big antlers that stood at the door, some twenty-five king game, ducks, geese, chickens, quails, plovers, hares, rabbits, elk, venison, &c. The next day we passed, and the table was gone from the outside, for the hungry ones had called and the tables were cleared.

Atkins Female Seminary Benicia.—The Examination and the Festival scenes connected with this distinguished Seminary, took place on Thursday and Friday of last week. It was our good fortune to be present and enjoy the scenes of intellectual and social pleasure which were presented on the two days and evening of that week. We wish we were able to present a full and detailed sketch of all we witnessed there, in this issue, but this being our closing number of the volume, and not having all the data we need, we defer till the next number an attempt to do the matter justice, briefly saying that we believe no institution in this or any other State could present evidences of greater proficiency, or recitations more interesting or satisfactory, or a group of young ladies whose love of study, whose accomplishments, or whose amiability, worth of character and beauty of person, could surpass them; or can there be found a teacher whose moral and intellectual accomplishments and worth command a higher love and veneration among her pupils. Rarely does it fall to the lot of any institution to be so fortunate in a Principal and so successful in the department of teachers. We know we shall be able to please our readers with the sketch we have in preparation, when we hope to be able to give the plans of the new term, and when it will commence, so that those who have daughters can secure for them an entrance to this pattern Seminary.

Snow! Snow!!—Blow! Blow!!—How beautiful was Earth on Wednesday morning last to a New Englander; it was indeed refreshing to look out upon the snow-covered ground—to see the earth, and trees, and dwellings, with their snow white robes; and to see the falling flakes as they came floating through the air like a winged messenger from fairer sky. Quickly were the "jumpers" prepared, and soon the merry Drouths heard by the crack of their whips; anon, several fleet steeds were gliding swiftly through our streets, and nothing was wanting but the "merry bells" to give us a reality of an old fashioned winter. Since the snow has disappeared, the weather has moderated—and now the rain is falling fast.

The weather has been very cold—as cold, we think, as ever known here. We learn from Mr. Taylor, proprietor of the Pottery, that all the soft pottery in his workshop froze and split on Tuesday evening last; a circumstance that has never occurred before. Some $1,500 worth of pots were spoiled for baking. All the work will require to be done over again.

Books Examined.—Much in a little—this we consider the best praise we can bestow upon the books received from the publishers, of which we have before spoken:

The Shepherd's Sentinel.—Much, well said and truly said: good truths in a good manner, and good for young and old, for children and youth, go for who will it, and let it be the steadfast

teacher and taught. A most valuable work. Published in Boston by Robinson & Richardson.

Rural Almanac.—Leaves of all seasons of the year, *branches* of all subjects on rural life, *buds* upon every branch, and *blossoms* of beauty in them all. Reader, do you love a rural life? If you do, procure a Rural Almanac, turn the leaves, watch the branches, examine carefully the buds, inhale the fragrance of the blossoms, and the *fruit* of your labor will be sweet to the taste. This book is published by Luther Tucker & Son, Albanay N. Y.

Lectures on the Women of Olden Time. The Rev. O. C. Wheeler's lectures continue to attract large audiences. The lecture last Sabbath, "Lot's Wife," presented a strong contrast with the characters described in former lectures.

The lecturer is sure to interest his hearers; his style is winning, and he presents the subjects of his lectures in all their phases with great frankness.

The theme for next Sabbath, will be, "The Wives of Abraham, Isaac and Jacob,"—and we hope an audience worthy the subject will be present.

Military Spirit.—Large deputations of the military of San Francisco will visit our city to unite with their military friends at the Inauguration Festival. The Sacramento Guards will make their *first parade* in their splendid uniform. Great things are expected, as the corp is composed of the *elite* of the young men of Sacramento, that were not already enrolled in the Sutter Rifles. The Sutters will also parade, and undoubtedly make a fine display. Gen. Sutter and Staff and other leading military men will be present, all adding to the grand pageant of the general display at the capital.

Cold Days in Stockton.—The following thermometrical record, kept at the Stockton Insane Asylum, we extract from the Argus:

Year.	*Month.*	*Day.*	*Hour.*	*Ther. Fahr.*
1850,	December	31st,	8 A. M.	35 degrees.
1851,	December	17th,	8 "	38 degrees.
1852,	December	15th,	8 "	34 degrees.
1853,	December	25th,	8 "	32 degrees.
1854,	December	20th,	8 "	18 degrees.
1855,	December	24th,	8 "	30 degrees.

It will be seen in the above table, that Monday last was the coldest morning we have had in the last five years except the 20th of December, 1854, which was by far the coldest day known to "the oldest inhabitant."

Gold without a Claim.—Coon Hollow is a mining locality in the immediate suburbs of Placerville, long noted for its valuable gold deposits. An immense ridge is being leveled down, mostly by hydraulic power, and the gold saved in sluices by the ordinary mode. There are a great number of these, and their accumulated waste waters, after leaving the sluices, form quite a stream of muddy water, and gravel. A Mr. Sprague, says the Placerville American, in mentioning these circumstances, though working no claim, conducts this water through a set of sluices containing riffles, false bottoms and quicksilver, and with no other labor or cost than renewing his false bottoms as often as they wear out, say once in a month or two, actually realizes from one to two hundred dollars per month; thus securing a handsome gold yield, without possessing a mining claim, and with no injustice to any one, as he only saves what others permit to run to waste. With still greater care and a more refined method, nearly as much more might be saved.

Merino Sheep.—The bark Fanny Major, which arrived at San Francisco, 22d inst., from Sydney, Australia, brought 111 fine Merino sheep, for breeding. Mr. Whitney, the importer, bought 300 in Sydney, 160 having died on the passage, leaving only 120 ewes and 20 rams of the lot. We learn that a very large price has been offered for some of them. We are glad to see this movement for the improvement of our native stock, and hope it may be followed up by further importations as no country in the world is better adapted for sheep raising than California.

Unfortunate Occurrence.—On the 22d inst., the boiler of the steam flouring mill of Messrs. Sperry & Baldwin, at Stockton, burst with a terrible explosion—the boiler was thrown through the building some fifty feet, and fell upon a small frame building, crushing it. Fortunately no persons were in the building. Three persons were injured by the explosion. Mr. John Ilen was badly hurt, fear'd fatally; Messrs. Osborne and Sprague were injured seriously. The building took fire, but the flames were soon mastered. Loss about $1,000.

Shipments of Gold from the State, for three years, to January 1, 1856:—

Gone.—The Alta states that A. C. Ingalls, who was charged with embezzling over $4,000 from [illegible], and who was released by the payment of [illegible] by his counsel, has left in the steamer for Nicaragua.

Late from Oregon.

Portland, (Oregon,) Dec. 19, 1855.

As near as I can ascertain, there will be no winter campaign. The troops are not in a condition, neither is there a sufficient number to take the field and keep it; and let me tell you that Gen. Wool is too old a soldier to commence operations with the fact staring him in the face that he has not a force sufficient to follow up the Indians, in case they should retreat, only to return again. There is no use commencing operations unless everything is in readiness to sweep the whole country, and close the war with one campaign. The General will send such forces as are needed at exposed points, and keep a reserve well appointed, to start at any moment if they should be needed at any particular place. By keeping the Indians in check during the winter, and then getting everything in order for active operations in the spring, a brilliant campaign will follow, and the war which has now commenced, be brought speedily and summarily to a close.

I suppose you have heard about the loss of Lieut. Slaughter, at the Sound. Also, of the action on the Walla Walla river, between Major Kelly's command and the Indians, in which the Americans lost 25 killed and wounded, and the Indians 35 killed and several wounded.

By the arrival of the Fashion, on the 17th, we received news of the death of the Chief Pee Pee Mox Mox. His war steed which has been considered the best animal in the country, was brought down by Capt. VanBergen as a trophy.

By the Panama, large quantities of supplies have arrived together with 140 horses and mules, all of which arrived in order and safety. Capt. Baby has received much credit here for the manner he has brought out his live stock and supplies.

Fort Vancouver wears a very busy aspect, and strongly reminds me of Point Isabel, in Texas, at the time of the preparations for the Mexican war. Stores of all kinds are landed, and embarked, stacked up, stowed away, going and coming, and in fact the place is alive with business. Lieut. Withers is exerting every nerve to forward supplies to the Dalles, and with Maj. Eastman's assistance, contrive in spite of rain, mud and impassable roads, to accomplish their object.

The agent here of the Hudson Bay Company, Mr. Graham, as well as the company in general, are doing all they can to prevent the remaining tribes of Indians from joining in the hostilities to the whites, and as I believe they are sincere, they deserve much credit for it. They have issued strict orders that none of their posts shall sell fire-arms or ammunition to the savages.

Gen. Wool has commissioned Capt. Newell to raise a company of Rangers to act as scouts, which he is fast making up. Capt. Newell has been on this side of the Rocky Mountains for twenty-five years, during which time he has been engaged in hunting and trapping, and has the reputation of killing more bears, taken more beavers, and scalped more Indians, than any other white man on this side of the continent. His name is a terror to the Indians, and as his company is made partly up of half breeds, all thoroughly acquainted with the Indian lingo, as he is also, they will no doubt do great service.

By way of a little piece of gossip, we are going to have a grand ball, just to keep off the blues during the prevalence of mud and snow; the former of which abounds in luxuriance at present, and the latter daily expected.

I learn from very good authority, that the Indians are able to bring 5000 warriors into the war, and moreover, that they are all more or less supplied with guns, or rifles, and have for the last three years been quietly gathering together ammunition and material for this grand struggle. These Indians are totally different from the lower coast tribes, and are really brave and blood thirsty, so you may judge what kind of a force Gen. Wool should have to contend successfully against them. By the by, a company of U. S. Dragoons have lately been added to the General's forces. They came across from Missouri, and got in by the way of Umpqua. They are 110 strong.

All the mountains back in the country are covered with snow, and their white peaks look grand on a clear morning at the rising of the sun. The snow and rain may to a great extent retard the hostile movements of the Indians, which I hope may continue so until we are ready for them.

The farming interest in the more central districts are by no means neglected, and considerable preparations are being made for next year's crop. The oldest inhabitants never [illegible] a long wet spell of winter, which materially retard the farmers prospects. For the present I must close.—*Cor. in Alta Cal.*

Portland Market.—Business [illegible] trade has been dull [illegible] market [illegible] the past. The rates for [illegible] are steady at former quotations. Large [illegible] are accumulating without any [illegible] Potatoes are advancing, and are [illegible] Butter [illegible] a 4[illegible] Eggs [illegible] 4 cents per dozen.—*Standard.*

Great Improvement in the Magnetic Telegraph.—The New York Herald says that a great invention has been made to improve the working apparatus of the magnetic telegraph. The Herald [illegible] the words says of the new

It will print at the rate of [illegible] per minute, and [illegible] or from [illegible] a message will be [illegible] over. It will send [illegible] per hour, and will send a communication from the point of departure direct to its destination, without the possibility of any way office on the route receiving a copy, excepting at the will of the sender. This is a feat which no other instrument now in use can perform; and one, the advantages of which must be apparent to every individual who is at all conversant with telegraphic matters. It is very simple in its operation. Any person who knows a letter of the alphabet when he sees it, can write as correctly with this instrument as the most experienced operator; all that is requisite to insure absolute correctness being that the copy shall in the first instance be written plainly and correctly. The machine verifies itself—that is, at each revolution the operator can tell, by means of an unerring test in his instrument, whether it is in unison or not with the instrument with which it is communicating in a distant city. But its most wonderful feat, and that which will test the reader's credulity the severest, is its power to start into operation a similar machine in a distant office, without the help or even presence of an operator, and compel it to write out whatever messages it chooses to send in the same perfect manner in which they first started on their transit. * * * * * * *

The new company to which we have called attention, as the first step in their operations, have secured the absolute patent of the Hughes machine for the whole United States, at a cost of between one and two hundred thousand dollars. A number of these machines are now being manufactured by an ingenious mechanic, and some of them, we understand, will soon be put in operation. Their next step, we are told, will be the leasing of all the direct lines between New York and Nova Scotia. Negotiations in this direction are, we are assured, already nearly completed, and the new company will probably assume the management of those lines about the first of January ensuing. When the spring opens, new lines of the most substantial and perfect construction will, we have reason to believe, be built to the South and West, so that eventually the owners of the Hughes patent will have a network of wires radiating in all directions from New York to every prominent business place in the Union. When all the plans of the company are fully perfected, the public may witness a revolution in the telegraphing business. Celerity, reliability, and cheapness, will, we hope, be the motto under the new dispensation. With these there will, of course, be a very rapid increase in the amount of telegraphic business; and, if the reduction in tolls ever reaches the point now in contemplation by the new company, Uncle Sam's mail bags will eventually be left entirely to the newspapers.

Fish in the Artesian Creeks.—Mr. Dabney showed us last week three beautiful little fish, taken from his Artesian creek. In shape these fish resemble the bass, are very red under the mouth and belly, and have shaded stripes of a dark brown color on the sides. They had been kept for a week or more in a tumbler of water, where we noticed them feeding on crumbs of bread. Mr. Dabney states that they have grown very fast since they were first taken. There is no doubt that these fish came from the subterrean stream through the Artesian pipes to upper earth. Mr. Dabney says that one of them was found in a bucket, which was set under the spout of the Artesian well.—*San Jose Telegraph.*

A Long Fall.—On Wednesday last, says the Sierra Citizen, a man by the name of Tuttle, at the Rock creek Engine company's shaft, attempted to hold a rope with his hands, in order to be drawn from the shaft, a distance of 115 feet; and when within about 15 feet of the top his strength failed, and he was precipitated to the bottom—a distance of a hundred feet. He did not appear to be seriously hurt, although a watch in his pocket was literally shivered by the concussion. There was about six feet of water in the shaft, which no doubt tended to break the fall.

Fatal Stage Accident, &c.—Iowa Hill, Dec. 22.—We have just received intelligence that the stage from Nevada to this place, while crossing Bear River, got capsized, and one passenger was drowned. In consequence of the recent heavy rains the river is greatly swollen, and while endeavoring to find the stage [illegible] The driver and [illegible] of the passengers [illegible] a resident of Nevada [illegible] — a married man [illegible] the stream [illegible] The [illegible] man [illegible] with the [illegible].—*Times & Union.*

Sheep from New Mexico.—Two [illegible] from [illegible] to [illegible] a large number [illegible] the North. The [illegible] part [illegible] [illegible] [illegible]

Horticultural Department.

Chatsworth.

We present to our readers a sketch of "Chatsworth," the magnificent park and grounds of the Duke of Devonshire, England. This is one of the most magnificently designed estates in all Europe. No estate is kept up with more grandeur; none that approaches so near kingly royalty as Chatsworth.

It was at this princely estate that the Royal Banquet was prepared for Queen Victoria and Prince Albert, in 1832; and it was here that the Grand Cavalcade passed through the Conservatory in the royal carriages, and with the whole royal train. Even the fine description here given by the writer falls far short of presenting the full conception of this gorgeous palace and grounds.

It was our pleasure to spend some time at Chatsworth, in the winter of 1847, and we remember with what intense interest we gave our mind to the enchanting views that were presented to us. Bearing letters of introduction to Sir J. Paxton, we received every courtesy and attention that could be desired; and never shall we forget our feelings as we stood at the foot of the Grand Cascade, as the first fountain sent up its brilliant column, and as it fell upon the temple and came rushing down the cascades. We remember our surprise as we stood watching the coming sheet of waters, when the large fountains, one after another, sprang upward like the report of artillery, sending their jets up to the very clouds. Here at one view the eye grasps the most grand and comprehensive sights of art and nature combined, that can be found, we venture to assert, on any spot on earth.

We had intended to have presented to our readers a sketch of this celebrated place, from our notes taken at that visit, but had delayed it; and now we give the following, from Hovey's Magazine, as a prefatory one, with the design, by-and-by, to give a full and detailed sketch to show how even nature can be beautified by art:

CHATSWORTH—BY HOWARD DANIELS, ARCHITECT, N. Y.

On the morning of the 11th September, I left Sheffield, in a coach, with twenty passengers, (six inside and fourteen out), for Chatsworth; we passed over a very hilly and picturesque country; a portion being the East Moor of Cheshire, very rocky in places, and mostly covered with ferns and heaths, with scarcely a tree in a thousand acres. These moors are valuable only for breeding hares, rabits, grouse, partridges, &c., which are very numerous. Most of the passengers were acquainted with the route, and enjoyed the fine views and pleasant weather very much. So highly are these enjoyments prized by the English, that, at the time of starting, two ladies had high words as to which should have the only remaining outside seat; finally, one surrendered, and the other "took Sebastopol."

About eleven o'clock we arrived at Barslow, a small village adjoining Chatsworth. After a few preliminaries I started for Chatsworth, and soon found the head gardener, procured a guide, and went forth to explore the far famed wonders, created by Sir Joseph Paxton and others.

In passing through the park on my way to the mansion, I fully realized, for the first time, what I had always imagined fine English parks to be: groups of venerable oaks, with room enough for each to spread its arms to their utmost extent, interspersed with smaller trees, of various kinds and sizes, down to the hawthorn; all being arranged in the most irregular and picturesque shaped groups, and connected together by scattering trees and shrubs, in a very natural and happy manner in the shade of which were reposing herds of fallow deer, sheep and cattle.

The mansion is a grand old structure, built of a drab stone, in the Roman style. The main building, by Sir Christopher Wren, architect, was finished in 1706, having been about twenty years in building. The old mansion, which formerly occupied the same site, was celebrated as being the occasional residence of Mary, Queen of Scotts, during her imprisonment, from 1570 to 1581. Some of the furniture used by her, still remains, and is exhibited to visitors. The new wing is 385 feet long, and is in continuation of the east and west fronts to the north; it was built by Sir Jeffry Wyatville, architect, and is a modern structure in the Greco-Roman style. It harmonizes well with the older portion, and makes one continuous frontage of 557 feet. The interior is finished in very different style from our modern upholstery affairs; the stairs, halls, door jambs, &c., are all real stone, built into the walls as they were constructed; the halls have tassellated pavements, in colored marble; the floors of the best rooms are real oak, in simple patterns of parquetry; of the lesser rooms, a plain oak floor was all the nobility demanded in those days. The doors, sashes, castings, &c., are solid oak, and show their construction completely; no veneering, puttying, or painting whatever. The walls of some, and the ceilings of all the best rooms, are plastered and decorated with fine painting on the plastering, as a ground. The walls of a few of the best rooms are covered with embossed leather in gilt edgings.

The most delicate carvings in wood, of game, fruit and flowers, (by celebrated carvers), decorate some of the best rooms. To give an account of the galleries of paintings and sculpture, would be to write a book; so I will only say, the latter is very fine indeed, and in it is a very fine bust of Mr. Everett, our late minister to St. James; the former has many very good pictures, and many that are mere trash: a large collection of drawings, from all countries, is very good.

The mansion is admirably located on the western slope of the valley of the Derwent, and facing the west; immediately in front are terraced gardens in the Italian style, 1,200 feet long, with their "jets d'eau" in the centre. South of these gardens is a Spanish chestnut tree, planted by the late Emperor of Russia, in 1816; and a variegated sycamore, planted by the Arch Duke Michael, in 1818, in commemoration of their visits. In another part of the garden, is a British oak, planted by her Majesty (then Princess Victoria) in commemoration of her visit, in 1832; and an American chestnut, planted by the Duchess of Kent, at the same time. Beyond, in the park, is a fine old stone bridge, supposed to be built after a design by Michael Angelo. Queen Mary's Bower is a heavy stone structure, surrounded by a moat, and has the appearance of having been originally constructed for a battery or redoubt. Beyond the river, the ground rises in gentle undulations, and is thickly dotted with villas and cottages. In the distances is a range of hills.

On the south is an extensive lawn, perfectly level, with straight paths, bordered with a row of fine marble statues of the gods and goddesses, and vases, with Deodar cedars and Portugal laurels, placed intermediate. In the centre is a fine old fountain, with dolphins, sea horses, &c., throwing a stream of water 64 feet high. Beyond is another lawn, with an avenue of gigantic lime trees on the west, and an ancient grove of beeches on the east; in the centre of this lawn is a large oblong sheet of water; at the north end of which is a jet, throwing water 94 feet high; at the south end are five jets; in the center is the Emperor Fountain, which is the most magnificent jet in the world, throwing a stream to the prodigious hight of 267 feet. These fountains, when in action, create sensations of a sublime nature, in a much higher degree than any other human production I ever witnessed.

On the east the ground rises considerably, and in the immediate vicinity of the mansion, is terraced and ornamented with Italian and geometric gardens; farther on, the ground rises faster, and a cascade, built at the same time with the older part of the mansion, forms a conspicuous object. The head is a rustic temple, surmounted by a dome, and profusely ornamented with lion's heads, dolphins, sea-nymphs, urns, &c., through which the water rushes with great force, covering it with one broad mass of foam and spray, which, on falling into a basin, in front, rolls down a great number of steps and ledges for about three hundred yards, and is then engulphed, passing under the lawn, and appearing in the old circular fountains near the mansion; after which it reappears at the Tazza Fountain, on the west part of the mansion. Still farther east the hills grow steeper and wilder, and are clothed with dense woods, forming an admirable background to the picture. East of the Emperor Fountain, is the Great Conservatory, 277 feet long, 123 wide, and 67 feet high in the centre, which is by far the largest structure of the kind in the world. As this building has such a world-wide renown, it seems unnecessary for me to say more than that it fulfills the most sanguine expectations of its projectors, and already has several plants reaching to the roof in the highest point.

Around the conservatory is a broad space planted as a flower garden, then a low terrace wall, from which the ground rises on a slope, about twelve feet; then a broad gravel walk all around, affording fine views of the conservatory and its surroundings; the sloping bank is planted with Chili pines, *Araucaria imbricata*, and a border of brilliant flowers. The central passage through the conservatory forms part of the drive; and I was informed that the Duke often indulged his friends with a ride through it in a coach and four. To the north, on leaving the conservatory, the drive enters a gigantic rockery, with waterfalls, pools, &c., which are so natural, that it is with difficulty many are made to believe it is artificial. This rock work is certainly on the most stupendous scale of anything of the kind in the world, and forms a screen, or rather a piece of Alpino scenery, dividing the grounds around the mansion with its rich pastures, from the mammoth conservatory.

There is here no dwindling away into mere imitation. The thing is really and substantially as natural as if Sir Joseph Paxton had, by some supernatural means, moved a slice of one of the Derbyshire hills, and set it down here. Many of the stones are several tons in weight, and are piled up to an enormous hight, and scattered around in great profusion. Among the many works of the kind I have already seen, this is the only one that did not seem a puny effort, (notwithstanding their naturalness), as compared with their surroundings.

The fruit and vegetable gardens are situated about half a mile northward of the mansion, occupying about 12 acres, and contain the Victoria Regia house, 68 feet by 49 feet, where the first specimen of this gem of South American waters was propagated. One of the first flowers, and a leaf nearly six feet in diameter, was presented to Her Majesty, the Queen, on the 9th of November, 1849. This unique structure was the germ from which sprung the idea of the grand building at Hyde Park and Sydenham. At the north end of the garden is Sir Joseph Paxton's residence: an Anglo-Italian villa on a large scale, with a fine tower and all the necessary offices—a model structure of this kind, and charmingly located on the margin of the park, with the grounds tastefully laid out and planted with a great variety of choice trees, shrubs and flowers, with a princely and unsparing hand.

These grounds and plantations I consider of a far higher order than some lately made east of the mansion and great conservatory. Of some of the new drives and walks, I cannot speak in very high terms of commendation. They are stiff in their curves, and too much regard has been paid to keeping a regular grade over the undulating and picturesque grounds. Cuttings are made through slight eminences, leaving their sides nearly vertical, and the turf pegged on to make it stay, and dead at that, (the first dead sodding I have seen in this country). These cuttings are exactly what an engineer would do on a railroad or canal embankment.

The sketch here given of Chatsworth, will, I trust, be enough to give the reader some idea of its deep interest and great extent; being upwards of eleven miles in circumference, stocked with numerous herds of deer, and presenting every variety of aspect; the lofty mountain and the lowly valley; the gently swelling eminence and the verdant lawn; the wooded hight and the bald bluff crag; the majestic trees of hundreds of years' growth; the elegant parterre; the noble stream, and the enlivening fountain. Nature and art have combined to render this noble mansion everything that could be desired for the residence of one of the first rank and fortune in the kingdom.

California Flowers.

We present this week the descriptions of two new Flowers, that are now figured in the English works, and by them esteemed of great merit. Americans are behind the age; our Florists will permit others to bring out California Flowers and figure them in Europe, even before they are brought into notice here, upon our own soil.

This should not be. Where are Walker, Center, and Sontag, of San Francisco? and where are Provost, and Delmar, of San Jose—and friend Smith, of our own city? They must wake up and not let others get ahead of them:

RHONONENDRON CALIFORNICUM—*Hook.* CALIFORNIA RHODODENDRON. (Ericaceæ) California.—A half hardy (or hardy?) plant; growing three or four feet high; with delicate pink flowers; appearing in summer; increased by layers; grown in sandy peat and loam.—*Bot. Magazine*, 1855, plate 4803.

A fine rhododendron from California, which has attracted much attention among the English cultivators. It has the habit of *R. catawbiense*, with stout branches, and flowers freely; a plant a foot high, having three or four of its showy heads of blossoms. It was introduced by Messrs. Veitch, King's Road, where "we were struck with the great beauty of living flowering plants of the same, exhibiting a richness of color in the varied pale and deep rosy tints of the numerous corollas of which the large heads are beautifully nestled in an involucre as it were, formed by the handsome green leaves constituting a dark back ground to the flowers." It is not stated in what locality it was found, or at what elevation, but probably it may prove hardy, and become a most valuable acquisition.—*Bot. Mag.*, (July.)

LEPTODACTYLON CAFIFORNICUM.—A beautiful new plant from California, exhibited by Messrs. Veitch, at the June exhibition at Chiswick. The genus was founded on two North American plants, one of which Sir W. J. Hooker had previously called Phlox Hoodii, but which has been found to differ from Phlox in the ovary containing a great many ovules instead of one or two. The plant is one of the most charming acquisitions of Mr. William Cobb, who found it on the mountains of St. Bernardino, in California, who describes it as an evergreen shrub, two to four feet high. The wood is hard, the branches closely covered with bright green, stiff, finely cut leaves, and loaded with rose-colored flowers as large as those of our common phlox. It will, undoubtedly, prove a valuable half-hardy or greenhouse shrub.—*Gard. Chron.*

A Singular Tree.

Mr. Editor: Several times within two years I have been asked whether I had ever seen or heard of a certain curious or singular evergreen tree in the town of Methuen, in Essex county, Mass., and being engaged in raising forest or ornamental trees, I this day took the trouble to go a short distance out of my way to see it, and propose to give you a short description of it, viz.:

I should describe it as a white pine tree, 35 feet in hight, 18 inches in diameter 3 feet from the ground, straight and smooth like an old growth swamp pine up to about 14 feet high; it then branches out very thick, forming a head 25 feet in diameter, of very regular cone shape, so thick as to be entirely impenetrable for the entrance of birds on the wing. The limbs are so thick that it would be almost impossible for a man to climb through it. Ton seed-cones that I found under it measured less than three inches in length, (the common pine averaging over six), the leaves being very much thicker than the common pine, and the joints on whorls of limbs. The tree stands in open, cultivated ground, and is perfectly thrifty. Several young trees that have been transplanted and cultivated by Mr. Jeremiah Barker, are 2 1-2 feet high, and the diameter or spread of limbs from 2 ft. 9 in. to 4 ft., in all cases showing a greater diameter than hight. From its general appearance, seed-cones, &c., I suppose it may be a new variety of the white pine not described by Mr. Emerson in his "Trees of Massachusetts," At any rate, it will well pay any lover of trees the expense of a few miles ride, to see it. It stands on a farm formerly known as the "Perley Morse" farm, 3 1-2 or 4 miles south-westerly from Lawrence, and a mile or two more than that distance from Lowell, in a north-easterly direction, or less than a mile from the Bartlett farm. It is one of the greatest natural curiosities that I ever saw in the shape or form of a tree.—*B. F. Cutler in New England Farmer.*

A NEW ESCULENT IN THIS COUNTRY.—In May last, (says a correspondent in the Horticulturist, Cincinnati, O.,) I received from the Agricultural Division of the Patent Office, the "Chufas or Earth Almonds," known to botanists under the name of "Cyperus Esculentus," with the following notices of the same:

"It grows spontaneously in the light humid soils of Spain, and is cultivated in Germany and the South of France. If planted in May or June they are ready to be harvested in October. They resemble in taste a delicious chestnut or cocoa-nut, and like them may be eaten raw or cooked. They are chiefly employed for making an orgeat, (orchata de chufas) a delightful refreshing drink, much used in Spain, Cuba, and other hot climates where it is known. When mashed to a flour, which is white, sweet and very agreeable to the taste, it imparts to water the richness and color of milk. At Almacero and Albargo considerable attention is devoted to the cultivation of this plant, eight acres of land yielding a profit of $3,500 in five months."

I planted the tubers or bulbs, according to directions accompanying them. They are now growing vigorously, and very easily cultivated, requiring no special care, and I have no doubt will be as productive as any vegetable grown in this climate. I hope to have seed enough to plant some two acres of cultivation next season. It is worthy of cultivation as an ornamental plant.

GRAPES.—The method of training vines which produce the famous grapes that supply the Paris market, consists in allowing the plants very little room to grow either with their branches or their roots, and in keeping the latter very near the surface of the ground; each vine is only allowed to occupy a space of about six feet, so that the walls are supplied by a multitude of plants. The error in growing grapes in Britain consists in training them into elevations. They ripen best when trained near the ground, in open air. The heat of hot-houses is an exception. Vineyards, in France, resemble plantations of gooseberry bushes, with the bunches close to the soil, the heat of which ripens them. —*Ex.*

BLACKBERRIES IN THE MIDDLE OF OCTOBER.—Prof. Page showed us the other day, a bunch of blackberries, eight in number, in every stage of progress, from the ripe to the green fruit. It was plucked from a vine of the variety known as the Lawton or New Rochelle blackberry, and is the second crop from the same root. We have now strawberries, raspberries, and blackberries, in October, and what next?—*Nat. Intel.*

England vs. United States.

While so much is paraded in our journals relative to the angry feeling engendering in England against us, it is well to know that the Times does not express the minds of all England; there is another side to the question, and we quote with pleasure from the London Daily Telegraph, a paper claiming a larger circulation than even the Times, and more qualified to give the true feeling of the English nation. Hear what the Telegraph says upon the Crampton question:

"The American people have, since the commencement of the war with Russia, evinced towards us the most honorable neutrality. Where are those swarms of 'long, low, black, piratical-looking Yankee privateers,' who were to have swept our commerce from the sea?—where those buccaneering expeditions into Canada?—where those tumultuous assemblages of lawless b'boys, who were to have urged upon their government the advantage of a war with England, as England's perplexity was to be America's opportunity. All these prophecies are now mouldering in the waste-paper basket of the Times newspaper. But this much let us remember, and forgot it not at the present moment, that the high-minded English nation hired low ruffians to proceed to the United States, and recruit men from the Five Points and gin-shops, to enter our Foreign Legion. Our Ambassador at Washington, our Governors of Canada and Nova Scotia encouraged those infamous and disgraceful proceedings, in open violation of the neutrality laws of the United States. We must, forsooth, send over our Colonial braggarts into the States to organize so admirable a plan. Joe Howe, and other of his brawling fraternity, were dispatched post-haste by that stuck-up samplo of a Governor, Sir Gaspard le Marchant—more fit for governorship of a military prison than a British maritime power—to sow the seeds of a very 'hell broth' between us and the citizens of the United States.

"Instead of our bouncing and flustering, it is the Government at Washington that has the right to demand the instant recall of our Ambassador at that Court, and also the recall of the Governor of Nova Scotia; for it is those two worthies who have nearly embroiled England and America in a revolting struggle."

PRAYER.—Some one has quaintly but truly said, that "God looks not at the oratory of your prayers, how eloquent they are; not at their logic, how methodically they are; but He looks at their sincerity, how spiritual they are."

Miscellany.

THE CALUMNIATED.

I saw a meek-browed man,
Threading the busy, jostling haunts of life,
Wending his peaceful way—avoiding strife—
Yielding when strife began;
Gentle in bearing, yet he firmly trod
In deed, in word, in form, a man of God!

I watched the meek-browed one—
Sweeping with inward gibe and sneer, the crowd
Gathered around his path—then, hissed aloud
What all but fiends would shun;
A tempest of vile words and taunts and jeers,
That filled my soul with grief and angered fears.

I marked his tortured look;
His frame, one instant lost its calm control,
As though an ice-bolt crushed upon his soul!
Muscle and keen nerve shook!
His spirit writhed, as if 'twould break away
The *chain* that linked it to unhappy clay!

I saw a glance of fire
Glimmer one moment from his soul of pain—
Passion's wild struggle! Then came peace again.
With eye bereft of ire—
Sustained of God—he looked the wolves at bay;
And they o'erpowered, abashed, did cower away!

I mingled in the throng,
After the meek one's steps had passed away,
Seeking within each motley group, why they
Had done such cruel wrong;
Why pierce him thus, as with a sharpened dart,
Or poisoned jav'lin, to the inner heart?

They foully cursed his name;—
Decked him all out with robes of darkest hue:—
A hypocrite—shuffler—dastard—most untrue
In friendship. He made game
Of honor, religion, all the choicest ties
That beautify the earth—and told huge lies!

Such were their truthless words!
False as those spoken by the ruthless clan,
That once belied the blessed Son of Man!
I left those shameless herds;—
Away to solitude, in grief I crept—
This, this earth's nature—oh! I could have wept!

* * * * * * * *

Behold upon the hight!—
Far from the Babel-haunts where rude men hive,
And crime, and foul corruptions sprout and thrive,
And earth is swathed in night—
A form of majesty is standing there,
With hand and eye upraised—and temples bare!

See!—the ecstatic gaze—
The perfect grace of that proud, swelling form!—
Fit to embrace the wave, or breast the storm,
Or brook the tropic's bluze!
Approach ye nearer yet, and closer scan—
Wonders of earth! It is the meek-browed man!

Away from those rough men,
A new and joyous life to him is given!
We saw him once, borne down—the chain was riven
That bound and galled him then!
Oh! wondrous change! unfettered as the light,
He stands a monarch in unchallenged right!

No pallid lip is here—
No quiv'ring nerve—no eye oppressed with gloom,
Nor wearied spirit longing for the tomb—
No anger, doubt, nor fear!
Wrapped in God's glory—standing thus apart—
In unison are *his* and *nature's* heart!

Oh! yes; behold him now!
The light of Genius—though his divine—appear,
Beaming with wondrous pow'r, in tracings clear
Upon his noble brow!
In spiritual freedom lifted from the earth,
He feels—he knows—he *claims* his higher birth!

Now strength is to his soul!
When he again shall tread the thorny path,
And breathe the dust—he'll feel that scorn and wrath
Can never more control.
Music—the earth—the air—the beauteous sky—
Nature—are his forever and for aye!

Nature says—Come to me,
All ye who cannot *be*—nor *act* with—*slaves!*
Come to my mist-crowned hills and mountain caves;
There thou art *Great*, and *Free!*
There all is thine—below, around, above!
There *wed thyself* to Beauty, Truth, and Love!

Ship Sweden, Pacific Ocean, July 15, 1849. C. M. F.

OCCUPATION.—What a glorious thing it is for the human heart? Those who work hard seldom yield themselves entirely up to fancied or real sorrow. When grief sits down, folds its hands, and mournfully feeds upon its own tears, weaving the dim shadows, that a little exertion might sweep away, into a funeral pall, the strong spirit is shorn of its might, and sorrows become our master. When troubles flow upon you dark and heavy, toil not with the waves, wrestle not with the torrent; rather seek, by occupation, to divert the dark waters that threaten to overwhelm you into a thousand channels which the duties of life always present. Before you dream of it, those waters will fertilize the present and give birth to fresh flowers that may brighten the future—flowers that will become pure and holy in the sunshine which penetrates to the path of duty in spite of every obstacle. Grief, after all, is but a selfish feeling, and most selfish is the man who yields himself to the indulgence of any passion which brings no joy to his fellow man.

HELP ONE ANOTHER.—Sir Walter Scott wrote: "The race of mankind would perish did they cease to aid each other. From the time that the mother binds the child's head, till the moment that some kind assistant wipes the death damp from the brow of the dying, we cannot exist without mutual help. All, therefore, that need aid, have a right to ask it of their fellow mortals; and no one who has it in his power to grant, can refuse without incurring guilt."

LINE ON THE FUNERAL OF DR. CHALMERS,
Buried in the new Cemetery of the Grange. June 4th, 1847.

[THE following beautiful lines are from the Edinburgh Witness. They are a fitting tribute to the mighty dead:]

Go forward to thy silent home, thou clay,
Thou casket of the diamond reft away,
Thou scabbard, whence the sharpened steel has fled,
Thou lonely tenement, thou mighty dead!
A nation's blessing cheered thy living way,
A nation's tears attend thy path to-day,
Where thronging multitudes beside the tread
And severed creeds are meeting round thy bed.

No minstrel's chaplet bound thy lofty brow;
No mighty breather-out of song wert thou;
No conquering warrior on his bay-wreathed bier,
No ruler of a realm, nor armined peer.
No! to thine honored grave thou goest down,
But locks of silver are thine only crown;
A lowly worshipper, a faithful pastor,
A child-like servant of thy heavenly Master;
The pillar of thine own beloved fane,
The wrencher of its chill and crushing chain,
The master-spirit of thy native land,
The famed, the loved of many a distant strand.

And now, unconscious of each honor paid,
Thy noble brow must in the dust be laid;
Thou goest, heedless of each heaving breast,
Midst weeping thousands, to the place of rest:
Not where the mighty of the earth are sleeping,
Not where the escutcheoned vault proud dust is keeping:
Near the green shade of trees we lay thine head,
Hallowing a new-made city of the dead!

Oh! lovely gooth down the sun at eve,
When crimson clouds their glorious garlands weave,
When golden streamlets shod their parting light,
Till the bright morrow of a summer night.
Thus set thy son; no tempest's power
Darkened the brightness of thy setting hour,
No pang, no struggle crossed thy mighty frame:
Swiftly the chariot for the prophet came,
And from thy finished work, thy goal-won race,
Bore thee to fill thy blissful, blood-bought place!

And oh, our God! although we mourn that Thou
Hast torn our father from his children now,
Yet for his joy we thank Thee! And for all
His glorious years of combat on the wall
Of warring Zion, champion of the breach,
Where Thou thy buckler arm to him didst reach,
We thank Thee, Lord! And for each eagle flight,
His vision-winged flashing words of light,
For each bright proof he gathered from the sky,
Of love divine—of inspiration high;
And for his work in every land enshrined,
The living labors of a deathless mind,
We thank Thee, Lord!

And for his large, deep heart,
Where world-wide love bore undivided part;
For each wise council, each electric word,
Each kindly glance which oft our spirits stirred;
For the bright hope that soon in heaven we'll meet him,
And there, in presence of beloved ones, greet him,
We thank Thee, Lord! And for the advent day,
When each blest sleeper rises from the clay:
When he who from our weeping eyes hath gone,
Shall come with Jesus, glorious robes to don;
When to its casket cometh back the gem,
To deck Immanuel's blood-bought diadem;
When to its jewelled sheath returns the sword,
With brightened blade—we thank Thee, risen Lord!

SILVER MINE AT SING SING, N. Y.—The N. Y. Tribune gives an account of a silver mine at Sing Sing, of the existence of which the public have probably been entirely unaware. It is located just above the prison at Sing Sing, and the entrance to it is not more than twenty feet from the line of the Hudson river railroad. The existence of silver in this locality was discovered about the year 1770, by an ancestor of certain families now residing in Sing Sing, while engaged in fishing along the shore. He observed what appeared to be a mass of silver cropping out from a rock or limestone formation, and upon breaking off the piece, found it to be a rich specimen of the precious metal. Concealing the fact of this discovery, the finder subsequently attempted to explore beneath the surface by means of a powder blast. Unfortunately, through the very agency by which he expected to line his pockets, it eventuated that his hopes themselves were *blasted*. It seems the *report* spread, and publicity snatched from the poor fisherman the unknown treasures of this argentiferous Golconda.

The colonial government soon took the matter in hand, and traced to a considerable depth what proved to be a rich vein of silver. A stamping and smelting house was erected, and some of the oldest inhabitants of the village relate that they have conversed with those who had frequently seen at these works silver to the amount of several hundred weight. The revolutionary war put a stop to the operations, however, and the works were suffered to remain idle until about a year ago, when a company of citizens, with apparently no more foresight than capital, re-opened the mine, and attempted to rival the success of their predecessors. After bringing a steam engine to the spot, and pumping away vigorously for a time, their finances, through gross mismanagement, were exhausted simultaneously with the water. At this juncture the celebrated pill maker, Dr. B. Brandreth, purchased the whole establishment, and is now vigorously engaged in an effort to obtain the precious metal. Although he has secured some rich specimens, it is thought that his speculation will be an unsuccessful one. The original productive yield of this subterranean soil is beyond question; but it is probable that its veins have either been lost, or, in a measure, exhausted.

The main shaft of the mine is almost perpendicular, and reaches to a depth of one hundred and twenty feet below tide water. The galleries or chambers are nine in number, and vary from thirty to one hundred feet in length, extending in every direction, some of them to a considerable distance under the Hudson.

Ladies' Department.

Eugene to Alice.

WE publish the annexed letter from Eugene, and regret that one so much enraptured with the beautiful writings of Alice, should be doomed to such bitter disappointment as we are compelled to present to him. Alice is worthy all the compliments he has paid to her for the "beauty of her mind alone," and this should always be the standard of man's worship. Most unfortunately for "Eugene," *he came too late*—"Alice" *is engaged;* and therefore our friend Eugene must bear as well as he can the hard lot of disappointment we communicate to him. However much we shall grieve for him, we hope to hear from him often:—

YUBA CITY, Dec. 20, 1855.

MESSRS. EDITORS: I am only one of your subscribers for the FARMER, but, like many others, I have noticed the rare genius of your correspondent "Alice," who bids fair, ere long to become a distinguished literary character. The fair Alice may be justly ranked among the most gifted ladies of California. Her talent, and her taste in composition, have given her a reputation of which every true Californian may well be proud. She has been called, and not unjustly, the Mrs. Sigourney of California. That true womanly spirit of heavenly love breathes in all her writings. They are not only neat and chaste, but the impress of inspiration is there also. Her descriptions are very fine, and perfectly true to nature. Alice has powerful feelings, a vivid imagination; therefore, whatever her prolific pen touches, she adorns. I concluded to send this note of inquiry to your editorial chair, inasmuch as I am a bachelor, I would inquire through the medium of your worthy paper, if "Alice" be single? of her residence? home personal appearance? I know nothing of whether she be old or wrinkled; but of one thing I'm certain—Alice's *heart* is young. I now write to find out her abode, that I may see her face to face; for I think the "Fair Alice," as the literati style her, must be a charming creature. I picture in my imagination she must be beautiful—from whence those bird warblings come—a beauty that springs from the heart, from benevolent and pure affections, which would give to her eyes, her looks, her voice, her manners, such angelic charm that one could not look upon her without exclaiming—

> She was nearest Heaven of all earth I knew,
> And but simple adoration was her due.

I think she must have a heart warm and genial as a May day, with a combination of courteous manners which would make her all that would be desirable. With me, the past has been an emptied flask; the rich future a bottle yet uncorked, and can I say—Alice, share it with me? I hope my simple lines will be answered; until then my mind will remain in anxious doubt.

Your humble servant, EUGENE.

A Word to Young Mistresses.

Do not be in a hurry, directly you are married, to hire a kitchen-ful of servants. Consider first what your means will properly allow, and what will really add to domestic comfort, rather than what will gratify your own regard to appearances.

Your parents may have been prosperous and possessed of sufficient means to justify their keeping many servants; but that does not make it either necessary or right that you should do the same. Perhaps they did not when they were setting out in life, which may be one reason why they can afford to do it now. At any rate, their doing so does not give you a claim to the same indulgence, (if such it may be called), as it is your husband's circumstances, not your parents', that you are now to consider. Not a few unsuccessful young tradesmen may trace their difficulties to a want of proper caution in this respect. And who is there that would not shrink from the idea of her husband being classed among the unsuccessful? Let the young wife remember, then, that much of her husband's success is in her power.

As to the necessity of keeping more than one servant—I will repeat a rough rhyme which I met with the other day, when amusing myself by looking over an old copy-book, wherein my great-great-aunt had been taught, at one and the same time, good writing and a variety of wholesome truths:—

> "When I a servant had, I had one then;
> When two—I had but half a one; and when
> I had three servants—I had none at all.
> Thus was I served by one, two, three, and all."

This was the oft-repeated writing copy of a little girl in the year 1721. Perhaps it then proved a puzzle to her; but no doubt she afterwards understood it very well, for she lived to a good old age. And those young ones who cannot understand it now, may ask an explanation of some elderly friend, and well will it be if they profit by the experience of others, and so avoid the countless troubles induced by needlessly adding to their expenses and responsibilities in the unnecessary hire of servants.

The copy would seem to express that a mistress may be better served—that is have more real help, from only one servant than from two or even three.

No doubt this is often the case—especially where the mistress herself is young and inexperienced. It is not uncommon for a young mistress to hire a young servant, with the idea of "bringing her up to her own way" and so forming a servant that she will like." Ninety-nine times in a hundred this scheme proves a failure; for if the mistress is successful in training a girl, the most frequent ending is, that she wishes to exercise her newly-acquired knowledge in a "better place," and the mistress is left to train another, if she chooses. Generally, however, mistress and maid being both practically inexperienced, they blunder on together for a time amidst much discomfort, until the maid thinks she has too much to do, and the mistress is persuaded to hire a second to help the first, and soon finds that the third is wanted to help them, and that with them all she has no addition of ease, but that discomfort and expenses are greatly and unjustifiably increased.

How is the mistress to extricate herself from such a maze? She must believe that it is not more hands, but knowledge and management that is needed, and that one capable servant would be of more use to her than three, whom she cannot guide, and who cannot guide themselves.

If, on commencing housekeeping, you feel that you are rich enough to hire one servant, choose a good one: she will be less expensive and more useful than one who needs to be taught every thing.

If your means appear to warrant your hiring two, consider whether the second is likely to prove an addition to your comfort, and whether the money that would be so spent might not be more wisely laid by for a rainy day.

If you are to think twice before taking a second, think many times before you have a third. Remember that not only expenses, but responsibilities and cares, are necessarily in some measure increased to the mistress by each servant that she has, and that, as our copy tells us, she may be better served by two than by three, and better by one than two.

Kissing.

> "For me, I kiss but very few,
> But with that kiss my heart goes too;
> I hold a very Judas he
> Who'd kiss but in sincerity!"

WE are born to kiss and to be kissed. It comes as natural to us, as marriage does to a woman. Why, sir, I can remember kissing the family babies when I was yet in my cradle, and my friend, Sir Thomas Lawrence, did himself the honor to paint me at my favorite pursuit, as you know by that exquisite picture in my library. The very first day I went to school, I kissed all the dear little angels there. I wasn't fairly out of my alphabet, when I used to wait behind the pump, for my sweetheart to come out of school, and as soon as I saw her, I made a point of kissing her, just to see how prettily she blushed. As I grew older, I loved to steal in, some summer evening, on her, and kiss her asleep, on the sofa; or if she were awake, and the old folks were by, I'd wait till they both got nodding, and then kiss her, all the sweeter for the slyness of the thing. Ah! such stolen draughts are delicious.

I wouldn't give a sous to kiss a girl in company, and I always hated copenhagen, pawns, and your other kissing plays, as I hope I hate the devil. They had a shocking custom when I was young, that everybody at a wedding should kiss the bride, just as they all drink, in the same free and easy way, out of the one big china punch bowl; but the practice always hurt my sensibilities; and I avoided weddings as I would avoid a ghost, a bailiff, or any other fright. No, no—get your charmer up into a corner by yourselves; watch when every one's back is turned, then slip your arm round her waist, and kiss her—with a long sweet kiss, as if you were a bee sucking honey from a flower.

Nor can one kiss every girl. I'd as lief take ipecacuanha as kiss some of your sharp-chinned, icicle-mouthed, lignumvitæ-faced spinsters. Why, one couldn't get the taste of the bitters out of his mouth for a week! I go in for your rosy, pouting lips, that seem to challenge every one so saucily—egad! when we kiss such at our leisure, we think we are in a seventh heaven. I once lived on such a kiss for forty-eight hours; for it took the taste for commoner food out of my mouth "intirely," as Powers used to say.

Oh, how I do love the wide, dark entries one finds in old mansions, where one could catch these saucy little fairies, and before they were well aware of your presence, kiss them so deliciously. There's kissing for you! Or, to go upon a sleigh ride, and when all, save you and your partner, are busy chatting—while the merry ring of the bells, and the whizzing motion of the vehicle cause your spirits to dance for very joy—to make believe that you wish to arrange the buffalo, or pull her shawl up closer around her, and then stealing your face into her bonnet, to kiss her for an instant of ecstacy, while she blushes to the very temples, lest others may catch you at the sport. And then, on a summer eve, to row about the bosom of a smooth lake, and while one of the ladies sings and all the rest listen, to snatch a chance, and laughingly kiss the pretty girl by your side, all unnoticed except by her. Or to sit beside a charmer on a sofa, before a cozy fire, on a bitter winter night, and fill up the pauses of the conversation—you know, by drawing her to you and kissing her. But, more than all; when you have won a blushing confession of love from her you have long and tremblingly worshipped with all a boy's devotion—is the rapture of the kiss that you press boldly to her brow, while her warm heart flutters against your side, and every pulse in your body throbs with an ecstacy that has no rival in after life. Ah, sir, that kiss—that kiss. It is worth all the rest.

But a word as to the [illegible] of taking. Delicacy in this [illegible] of the soul of things. Don't, [illegible] of Jupiter [illegible] Don't [illegible] with a [illegible] Kiss a girl [illegible] or, [illegible] of the [illegible] and [illegible] her [illegible] Don't [illegible] [illegible] [illegible]

from the flask. Ah, then you get it in all its airy and *spirituelle* raciness. If you wish a sentimental kiss—and after all, perhaps they are the better—steal your arm around her waist, take her hand softly in your own, and then tenderly drawing towards you, kiss her as you might imagine a zephyr to do it. I never exactly timed the manœuvre with a stop watch, but I have no doubt that the affair might be very handsomely managed in ten seconds. The exact point where a lady should be kissed, may be determined by the intersection of two imaginary lines, one drawn perpendicularly down the centre of the face, and the other passing at right angles through the line of the mouth.

DIED.

At Calusa, on the 16th inst., Christopher C., infant son of John J. Lane. (Oregon papers please copy.)

He has faded from the earth like a flower that withers in its bloom and ripens not into fruit.

SPECIAL NOTICES.

☞ JOSEPH GILLOTT'S STEEL PENS —
For sale by all Stationers and Booksellers throughout California, and to the trade at the Manufacturer's Warehouse,
No. 91 John street, New York,
where a large stock of these popular Pens, of standard excellence may constantly be found.
HENRY OWEN,
v3-22 3m Sole Agent for the United States.

☞ Sands' Sarsaparilla.—It seems almost unnecessary to direct attention to an article so well known, and so deservedly popular, as this preparation, but patients often who wish to use the extract of Sarsaparilla are induced to try worthless compounds bearing the name, but containing little or none of the virtue of this valuable root; and we think we cannot confer a greater benefit on our readers than in directing their attention to the advertisement of the Messrs. Sands' in another column. The bottle has been enlarged to hold a quart, and those who wish a really good article will find concentrated in this all the medicinal value of the root. The experience of thousands has proved its efficacy in curing the various diseases for which it is recommended.
Agents—HENRY JOHNSON & CO.,
v4-23 1m 146 Washington street, San Francisco.

☞ An Invaluable Medicine.—*From the Hon. Solomon Foote, Member of Congress from Vermont.*
WASHINGTON, D. C., June 1.
Dr. Geo. B. Brown,—Dear Sir: In your note of this morning, you ask "for an expression of my opinion in regard to your medicine, called *Oxygenated Bitters.*" It affords me pleasure to state, that from the experience I have had in curing a severe attack of Dyspepsia in my own family, and from the wonderful effect which it has produced in other and more severe cases, arising in families of members of Congress with whom I am acquainted, I think it an invaluable medicine, and hope that such circulation will be given to it as will bring it within the reach of all who are afflicted with that distressing malady.
Respectfully yours, S. FOOTE.
SETH W. FOWLE & CO., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.
Agent for Sacramento—C. MORRILL. 26-2w

[From the Editor of the New York Mirror, Aug. 9, 1853.]

☞ A Perfect Cure, and no Mistake.—About four weeks since, one of the compositors of this office was suffering so badly from a cough that he was unable to sleep nights, and too weak to stand at his case. He became very pale and thin, and gave symptoms of falling a victim to quick consumption. We recommended him various medicines, which had no effect. Finally, we gave him one bottle of WISTAR'S BALSAM OF WILD CHERRY. It afforded him immediate relief, and he is now a well man, and not the slightest symptom of a cough. These are facts, and further particulars may be learned at this office. We should add that the cough in the above case was accompanied by profuse spitting of blood.
☞ Be sure it is signed I. BUTTS on the wrapper.
Agent for Sacramento, C. MORRILL, corner K and Third streets.
Sold by all Druggists. 26 2w

Removal of "Winn's Fountain Head."
TO
Clay street, Opposite the Plaza.

In many a bottle with *the times*, despite the smoke and din,
The banner of the "Fountain Head" was borne by GEN. WINN.
Unconquer'd through full many a strife—Hard Times and even Slander—
Which clearly proves the General is—an excellent Commander—
And not only can he lead a host, but conquer many foes
That mar our earthly comforts, and add much to our woes;
And hunger—man's great enemy—with this I will begin;
Now who can it subdue, I'd ask, like famous GENERAL WINN.

"The Fountain Head" is on Clay street now—right opposite the Square—
So when you're hungry, call in there, and try the "Bill of Fare."
The General, being a clever Host, will bountifously provide
Each good thing found upon the coast, and many things beside.
The "Horn of Plenty" seems to be, all times at his command—
His creams and pastry can't be match'd in all this golden land;
His fame, as a public caterer, through all the country's spread,
For why, I'd ask, does not know Winn, of Winn's famed "Fountain Head?"

"The Fountain Head" will open, December First, being Saturday,
And General Winn will—conqueror-like—make a glorious display
Of Rockets, Shooting-Stars, and Snakes and other Fire-Works,
As if he were a Russian Host, throwing *Greek fire* 'mong the Turks.
And though he makes a stir outside—within, all will be quiet—
Unless the cut back of knives and forks, on TURKEY makes a riot—
But the General, used to such attacks, his ranks he still keeps full,
And his Larder is as hard to take as was Schastopol.

The General, at the "Fountain Head," will keep all man could wish,
From a yearling porker, roasted whole, down to a little fish;
All kinds of Game, and Meat and Fowl, he daily will prepare,
And many a dish, you cannot find on other Bills of Fare.
He keeps all sort of Pastry and Confections—people eat:
Ice Cream, Sherbet, Iced Lemonade, Tea, Coffee, Chocolate:
He keeps only temperance beverages, as it never will be said—
In exciting drink of any kind by WINN
v4-26 of the "Fountain Head."

DUNCAN & CO.,
J. C. DUNCAN AUCTIONEER.
REAL ESTATE AUCTION ROOMS,
Nos. 150 and 152 Montgomery street.
(In Montgomery Block.)

Having taken the above spacious rooms, we shall devote our entire attention to sales of Real Estate, Stocks, Administrators' and Assignees' Sales, etc., etc.

Intending to transact a strictly legitimate Commission Business, we solicit consignments from our friends and the public.

Our rooms being well adapted to large sales of FURNITURE, consignments of the same will be received. v4-26

Hedges.

THE undersigned, residing on the San Francisquito, two miles from the Mayfield Post-office, in Fremont Township, has *One Hundred Thousand* Osage Orange Plants for Hedging, which he will sell low for cash.

Apply to me on the premises, or to L. PERVOST, San Jose Nursery; or at the Office of the CALIFORNIA FARMER.
v4-2 WILLIAM PAUL.

HORTICULTURAL, &c.

EXCELSIOR NURSERY,
Tenth street, between F and G, Sacramento.

WE would call the attention of the public to the above named establishment, whom may be found a large variety of Fruiting and Ornamental Trees, Vines and Shrubbery, including 50 varieties of Apple, 20 of Peach, 18 of Pear, 12 of Plum, 10 of Cherry, 8 of Nectarine, 4 of Apricot, of Grapes, 10 of Roses—beside Gooseberry, Currant, Strawberry, Almond and Raspberry. Also, Catalpa, Locust, Allanthus, Kentucky Coffee, Acacia, Cassia Pines, Spruces, Cypress, Flowering Almonds, Rose Acacias, White Lilac, Coral Honeysuckles, Azaleas, &c., &c.

The proprietors, conscious that an *examination* of what they offer will satisfy purchasers with the quality and prices of their stock, invite, at all times, the attention of those about to purchase or adorn their grounds.
Sacramento, Dec. 26, 1855. v4-26 3

Smith's Pomological Gardens and Nurseries
On the American River, 2½ miles from Sacramento City.

The stock of Trees offered to the patrons of the above well known establishment this season is immensely large and fine, embracing by far the largest assortment of Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants to be found in any one establishment on the Pacific Coast.

Care and experience in selecting and propagating varieties is always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers. Fruit Trees, fine, vigorous and in every variety, of the following: Apple, Peach, Pear, Cherry, Nectarine, Apricot, Fig, Currant, Gooseberries, Raspberries, Strawberries, and Grape Vines of all the choice kinds. Ornamental Trees, Flowering Shrubs and Hardy Climbers. Among the fine Trees are the following varieties: Elm, Locust, Catalpa, Maple, Laburnum, Weeping Willow, Ash, Ailanthus and China Trees; among the Arbor Vitæ and other Trees and Shrubs, too numerous to particularize.

ROSES in all their classes as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are now in bloom, of the finest varieties, for health and beauty we challenge comparison.

P. S.—BOUQUETS of fine and rare flowers, on hand to order.

Seeds the Growth of 1855.

J. R. RAY, 70 J street, Sacramento, has purchased from Mr. A. P. SMITH his entire growth of Seeds, which, together with some choice foreign importations, constitute the most extensive and desirable stock ever offered on the Pacific Coast.

Fruit and Shade Trees, Flowering Shrubbery, Asparagus and Rhubarb Plants, &c., always on hand or for sale directly from the Nursery. v4-21

Fresh Field and Garden Seeds.

THE undersigned receives constantly, by Express, a large variety of Seeds from one of the best establishments in the States, and purchasers may rely with confidence on the purity and freshness of them. Sold wholesale and retail at the Agricultural Seed Store, corner of California and Sansome streets.

Orders for shipment to any part of the country will be carefully executed.

Address by Post Office or Express.
v4-18 3m J. P. SWEENEY & CO.

1,000 Dwarf Pear Trees,

GRAFTED on Quince Stocks, just received via Panama only thirty days from the Nursery. The above trees were selected by Mr. James Hill, from his Nursery, Somerville, near Boston, are labelled true to their names, and packed in his best manner for this market. The varieties consist of the Bartlett, Rostiezer, Mons. Locuye, Duchess, White Doyenne, Beurre Diel, Madeline, Lecuye, Golden Beurre, Louise Bonne de Jersey, Beurre de Analis, Beurre de Anjo, &c.

Farmers residing out of this city can have them sent by Express, well packed in straw and bundles, to any part of the State. Orders with remittances, by either Expresses, will attended to with dispatch. Price $1 each, (assorted), less per cent in 25 and upwards. BRADSHAW & CO.
v3-24 Cor. California and Battery streets, San Francisco.

PIONEER NURSERY, ALAMEDA.

A. H. MYERS, at the Pioneer Nursery, Alameda, has on hand, for the market this season, at reduced prices, every description of Budded and Grafted Fruit Trees, Vines, etc.,

EMBRACING

Apples—50 best varieties, from one to three years old.
Peach—20 best varieties, from one to two years old.
Pear—10 best varieties, from one to two years old.
Cherry—10 best varieties, from one to two years old.
Also—Almond, Nectarine, Plum, Apricot, Fig Trees, Grape Vines, Currant, Gooseberry and Raspberry Bushes. Four hundred varieties of Strawberry Plants.

Also—Greenhouse Plants and Ornamental Shrubbery.

Terms, Cash..... Orders promptly attended to
A. H. MYERS, Proprietor.

☞ Alameda is Eight miles from San Francisco, and Four Miles South of Oakland.
September 9, 1855. v4-11

Flowers! Flowers!!
GOLDEN GATE NURSERY,
Corner Fourth and Folsom streets.
Office 170 Washington street, San Francisco.

PERSONS desirous of embellishing their gardens or conservatories, will find at this establishment the largest and greatest variety of plants to be found on the Pacific coast. Among which are:

Camelia Japonicas, in 70 varieties; Perpetual Roses of all the classes; fragrant and fancy Geraniums; Passiflora, Heliotropes, Verbenas, Honeysuckles, Abutilons, Myrtles, Oleanders, Jassamines, Fuchsias, Daphnes, Dahlias, Bulbous Roots, Ornamental Shrubbery; and a general assortment of Green House and Hardy Plants.

Orders for shipment to any part of the State will be carefully executed by addressing D. Nelson, 170 Washington street, or the proprietor, Box 1,957 Post-office.
v3-9-3m W. C. WALKER.

NAPA NURSERIES.

THE undersigned would call the attention of purchasers of Fruit Trees to their fine collection now in fit state for planting out. We would offer the present season as follows: 5,000 Apple Trees, 5,000 Pear Trees, 1,000 Quince Trees; with a fine collection of Ornamental Trees, all of which we will sell at a very low rate.

Our Nurseries situated 11 miles from Napa City. All orders addressed to us there, will be promptly attended to, and Trees will be delivered at Napa City *free of charge for freight*, from thence they can be forwarded to any part of the State, agreeable to instructions given us.

We hope to receive a share of patronage.
v4-21 HAVEN & BAKER, Napa Nurseries.

GENTEEL BOARD.

FOUR Gentlemen, who may desire *board only*, in a genteel private circle, can learn of an opportunity where they can find a "Home" of quiet, social and intellectual comfort. Only those who desire such a place need apply.

Something New and Wonderful in the CALIFORNIA ARTS.

JAMES W. JOHNSTON, Daguerrean Artist, southeast corner of the Plaza, has the pleasure of announcing to the public, from whom he has received many substantial favors, that he has just completed the *enlargement of his Gallery*, and combined with it several magnificent features to the Arts here before entirely unknown on the Pacific Coast. He is now prepared to execute in superior style—

1st. Daguerreotypes, as heretofore, on metallic plates, with or without coloring.

2d. Stereoscope Likenesses and Views from Nature.

3d. Daguerreotypes on *Glass* and *Paper*—the most splendid and remarkable discovery of the age. These Miniatures are susceptible of being worked up by the brush of the Painter, to embody all the freshness and naturalness of life, at about one-half the cost ordinarily attending miniatures on ivory, which they far surpass in correctness of delineation. The business has now been commenced at Johnson's Gallery, for the first time in California, where Ladies and Gentlemen are invited to call and examine specimens.

Connected with Johnston's Rooms is a Portrait Gallery, also, where Mr. THOMAS S. OFFICER, late of New York, is prepared to execute Portraits on Canvass in elegant and life-like style.

☞ Call and behold the latest triumphs of Art. v4-15

Benicia Iron Works.

STEAM ENGINE, BOILER AND MACHINE SHOP.—This establishment is now in successful operation, and offers to the public facilities equal to any in the United States, for manufacturing or repairing Steam Engines of the largest size, Boiler Wares, Brass Castings, Mill Gearing of the most approved patterns, Bloom Iron, Cast Iron Columns, Window Caps or entire fronts.

Contractors and others will do well by patronizing this establishment, as their work will be executed with greater dispatch and at lower prices than any other manufactory in the State.

The company have extended their Pier, and erected a large crane for the accommodation of their customers.

For further particulars apply to
FORBES & BABCOCK,
Agent P. M. S. Company,
corner Leidesdorff and Sacramento streets, San Francisco;
or to CHARLES FRENCH,

S. P. Ruggles' Power Press Manufacturing Co.
[Incorporated February 8, 1854.]

THE above named Company having purchased of the well known inventor, S. P. Ruggles, Esq., his Patents connected with the Printing Business, are now manufacturing under Mr. Ruggles' immediate superintendence, the following machines, viz.:

	Size of Form in Inches.
Half Sheet Job Engine	18 by 12
Half Sheet Combination Engine	18 by 12
Quarto Sheet Job Engine	12½ by 9
Quarto Sheet Combination Engine	12½ by 10
Half Sheet Cap Job Rotary	10½ by 7¼
Card and Bill Head Rotary	7 by 4½
Diamond Rotary Card Press	4½ by 3
Circular and Dating Hand Press	5 by 3
Embossing Press	18 by 10
Cast iron Imposing Table	26 by 22
Shaving Machine, shaves	27 by 16.
Paper Cutter	cuts 27
Card Cutter, improved	cuts 25
Bookbinders' Rotary Shears	cuts 25
" " larger size, in proportion.	

Those presses are considered by the Job Printers as the best adapted to their wants of any machines ever manufactured. All orders addressed to their agent, M. B. BIGELOW, 152 Washington street, Boston, Mass., will be promptly attended to.

Mr. Ruggles has also sold to the CUTTING MACHINE MANUFACTURING CO., his Patent ROTATING SHEARS, for cutting sheet tin, iron, copper, brass, zinc, steel, nail and boiler plates, and all other metallic sheets. This is entirely a new process for cutting metals, and is destined to supersede all other machines for that purpose.

ANSON HARDY, Agent,
152 Washington street, Boston.

And to a third company, called the BOSTON HAND STAMP CO., he has sold his patent for a very ingenious Flexible Hand Stamp, whereby perfect impressions may be made at the rate of sixty per minute, the die adapting itself to the surface to be printed on. A very convenient article for all business men.
v4-12 1y M. B. BIGELOW, Agent, Boston.

Dancing and Waltzing Academy.

MR. C. C. CLAPP takes pleasure in announcing to the ladies and gentlemen of this city, that his Academy is now open for the reception of Pupils, at the Assembly Rooms, K street, between Fourth and Fifth, recently known as Concert Hall. Days of Tuition, TUESDAYS and SATURDAYS, for beginners only.

All the most Fashionable Dances, both of Europe and America, are taught in this Academy. Private lessons given, if required. For terms, &c., apply on the above named days, or by note through Post Office. v4-21

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK Physician to Q[illegible] of the most [illegible] in [illegible] C[illegible], thus says: "[illegible] hundred a brute [illegible] is a mass of debris; [illegible] illustrated by the [illegible] and other [illegible] DR. CARSWELL, who investigated [illegible] by the daily as any [illegible] my hair, perhaps, never affords [illegible] in proof of the curability of a disease [illegible] cure [illegible]" (pulmonary consumption.)

It Is no Fiction.

The [illegible] used by men who have demonstrated what [illegible] me, in a crowded hospital, and in the [illegible] diseases [illegible]. They are from men who have a peculiar motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

DR. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]
Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.
Signed I. BUTTS on the wrapper.
SETH W. FOWLE,
Proprietor, Boston, Mass.

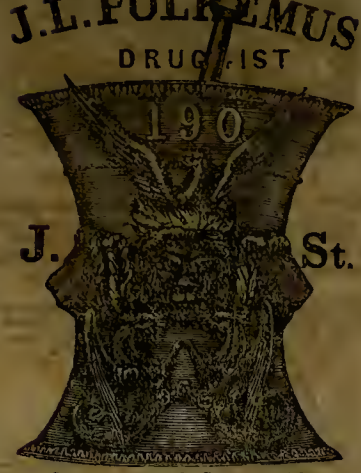
SANDS' SARSAPARILLA.
IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of *Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Bilc, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.*

THE value of this medicine is now widely known, and every day the field of its usefulness is extended. It is approved, and highly recommended by Physicians, and admitted to be the most powerful and searching preparation from the root, that has ever been employed in medical practice. Its operation extends to the remotest parts of the system, and consists in removing diseased action to the absorbing and secreting organs. In man, Nature seldom effects, unassisted, the cure of any virulent disease, but requires the aid of a stimulant, alterative, or antiseptic medicine. In diseases of the skin and flesh, a combination of these three classes of medical agents is highly desirable. All these properties are combined in this preparation; and instead of operating successively upon the system, as they must necessarily do when taken separately, they operate simultaneously, and in perfect harmony when administered in this form. Its tonic property strengthens the digestion, and improves the appetite. Its alterative tendency carries off the accumulations of morbid matter,—and its antiseptic influence neutralizes the virus, by which the disease is fostered. Its uniform success in curing and relieving the various diseases for which it is recommended, is established by a multitude of attested facts.

From the Army.



MONTEREY, Cal., Jan. 18, 1850.

MESSRS. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, hoping it may lead some other unfortunate beings to try its effects, and that they may be benefitted as I have been. I arrived here by the overland route, about the first of October last. A few days after I was first attacked with a very disagreeable eruption of the skin, which my physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine at home, I purchased three bottles, which had the desired effect of removing my difficulty entirely. With high regards, yours, &c.,
J. H MILLER, Lieut. U. S. A.

Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, 100 Fulton street, corner of William, New York. Sold also by Druggists generally throughout the United States and Canadas. Price $1 per bottle; six bottles for $5.

For sale by Henry J. Bowen & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-12 3m

v4-25 tf BOSTON AND WORCESTER.

ALBANY AGRICULTURAL WORKS,
ON HAMILTON, LIBERTY AND UNION STREETS;
WAREHOUSE AND SEED STORE,
No. 52 State Street, Albany, N. Y.

The Proprietors of the above-named establishment being the sole owners and manufacturers of
EMERY'S PATENT HORSE POWER, &c.,
☞ ALL ARRANGEMENTS WITH OTHER PARTIES FOR THEIR MANUFACTURE HAVING EXPIRED
have formed a new Copartnership, under the firm name of

EMERY BROTHERS,

and will continue the manufacture and sale of AGRICULTURAL IMPLEMENTS and MACHINERY, as heretofore, at the old stands of EMERY & CO. By this arrangement the united efforts, and interest of the Brothers, long known to the public, are united, and no exertions will be spared to meet the wishes of those dealing in and using the class of implements they manufacture—their leading branch being the manufacture of the justly celebrated

Emery's Patent Changeable Geered Railroad Horse Powers,

with the machines to be propelled by it, as Threshing Machines, Saw Mills, and Machinery generally.
These Powers having been submitted repeatedly to the most severe tests and trials to determine their relative merit and utility with those of every known manufacturer, have without exception been awarded the highest prizes for superiority—among which were the following:

N. Y. STATE AGRIC'L SOCIETY, 1851, 1853, 1852, 1851, 1850	MARYLAND STATE AGRICULTURAL SOCIETY, 1853
OHIO STATE BOARD OF AGRICUL., 1854, 1853, 1852, 1851	MISSOURI STATE AGRICULTURAL SOCIETY, 1853
MICHIGAN STATE AGRICUL'L SOCIETY, 1853, 1852, 1851	AMERICAN INSTITUTE, 1852, 1851
INDIANA STATE AGRICULTURAL SOCIETY, 1853	NEW YORK CRYSTAL PALACE, 1853
ILLINOIS STATE AGRICULTURAL SOCIETY, 1853	CANADA PROVINCIAL SOCIETY, 1852, 1851
PENNSYLVANIA STATE AGRICULTURAL SOCIETY, 1853	CONNECTICUT STATE AGRICULTURAL FAIR, 1854

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 224 bushels of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both kinds of Powers, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. In the crops be extraordinarily heavy or light, greater or less results will follow.

These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by this Circular, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and full purchase money refunded if not found acceptable to purchasers.

The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, may hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.

They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery, Implements and Seeds, which are all new and of the most approved and complete kinds extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.

The attention of a discerning public is solicited to our present stock of goods, before selecting and purchasing the coming season.

Mathematical Instruments, &c.

WM. [illegible]

Varieties.

We open the hearts of others, when we *open our own.*

Of our fourteen Presidents, not one was a citizen of a great city!

Were it not for the tears that fill our eyes, what an ocean would flood our hearts.

If we can still love those who have made us suffer, we love them all the more.

A Western editor asks the following question: "If a fellow has nothing when he gets married, and the girl has nothing, is her things hizzen or his things hern?"

Mirth is like a flash of lightning, that breaks through a gleam of clouds, and glitters for a moment; cheerfulness keeps up a kind of daylight in the mind and fills it with a steady and perpetual serenity.

A gentleman having occasion to call on a famous writer, found him at home in his writing chamber. He remarked the great heat of the apartment, and said it was "as hot as an oven." "So it ought to be," was the reply, "for it is here that make my bread."

A gallant was lately sitting by the side of his beloved, and being unable to think of anything else to say, asked her why she was like a tailor? "I don't know," said she, "unless it is because I am sitting beside a goose!" Exit, gallant, with a mitten pinned to his coat pocket.

A Delicate Fabric.—The present Empress of the French has a dress which weighs but *one ounce*, woven from the fibre of a plant, one mile of which weighs but *five grains!* This corresponds well with the proverbial *lerity* of the French character—says an exchange.

Interest.—Rev. H. Ward Beecher, in a late letter to the New York Independent, thus gives his opinion on farming upon borrowed capital, and one of the best definitions of *Interest* that we ever read: "No blister draws sharper than *interest* does. Of all industries none is comparable to interest. It works day and night, in fair weather and in foul. It has no sound in its footsteps, but travels fast. It gnaws at man's substance with invisible teeth. It binds industry with its film, as a fly is bound upon a spider's web. Debt rolls a man over and over, binding him hand and foot, and letting him hang upon the fatal mesh until the long-legged interest devours him. There is no crop that can afford to pay interest money, of a farm. There is but one thing raised on a farm like it, and that is the Canadian thistle, which swarms new plants every time you break its roots, whose blossoms are prolific, and every flower the father of a million of seeds. Every leaf is an awl, every branch a spear, and every single plant is like a platoon of bayonets, and a field full of them is like an armed host. The whole plant is a torment and a vegetable curse. And yet a farmer had better make a bed of Canada thistles, than attempt to lie at ease upon *interest.*"

PERUVIAN FEBRIFUGE,

FOR THE PREVENTION AND CURE OF

FEVER AND AGUE,

Intermittent and Remitent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THE usual method of administering tonics produces only temporary relief, merely breaking the chill without removing the disease; but it is necessary to relieve the liver and other organs of the unhealthy action, on which the illness of the patient depends. This can be safely, speedily, and effectually accomplished by this valuable preparation; and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians, with the most signal success. In all climates where bilious and remittent fevers prevail, this remedy will be found invaluable, and no persons traveling through, or residing in, infected and marshy districts, should be without it, as a few doses will effectually counteract the poisonous and miasmal influence arising from such location, by imparting activity and vigor to the biliary organs, and thus prove a *sure preventive* against an attack of Chills and Fever.

The following are selected from the numerous testimonials received, showing the superiority and efficacy of the Peruvian Febrifuge, not only in cases of long standing, but where other remedies had failed:

Flatbush, King's Co., N. Y., April 1, 1854.

Messrs. A. B. & D. Sands: Gentlemen,—I have much pleasure in informing you that I have been entirely cured of the Fever and Ague by the use of your Peruvian Febrifuge, after suffering with it for over two years, and trying all the best known remedies without success. The Chills could not be broken by using any other medicine, and I almost despaired of a cure; but a neighbor who had been cured by your Febrifuge recommended me to try it, which I did, and was entirely restored by using less than one bottle, and have had no return of it since. Very respectfully, MICHAEL COX.

Gowanus, Long Island, N. Y., April 4, 1854.

Messrs. A. B. & D. Sands: Gentlemen,—Myself and two of my children were afflicted with Fever and Ague, more or less for about two years, and tried various medicines without any benefit. In October last we were persuaded to use your Peruvian Febrifuge, one bottle of which cured us; and we have not been troubled with it since. I can recommend it to others with the greatest confidence—having known of several cases which have been cured by it after every other medicine failed.

Respectfully yours, M. RAWL.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & Co., Sacramento. v4-19 3m.

MEDICAL.

DR. GUYSOTT'S IMPROVED

Extract of Yellow Dock and Sarsaparilla

Is acknowledged to be the best Sarsaparilla made, as is Certified by the Wonderful Cures it has performed.

☞ Remember this is the only True Original Article.

This Medicine, when used according to the directions,

Will Cure Without Fail,

Scrofula, or King's Evil, Cancers, Tumors, Eruptions of the Skin, Erysipelas, Chronic Sore Eyes, Ringworm, or Tetter; Scald Head, Rheumatism, Pains in the Bones and Joints, Old Sores and Ulcers, Swelling of the Glands, Syphilis, Dyspepsia, Salt Rheum, Disease of the Kidneys, Loss of Appetite, Disease arising from the use of Mercury, Pain in the Side and the Shoulders, General Debility, Jaundice, and Costiveness.

The Best Female Medicine Known.

The Yellow Dock and Sarsaparilla is peculiarly adapted for females of delicate health, resulting from irregularity of menstrual discharges, and other diseases peculiar to their sex. We assure the afflicted, that a bottle or two of DR. GUYSOTT'S EXTRACT OF YELLOW DOCK AND SARSAPARILLA will at once regulate those difficulties and renew the natural energies.

Syphilis, Scrofula and Diseased Blood.

DR. GUYSOTT'S IMPROVED EXTRACT OF YELLOW DOCK AND SARSAPARILLA is a true specific. The proprietors have in their possession over one hundred certificates of the most extraordinary cures effected by it. We can safely say—TRY IT. It revives the drooping constitution, eradicates all bad humors from the Blood, and by its tonic properties restores the invalid to life and vigor. As a spring and summer medicine it has no equal. Its singularly efficacious action on the blood, its strengthening and vivifying action on the system, stands pre-eminent above all other Sarsaparillas. If you would have the rose brought back to your cheek, a clear, healthy and transparent skin, and life and vigor infused through the system, take Guysott's Extract of Yellow Dock and Sarsaparilla. It contains more of the pure Honduras Sarsaparilla than any other preparation extant, which is chemically combined with the Extract of Yellow Dock and the Extract of Wild Cherry, thus making the remedy more thoroughly efficient than any other Sarsaparilla before the public. At the same time it is perfectly free from all mineral poisons, which cannot be said of any other Sarsaparilla compounds.

Sold by all the Druggists in California and Oregon.

v4-15 RICE & COFFIN, Agents, Marysville.

OXYGENATED BITTERS,

CONTAINING NO ALCOHOL,

A CURE FOR

Dyspepsia, in all its various forms; Heartburn, Habitual Costiveness, Acid Stomach, Loss of Appetite, Nervousness, Coldness of the Extremities, General Debility and Asthma.

THESE Bitters are approved by some of the best physicians, who use them in their practice. Scientific men have more difficulty in overcoming and controlling the various symptoms of Dyspepsia than almost any disease in the world. They are so various, in different individuals and cases, that it has seemed impossible sometimes to obtain even temporary relief from suffering. But a medicine has been discovered which proves, beyond a doubt, that in most cases a permanent cure can be effected. By avoiding stimulants, and using the *Oxygenated Bitters* strictly according to directions, a healthy tone is imparted to the digestive system, and strength to perform its natural functions.

Ample testimony to the truth of this can be had by reference to numerous customers in possession of the general agents. We have no hesitation in pronouncing the Bitters a sure cure for DYSPEPSIA.

From J. C. Dann, Esq., City Treasurer.

Boston, June 6, 1852.

Gentlemen: I have been for some years troubled occasionally with severe attacks of Indigestion; have consulted many physicians, tried Allopathy and Homeopathy, and can truly say, I have received more speedy and effectual relief from the use of *Oxygenated Bitters*, procured from you, than from all other remedies, and most cheerfully recommend them to all who suffer from a similar affliction. Yours truly,

JAMES C. DUNN.

DR. HENRY E. NORRILL, a skillful Physician of New York city, in his remarks on Dyspepsia, says: "The most effectual medicine to improve the tone and energy of the stomach, is that prepared by Dr. George B. Greene, and called the Oxygenated Bitters. I would publish the receipt for preparing this valuable medicine, if I knew what it was, but as I do not, I can only recommend its use. It seems to me to be improperly called 'Bitters,' at least in the popular acceptation of that term, for it contains no Alcohol or other Spirit, and is rather sour than bitter. Though here, by the way, I cannot too earnestly caution the dyspeptic sufferer against using the thousand and one advertised 'Bitters,' the basis of which is alcohol, or other ardent spirits. They impart no real energy to the stomach.

The stimulation which they excite is only temporary, and sure to be followed by a reaction which at length will inevitably wear out the stomach. This medicine obviates these objections. It has been analyzed by that distinguished chemist, Prof. Hayes, M. D., *State Assayer of Massachusetts*, who declares that "the medicinal articles used are those prescribed by the most eminent physicians, for the diseases for which these Bitters have been so eminently successful." I have employed them in a multitude of cases, and have uniformly found that when used according to the directions, they gradually, but surely, remove, one by one, the various distressing symptoms which cluster around the confirmed dyspeptic, restore to the stomach its lost energies, and thus lead the patient back to the enjoyment of permanent health and strength."

It has also been used by the following persons, and received their unqualified approbation:

Prof. Edward E. Phelps, M. D., Dartmouth College.
Hon. Myron Lawrence, Ex-President Mass. Senate.
" Samuel S. Phelps, U. S. Senator from Vermont.
" J. F. Simmons, U. S. Senator from Rhode Island.
" L. H. Arnold, formerly Governor of Rhode Island.
" H. D. Foster, Member of Congress from Pennsylvania
" Solomon Foot, U. S. Senator from Vermont.

Many other individuals of the highest respectability can be referred to, who will confirm all that has been said in favor of the Oxygenated Bitters

Prepared by Dr. GEORGE B. GREEN.

Seth W. Fowle & Co.,

138 Washington street, Boston.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerreian Gallery!

Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to Vance's who wishe PERFECT LIKENESSES? Because he has now the most arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

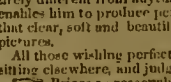
2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.



☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building, corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

We mean precisely what we advertise, that we *can and will sell cheaper than any other store in the City or State.*

Our stock consists of

ROSEWOOD, MAHOGANY AND WALNUT SETS, FOR PARLORS AND BEDROOMS.

ALSO,

PAINTED SETS, WITH KITCHEN AND DINING-ROOM FURNITURE, IN GREAT VARIETY.

THIRTY THOUSAND CHAIRS!

Bedding and Bedsteads of every Description.

To particularize and describe our stock would require one half of a newspaper, but having

An Enormous Stock,

and at the same time paying storage on much of it, we are

Determined to Sell it

and reduce our expenses, and we solicit the public to give us a call in every instance before purchasing elsewhere.
